He is said to have lived in Medina and to have embraced Islam shortly before the expedition to the well of al-Muraysīʿ of the Banu 'l-Muṣṭalik. After that, he is reported to have participated in the Prophet's military campaigns, the first being the Battle of Khandak or the Ditch. He owes his fame mostly to the role he is reported to have played in the *ifk* affair, i.e. the scandal around ʿĀʾisha [*q.v.*], the Prophet's favourite wife. An allegation had been brought into circulation, slanderous as it turned out, about ʿĀʾisha having had illicit relations with Ṣafwān on their joint return from the Prophet's expedition to the Banu 'l-Muṣṭalik in the year 5/627, when, after having become separated from the main caravan, they sought to catch up with it on a solitary trek through the desert. For details of the affair, see Ibn Isḥāk's *Sīra*, ed. Muṣṭafā al-Sakkā *et alii*, iii, 309-18, ed. Wüstenfeld, 731-8 = al-Bukhārī, *Ṣaḥīḥ*, ed. Krehl, ii, 153-7, iii, 103-9. In the aftermath of the affair, ʿĀʾisha is said to have made a statement to the effect that Ṣafwān was impotent and had never touched a woman (also recorded in Ṣafwān's own words, al-Bukhārī, iii, 108, ult.). This allegation is contradicted in another report (cf. Abū Dāwūd, *Sunan*, ed. M. Muḥyī al-Dīn ʿAbd al-Ḥamīd, ii, 330, Ibn Ḥanbal, *Musnad*, iii, 80) in which it is alleged that someone presenting herself as Ṣafwān's wife once came to the Prophet in order to complain about her husband forcing his will upon her and hitting her, saying *ana radjul shābb fa-lā aṣbir* ... ; for an attempt at harmonisation, see Ibn Ḥadjar, *Iṣāba*, iii, 441.

During an exchange with the poet Ḥassān b. Thābit [*q.v.*], whom Ṣafwān blamed for having had a part in spreading the rumour about him and ʿĀʾisha, he is said to have struck him with his sword. Another story, extant in different versions, has it that he hit Ḥassān because of his denigrating verses directed at a group of *Muhādjirūn* who had sought out the Prophet to embrace his cause. Saʿd b. ʿUbāda [*q.v.*], a leading Anṣārī, induced Ḥassān in the presence of the Prophet to give up his claim for retaliation on Ṣafwān. Then Saʿd presented Ṣafwān with a mantle. The Prophet gave Ḥassān an Egyptian woman and/or a certain piece of property as appeasement, while Ṣafwān was ultimately left unpunished. The various versions of the story, complete with the verses supposedly recited by both, are recorded in many sources, most extensively in al-Wākidī, *Maghāzī*, ii, 436 ff., and *Aghānī*³, iv, 155-63. Whether or not they contain a kernel of historicity is hard to establish; they may be no more than background embellishments of Ṣafwān's role in the *ifk* affair, assuming then that the tale is historically tenable. (The story's plausibility has been recently evaluated anew in G.H.A. Juynboll, *Early Islamic society as reflected in its use of isnāds*, forthcoming in *Le Muséon* [1994].) According to Khalīfa b. Khayyāṭ, *Ṭabakāt*, 51, 181, he later settled in Baṣra and took up residence near the Mirbad [*q.v.*]. For other exploits of Ṣafwān, cf. al-Wākidī, index, s.n. For his participation in the conquest of al-Djazīra, see al-Balādhurī, *Futūḥ al-buldān*, 172-5, 184.

(G.H.A. JUYNBOLL)

AL-ṢAGHĀNĪ, ʿAbd al-Muʾmin b. Ḥasan, *adīb*, *floruit* during the 7th/13th century.

He is noted only for his poetic version of the animal fable collection, originally translated into Arabic by Ibn al-Mukaffaʿ [*q.v.*], *Kalīla wa-Dimna* [*q.v.*]. This version he called *Durrat al-ḥikam fī amthāl al-Hunūd wa 'l-ʿAdjam*, and he completed it on 20 Djumādā 640/15 November 1242 (according to the Vienna ms.) or possibly some 25 years later (according to the other extant ms. of Munich); see Brockelmann, S I, 234-5.

Bibliography: Given in the article. (ED.)

AL-ṢAGHĀNĪ, RAḌIYY AL-DĪN AL-ḤASAN b. Muḥammad b. al-Ḥasan b. Ḥaydar b. ʿAlī b. Ismāʿīl al-Kurashī al-ʿAdawī al-ʿUmarī, lexicographer and *muḥaddith*, who owed his name to the upper Oxus province of Čaghāniyān [*q.v.*], Arabised form Ṣaghāniyān.

He was born in Lahore on 10 Ṣafar 577/25 June 1181 according to the most generally accepted report. He commenced his studies in Ghazna, first under his father who was a *mutakallim*, then under a number of scholars, most notable of whom was Niẓām al-Dīn al-Marghīnānī [*q.v.*]. In further pursuit of knowledge, he travelled—between the years 605/1208-9 and 615/1218-9—to Mecca, Medina, Aden and Makdishū. The notice by his contemporary, Yākūt [*q.v.*] (*Udabāʾ*, iii, 211-12), which ends in the year 613/1216-17, clearly shows that Ṣaghānī had by that early time acquired enough fame and respect to warrant his inclusion in a biographical dictionary. In Ṣafar 615/May 1218 he came to Baghdād for the first time (see his *al-ʿUbāb*, under the root *k r ṭ*, in the editor's introd., 9), and two years later was sent to India by the caliph al-Nāṣir [*q.v.*], where he stayed for several years. He came back to Baghdād in 624/1226-7, only to be sent, in the same year, once more to India, this time by al-Mustanṣir [*q.v.*]. Impoverished there, he managed to get back to Aden in 630/1232-3 and then to Baghdād in 637/1239-40. In his later days he taught at the Marzubāniyya *ribāṭ*, but resigned his post in 640/1242-3 when he came to learn that the *shaykh* of this *ribāṭ* had to be a Shāfiʿī (Ibn al-Fuwaṭī, *al-Ḥawādith al-djāmiʿa*, Baghdād 1351/1932-3, 263); hence al-Mustaʿṣim entrusted him with the Ḥanafī Tutushiyya *madrasa*, and it is in this period that he wrote his *Mashārik al-anwār* and *al-ʿUbāb*. His death is most widely reported to have been on 19 Shaʿbān 650/25 October 1252.

Al-Ṣaghānī's contribution was predominantly in the field of lexicography. By his time, it was deemed no longer possible for a lexicographer to investigate usage among the desert Arabs, due to the so-called loss of the earlier "purity" in their language. Al-Ṣaghānī, however, seems to have made up for this major handicap by concentrating on the shortcomings and errors of his predecessors in *riwāya, taṣḥīf*, attribution of poetry, etc. Aided by his vast knowledge (cf. his list of sources in *al-ʿUbāb*, i, 7-9), he produced three of his major works that can be seen in the light of the above. These are: (1) *al-Takmila wa 'l-dhayl wa 'l-ṣila* (ed. ʿA.ʿA. al-Ṭaḥāwī *et alii*, 6 vols., Cairo 1970-9), a supplement to al-Djawharī's *al-Ṣiḥāḥ*, which comprises linguistic usages overlooked by al-Djawharī and extensive corrections of his errors; (2) *Madjmaʿ al-baḥrayn* (Brockelmann, S I, 614; Sezgin, viii, 219), which incorporates *al-Ṣiḥāḥ*, *al-Takmila*, and al-Ṣaghānī's own *Ḥāshiya ʿalā 'l-Ṣiḥāḥ*, in which he amended still further errors of al-Djawharī, and (3) *al-ʿUbāb al-zākhir wa 'l-lubāb al-fākhir* (ed. Y.M. Ḥasan, i, Baghdād 1978, and ed. M.Ḥ. Āl Yāsīn, Baghdād 1397/1978 ff.) in which he only got as far as *b-k-m* before he died. This book, according to al-Suyūṭī (*Bughya*, Cairo 1964, i, 519) is the greatest linguistic treatise after the era of al-Djawharī, along with Ibn

Sīda's *al-Muḥkam*. It is indeed in this work that al-Ṣaghānī's mastery of the sources and his vast *riwāya* are most clearly manifested, and in his introduction (pp. 12-19) he lists but a few of the more glaring errors of al-Azharī in his *Tahdhīb al-lugha* (over 1,000 in all), al-Djawharī in his *al-Ṣiḥāḥ* (over 2,000), and Ibn Fāris in his *al-Mudjmal* (over 500), and ridicules Ibn al-Sikkīt's *Iṣlāḥ al-manṭiḳ* as needing an *iṣlāḥ* of its own, and Ibn ʿAbbād's *al-Muḥīṭ* as having comprised (*aḥāṭa*) error and *taṣḥīf*.

Another obvious linguistic interest of al-Ṣaghānī is demonstrated by his work on patterns, as in his *K. yafʿūl* (ed. Ḥ. ʿAbd al-Wahhāb, Tunis 1939), *K. al-Infiʿāl* (ed. A. Khān, Islāmābād 1977), *K. al-Iftiʿāl* (Ḥadjdjī Khalīfa, v, 47), *Mā banat-hu 'l-ʿArab ʿalā faʿāli* (ed. ʿA. Ḥasan, Damascus 1964), and *Naḳʿat al-ṣadyān fīmā djāʾa ʿalā wazn faʿlān* (Brockelmann, S I, 615). The published titles show that al-Ṣaghānī, despite being innovative in some of his subject matter, as in collecting the verbs of the *infaʿala* pattern (cf. *K. al-Infiʿāl*, 1), did not attempt to explore the meanings of each pattern or to establish general meanings with which constituent verbs can be identified; thus his books in this genre are merely lists of words from a certain pattern which any general lexicon would have, but listed alphabetically under their roots.

Some of al-Ṣaghānī's other lexicographical works include *al-Shawārid fi 'l-lugha* (ed. ʿA.ʿA. al-Dūrī, Baghdād 1983, and ed. M. Ḥidjāzī, Cairo 1983) of the *nawādir* genre; a *tawshīḥ* or *tasmīṭ* of Ibn Durayd's *maḳṣūra* called *Sharḥ al-ḳilāda al-simṭiyya fī tawshīḥ al-Duraydiyya*, preserved in a *mukhtaṣar* by Ibn al-Ḥādjib (ed. S.M. al-ʿĀnī and Ḥ. Nādjī, Baghdād 1977); *K. al-Aḍdād* (ed. A. Haffner, Beirut 1912); and a number of thematic works the titles of which include *K. fī asmāʾ al-asad*, *K. fī asmāʾ al-dhiʾb wa-kunāhu*, *K. al-ʿāda fī asmāʾ al-ghāda*, and *K. Khalḳ al-insān*.

To a lesser extent, Ṣaghānī contributed to the realm of *ḥadīth*, and his main work here is *Mashāriḳ al-anwār al-nabawiyya ʿalā ṣiḥāḥ al-akhbār al-muṣṭafawiyya* (printed several times in Leipzig, Istanbul, and Beirut). The importance of this treatise, which integrates the two *ṣaḥīḥs* of Bukhārī and Muslim, lies in the fact that it is the earliest contribution of India to *ḥadīth* literature (see HIND, in *EI*², at III, 435; and a list of its *shurūḥ* in Ḥādjdjī Khalīfa, v, 548 ff.). Even here, al-Ṣaghānī's foremost linguistic interests emerge in his classification of the material, basically according to the particle (e.g. *in, idhā, mā, laysa, law, ḳad*, etc.) or morphological unit (e.g. elative, imperfect, imperative, etc.) with which the *ḥadīth* begins. His other works include two *risālas* on apocryphal *ḥadīth*, namely *al-Durr al-multaḳaṭ fī tabyīn al-ghalaṭ* (ed. S.M. al-ʿĀnī, in *Madjallat Kulliyyat al-Imām al-Aʿẓam*, i [1972], 139-72), and his *Risāla fī 'l-mawḍūʿāt min al-aḥādīth* (published under the title *Mawḍūʿāt al-Ṣaghānī*, ed. N.ʿA. Khalaf, Cairo 1980). Of the *ridjāl* genre are his *Naḳʿat al-ṣadyān fī man fī ṣuḥbatihim naẓar min al-ṣaḥāba* (ed. S.K. Ḥasan, Beirut 1990) and *Asāmī shuyūkh al-Bukhārī* (Sezgin, i, 130).

(RAMZI BAALBAKI)

ṢAGHĪR (A.), infant, child, minor (opp. *bāligh* [*q.v.*]), one who has not attained to puberty (opp. *kabīr*). Minority ends with the onset of physical maturity, and the ability to control one's own affairs (see al-Wansharīsī, ii, 269). In the absence of signs of physical maturity, fifteen was generally regarded as the age that divided between majority and minority for males and females alike (see BĀLIGH and Goldziher, *Muh. Studien*, ii, 17, Eng. tr. *Muslim studies*, ii, 29). Entrusting a boy or a girl with their respective adult functions was the accepted way to examine mental maturity (*rushd*) (see Ibn Ḳudāma, iv, 523). Physical maturity as coincident with the conclusion of formal-religious education and the start of work without parental supervision is reported also for contemporary Muslim societies (see e.g. Ammar, 183).

1. Terminology.

Arabic has a rich vocabulary to designate childhood and its subdivisions. Within high Islamic culture childhood is seen as a unique period which has its own gradual process of development, physically and psychologically different from other periods in human life. As such it finds clear expression in writings of various kinds, legal, theological, hygienic-medical, ethical and pedagogical as well as belles-lettres. At the same time, it remains difficult to know exactly how this and other (sometimes contradictory) concepts of childhood influenced the everyday life of children in Muslim societies.

While in its mother's womb, the child is called *djanīn* (foetus). The general term for "child" is *walad*, and other terms have special shades of meaning, e.g. *nadjl* "progeny" and *faraṭ* "a child who dies before reaching maturity", lit. "dying before his/her parents". Other terms designate in addition a specific period within childhood. Among these are *ṣabiyy* ("a youth, boy, or male child... or one that has not yet been weaned... so called from the time of his birth"), *ṣabiyya* ("a young woman, girl, or female child", Lane), *salīl* ("a child or male offspring", Lane); "a child, specifically at the time of his birth and (from then) until its weaning" (Ibn Sīdah, *Mukhaṣṣaṣ*, Būlāḳ 1316, 31); *ṭifl* ("... a child until he discriminates... after which he is called *ṣabiyy*..." or "a child from the time of his birth... until he attains to puberty...", Lane); ("at his birth the child is designated *ṣabiyy*, afterwards he is called *ṭifl* although I do not know how long...", Ibn Sīdah. 31): *ṭalā* (... "the youngling of any kind... an infant until a month old or more," Lane): *sharkh* ("a youth or young man... the offspring of a man...", Lane); *ghulām* ("a young man, youth, boy... or one from the time of his birth until he attains to the period termed *shabāb*, meaning young manhood...", Lane).

Terms for either a limited period within childhood or a specific phenomenon connected with a child's physical or mental development are *ṣadīgh* ("an epithet applied to a child... in the stage extending to his completion of seven days... because his temple

becomes firm... only to this period", Lane); *raḍīʿ* ("a child while it is a suckling", Lane); the verb *tadabbaba* (also *taḥallama*, Lane, and *ig̲h̲tāla*, Ibn Sīdah, 32) ("he [a child] became fat...", Lane); *itht̲hag̲h̲ara* ("he [a boy] bred his central milk teeth... or... front teeth... or he bred his teeth after the former ones had fallen out", Lane) (several terms refer to different stages of this process: *shakka, ṭalaʿa, nadjama, nasaʿa, intaḍat* (*al-sinn*), *adrama* (*al-ṣabiyy*), *aḥfara, abdaʾa* [Ibn Sīdah, 331]; *faṭīm* ("a child weaned or ablactated", Lane); *dāridj* (*daradja*: "... said of a child: 'he walked a little, at his first beginning to walk' ", Lane); *djafr* (*djafara*: "he, or it, became wide... or became inflated or swollen", Lane; Ibn Sīdah, 33); *mustakris̲h̲* (*istakras̲h̲a* [also *tazakkara*, Lane] "... he [a kid and a boy] became large in his stomach or became hard in his palate.. and began to eat"); *djaḥwas̲h̲* ("the child who passed the stage of weaning becomes *djaḥwas̲h̲*", Ibn Sīdah, 33); *fāḳiʿ* ("he [a boy] became active, and grew...", Lane); *ḥazawwar* ("a boy who has become strong... and has served... or one who has nearly attained the age of puberty...", Lane); *mutaraʿriʿ* (also: *mulimm* [Ibn Sīdah, 34] "... a boy... almost or quite past the age of ten years, or active", Lane); *muṭabbik̲h̲* ("... a young man that is full [or plump]", Lane); *yāfiʿ* ("a boy grown up... grown tall", Lane); *k̲h̲umāsiyy* ("a boy five spans [*as̲h̲bār*] in height... said of him who is increasing in height...", Lane); *waṣīf* (*awṣafa* and *istawṣafa*: "he [a boy] became of full stature and fit for service", Lane); *g̲h̲aydāḳ* ("... soft or tender; applied to a youth or young man... applied to a boy signifies 'that has not attained to puberty' ", Lane); *murāhiḳ* (also *kawkab*, Lane) (*rāhaḳa, arhaḳa*: "... he [a boy] was, or became, near to attaining puberty or virility...", Lane); *ak̲h̲lafa* ("the boy passed the time when he had nearly attained to puberty... he nearly attained to puberty; so that those who looked at him differed in opinion...", Lane); *ḥālim* ("originally signifies *muḥtalim* [dreaming and particularly dreaming of copulation and experiencing an emission of the seminal fluid in dreaming]... hence used in a general sense... meaning one who has attained to puberty, or virility...", Lane); *anbata* ("his [a boy's] hair of the pubes grew forth... he having nearly attained the age of puberty...", Lane); *s̲h̲abala* ("he [a boy...] became a youth or young man...", Lane); *balag̲h̲a al-ḥint̲h̲* ("he [a boy] attained to the age when he was punishable for sin... or attained to the age when the pen [of the recording angels] began to register his acts of obedience and of disobedience...", Lane); *as̲h̲hada* ("he [a boy] attained to puberty... and *as̲h̲hadat*: she [a girl] menstruated and attained to puberty"); *ḥāniṯ* ("a child who reached the age of reason", Ibn Sīdah, 35). *TA* points to those terms which signify the main stages of childhood and arranges them according to the course of the child's development: "a child when born is called *raḍīʿ* and *ṭifl*, then *faṭīm*, then *dāridj*, then *djafr*, then *yāfiʿ*, then *s̲h̲adak̲h̲*, then *muṭabbik̲h̲* and then *kawkab*" (see also Ibn Ḳayyim al-Djawziyya, 183).

The terms used in the Ḳurʾān to designate infants, children and young people are *ṭifl, ṣabiyy, walad* and *g̲h̲ulām*, mentioned above, as well as *fatā* (a youth), *banūn* (male children), *d̲h̲urriyya* (offspring) and *yatīm* (a fatherless child) (O'Shaughnessy, 33-43).

2. Subdivisions of childhood.

Medical-hygienic writings contain detailed descriptions of the physical and mental characteristics of the various stages in childhood and relevant treatment instructions. Thus Ibn al-Djazzār al-Ḳayrawānī (d.? 395/1004), following Hippocrates, divides childhood into four periods: 1. infancy proper from birth to dentition (*sinn al-wildān*); 2. second infancy from dentition to the age of seven (*sinn al-ṣibyān*); 3. childhood from the age of seven to fourteen (*sinn ibn sabʿ sinīna*); 4. the age of transition from childhood to puberty starting at the age of fourteen (*Siyāsat al-ṣibyān*, 86-7). Another division is offered by ʿArīb b. Saʿd al-Ḳurṭubī [*q.v.*]: 1. from birth to forty days—a period characterised by drastic changes; 2. from forty days to the appearance of molar teeth, at seven months, a stage characterised, *inter alia*, by the beginning of the development of the senses as well as the imagination and the mental qualifications; 3. from dentition to the growth of the child's hair (the exact age is not mentioned), a stage characterised by further mental development as well as by weaning and the beginning of talking and walking, increase in the child's energy, and excellent memory (57-60, and also al-Baladī, 75).

Instructions for physical treatment as well as moral education of children on a more popular level, directed at parents and nurses, are based on the same concept of childhood as a unique period in human life with its own gradual development process (Ibn Ḳayyim al-Djawziyya, 137-44, and 183, where the author lists twelve terms which signify various periods in the child's life from birth to maturity).

In the context of children's mental development the appearance, at about the age of seven, of *tamyīz*, the faculty of "discernment", which enables the child to grasp abstract ideas and thus to distinguish between good and evil, is regarded by doctors and educators as a most important stage. Its obvious manifestation being a sense of shame, discernment rounds off the development of the senses, ushers in the "stage of intellectual grasp" and presages the perfection of mental and moral qualities in adolescence. (See e.g. al-G̲h̲azālī, *Iḥyāʾ*, iii, 22, 72, 92; Motzki, *Das Kind*, 421-3.) For the mental developments in the earliest period of a child's life, significant are the first smile, at the age of forty days, revealing the onset of the infant's self-awareness and mental development, and the first occurrence of dreams at the age of two months (Ibn Ḳayyim al-Djawziyya, 176). In socio-religious terms, important stages are: one week after birth, when the *ʿaḳīḳa* [*q.v.*] and *tasmiya* ceremonies (see below) take place; six years, when the child's (formal) education starts, nine years, when children are to be separated from each other in bed, thirteen years, when children should be beaten on neglecting prayer, sixteen years—the age of marriage (al-G̲h̲azālī, *Iḥyāʾ*, ii, 276).

3. Children and parents.

Certain branches of the Islamic religious literature frequently raise issues of child-rearing in the context of marital matters (see e.g. Ibn Bābawayh, iii, 274-7, 304-19; Ibn Ḳudāma, ix, 299-313). In Muslim societies the principal purpose of marriage was, and still is (see Ammar, 93), the bearing and rearing of children, its fulfillment an obligatory religious mission: to please God by contributing to the continued existence of the human race, using the means that God created for this goal, and to please the Prophet Muḥammad by enlarging the community of the faithful. This in addition to the personal advantages children bring: "... the blessing of the righteous child's invocation after his father's death" and "... the intercession through the death of the young child should he precede his (father's) death" (al-G̲h̲azālī, *Iḥyāʾ*, ii, 67-70; Farah, 53-4). Each child, particularly a good one (*al-walad al-ṣāliḥ*), is therefore regarded as one of God's blessings. On the other hand, contraception existed and was lawful in mediaeval Muslim societies for economic reasons, for the benefit of the

woman and for the welfare of the existing children (Musallam, ch. 1).

Mediaeval Islamic sources abound in accounts of loving, tender relationships between parents and children including close physical contacts. The Prophet Muḥammad is often shown as one who knew how to treat children properly. For instance, once he hastened to wash the dirty face of a child and kiss him instead of ʿĀʾis͟ha, who was unable to bring herself to do so, while on another occasion he remained prostrated in prayer longer than necessary so as not to disturb his grandson Ḥusayn who was riding on his back (al-G͟hazālī, *Iḥyāʾ*, ii, 275-9). According to one of the most revealing traditions in this regard, a caring father who in the middle of the night gets up to warm his children with his own clothes is more virtuous than a fighter in a holy war (*ibid.*, ii, 41). No wonder, then, that Ṣalāḥ al-Dīn al-Ayyūbī [*q.v.*], the epitome of *d͟jihād*, is also depicted as a loving father to his seventeen children (Ibn S͟haddād, *Fī sīrat Ṣalāḥ al-Dīn*, n.p. n.d., 52, 59).

Children, especially when grown-up, are portrayed as arousing expectations in their parents, making them proud and others envious. They are expected to be energetic, brave and intelligent (al-Ḳaysī, fol. 171b). However, besides this type of parent-child relationships other, sometimes contradictory, types have always existed. On the whole, expressions of parental care for and love of their offspring refer to male children, with explicit observations reflecting discrimination against, even hatred of, females (see below). But even males were sometimes regarded as little other than property and a source of labour. Thus, while several Ḳurʾānic texts stress the strong love of parents for their children (e.g. XXVI, 17; XVII, 24; XXVIII, 9; XXXI, 33) the Ḳurʾān also depicts children (*banūn, awlād*), and possessions (*māl* or *amwāl*) as a temptation to disbelievers and believers alike (e.g. VIII, 28; LXIV, 15; LVII, 20; LXIII, 9; O'Shaughnessy, 38-9, 42). Side-by-side with the notion of the child's purity and innocence (for a comparison between children and saints, see al-G͟hazālī, *Naṣīḥat al-mulūk*, Cairo 1317, 134) there existed an image of the child as an ignorant creature, full of desires and with a weak and vulnerable spirit. This image, and the concept behind it that childhood is no more than a "passage" leading to the "parlour" of adulthood, justified extensive, sometimes excessive, use, by parents and teachers, of corporal punishment in order to correct undesirable traits (although reservations and proposals for alternatives to physical punishment are also found in Muslim educational thought) (Giladi, *Children of Islam*, 61-6). Children also suffered from adult violence (verbal or physical) motivated by other than educational principles. On the other hand, child abandonment and infanticide, phenomena not unknown in mediaeval Muslim societies in spite of the unequivocal religious rejection (Ḳurʾān LXXXI, 8; VI, 137, 140, 151; XVII, 31; LX, 12; XVI, 57-9), were not necessarily motivated always by feelings of hatred or contempt but may have served as a means of (post partum) birth control, particularly in times of want and economic duress (Giladi, *ibid.*, 78-9, 101-15). Even in Islamic consolation treatises for bereaved parents (see below), one finds contradictory motivations: love and tenderness towards infants and children and strong emotional ties which made their death very difficult for parents to accept, on the one hand, and steadfastness in the face of children's death, even the readiness of parents to sacrifice their offspring for the sake of God, on the other (see Giladi, "*The child was small*", 367-86).

It has been suggested that in the traditional patrilineal Arabic-Islamic family the child "is a miniature adult, capable at most of childishness. His value lies in what he will be, not in what he is" and that "childhood is de-realised to such an extent that is deliberately ignored by the fathers who willingly hand over to the mothers responsibility for their sons for a large part of their childhood" (Bouhdiba, *Sexuality*, 219). The special emotional relationships between mothers and (particularly male) children and their long-term impact on the latter (Bianquis, 578; Bouhdiba, *The child and the mother*, 128, 132-5) can be explained against this background. Anthropological research among contemporary Muslim societies gives an even stronger impression than do historical sources of the complexity of parent-child relationships. Thus the centrality of children for their parents, adult awareness of the great responsibility involved in raising and educating children, the attention for children's needs, on the one hand, but limited and not very effective interactions between adults and children and a strong feeling that children are a heavy burden, on the other, together with differences in attitudes towards males and females, are some seemingly inconsistent and contradictory observations (Friedl, 195-7, 210-11; cf. Ammar, 53).

The Ḳurʾān, under Judaeo-Christian influence and as a response to the challenge of structural changes in tribal society, shows special sensitivity towards children. Rejecting the pre-Islamic concept of children as their fathers' property, it acknowledges their own right to live and regards their life as sacred (see e.g. XVII, 31; VI, 151). This principle the *S͟harīʿa* extends even to foetuses: a special indemnity (*g͟hurra*) is to be paid for causing an abortion. An unborn child can inherit, receive a legacy and, if it is a slave, be manumitted (Schacht, 124, 186; Motzki, *Das Kind*, 409-10).

The child's right to an established paternity (*nasab*), crucial in patrilineal families, gives rise to mutual rights of inheritance, guardianship and maintenance (Nasir, 156-61). It should be emphasised that Islamic law placed very few difficulties in the way of recognising the legitimacy of children. By regulating *ʿidda* [*q.v.*], Ḳurʾānic law intended to help identify the biological father in cases of divorce or the father's death. As a rule, however, any child born in wedlock is regarded as legitimate (*al-walad li-ṣāḥib al-firās͟h*... "the offspring belongs to the owner of the bed...", see Rubin, 5-26), provided that it is born not less than six months after the beginning of cohabitation, and not later than (according to the Ḥanafīs) two (according to the Shāfiʿīs and Mālikīs) four or even five years (al-Wans͟harīsī, iv, 477) after the last intercourse between husband and wife (see NIKĀḤ, at VIII, 28). This means, in fact, that any child born to a woman, from any intercourse, is to be considered the legal offspring of her husband or master. Formal paternity can be established also through acknowledgment (*iḳrār*), to be used only when the child's lineage is unknown and biological fathership is feasible, or through evidence (*bayyina*) involving the testimony of two men or a man and two women (Levy, 135-9; al-Barā, 11-20, 27). Only by *liʿān* [*q.v.*] can a husband challenge the legitimacy of a child and disown his paternity. Sunni jurists showed more leniency towards *awlad zinā* (offspring born out of wedlock) than S͟hīʿī-Imāmī ones in the contexts of purity, marriage and wet-nursing. But even among the Imāmī S͟hīʿīs, the argument that it remains impossible to know for certain whether or not someone is *walad al-zinā* played a role (Kohlberg, 237-66).

The Ḳurʾān abolished the pre-Islamic custom of adoption, whereby an adopted child could be assimilated in a legal sense into another family, and replaced it by the recommendation that believers treat children of unknown origin as their brothers in the faith and clients (XXXIII, 4-5, 37-40). Adoption was regarded by the *Sharīʿa* as a lie, as an artificial tie between adults and children, devoid of any real emotional relationship, as a cause of confusion where lineage was concerned and thus a possible source of problems regarding marriage between members of the same family and regarding inheritance (Fahd and Hammoudi, 334-6). However, the custom of adoption, rooted in local tradition, survived in some Muslim communities, e.g. those of North Bali (Wikan, 452).

Viewing children as vulnerable, dependent creatures, Islamic law supplies various rules for the protection of their body and property. In some cases more attention is given to the child's benefit (*manfaʿat al-walad*; see e.g. al-Sarakhsī, v, 207, vi, 169) than to the interests of its parents. Fathers, because of their discretion and compassion, retain the power of guardianship (*wilāya* [*q.v.*]) over the child which involves guardianship over property (*wilāyat al-māl*) and over the person (*wilāyat al-nafs*), including overall responsibility for physical care, socialisation and education. To these should be added the father's duty to marry his child off when the latter comes of age (*wilāyat al-tazwīdj*). Mothers, because of their pity and gentleness, are entrusted with the care and control of their children for the first few years of their life and, in case of dispute, have the right to custody during these years. If a mother dies, the responsibility falls on other female relatives, preferably in the mother's line (see ḤAḌĀNA, and Pearl, 92, 97-9).

Riḍāʿa (lactation) [see RAḌĀʿ] is the basic right of any infant at least during the first two years of its life (Ḳurʾān, II, 233; XXXI, 14; XLVI, 15). Moreover, it is the mother's obligation (which, according to some opinions, can be enforced on her, if necessary, even if this involves injury) unless the alternatives do not endanger the infant's life and are economically viable. At the same time, *riḍāʿa* is a mother's right, though it can be denied when she demands to be paid a certain sum for it and another woman is ready to suckle without or for lower pay. The father again is responsible for the infant's welfare in this regard, for covering the expenses involved (Ḳurʾān, *ibid.*, and LXV, 6), for finding a physically and morally suitable wet-nurse, if necessary, and for making sure she treats the infant well (Ibn Taymiyya, *Ikhtiyārāt*, 286; Ibn Ḳudāma, ix, 312; al-Sarakhsī, xv, 122; al-Barā, 31-5).

Cognisant of the infant's needs, and in the belief that character traits are transmitted through the mother's milk, Muslim jurists emphasise the preference of maternal suckling. Also, some jurists regard harmful for the nursling, and even forbid, sexual relations with a nursing woman (*ghīla*), in contrast to the authorisation given by a *ḥadīth* (Ibn Bābawayh, iii, 305; al-Djūghī, fol. 65a; Musallam, 15-16).

Feeding of children in general and breast-feeding in particular constitute a central theme in mediaeval medical-hygienic writings and in the child-rearing manuals that Muslim doctors compiled under the strong influence of Greek medicine. These writings deal with such key questions as maternal suckling versus wet-nursing, the recommended characteristics of wet-nurses, the frequency of breast-feeding, the weaning of the child and the like. This, in addition to instructions on how to treat the infant immediately after birth, how to prepare its cradle, to wash and swaddle it, advice on how to calm weeping children, on teething, on how to treat children when they start walking and talking and recommendations regarding entertainment and the company of other children. Together with observations on e.g. birth shock and the psychological development of the child, the authors discuss such theoretical issues as the relationships between innate dispositions and acquired characteristics, the changeability of natural dispositions, etc. It is clear that such 4th/10th-century authors of comprehensive medical compilations as al-Madjūsī [*q.v.*] and Ibn Sīnā [*q.v.*], but particularly the writers of gynaecological, embryological and paediatric treatises, like Ibn al-Djazzār, Muḥammad b. Yaḥyā al-Baladī and ʿArīb b. Saʿd al-Ḳurṭubī, attached perhaps even greater importance to paediatrics than their Greek predecessors. Moreover, their rich and diversified knowledge implied an understanding of some of the unique characteristics of children from physical as well as psychological points of view. Ibn al-Djazzār's *Siyāsat al-ṣibyān*, for instance, has fifteen chapters on infant diseases and methods of healing in addition to six chapters on the hygienic care of new-born infants. Part of the material included in these paediatric writings was later "Islamised", popularised and adapted for use by literate parents and nurses, for instance by Ibn Ḳayyim al-Djawziyya in his *Tuḥfat al-mawdūd* (Giladi, *Children of Islam*, 4-8, 19-34). Obviously, popular medicine and magic played an important role in the treatment of children among the common people (Ullmann, 2, 92).

The first stages of incorporating the new-born child into the larger human society, and particularly into the Muslim community, are symbolised by a series of childhood rites, most of them of tribal, pre-Islamic origin for whose performance the father has the responsibility. By reciting in his ears, immediately after birth, the formula used for the call to prayer (*adhān*) as well as the words chanted in the mosque at the beginning of the prayer (*iḳāma*), the infant was believed to acquire the basic principles of Islam. *Taḥnīk*, the rubbing of the infant's palate with a date, was another ceremony early Muslims performed soon after birth. It probably symbolised the curbing of the child's natural desires and the harnessing and directing of his energies, for it clearly parallels the practice of putting, for the first time, a rope in a horse's mouth. It might also signify the readiness of the community to share its food with the new-born child, accepting it as a member (Giladi, *Children of Islam*, 35-41; Motzki, *Das Kind*, 413). Other ceremonies, i.e. naming (*tasmiya*) (Schimmel, 14-24), the first haircut, which separates the child from its previous environment (Van Gennep, 50, 53-4), and the *ʿaḳīḳa* [*q.v.*], the slaughter of a sheep or a goat to redeem the child and to express gratitude for its birth, are delayed to the seventh day after birth when the prospects for the infant's life look brighter. By performing these rites, the father confirmed his fatherhood in public and thus his responsibility towards the child. Some Muslim scholars have suggested adding male circumcision (*khitān* [*q.v.*]), regarded as an act of purification and incorporation into the community of faithful (Van Gennep, 72), to the ceremonies of the seventh day. However, most say that circumcision should be performed later, at the age of seven (when the male child, under his father's supervision, starts his systematic religious education) or ten or even thirteen years. In the latter case, it is probably designed to mark the beginning of adolescence and to prepare the child for marriage (Motzki, *ibid.*, 416-17). Female circumcision (*khafḍ* [*q.v.*]), explained as primarily a means of

restraining a woman's sexual desire and maintaining chastity, is also practised when the girl is between six and thirteen years (on childhood rites, particularly male and female circumcision, in a contemporary Muslim community see Ammar, 116-23).

Ensuring that his children receive a good education is another of the father's duties. According to mediaeval Muslim thinkers, character training should start in early childhood, when the child's soul is still pure and impressionable and good character traits can be engraved upon it as upon a smooth stone. At this stage, protecting the child from harmful influences in its social environment is crucial. In writings inspired by Greek ethical thought, moral education is guided by the ideal of balancing the psychic forces of desire and anger. To be content with little, meekness and endurance are the traits the child should acquire through specific habits of eating, sleeping, dressing, and social conduct (see al-Ghazālī, *Iḥyā*ʾ, iii, 92-5). Recommendations concerning relaxing games and physical activity for children include the advice to teach them swimming and archery (Giladi, *Children of Islam*, 58-9). While the basic principles of faith should be inculcated as soon as the child starts talking, the age of *tamyīz* is generally perceived as the appropriate time to begin systematic education, primarily towards performing the religious commandments (see al-Ghazālī, *ibid.*, al-Ṭabarsī/al-Ṭabrisī, 175), and for sending male children to the *kuttāb* [*q.v.*] (or *maktab*) for their elementary education. The popularity of this institution in Muslim countries might have delayed by some years the induction of children into the labour force. Female children were generally educated at home by their mothers to fulfill their religious duties and to carry out household work. Obedience to God, filial piety and good conduct are the basic aims of child education (see Ḳurʾān, IV, 36; XXXI, 13, 16-9), their accomplishment ensuring the child a happy life in this world and, more important, in the Hereafter (Motzki, *ibid.*, 35-48). After they had completed their elementary education, the father was expected to help his male children choose an occupation in accordance with their talents and inclinations and train them toward their vocation (Ibn Ḳayyim al-Djawziyya, 144-5).

Instructions for the rearing and education of children of the nobility and the upper classes are included in *waṣāyā* ("injunctions") which fathers formulated for tutors (many of which are scattered through *adab* compilations, see e.g. Ibn Ḳutayba, v, 166-8; al-Djāḥiẓ, ii, 75) and in the "Mirrors for Princes" literature. Thus al-Māwardī [*q.v.*] in his *Naṣīḥat al-mulūk* (fols. 106-10) makes the selection of a good woman as the future mother the starting point of his discussion. Special emphasis is laid on the moral and physical education of princes and on enriching the curriculum of their elementary education (usually consisting mainly of Ḳurʾān) with studies of language, history and poetry.

Parents were believed to be questioned (and accordingly rewarded in the Hereafter) as to how they had fulfilled their duties towards their offspring, particularly in the domain of education, since God regarded these as more important than the obligations children had towards their parents (Ibn Ḳayyim al-Djawziyya, 136; al-Ghazālī, *Iḥyā*ʾ, iii, 92).

Many parents in pre-modern Muslim societies experienced the loss of one or more children. The generally high rates of infant and child mortality rose even more drastically as a result of recurring epidemics of the Black Death, particularly from the 8th/14th century onwards. Juridical and theological writings deal with the ways in which deceased infants and children should be treated, and with their fate in the Hereafter. The focus of legalistic considerations is whether or not the child is to be regarded as a human being in the full sense of the word. The answer given by some well-known jurisconsults, like al-Sarakhsī (ii, 57), is in the affirmative. This means, for instance, that the coffin of a dead child is to be borne by people, not on the back of an animal, and that the washing of an infant's corpse and the prayer for him should be exactly the same as for a deceased adult. Ḳurʾān commentators, theologians and heresiographers discuss such issues as whether or not children are questioned in the grave, whether children of unbelievers are sent by God to Hell, whether God punishes children in the Hereafter, and the exact status of Muslim children in Paradise (Rosenthal, 9-15). Discussions of this sort, abstract as they were, mirror, in some cases, certain concepts of childhood and attitudes towards children.

Like *ḥadīth* compilations, early Muslim sources contain much material on how to react to children's death, which later, against the background of the Black Death, were collected in special, apparently widely circulated, consolation treatises for bereaved parents (see e.g. al-Manbidjī, al-Ḳaysī and al-Sakhāwī, all from the 8th-9th/14th-15th centuries). Their main task was not to deal with the theological problems involved in the death of innocent creatures but rather to help bereaved parents cope with outbursts of emotions and with the psychological difficulties they experienced. Most interesting in these treatises, as well as in a few lamentation poems written for or by bereaved fathers (see e.g. Ibn al-Rūmī, *Dīwān*, Cairo 1973-9, i, 244, ii, 625, 6; Ibn Nubāta, *Dīwān*, Cairo 1905, 156, 218, 347, 348, 546), are the tension between the emotional-spontaneous type of reaction, on the one hand, and the religious-"rational" one, on the other, and the efforts to harmonise them. They bring to light strong psychological attachments resulting in moving emotional reactions in case of death but also call for restraint and control and even point out the religious "advantages" of children's death. However, these efforts too of Muslim scholars to impose on the believers a certain cultural pattern for the emotional expression of grief often reveal a degree of understanding of basic psychological needs. Although lacking any precise information on mortality rates in pre-modern Muslim societies, consolation treatises can give us a clear idea of the dimensions of the problem and draw a partial picture of the circumstances of children's lives and causes of their deaths.

The burial of deceased infants as adults, strong psychological ties between parents and children expressed through intense, heart-rending grieving in cases of children's death, difficulties in comforting bereaved parents as well as opposite reactions of restraint and control are all part of contemporary Muslim communities. However, the link between them and Islamic ethics is not always unequivocal (Granqvist, 90-2; Wikan, 451-3).

4. Children in society.

Any child born to Muslim parents is regarded as Muslim. According to the rule, formulated by a *ḥadīth*, that Islam "overcomes" other religions (*yaʿlū wa-lā yuʿlā*) (al-Bukhārī, *K. al-Djanāʾiz*, *bāb* 80) this is true also when only one parent is Muslim. Al-Sarakhsī (v, 210), on the other hand, maintains that the child follows his father's faith (...*al-walad*... *muslim bi-islām al-ab*).

According to some legal opinions, the fact that children lack responsibility (*takalluf*), that they are

neither rewarded nor punished for their deeds (*marfūʿ al-ḳalam*), that they are not even addressed by religious preaching (*ghayr mukhāṭab bi 'l-islām*), makes their conversion to Islam (or their apostasy) invalid (al-Sarakhsī, x, 120, 122, 123). Other debatable questions are whether children should be obliged to pray, to fast during Ramaḍān, to pay legal alms, to make a pilgrimage, or even whether children may be allowed to serve as *imāms* in public prayer. Even though they are aware of the special religious status of children, there is no agreement between jurists on these questions. Thus for both Ibn Masʿūd and Ibn ʿAbbās a child could not lead in prayer since it is not one of the "people of perfection" (*ahl al-kamāl*) (Ibn Ḳudāma, ii, 54). A common argument is that the observance of religious commandments, particularly prayer and the fast of Ramaḍān, is for children of an educational rather than formal-religious significance.

The special legal status of the child is reflected also in spheres outside the purely ritual domain. Being subject to legal disability or interdiction (*ḥadjr*) children, like the insane (*madjnūn*) and the idiot (*maʿtūh*), do not have the capacity to contract and to dispose (*taṣarruf*), do not owe full obedience to criminal law and therefore cannot be punished as Muslims who are sane and come of age. Thus a minor may be guilty of deliberate homicide, but because legally he is not considered capable of forming a criminal intent, he is not subject to the death penalty (Coulson, 179). Still, Islamic law distinguishes between various stages of childhood: The infant (*ṭifl*), who is wholly incapable, can incur certain financial obligations. A minor (*ṣabiyy, ṣaghīr*) has in addition the capacity to conclude purely beneficial transactions and to accept donations and charitable gifts. An intelligent (*ṣabiyy yaʿḳilu*), discriminating (*mumayyiz*) minor, moreover, can adopt Islam, enter into a contract of manumission by *mukātaba*, if he is a slave, and carry out a procuration (Schacht, 124-5).

That Islamic law allows child marriage seems to contradict its general attitude of protection towards children. The *Sharīʿa* may have been following the social practice of the Islamic core countries in the 1st-4th/7th-10th centuries. Little is known about the frequency, the possibly differential regional distribution, manner of functioning and motives of child marriage, though the issue is raised, sometimes rather frequently, in pre-modern *fatāwā* collections from regions as far afield as Morocco (al-Wansharīsī, iii, 30, 90, 96, 130, 195, 281, 292, 378) and Palestine (Motzki, *Muslimische Kinderehen*, 82-90). Contemporary ethnological and sociological field studies have shown that in various regions and milieux of the Middle East there exists a practice of marriages in which either one or both partners are children. However, more recent family legislation in Islamic states prescribing a minimum age for social and demographic reasons has led to a marked decline in the number of child marriages [see NIKĀḤ]. From *al-Fatāwā al-Khayriyya* by the Ḥanafī jurisconsult Khayr al-Dīn al-Ramlī (993-1081/1585-1670), it emerges that the minors involved were predominantly girls, that marriage contracts were made up for them while their ages ranged anywhere between birth and sexual maturity, and that generally neither the wedding nor marital sexual intercourse were postponed until they had reached sexual maturity (Motzki, *ibid.*).

The sexuality of infants was deemed insignificant and males could be dressed, for instance, in silk clothes more typical of women (Ibn Ḳudāma, i, 629). This was no longer allowed for older children the moment adults noticed their budding sexuality (al-Ghazālī, *Iḥyāʾ*, iii, 93). *Ḥadīth* and *fiḳh* compilations recommend separating children in bed when they have reached the age of ten (according to one version, six), having adults avoid washing children of the other sex as soon as they are seven years, and even consider any form of physical contact between a mother and her six-year-old daughter a form of adultery (Ibn Bābawayh, iii, 275-6; Ibn Ḳudāma, ii, 313-4, 400; al-Djūghī, fol. 66a), thus reflecting the awareness of the latent sexuality of children approaching maturity. The popularity of child marriage renders this awareness even more obvious.

It is told of the Prophet that he did not allow the fourteen-year-old Ibn ʿUmar to join the Muslim fighters at Uḥud, but a year later agreed to include him among the warriors of the battle of Khandaḳ (al-Shāfiʿī, vi, 135). While reaffirming the age of fifteen as a criterion of majority, this *ḥadīth* reflects a general Islamic objection to the participation of children in war. The prohibition, attributed to the Prophet (see e.g. Mālik b. Anas, 163-4), against the killing of an enemy's children (and women) in time of war is also important here. In his explanation, Ibn Taymiyya (*Madjmūʿ fatāwā*, xvi, 80) bases himself on a threefold argument: (a) like Muslim children, the enemy's children, from the juridical point of view, are to be regarded as innocent and not responsible; (b) like women in the enemy's homeland, they are not a part of the fighting force; and (c) there is always the possibility for them to become Muslims.

The Ḳurʾān calls for a just treatment of a fatherless child (*yatīm*). Nineteen texts make mention of children of such status, the earliest speaking of God's providential care of Muḥammad. Several verses from the Meccan period forbid any harsh and oppressive treatment of fatherless children, urge kindness and justice towards them, particularly in the matter of property rights, and speak of feeding them as well as the poor. Exhortations to respect the property rights of children as well as to provide for their security by marrying them off are included in some of the Medinan *sūras* (O'Shaughnessy, 35-8) and echoed in later legal writings (see e.g. al-Sarakhsī, xv, 129; al-Djūghī fols. 66a-b). Orphanages and foundling homes were unknown in pre-modern Muslim societies (unlike their European counterparts), so that caring for these children and educating them was the responsibility of relatives. An abandoned child (*laḳīṭ* [*q.v.*], *manbūdh*) was also brought up within an individual family. That the practice of abandonment was known in mediaeval Muslim societies, probably as a means for regulating family size or as a device for disposing of illegitimate children, can be inferred from the juridical literature. Questions such as the status of the foundling and his religious identity, his maintenance, the management of his property, claiming abandoned children and the like are rather frequently dealt with (see e.g. Mālik b. Anas, 293; al-Shāfiʿī, vi, 263; al-Samarḳandī, i, 315-16).

A preference for males is typical of Muslim societies with a patrilineal family structure. The majority of the utterances in Arabic-Islamic sources that show understanding and sympathy for children refer to males. That females were discriminated against from birth is shown, *inter alia*, by the efforts religious scholars made to counteract this practice by praising fathers devoted to their daughters (Ibn al-Djawzī, 356-9) and denouncing the rejection of newborn females that sometimes led fathers to wish them dead (Ibn Ḳayyim al-Djawziyya, 10-13). It is against this background that differences in treating and educating male and female children and even female infanticide are to be explain-

ed. It should be emphasised, however, that infanticide was committed not only on females and that it was not necessarily always motivated by feelings of hatred or contempt for the victim (see above). Occasionally, jurists made attempts to close (or at least minimise) the gap between female and male children where religious status or education were concerned. Thus, while the common view was held that the urine of only female children was unclean, Ibn Ḳudāma (i, 734-5) claimed that the urine of children in general was impure. Statements, rare as they are, concerning the validity of the prayer of an intelligent female child, like that of her male counterpart (*ibid.*, i, 647), or regarding the obligatory status of female circumcision (Ibn al-Djawzī, 144) should also be mentioned in this context. Scholars urge Muslims to grant their daughters a basic religious and moral training, and there are testimonies to the effect that special institutions of elementary education for female children existed in mediaeval Muslim societies (Ibn al-Ukhuwwa, 171). Among the authors of consolation treatises for bereaved parents, Muḥammad b. ʿAbd al-Raḥmān al-Sakhāwī [*q.v.*] seems to have been particularly sensitive to the impact of female children's deaths and quotes an impressive number of narratives which pertain to bereaved mothers (Giladi, "*The child was small*"..., 382-5).

Contemporary Middle Eastern thinkers have drawn attention to the significance of Islamic as well as local-customary traditional attitudes towards children, of parent-child relations in patrilineal families and of the traditional methods of formal education in Islamic countries as influential factors in their societies (Bouhdiba, *The child and the mother*..., 126-41; Sharabi, 240-56). The growing awareness of the pschological and socio-cultural role of rearing and educating children and of their status in society is reflected in the relatively new inclination of authors of autobiographies to devote whole chapters, sometimes even entire works, to their childhood (see e.g. Ṭāhā Ḥusayn; Sayyid Ḳuṭb; Aḥmad Amīn; Ḥusayn Aḥmad Amīn).

ṢAḤĀBA (a.), (pl., sing. *ṣaḥābī*, other plural forms are *aṣḥāb*, *ṣaḥb*, *ṣuḥbān*) are the Companions of the Prophet Muḥammad, who in many respects are key-figures in the early history of Islam. In the critical approach of tradition (*ʿilm al-ridjāl* [*q.v.*]), which is a section of *ḥadīth* literature, they are considered as reliable transmitters of statements, deeds and instructions of the Prophet. Their own deeds and statements, too, are worthy of imitation, particularly in the history of Islamic rites.

The first endeavours to define the *ṣaḥāba* as a distinct group of individuals, and to establish the most important criteria according to which someone might be given the title of *ṣaḥābī*, probably reach back to the outset of the 2nd/8th century. At the beginning of the *K. Faḍāʾil aṣḥāb al-nabī* of his *Ṣaḥīḥ*, al-Bukhārī [*q.v.*] gives a short definition of a *ṣaḥābī*, which, however, needs further interpretation. According to him, such an individual, while being a believing Muslim, must have accompanied (*ṣaḥiba, lahu ṣuḥba*) the Prophet or have seen him. It has always remained a point of discussion whether the simple fact of having seen (*ruʾya*) the Prophet is sufficient in this respect. In general, participation in a number of the Prophet's campaigns, adulthood (*bulūgh al-ḥulum*), and capability of transmitting directly from the Prophet were basic prerequisites. According to a passage in Ibn al-Athīr (*Usd al-ghāba*, ed. Tehran, n.d., i, 12), the division of the *ṣaḥāba* in classes was already common in the time of al-Wāḳidī (130-207/747-823 [*q.v.*]) at the latest. He clearly speaks of a classification of the *ṣaḥāba* according to their pre-eminence in Islam (*ʿalā ṭabaḳātihim wa-taḳaddumihim fi 'l-islām*). For this, the moment of conversion to Islam was evidently of particular importance. Ibn Saʿd (*al-Ṭabaḳāt al-kubrā*, ed. Sachau *et alii*, Leiden 1905-40) places the moment of conversion in a clearly defined historical context: certain individuals accepted Islam before the Prophet entered the house of al-Arḳam b. Abi 'l-Arḳam in the neighbourhood of Ṣafā (Ibn Saʿd, iii/1, 34, ll. 21-3; 59, ll. 10-11; 62, ll. 15-7; 88, ll. 2-4; 107, ll. 5-7; 116, ll. 21-3; 164, ll. 16-8, etc.; for further references, see M. Muranyi, *Die ersten Muslime von Mekka*... in *JSAI*, viii [1986], 28). This circle of early Muslims (*aslama ḳadīm^an/kāna ḳadīm al-islām*) is also designated as *al-sābiḳūn/al-sābiḳūn al-awwalūn* who, after ʿUmar b. al-Khaṭṭāb had entered al-Arḳam's house, counted 53 persons (see the list in al-Dhahabī, *Siyar aʿlām al-nubalāʾ*, ed. Shuʿayb al-Arnāʾūṭ and Ḥusayn al-Asad, Beirut 1990⁷, i, 144-5).

The *sābiḳūn* are also mentioned in Ḳurʾān, IX, 100, and LVI, 10. Ḳurʾān exegesis (*tafsīr* [*q.v.*]) already defines them in the light of the historical events of Muḥammad's prophethood and considers as *sābiḳūn* those Muslims who prayed in both directions, viz. Jerusalem and Mecca, who emigrated with Muḥammad to Medina, and who took part in the battle of Badr [*q.v.*] and in the treaty of al-Ḥudaybiya [*q.v.*]. The latter are also called *aṣḥāb al-shadjara*, i.e. those who took the oath of allegiance to the Prophet (*bayʿat al-riḍwān*) under the tree in the oasis of al-Ḥudaybiya.

The élite of the Meccan Muslims are also designated as the (first) Emigrants (*al-muhādjirūn* (*al-awwalūn*)), i.e. those who had joined the Prophet by March 628 (al-Ḥudaybiya at the latest, or, according to another interpretation, by January 624 (the date of the change of the *ḳibla* [*q.v.*].

Members of Arab tribes, who settled at Medina after their conversion to Islam and thus renounced returning to their tribes, are also designated as *muhādjirūn*. However, in the endeavours of classification carried out by the following generations, these individuals do not appear among the "Emigrants" from Mecca, who emigrated with Muḥammad—or shortly afterwards—to Medina.

The above-mentioned classification cannot be established for the Medinan "Helpers" (*al-Anṣār* [*q.v.*]). Mentioned are only those representatives of the two main tribes of Yathrib [see MADĪNA]—the Aws and the Khazradj—who took part in the secret meetings which the Prophet held at al-ʿAḳaba [*q.v.*] in order to negotiate guarantees of protection for himself and for the Meccan emigrants at the eve of the Hidjra [*q.v.*]. The *Anṣār* did not take part in Muḥammad's campaigns before Badr (Ibn Saʿd, ii/1, 6, l. 16; al-Wāḳidī, *Kitāb al-Maghāzī*, ed. M. Jones, London 1966, i, 11, 48).

The moment of conversion to Islam and the participation in the campaigns of the Prophet were of particular importance for the economic and social position of the *ṣaḥāba* and of their descendants. These aspects seem to have been taken into consideration when, under ʿUmar b. al-Khaṭṭāb, the lists for endowments were established (see G.R. Puin, *Der Dīwān von ʿUmar b. al-Ḫaṭṭāb*, diss. Bonn 1970).

Early lists in the Maghāzī literature, among which is a papyrus fragment of the 2nd/8th century with the names of the fighters at Badr (A. Grohmann, *Arabic papyri from Ḫirbet al-Mird*, Louvain 1963, 82-4), confirm the keen interest of historiography in the above-mentioned endeavours of classification. Ibn Saʿd composed his *K. al-Ṭabaḳāt al-kubrā* on the basis of this principle of classification, and also from old lists given by the historiographers. In the first class (*ṭabaḳa*) are mentioned the *ahl al-sābiḳa*, the fighters at Badr from among the Meccan Emigrants and the *Anṣār*, the twelve *nuḳabāʾ* of al-ʿAḳaba and some Muslims whose participation in the battle of Badr cannot be proved beyond doubt. In the second class are found the Emigrants who were converted at an early date and had migrated to Abyssinia, and the fighters at Uḥud [*q.v.*]. A third class, only known to us through allusions by Ibn Ḥadjar al-ʿAsḳalānī [*q.v.*], comprises the participants in the "Battle of the Ditch" (*khandaḳ* [*q.v.*] (see *al-Iṣāba fī tamyīz al-ṣaḥāba*, ed. A. Sprenger, Calcutta 1853-4, i, 445 no. 1047). In still another class, Ibn Saʿd brings together the individuals who were converted before the conquest of Mecca. Another group of early Muslims, who accepted Islam during the Prophet's stay at Mecca, are the so-called *mustaḍʿafūn*, a term which W.M. Watt (*Muhammad at Mecca*, Oxford 1953, 88, 96) renders with "those who are considered weak". They represent the class of Meccans who were socio-economically weak and destitute, and who were prevented by their clans from participating in the Hidjra. According to Ḳurʾān exegesis, Sūra IV, 75, refers to this group of the oldest *ṣaḥāba*.

The good qualities and virtues of the *ṣaḥāba*, measured against their early merits for Islam (*manāḳib, faḍāʾil*), were a favourite theme already in the narrative art of the oldest historiographers of the early 2nd/8th century. The works of the 3rd/9th century known as *muṣannafāt* [*q.v.*] in their turn devote a special *kitāb* to this theme: *faḍāʾil aṣḥāb al-nabī, manāḳib al-anṣār*. In the meantime, specific collections were devoted to the ten Companions of the Prophet to whom he is said to have promised paradise (*al-mubashsharūn al-ʿashara*), namely the four "rightly guided" caliphs, Ṭalḥa b. ʿUbayd Allāh, al-Zubayr b. al-ʿAwwām, ʿAbd al-Raḥmān b. ʿAwf, Saʿd b. Mālik, Saʿīd b. Zayd and Abū ʿUbayda ʿĀmir b. al-Djarrāḥ [*q.vv.*] (see e.g. al-Muḥibb al-Ṭabarī, *al-Riyāḍ al-naḍira fī manāḳib al-ʿashara*, ²Ṭanṭa 1953).

Due to the narrative art of the historiographers, the *ṣaḥāba* in later times gradually took on charismatic features. In Sunnī Islam, abuse of them (*sabb al-ṣaḥāba*) is considered as a sin and, according to many interpretations, is even to be punished by death. It is a duty to pronounce the *tarḍiya*, i.e. the eulogy *raḍiya 'llāhu ʿanhu*, when one mentions the name of a Companion of the Prophet.

Historiography, local history in particular, deals in detail with information which has been transmitted

about the stay of *ṣaḥāba* in provincial towns. One-third of the *K. Futūḥ Miṣr wa-akhbāruhā* by the Egyptian author Ibn ʿAbd al-Ḥakam (d. 257/871) (ed. C.C. Torrey, New Haven 1922) consists of lists of those Companions who stayed in Egypt and whose traditions circulated there. Similar lists originated also in other localities: Aḥmad b. Muḥammad b. ʿĪsā (second half of the 3rd/9th century), *Kitāb Ṭabaḳāt ahl Ḥimṣ/Taʾrīkh al-Ḥimṣiyyīn*; Aslam b. Sahl b. Aslam b. Baḥshal, *Tasmiyat al-ḳarn al-awwal al-ḳādimīn madīnat Wāsiṭ min ṣaḥābat rasūl Allāh* (ed. Dj. ʿAwwād, Baghdād 1967, see W. Hoenerbach, *Über einige arabische Handschriften in Bagdad und Tetuan*, in *Oriens*, viii [1955], 103 ff.); Saʿīd b. ʿAbd al-Raḥmān al-Ḳushayrī (d. 334/946), *Taʾrīkh Raḳḳa wa-man nazalahā min aṣḥāb rasūl Allāh* (see *GAS*, i, 348). The *K. Taʾrīkh Dārayyā* by ʿAbd al-Djabbār b. ʿAbd Allāh b. Muḥammad al-Khawlānī (d. *ca.* 365-70/975-80, see *GAS*, i, 348) contains a chapter on the *ṣaḥāba* of the town: *dhikr man nazala Dārayyā min aṣḥāb rasūl Allāh*... (ms. Tunis, Aḥmadiyya, no. 15881, fols. 2b-4a; *GAS*, i, 348, is to be corrected accordingly). Many fragments from these works, and from others which have been lost, are found in Ibn Ḥadjar al-ʿAsḳalānī, *al-Iṣāba*, and in *Istīʿāb fī maʿrifat al-aṣḥāb* by the Cordovan Ibn ʿAbd al-Barr al-Namarī (d. 1070 [*q.v.*]) (ed. al-Bidjāwī, Cairo n.d.).

While Islamic historiography—apart from some controversial representations among Islamic sects—depicts almost without criticism the contribution of the *ṣaḥāba* to the early history of Islam and their historical role in it, *ḥadīth* literature and criticism of the late 2nd/8th and early 3rd/9th centuries apply other standards. It is true that they do not call into question the credibility of individual Companions of the Prophet as transmitters of his statements and as prime witnesses of his deeds, but an *isnād* [*q.v.*] with a specific *ṣaḥābī* as prime witness is nevertheless preferred to another one.

SAḤĀBĪ ASTARĀBĀDĪ, Kamāl al-Dīn, Persian poet of the 10th/16th century, born in Shushtar [*q.v.*]. He is known as Astarābādī after his father's place of origin, which was Astarābād, and also as Shūshtarī after his own place of birth. Some writers have called him Nadjafī since he lived for forty years at Nadjaf, where he went towards 970/1562-3 during the reign of the Ṣafawid ruler Ṭahmāsp I (930-84/1524-76). During his stay in that city, he studied and taught, as one of the jurists of his time, at the holy shrine attached to ʿAlī's tomb. The author of the *Haft iḳlīm*, Amīn Aḥmad Rāzī [*q.v.*], describes him as a man of austere habits whose pious living endeared him to people of all classes. He died at Nadjar in 1010/1601-2, and was buried there.

Saḥābī's poetical output consists chiefly of *ghazals* and *rubāʿīs*. He was also the author of a *mathnawī*, based upon a Ṣūfī theme and employing the same metrical form as that used by Niẓāmī for his *Bahrām-nāma* (*Haft paykar*). It comprises 343 couplets and was dedicated to Shāh ʿAbbās I (r. 996-1038/1588-1629). Saḥābī is remembered essentially for his *rubāʿīs*, the total number of which is most probably around 6,000. Some early writers, however, place the figures much higher, but the numbers quoted by them appear to be exaggerated. In his poetry, Saḥābī deals with mystical and moral themes. He was one of the chief poets of the Ṣafawid period whose verse, according to Shiblī Nuʿmānī, reflects a philosophical colour (cf. *Shiʿr al-ʿAdjam*, v, 3rd ed., Aʿẓamgarh 1942, 209). Besides poetry, Saḥābī also composed, in mixed prose and verse, a Ṣūfī treatise (*risāla*), entitled *ʿUrwat al-wuthḳā* ("The true faith").

SAHARA [see al-ṢAḤRĀʾ].

SAHĀRANPŪR, a city of northern India in the uppermost part of the Ganges-Djamnā Doʾāb (lat. 29° 57′ N., long. 77° 33′ E.), now in the extreme northwestern tip of the Uttar Pradesh State of the Indian Union.

It was founded in *ca.* 740/1340, in the reign of Muḥammad b. Tughluḳ [*q.v.*] and was named after a local Muslim saint, Shāh Haran Čishtī. The city and district suffered severely during the invasion of Tīmūr; in 932/1526 Bābur traversed them on his way to Pānīpat, and some local Mughal colonies trace their origin to his followers. Muslim influence gained much by the proselytising zeal of ʿAbd al-Ḳuddūs, who ruled the district until the reign of Akbar. Under Akbar, it was the centre of a *sarkār* and important enough to be a mint place. In the reigns of Djahāngīr and Shāh Djahān, Sahāranpūr was a favourite summer resort of the court, owing to the coolness of its climate and the abundance of game in its neighbourhood. Nūr Djahān had a palace in the village of Nūrnagar, which perpetuates her name, and the royal hunting seat, Pādshāh Maḥall, was built for Shāh Djahān. After the death of Awrangzīb, the district suffered severely from the inroads of the Sikhs, who massacred Hindūs and Muslims indiscriminately, until, in 1716, they were temporarily crushed by the imperial Mughal authority. The upper Doʾāb then passed into the hands of the Sayyids of Bārha [*q.v.* in Suppl.], and on their fall in 1721 into those of several favourites. In 1754 Aḥmad Shāh Durrānī conferred it on the Rohilla, Nadjīb Khān [*q.v.*], as a reward for his services at the battle of Kotila. Before his death, in 1770, it was overrun by Sikhs and

Marāthās. His son Ḍābiṭ Khān revolted from Dihlī, but was reconciled, and his son Ghulām Ḳādir, who succeeded him in 1785, established a strong government and dealt firmly with the Sikhs. He was a coarse and brutal chief, and in 1788 he blinded the emperor Shāh ʿĀlam, being subsequently justly mutilated and put to death by Sindhya. Sahāranpūr remained nominally in the hands of the Marāthās, but actually in those of the Sikhs, until its conquest and occupation by the British after the fall of ʿAlīgaṙh and the battle of Dihlī in 1803. Sahāranpūr was only slightly affected by the Sepoy Mutiny of 1857-8, even though this last broke out in the nearby city of Meerut [see MĪRAṪH], with order restored by a Gurkha force by the end of 1857.

It is now the administrative centre of a District of the same name, a meeting-place for roads and railways and a centre for agriculture and food processing. The population of the city was 225,700 in 1971; at the opening of the 20th century, a majority of this urban population was Muslim, but many of these migrated to Pakistan after 1947.

(T.W. HAIG-[C.E. BOSWORTH])

AL-**SAHBĀʾ**, is the name of a wādī in the al-Khardj [*q.v.*] district of Nadjd [*q.v.* and see AL-ḤAWṬA], the central province of modern Saudi Arabia. The word itself is the feminine of an adjective of the form *afʿalu*, but it has no comparative or superlative signification (Wright, *Grammar*, i, 185A, cf. AL-ṢAḤRĀʾ). It is related to *sahb*, pl. *suhub* "desert, level country". The large valley runs eastwards into the Gulf basin across the sand desert of al-Dahnāʾ [*q.v.*] and, north of Yabrīn, of al-Djāfūra (see the map in AL-ʿARAB, DJAZĪRAT).

(E. VAN DONZEL)

SAḤBĀN WĀʾIL, the name given to an orator and poet of the tribe of Wāʾil, "whose seductive eloquence has passed into a proverb and who, it is said, whilst addressing an assembly for half-a-day, never used the same word twice" (Kazimirski, *Dictionnaire*, i, 1057; see *LʿA* and the other lexica). Speaking of the random effects of chance, whereby some person became a household word whereas others, equally meritorious, do not, al-Djāḥiẓ (*Ḥayawān*, ii, 104), cites Saḥbān Wāʾil, who was eclipsed by his contemporary Ibn al-Ḳirriyya, murdered by al-Ḥadjdjādj in 84/703 (*loc. cit.*, n. 5).

In his eulogy of the book (*al-kitāb*), the same al-Djāḥiẓ (*ibid.*, i, 39) says: "If you wish, it can be more eloquent for you than Saḥbān Wāʾil or more tongue-tied than Bāḳil" (an adolescent), echoing a proverb which figures in all the collections, where it is said "more convincing (*ablagh*) than Saḥbān Wāʾil, whereas one says "clearer (*afṣaḥ*) than Ḳuss b. Sāʿida [*q.v.*]" (cf. al-Nuwayrī, *Nihāya*, Cairo 1924, ii, 119).

Al-Ṭabarī, *Taʾrīkh*, ii, 1257, attributes to him seven verses in which he praises the courage of the army of Ḳutayba b. Muslim (49-96/669-715 [*q.v.*]) in the course of the conquest of Afghānistān between 89/705 and 90/706, notably, at the time of the conquest of Khokand [*q.v.*], which would indicate that Saḥbān was still alive in the caliphate of al-Walīd I (86-96/705-15).

(T. FAHD)

ṢĀḤIB (A.), "companion", a term with various senses in Islamic usage. Formally it is an active participle of the transitive verb *ṣaḥiba yaṣḥabu* "to associate with", but semantically a pure noun; it thus cannot govern an object in the accusative. The most common plural is *aṣḥāb*, of which the double plural (*djamʿ al-djamʿ*) *aṣāḥīb* is given in the dictionaries, while its "diminutive of the plural" (*taṣghīr al-djamʿ*) *uṣayḥāb* is attested (Wensinck, *Concordance*, s.v.). Other plurals include *ṣaḥb* (a collective noun), *ṣiḥāb* and *ṣuḥbān*, the verbal nouns *ṣuḥba* and *ṣaḥāba* are also employed as plurals (collectives). For the Companions of the Prophet one finds *ṣaḥb*, *aṣḥāb*, and specifically *ṣaḥāba* [*q.v.*], the last of which yields the designation of the individual, *ṣaḥābī*, by *nisba* formation (a procedure not uncommon with collective nouns). In the vocative the truncated form (*tarkhīm*) *yā ṣāḥi* for *yā ṣāḥibī* "O my companion" is well attested. The fem. is *ṣāḥiba*, with the plural *ṣawāḥib* and the double plural *ṣawāḥibāt* (cf. Wensinck, *Concordance*, s.v.).

Ṣāḥib, in its various semantic transformations, has produced a considerable number of titles, allusive names, and some technical terms, mostly by being the first term in a genitive construct. The idea of "companion" is specialised in cases where one speaks of the *ṣāḥib* of a poet, soothsayer, or orator, meaning his *alter ego* among the *djinn* from whom he receives (some of) his inspiration (also called *shayṭān* [*q.v.*], *raʾī*, and *tābiʿ*); this is a pre-Islamic notion, but one that lives on in Islamic times as a literary fiction (e.g. in the *Risālat al-tawābiʿ wa 'l-zawābiʿ* of Ibn Shuhayd [*q.v.*]). Still with the meaning "companion", the term has sometimes been used to refer to the counsellors of a ruler, thus in Ibn al-Muḳaffaʿ's *Risāla fi 'l-ṣaḥāba* (see Ch. Pellat, *Ibn al-Muqaffaʿ, mort vers 140/757, "conseilleur" du Calife* [Paris 1976], 88-9). The plural *aṣḥāb* followed by the name of a locality in the genitive serves to refer to people who are companions in that particular place; thus Ḳurʾānic phrases like *aṣḥāb al-djanna*, *aṣḥāb al-nār* and *aṣḥāb al-kahf*.

In a different specialisation *ṣāḥib* may acquire the meaning of "disciple", because the student is a constant companion of his master. Thus *al-Ṣāḥibān* in Ḥanafī sources refers to the "two disciples" of Abū Ḥanīfa [*q.v.*], i.e. Abū Yūsuf [*q.v.*] and Muḥammad al-Shaybānī [see AL-SHAYBĀNĪ]. Specifically, this term is used in Ṣūfism to designate the "adept" as opposed to the *maṣḥūb*, the "master", their relationship being called *ṣuḥba* (see e.g. W.C. Chittick, *The Sufi path of knowledge*, Albany 1989, 270-4). The plural *aṣḥāb* followed by a personal name in the genitive is, alongside the *nisba* formation, the normal way of expressing the "adherents of so-and-so" or the "members of his school": *aṣḥāb Abī Ḥanīfa* = *al-Ḥanafiyya*. Al-Fayyūmī (d. 770/1368) considers this last usage figurative (*madjāz*), presumably because the school members are mostly not contemporary with the founder (*al-Miṣbāḥ al-munīr*, Beirut 1398/1978, 394).

In one of its semantic developments, the term *ṣāḥib* becomes more general: "partner", "match" (sometimes "adversary"), and finally "someone (or something) endowed with s.th. or characterised by s.th." In this last sense it ends up being synonymous with *dhū* (cf. *ṣāḥib al-ḥāl* = *dhu 'l-ḥāl*, "the noun modified by a circumstantial accusative"). Here belong the rather

popular allusive names, such as *ṣāḥib al-ḥūt* "the man with the fish = Jonah (see Sūra LXVIII, 48, and cf. the synonymous *dhu 'l-nūn* in Sūra XXI, 87); *ṣāḥib al-ḥimār* "the man with the donkey" = the Khāridjite rebel Abū Yazīd al-Nukkārī [*q.v.*] (cf. *dhu 'l-ḥimār*, nickname of the Yemeni pseudo-prophet Ayhaba at the time of the Prophet, and for the symbolism of riding a donkey, see C. Brockelmann, *Geschichte der islamischen Völker und Staaten*, Munich and Berlin ²1943, Eng. tr. *History of the Islamic peoples*, London 1949, 49); *ṣāḥib al-nāḳa* "the man with the she-camel" and *ṣāḥib al-shāma* "the man with the mole" = the two Ismāʿīlī agitators Yaḥyā b. Zikrawayh and al-Ḥusayn b. Zikrawayh (see F. Daftary, *The Ismāʿīlīs, their history and doctrine*, Cambridge 1990, 132). This type of cognomen seems to be particularly common with religious rebels and "liberators" and has the air of being a code and/or taboo name. This type may also occur in the plural: *aṣḥāb al-fīl* "those with the elephant" (Sūra CV, 2). In the same semantic category belongs the plural *aṣḥāb* followed by an abstract noun in the genitive to denote adherents of a specific concept: *aṣḥāb al-tanāsukh* "the believers in metempsychosis", *aṣḥāb al-raʾy* "the proponents of juridical discretion" as opposed to the *aṣḥāb al-ḥadīth* "the proponents of (the exclusive use) of Prophetic Tradition." The last example shows that, even with a concrete noun (*ḥadīth* being a corpus of texts), the resulting compound may still belong in this category, with "belief in", "defence of", or a similar notion being understood. Thus e.g. *ṣāḥib al-dīk* and *ṣāḥib al-kalb* "the advocate of the rooster" and "the advocate of the dog" (in al-Djāḥiẓ, *al-Ḥayawān*, passim); obviously, these expressions could also mean the "owners" of the rooster and the dog.

By narrowing the semantic field just mentioned one arrives at the notion of "possessor, owner, lord, chief." In the legal sense of ownership one finds it in *ṣāḥib al-bayt* "the owner of the house" and similarly in *ṣāḥib al-dayn* "debtor." In the sense of "chief" it forms part of the designation of a good many administrative offices: *ṣāḥib al-djaysh* "army chief", *ṣāḥib al-barīd* "chief of intelligence", *ṣāḥib al-shurṭa* "police chief", *ṣāḥib al-sūḳ* "market inspector" (= tr. of Grk. *agoranomos*, later on called *muḥtasib*, cf. J. Schacht, *An introduction to Islamic law*, Oxford 1964, 25), *ṣāḥib al-dīwān*, or Persian *ṣāḥib-dīwān* "chief financial administrator under the Īlkhāns, on a par with the vizier." Somewhat removed, but still in the same category, the author of a book may be called *ṣāḥib al-kitāb*. Used with the title of a famous book, this would again result in an allusive name: *ṣāḥib al-Kashshāf* "the author of the *Kashshāf*", i.e. al-Zamakhsharī, author of the Ḳurʾānic commentary of that title.

(W.P. Heinrichs)

ṢĀḤIB ATĀ OGHULLARÎ, the modern designation for the descendants of the Rūm Saldjūḳid vizier Fakhr al-Dīn ʿAlī (d. 687/1288), known as Ṣāḥib Atā. Literary sources record two sons of Fakhr al-Dīn, Tādj al-Dīn Ḥusayn, the eldest (Ibn Bībī, ed. M.Th. Houtsma, *Histoire des Seldjoucides d'Asie Mineure*, Leiden 1902, iii, 337) and Nuṣrat al-Dīn (Aḳsarāʾī, ed. Osman Turan, *Musāmarat al-akhbār*, Ankara 1944, 74). An anonymous *Tawārīkh-i āl-i Saldjūḳ* completed after 765/1363 also mentions a daughter (F.N. Uzluk, *Anadolu Selçukluları devleti tarihi*, Ankara 1952, *facs*. text 70). The enduring influence of the family in the western borderlands of the Rūm Saldjūḳid domains dates from the years following the accession of Rukn al-Dīn Ḳilič Arslan [see ḲÎLÎDJ ARSLAN IV] to the sultanate in 644/1246, when the principality of the March (*imārat-i wilāyat-i udj*) was bestowed on Tādj al-Dīn and Nuṣrat al-Dīn, with Kütahya [*q.v.*], Sanduḳlu, Ghurghurum and Aḳshehir as an appanage. (Aḳsarāʾī, 74). The brothers evidently did not retain these lands. However, in *ca*. 670/1271 they again jointly received the commandership (*serleshkerī* = *subashîlîḳ*) of Ladîḳ, Khonas and Ḳaraḥiṣār Devele (Ibn Bībī, *op. cit.*, iv, 308). The last of these is evidently the same as Afyūn Ḳaraḥiṣār [*q.v.*], which remained in the possession of the family into the following century.

In 676/1277 both brothers lost their lives at the battle of Altuntash against the rebel Djimri [see ḲARAMĀN-OGHULLARÎ) who, for a while, occupied Ḳaraḥiṣār Devele (Aḳsarāʾī, 151). However, after his defeat and death the town evidently returned to the possession of the family of Ṣāḥib Atā. The anonymous *Tawārīkh-i āl-i Saldjūḳ* refers to a victory in 686/1287 of the Germiyānids [see GERMIYĀN-OGHULLARÎ] over the lord of Ḳaraḥiṣār, the son of Ṣāḥib Atā's daughter (Uzluk, *loc. cit.*). In his list of Turkish principalities submitting to the *noyan* Čoban [*q.v.*] after the accession of the Ilkhānid Abū Saʿīd in 716/1316, Aḳsarāʾī, 311, mentions Ḳaraḥiṣār Devele as being in the possession of the "grandsons of Fakhr al-Dīn". Al-ʿUmarī too, in about 730/1330, notes that "Ḳarasār" belonged to "Ibn al-Ṣāyib" (= al-Ṣāḥib) who possessed, in addition, a thousand villages and four thousand cavalrymen. To defend his possessions against Čoban's son, Timurtash, he had sought the protection of the lord of Germiyān through marriage to his daughter (*Masālik al-abṣār*, cited by Aḥmed Tewḥīd, in *TOEM*, 1st series, ii [1327/1909], 563 ff.). An inscription over the portal of the Ḳubbeli Djāmiʿ in Afyūn Ḳaraḥiṣār, bearing the date 731/1331, names the founder of the mosque as the "great lord" (*al-mawlā al-muʿaẓẓam*) Aḥmad b. Muḥammad, who was presumably the "Ibn al-Ṣāḥib" to whom al-ʿUmarī refers. An inscription dated 742/1341 on the Ulu Djāmiʿ in Afyūn Ḳaraḥiṣār refers to the same person as "Nuṣrat al-Dawla wa 'l-Dīn Aḥmad", describing him as "the progeny of the great viziers" (*sulālat al-wuzarāʾ al-ʿiẓām*) (Aḥmed Tewḥīd, in *TTEM*, 1st series, xi [1341/1923], 357). It is conceivable that this Aḥmad b. Muḥammad was the son of the "Shams al-Dīn Muḥammad son of (Nuṣrat al-Dīn?) Ḥasan son of (Fakhr al-Dīn) ʿAlī (Ṣāḥib Atā) son of Ḥusayn" who is buried in the Sahip Ata Mausoleum in Konya (Aḥmed Tewḥīd, *loc. cit.*).

Evidence of the family disappears in the second half of the 8th/14th century, but in the Ottoman period Afyūn Ḳaraḥiṣār continued to be known as Ṣāḥib'in Ḳaraḥiṣārî (Neshrī, ed. F.R. Unat and M.A. Köymen, *Kitāb-i Cihānnümā*, Ankara 1949, i, 65) or, from the 10th/16th century, as Ḳaraḥiṣār-i Ṣāḥib ("Ṣāḥib's Ḳaraḥiṣār").

(C. Imber)

ṢĀḤIB AL-BĀB (A.), "high chamberlain", a title borne, in Fāṭimid Egypt, by a man of the sword counted amongst the first rank of *amīrs* ("*amīrs* bearing a collar", *al-umarāʾ al-muṭawwaḳūn*). This official ranked next after the vizier, and his office, or "lesser vizierate", was in fact the stepping-stone to the vizierate for Yānis al-Rūmī, Riḍwān al-Walakhshī and Abu 'l-Ashbāl Ḍirghām b. ʿĀmir. The greater part of our information on this official duties comes from Ibn al-Ṭuwayr: he was president of the tribunal considering petitions and requests when the vizier was not a "man of the sword", and he sat at the golden

door of the palace in order to register complaints and pleas. When the vizier was a "man of the sword" and presided in person, the *ṣāḥib al-bāb*'s role as simple assistant was reminiscent of that of the *ḥādjib* amongst the Mamlūks.

The institution did not exist among the first Fāṭimids, and Ḥusām al-Mulk Aftakīn, in the time of the vizierate for al-Afḍal, was the first *ṣāḥib al-bāb* to be mentioned in the sources (beginning of the 6th/12th century). The *ṣāḥib al-bāb* was addressed as *al-Muʿaẓẓam*; the first to be thus called was the *amīr* Abu 'l-Muẓaffar Khumurtāsh al-Ḥāfiẓī in *ca.* 535/1141. His deputy, to whom he delegated the important office (called *al-niyāba al-sharīfa*) of assigning their places to envoys accredited to the court, was generally a legal figure or a religious dignitary, whom one addressed as ʿAdiyy al-Mulk. The *ṣāḥib al-bāb* occupied an important place in the processions forming part of the official ceremonies and the caliphal receptions of the later Fāṭimids [see MAWĀKIB. 1], a ceremonial occasion which Ibn al-Ṭuwayr [*q.v.*] describes in detail.

Ḥasan al-Shammāʿ, Baṣra 1967-70, iv/1, 136-7, 147; Ḳalḳashandī, *Ṣubḥ al-aʿshā*, iii, 478, 484; Maḳrīzī, *Khiṭaṭ*, i, 403, 461; idem, *Ittiʿāẓ al-ḥunafāʾ*, iii, 336, 342. (AYMAN F. SAYYID)

ṢĀḤIB GIRĀY KHĀN I, khān of the Crimea (939-58/1532-51) and khān of Ḳazan (927-30/1521-4), son of Mengli Girāy Khān I [*q.v.*] and his wife Nūr Dewlet, mother through an earlier marriage of Muḥammad Emīn (d. 925/1519), the last khān of Ḳazan [*q.v.*] in direct line from Ulugh Muḥammad, khān of the Golden Horde (1419-24, 1427-38). Half-brother of Meḥmed Girāy Khān I (920-9/1515-23 [*q.v.*]), Ṣāḥib Girāy was instrumental in this latter khān's new hostile policy against Muscovy, their father Mengli Girāy's traditional ally. In 927/1521, Ṣāḥib Girāy was able with the khān's help to drive away the Russian-backed candidate, Shāh ʿAlī, and to occupy the throne of Ḳazan, thus stressing the Girāy family's claims to the heritage of the Golden Horde. In concurrence with Meḥmed Girāy Khān I, he subsequently engaged in a struggle with Muscovy for the possession of the steppe region, which was to come to an end only 31 years later with Tsar Ivan IV's (1533-84) destruction of that khānate. In 929/1523, the brothers attacked the khānate of Astrakhān [*q.v.*], from where they ousted Ḥusayn Khān, Muscovy's candidate. In the same year, they launched a major campaign against Grand Prince Vasiliy III of Muscovy (1505-33). In the following year, as Vasiliy III prepared an expedition against Ḳazan, Ṣāḥib Girāy abdicated from the throne of Ḳazan, designated his nephew Ṣafā Girāy (first reign 930-7/1524-31) as his successor and took refuge with the Ottomans. The following eight years, Ṣāḥib Girāy stayed in Istanbul as a guest and trusted friend of sultan Süleymān Ḳānūnī (1520-66 [*q.v.*]). He not only participated in that sultan's campaigns, e.g. in Hungary in 1532, but he also became intimately acquainted with Ottoman institutions and culture.

After both the Ottoman-backed Seʿādet Girāy Khān I (1524-May 1532) and his nephew Islām Girāy Khān I (May-Sept. 1532 [*q.v.*]), who had found support with parts of the Crimean tribal aristocracy, had renounced the khānship, the Ottoman sultan confirmed with a *firmān* (reference to this is made in a document, the text and translation of which is given in *Khanat de Crimée*, 121-5; transcription in Gökbilgin 1973, 55-6) Ṣāḥib Girāy as the new khān and the former khān, Islām Girāy, as his *ḳalgha* [*q.v.*] or heir apparent. Accompanied by a large detachment of Ottoman troops (*ḳapi̊ ḳulu*), among them 360 artillerymen (*topču* and *tüfenkči*) and 1,000 Janissaries, the new khān received the homage of the representatives of the Crimean noble clans (*ḳaraču beys*) at the mouth of the Dnepr (Özü [see ÖZI]) river. He was the first Crimean khān to receive the *segbān aḳčesi* or accession money.

Obviously, the new khān had not been accepted by the entire Crimean noble families. An undated letter of a Crimean nobleman to the Ottoman sultan, probably written towards the end of 1533 or at the beginning of 1534 (See *Khanat de Crimée*, 125-7), accuses the khān of not respecting the customs and traditions of the past.

In the same letter, the sultan is asked to designate a new khān, arguing that the power struggle between Ṣāḥib Girāy Khān and his *ḳalgha* Islām Girāy, each supported by partisans from the noble clans, was threatening to ruin the country. Ṣāḥib Girāy's troubles with his nephew Islām Girāy continued until he succeeded, in 1537, in having him killed by Bāḳī Beg, one of the leaders of the eminent Crimean *ḳaraču* clan of the Manghīts and subsequently Ṣāḥib Girāy's most dangerous opponent. After this incident, the Crimean nobles who had been partisans of Islām Girāy paid allegiance to the khān.

Ṣāḥib Girāy Khān was now free to participate as a much-honoured ally in the Ottoman campaign against Moldavia (1538), which ended with the establishment of the *sandjaḳ* of Aḳkerman comprising the territories of Budjaḳ [*q.v.*], between the rivers Prut and Dnestr, and the neighbourhood of the former Tatar fortress of Özü/Očakov (cf. G. Veinstein, *L'occupation ottomane d'Očakov et le problème de la frontière lituano-tatare, 1538-1544*, in *Passé turco-tatar-Présent soviétique. Études offertes à A. Bennigsen*, Louvain-Paris 1986, 123-55). In the following year, the khān turned his attention towards his unruly Čerkes neighbours. Owing to the rugged terrain, however, the campaign was not successful, nor was another one in 1542.

In winter 1539/40, the khān sent an army of 30,000 men on a raid against Muscovy, under the command of the *ḳalgha*, his son Emīn Girāy. In winter 1541, Ṣāḥib Girāy in person led an—unsuccessful—campaign into Muscovite territory, but then finally managed to kill the Manghīt Bāḳī Beg, associated with the Noghays [*q.v.*] of the steppe who represented the most imminent threat to the Crimean Tatars and their pasture lands outside the peninsula. In 1546, Ṣāḥib Girāy's firearms dealt a severe blow to the Noghays' pre-eminence in the steppe. In 1549, he went on a punitive campaign against the khān of Astrakhān in an effort to preserve Crimean political claims in that region.

In spite of his excellent relations with the Ottoman court, at least during the first half of his rule, Ṣāḥib Girāy proved to be more than a puppet ruler in the service of sultan Süleymān's power game in the Black Sea area, or, on a different level, the preservation of the sultan's peaceful policy towards Muscovy in view of his trade interests. The khān's main political objective remained the containment of his northern neighbour. In this aim, he made regular inroads into that territory.

Both the intervention of the Shīrīn bey on behalf of the powerful Crimean aristocracy and the suspicion of Ottoman court circles in regard to Ṣāḥib Girāy's independent political action led to the khān's final downfall. Under the pretext of investing Dewlet Girāy

[*q.v.*], another "hostage" prince at the Sublime Porte, with the khānship of Ḳazan, the Ottoman sultan sent Dewlet Girāy with an Ottoman detachment to the peninsula, where he was able to win general support (Ramaḍān 958/Sept. 1551). Ṣāḥib Girāy subsequently was murdered in the fortress of Ṭāmān, together with his sons, by a partisan of his nephew and successor Dewlet Girāy, who was to become the most powerful khān of the 16th century.

Ṣāḥib Girāy Khān was considered a courageous and resourceful, though harsh ruler, both by his contemporaries and by later chroniclers. In spite of his marked taste for Ottoman civilisation, he pursued Crimean political interests by strengthening the Čingizid steppe tradition—the khān's power against that of the leaders of the tribal aristocracy (İnalcık, *passim*). It was most probably in the reign of Ṣāḥib Girāy Khān that the seat of power was transferred from Eski Ḳïrïm (Solghat) to Bāghče Sarāy [*q.v.*]. Diplomatic evidence seems to indicate that from 1533 onwards, Bāghče Sarāy was the place where the khāns had their palace and where they received foreign representatives (Fisher, *Crimean Tatars*, 29-30). ʿAbd ül-Ghaffār (*ʿUmdet ül-tewārīkh*, 101-2) mentions his building activities, a mosque, a medrese, palaces, a double bath and shops. The cultural life of the Crimean peninsula took a decisive turn towards Ottomanisation in the spheres of the military, of institutions and of the arts.

The most detailed source on both political and cultural life under Ṣāḥib Girāy Khān's reign is *Tārīkh-i Ṣāḥib Girāy Khān*, the first chronicle of Crimean Tatar history as such, completed in 960/1553, shortly after the khān's death, by Ḳāysūnī-zāde Meḥmed Nidāʾī, known as Remmāl Khʷādja, the khān's physician and astrologer.

Bibliography: The best study on Ṣāḥib Girāy Khān is by H. İnalcık, *The Khan and the tribal aristocracy: the Crimean Khanate under Sahib Giray I*, in *Harvard Ukrainian Studies*, iii-iv (1979-80), 445-66, which is partly based on Remmāl Khʷādja's work; the text was published by Ö. Gökbilgin, Ankara 1973; idem, *1532-1577 yılları arasında Kırım hanlığı'nın siyasi durumu*, Ankara 1973; Ḳïrïmī ʿAbd ül-Ghaffār used Remmāl's work in his *ʿUmdet ül-tewārīkh*, compl. in 1161/1748, ed. by Nedjīb ʿĀṣïm, in *TOEM*, *ʿilāveler*, Istanbul 1343/1924, at 99-112; Ḥalīm Girāy, *Gülbün-i khānān*, Istanbul 1287/1870, 14-18; missives from the reign of Ṣāḥib Girāy Khān were publ. in A. Bennigsen *et alii* (eds.), *Le khanat de Crimée dans les archives du musée du palais de Topkapı*, Paris 1978, 121-33, cf. also 328-30.

(B. Kellner-Heinkele)

ṢĀḤIB ḲIRĀN (A. and P.), a title meaning "Lord of the (auspicious) conjunction". *Ḳirān* means a conjunction of the planets, *ḳirān al-saʿdayn* [see AL-SAʿDĀN] a conjunction of the two auspicious planets (Jupiter and Venus), and *ḳirān al-naḥsayn* a conjunction of the two inauspicious planets (Saturn and Mars). In the title, the word refers, of course, to the former only. The Persian *i* of the *iḍāfa* is omitted, as in *ṣāḥib-dil*, by *fakk-i iḍāfa*. The title was first assumed by the Amīr Tīmūr, who is said to have been born under a fortunate conjunction, but with whom its assumption was, of course, an afterthought. After his death, poets and flatterers occasionally applied it to lesser sovereigns, even to so insignificant a ruler as the South Indian Burhān II Niẓām Shāh of Aḥmadnagar [see NIẒĀM SHĀHĪS], but it was officially assumed by Tīmūr's distant descendant, the Mughal emperor Shāh Djahān [*q.v.*], who styled himself *Ṣāḥib Ḳirān-i-Thānī* "the second Lord of the Conjunction".

Ṣāḥib-Ḳirān was also, in Persia, where it has since been corrupted into *Ḳirān* or *Ḳrān*, the name of a coin of 1000 *dīnārs*, the tenth part of a *tūmān*.

ṢĀḤIB AL-MADĪNA (A.), an administrative function found in mediaeval Islamic Spain.

Documentation for this is almost exclusively found in regard to al-Andalus. The Granadan jurist Ibn Sahl [*q.v.*], in his *al-Aḥkām al-kubrā*, mentions it amongst the six traditional functions (*khuṭṭa* or "magistratures") which gave their holders the right to pronounce judgements (the *ḳāḍī*, the *ṣāḥib al-shurṭa*, the *ṣ. al-maẓālim*, the *ṣ. al-radd*, the *ṣ. al-madīna* and the *ṣ. al-sūḳ*). According to the Valencian Ibn al-Abbār [*q.v.*], there existed until the 7th/13th century two distinct magistratures, sc. the *ṣāḥib al-madīna* and the *ṣ. al-shurṭa*. In the 8th/14th century, Ibn Saʿīd [*q.v.*] (in the great, later compilation of Andalusian culture by al-Maḳḳarī, the *Nafḥ al-ṭīb*), and in the following one, Ibn Khaldūn [*q.v.*], in his *Muḳaddima*, also mention the title of *ṣ. al-madīna*, but make it the designation of the chief of the police or *shurṭa* in Muslim Spain. However, the Sevillan Ibn ʿAbdūn [*q.v.*], who in his treatise on *ḥisba*, written towards the end of the 5th/11th century, passes in review the administrative offices in the capital at the end of the period of the Taifas and that of the first Almoravids, does not mention it. Nor does it appear in the detailed list of functions given by the Maghribī al-Wansharīsī [*q.v.*] in his *K. al-Wilāyāt*, even though this last is in part inspired by the Andalusian tradition.

Nevertheless, the Arabic sources on al-Andalus amply attest the existence of this "magistrature of the town" from the reign of the Umayyad *amīr* of Cordova ʿAbd al-Raḥmān II (206-38/822-52), who is said, according to Ibn Saʿīd, "to have separated the *wilāyat al-sūḳ* from the functions of the *shurṭa* called *wilāyat al-madīna*", until the crisis of the caliphate in the early 5th/11th century. The names of a good number of its holders are known to us. Ibn Ḥayyān's [*q.v.*] *Muḳtabis*, which used the *Annals* of ʿĪsā b. Aḥmad al-Rāzī, an author contemporary with the caliphate, testifies to the existence of two *wilāyat al-madīnas*, one for Cordova and one for the new capital of Madīnat al-Zahrāʾ. The importance of the persons holding this first charge or dignity appears from the duties entrusted to them under the amīrate and the caliphate. These were diverse, and could involve policing and public order, justice, the levying of taxes and even leading armies, all of which leads one to think that there were no strictly determined duties but rather, on a basis difficult to determine for the city of Cordova, a nexus of functions varying in extent according to the confidence placed in the holder, especially as this last often piled up for himself other offices (was it as *ḳāʾid* or *wazīr*, or as *ṣāḥib al-madīna*, that such a person holding these offices at the same time might lead a military expedition?).

Under the caliph al-Ḥakam II, the detailed descriptions of the protocollary order of official ceremonies during the years 360-4/971-5 place the *wazīr*, *kātib* and *ṣāḥib al-madīna* of Cordova Djaʿfar b. ʿUthmān al-Muṣḥafī immediately on the caliph's right; but since this concerns the "strong man" at this moment in the régime, it is hard to discern exactly under which title he held this preponderant role. It is nevertheless certain that the post was at this time a lofty one; on al-

Ḥakam's death in 366/976, al-Muṣḥafī designated the dead ruler's youngest son, Hishām II, as caliph, himself assumed the office of *ḥādjib* (which had not been filled for several years) and designated his own son *ṣāḥib al-madīna* of Cordova. A little later, in his brilliant ascension to the heights of power, Muhammad Ibn Abī ʿĀmir (the future al-Manṣūr), in the first place stripped the latter of his post in order to occupy it personally, and then eliminated al-Muṣḥafī himself and replaced him as *ḥādjib*. Afterwards, under the ʿĀmirid dictatorship, the function and title lost their importance. However, it is known that, at this time, a high personage, a cousin of al-Manṣūr's, held the title of *ṣāḥib al-madīnatayn* ("in charge of the two cities", i.e. Cordova and, it is thought, the official ʿĀmirid centre of al-Madīna al-Zāhira rather than the caliphal one of Madīnat al-Zahrāʾ, which had no importance in practice by this time).

The fact that the office seems to have existed only in al-Andalus poses a problem. It has been seen above that ʿAbd al-Raḥmān II is supposed to have created the office. J. Vallvé, in a detailed study of the history of this function under the Umayyads, has set forth the hypothesis that the *ṣāḥib al-madīna* could derive from the *comes civitatis* of the Roman and Visigothic period. The idea ought to be approached with prudence. Certainly, the sources bear witness to the existence, during the Umayyad amīrate, of an office of *ḳūmis* [*q.v.*] entrusted to a Christian, who originally had jurisdiction over the Mozarab community but who was at times the recipient of the sovereign's confidence and given various functions, including the command of the guard, the *kitāba* and the collection of taxes, even involving those from the Muslims. But the pieces of evidence adduced by Vallvé himself allow us to aver that, under ʿAbd al-Raḥmān II, there existed contemporaneously a *ḳūmis* of the Christians—for whom there are still some indications in the 4th/10th century—and a *ṣāḥib al-madīna*, and this makes the idea—in any case not very acceptable in the context of the Iberian peninsula under Islam—of a transformation pure and simple of the *comes civitatis* into the *ṣāḥib al-madīna* difficult to accept. Nevertheless, can one exclude the possibility that the change in numerical proportion between Christian and Muslim populations in Cordova in favour of the second group might, in the 3rd/9th century, have led to the transfer to a newly-created office/magistrature involving administrative and judicial functions which had been, in practice, and in the context of the capital city, exercised until then by the "count" of the Christians?

Vallvé's hypothesis endeavours to take into account an exceptional case in al-Andalus, which is complicated by the fact that, after the Reconquista, in Aragon and Navarre at the end of the 11th and beginning of the 12th centuries, the Christians gave to the municipal magistrate appointed by the king for administration and for rendering justice in the towns, the title of *justicia*, but also that of *zalmedina*, obviously a linguistic calque of the Arabic *ṣāḥib al-madīna*. The same state of affairs is attested in Christian Toledo, where there existed in the 12th century a *zafalmedina*. This leads one to suppose that, in the political capitals of principalities reconquered by the Christians at the end of the period of the Taifas, there still existed an official in the Umayyad tradition exercising the duties of *ṣāḥib al-madīna* or bearing the title.

(Mohamed Meouak and P. Guichard)

ṢAḤĪFA (A.), lit. "a flat object, a plaque, a leaf", whence "a surface or material on which one can write", applied especially to fragments of the Ḳurʾān or *ḥadīth* or any other document of a solemn nature, whence finally, the written texts themselves. The pl. *ṣuḥuf* is uncommon for feminine nouns (but cf. *madīna*, pl. *mudun* "town", *safīna* pl. *sufun* "ship").

1. Linguistic usage.

The term appears contemporaneously with the advent of Islam, but must evidently have existed before then. In Ḳurʾān, XLIII, 71, *ṣiḥāf* also appears as a pl. of *ṣaḥfa*, with the sense "plates, platters", but *ṣuḥuf* appears eight times in the sacred text. Sūras XX, 133, and LXXXVII, 18, refer to "the ancient scriptures", in LXXXVII, 19, and LIII, 36-7, described more narrowly as those of Abraham and Moses, always in the perspective of a continued revelation, from the Creation to Muḥammad, without naming the latter. But it is clearly Muḥammad who is referred to in LXXX "He frowned", and v. 13 mentions the *ṣuḥuf mukarrama* "honoured leaves". Slightly later, after the Hidjra of A.D. 622, there comes XCVIII, 2, *ṣuḥuf muṭahhara* "purified leaves". The Prophet's contemporaries, always hostile, would have liked some *ṣuḥuf munashshara* "leaves/scrolls spread out/unrolled", LXXIV, 52. Finally, to announce the end of the world, a series of utterances beginning with *idhā* "when..." describe apocalyptic events, including *wa-idhā 'l-ṣuḥuf nushirat* "when the leaves/scrolls will be spread out/unrolled" (LXXXI, 10), which could also mean the documents in which men's deeds are recorded.

Ṣaḥīfa and *muṣḥaf* and their plurals are attested in *Ḥadīth* 63 and 65 times respectively (Wensinck, *Con-*

cordance, iii, 360-1). As a leaf meant to receive a written text, the *ṣaḥīfa* could be rolled up (*ṭawā*) or spread out/unrolled (*nas͟hara*), and might often be suspended (*ʿallaḳa*) e.g. from the hilt of a sword. It was meant to be read in public and put into effect like an edict or ordinance.

The Prophet, just before his death, asked for a *ṣaḥīfa* for writing upon at his dictation (Ibn Ḥanbal, iii, 346; Ibn Mād͟ja, *Zuhd*, 7). This must refer to a blank piece of writing material, a leaf of parchment or papyrus.

According to the *Sīra* (Ibn Isḥāḳ and Ibn His͟hām [*q.vv.*]), there will be a mysterious fire which will devour the unjust person but spare the one who has suffered injustice. Two priests will come forth publicly, with their *muṣḥafs* round their necks, and walk through the fire. Idols and offerings will be consumed, but not the two *muṣḥafs* (*Sīra*, Cairo 1937, i, 24). The first Muslim migrants to Ethiopia witnessed the bishops spreading out (*nas͟harū*) their *muṣḥafs* (*ibid.*, i, 358). At the moment of ʿUmar's conversion, the latter found with his sister and brother-in-law a *ṣaḥīfa* (parchment? leaf?) on which was written the opening of sūra XX (*ibid.*, i, 364-6).

Correlatives of *ṣaḥīfa* include: *ḳirṭās* [*q.v.*], occurring once in the Ḳurʾān, as also its pl.; *kitāb* [*q.v.*], occurring 255 times, and its pl. six times; *lawḥ* [*q.v.*], once, and its pl. four times; *mawt͟hiḳ/mīt͟hāḳ* [*q.v.*], only to be connected with *ṣaḥīfa* under its aspect of pact, treaty, convention; *nusk͟ha* [*q.v.*], once only; *raḳḳ* [*q.v.*], once only; *ruḳʿa*, non Ḳurʾānic but with the sense of a piece of clothing or administrative document, or a sealed, personal message (*Sīra*, i, 26); *sifr*, non-Ḳurʾānic, but found there five times in its pl. *asfār*, with the sense of books, volumes; and *waraḳ(a)* [*q.v.*], three occurrences altogether, a leaf of a tree or of a ms. in *Ḥadīt͟h* (Ibn Mād͟ja). There are obvious links between all these terms designating materials meant to receive writing, with all the sacred connotations of this latter term. An impression is given that communication with the divine is perceived as taking place on three levels: (1) the *risāla*, or mission of God's messengers; (2) the *kutub*, the writings resulting from this mission; and (3) the *ṣuḥuf*, leaves in the form of archives, documents to which later reference is always possible.

2. Definition.

Ṣaḥīfa does not refer to a leaf, since we have the word *waraḳa* in both Ḳurʾān and *Ḥadīt͟h*, nor yet paper (only after *ca.* A.D. 750), but a flat, smooth surface specially prepared for writing, a document written on a page on a flat surface, not a stone, such as parchment or papyrus.

The *muṣḥaf* is a collection of written leaves placed between two covers (*ṣuḥuf bayn daffat^ayi/lawḥ^ayi 'l-muṣḥaf*), or a collection of a complete assemblage of leaves, each leaf being called a *ṣaḥīfa*, or a collection of pieces, of documents, a corpus or vulgate. In his *LʿA*, ix, 186a-187a, Ibn Manẓūr defines a *ṣaḥīfa* as a surface of writing upon in the form of a leaf. It differs from a *ruḳʿa*, which is necessarily sealed, whilst a *ṣaḥīfa* can be opened out, fixed on a wall or attached to something. He mentions, in this connection, the anecdote about Ṭarafa and al-Mutalammis [*q.vv.*], both of them bearers of a *ṣaḥīfa*, an unsealed letter from the king ʿAmr b. Hind ordering their execution. By getting the letter deciphered by a youth, al-Mutalammis escaped death, whilst Ṭarafa perished.

A *ṣaḥīfa* could be a leaf on which was transcribed the text of a pact or treaty, meant to be read out to the people and fixed on the wall of the Kaʿba or public place, whilst the expression *ṣuḥuf muṭahhara/mukarrama* could mean the leaves on which the Divine Revelation was written.

3. History.

The conversion of ʿUmar was a shock for the Prophet's enemies and encouraged the first Muslims, who performed their worship at the Kaʿba itself. This conversion resulted from the discovery of a *ṣaḥīfa* (= page) of the Ḳurʾān which ʿUmar had read at his sister's house (see above). This gave rise to another *ṣaḥīfa*, an agreement amongst the leading men of Ḳurays͟h, a kind of resolution voted upon by the people of Mecca and posted up inside the Kaʿba. (This edict recalls such documents amongst the ancient Romans, which were written on a leaf, read out to the people and publicly posted in the Forum.) (*Sīra*, i, 371, 397, 399; al-Ṭabarī, iii, 1189-98).

In A.D. 619, there had taken place the emigration of many of the Muslims from Mecca to Ethiopia [see HID͟JRA; MUHĀD͟JIRŪN], whilst those remaining in Mecca had protection from the young ʿUmar. But in a counter-stroke, the Meccan leaders produced from their deliberations a *ṣaḥīfa*, this event being the most important one in the history of Meccan-Muslim relations in the years immediately before the Hid͟jra. A social and economic boycott of the Muslims of the Banū Hās͟him and of al-Muṭṭalib was envisaged, involving a prohibition of marriages with them and avoidance of commercial contacts. These two Muslim clans took refuge in their *s͟hiʿb* or ravine, on the lands of Abū Ṭālib. The boycott lasted for two or three years, during which the *ṣaḥīfa* was posted up in the Kaʿba, but was not completely watertight. Certain citizens eventually banded together to denounce the pact, and five of them, Zuhayr b. Umayya, al-Muṭʿim b. ʿAdī, Abu 'l-Bak͟htarā b. His͟hām and Zamʿa b. al-Aswad, harangued the crowd in front of the Kaʿba and denounced the *ṣaḥīfa*; but the story goes that the words of it had all been eaten away by worms, with the exception of the opening words "In thy name, O Lord!" (*Sīra*, ed. Wüstenfeld, 247-51; W.M. Watt, *Muhammad at Mecca*, Oxford 1953, 121-2).

Bibliography: Given in the article.

(A. GHÉDIRA)

ṢAḤĪḤ (A.), literally, "sound, healthy".

1. As a technical term in the science of *ḥadīt͟h* [*q.v.*], i.e. Muslim tradition.

It did not come into use immediately with the onset of *isnād* criticism, for al-Rāmahurmuzī (d. 360/970 [*q.v.*]), who wrote the first systematic work on *ḥadīt͟h*, does not seem to have applied it yet. It is used by mediaeval as well as modern Muslim tradition experts (sometimes followed in this by some western scholars) to describe or qualify one particular prophetic tradition or a whole collection of such traditions. *Ṣaḥīḥ* traditions constitute one of the three major subdivisions of Muslim traditions, the other two being *ḥasan*, i.e. "fair", and *ḍaʿīf*, i.e. "weak". The commonest definition of a tradition which is declared *ṣaḥīḥ* is that it is supported by an *isnād* [*q.v.*] which is labelled as *ṣaḥīḥ*, namely, one which shows a chain of transmitters going back to the Prophet in an uninterrupted manner, i.e. each pair of two transmitters in that chain must both be considered *ʿadl*, i.e. "upright" or "honest" to the point that their testimonies are admissible in a court of law, and *ḍābiṭ*, i.e. "painstakingly accurate". Finally, they should be known to have met each other. In the case where a personal meeting of two transmitters is not recorded in so many words, it is imperative for an *isnād* in which these figure to be called *ṣaḥīḥ*, that their lifetimes should show a sufficient overlap (in Arabic: *muʿāṣara*) for a master-pupil relationship, or at least some transmission, to become feasible. Moreover, for a tradition to be *ṣaḥīḥ*, it should neither be *s͟hādhdh*, i.e. attested by a single *isnād*

not found anywhere else, nor *muʿallal*, i.e. marred by a *ʿilla*, i.e. a (hidden) defect pertaining to one pair of transmitters in its *isnād*. In short, a *ḥadīth* that deserves to be labelled *ṣaḥīḥ* is one credited with the highest possible degree of acceptability.

Many different *isnād* strands received the qualification of being "the most *ṣaḥīḥ* strand of all" at the hands of various early tradition scholars, but none is more famous than al-Bukhārī's favourite strand: (al-Shāfiʿī [*q.v.*])-Mālik b. Anas [*q.v.*]-Nāfiʿ [*q.v.*]-ʿAbd Allāh b. ʿUmar [*q.v.*]-Prophet. This strand was used also to support untold numbers of doubtful traditions, as its very frequent occurrence in e.g. the *Lisān al-mīzān* of Ibn Ḥadjar [*q.v.*] testifies. For a survey of the other strands held to be particularly *ṣaḥīḥ*, see *Bibl.*

Tradition collections entitled *al-Djāmiʿ al-ṣaḥīḥ* are the canonical collections by al-Bukhārī (d. 256/870 [*q.v.*]), Muslim b. al-Ḥadjdjādj (d. 261/875 [*q.v.*]) and al-Tirmidhī (d. 279/892 [*q.v.*]). Those of al-Bukhārī and Muslim are, furthermore, generally referred to as "the two *Ṣaḥīḥ*s". Besides, the post-canonical collection made by Ibn Ḥibbān al-Bustī (d. 354/965 [*q.v.*]) entitled *al-Musnad al-ṣaḥīḥ ʿalā 'l-taḳāsīm wa 'l-anwāʿ* is often abbreviated to *Ṣaḥīḥ Ibn Ḥibbān*, cf. the redaction of ʿAlāʾ al-Dīn ʿAlī b. Balbān al-Fārisī (d. 739/1339) called *al-Iḥsān bi-tartīb ṣaḥīḥ Ibn Ḥibbān*, ed. Kamāl Y. al-Ḥūt, Beirut 1987, 10 parts. Finally, there is the early, mainly Ibāḍī [see IBĀḌIYYA] collection of al-Rabīʿ b. Ḥabīb (d. *ca.* 170/785) which is sometimes called *al-Djāmiʿ al-ṣaḥīḥ*.

Bibliography: For a survey of definitions of, and gradations and sub-divisions within, the technical term, as well as the most *ṣaḥīḥ isnād* strands linked to various Companions and later key figures in *ḥadīth*, see al-Ḥākim al-Naysābūrī, *Maʿrifat ʿulūm al-ḥadīth*, ed. Muʿaẓẓam Ḥusayn, Cairo-Ḥaydarābād 1937, 58-62; Nawawī, *Taḳrīb*, tr. by W. Marçais in *JA*, 9e séries, XVI (1900), 480-97; Ibn al-Ṣalāḥ, *al-Muḳaddima* [*fī ʿulūm al-ḥadīth*], edited with *Maḥāsin al-iṣṭilāḥ* of Sirādj al-Dīn ʿUmar al-Bulḳīnī by ʿĀʾisha ʿAbd al-Raḥmān Bint al-Shāṭiʾ, Cairo 1974, 82-102; Djalāl al-Dīn al-Suyūṭī, *Tadrīb al-rāwī fī sharḥ taḳrīb al-Nawawī*, ed. ʿAbd al-Wahhāb ʿAbd al-Laṭīf, Cairo 1966, I, 62-152; Ṣubḥī al-Ṣāliḥ, *ʿUlūm al-ḥadīth wa-muṣṭalaḥuhu*, Damascus 1959, 141-57.

(G.H.A. JUYNBOLL)

2. In law.

In Islamic law, a legal act is regarded as valid, i.e. having its desired legal effects, if all its essential elements (*rukn*, pl. *arkān*) are present and the necessary conditions (*sharṭ*, pl. *shurūṭ*) are fulfilled. If one or more of these elements or conditions are lacking, the act is null and void (*fāsid* or *bāṭil* [*q.v.*]), therefore does not exist and has no effect. This classification applies to acts of devotion (*ʿibādāt*) as well as to legal acts (*muʿāmalāt*). With regard to the former, the desired effect is being acquitted of an obligation, which will result in reward in the Hereafter. Thus an obligatory *ṣalāt* [*q.v.*] performed in compliance with the prescriptions, is valid, counts as the discharge of a duty and will be recompensed after one's death. Similarly, a repudiation duly pronounced according to the rules is valid and produces its legal effects such as the dissolution of the marriage and the beginning of the waiting period for the wife (*ʿidda* [*q.v.*]). Valid acts are not necessarily binding (*lāzim*). Most schools recognise as valid suspended (*mawḳūf*) acts, i.e. legal acts that have no obligatory effect until after their ratification by a third party, such as acts performed by an unauthorised agent (*fuḍūlī*) or a discerning minor (*mumayyiz*). In order to be binding they have to be approved by the principal or the guardian. They are classified as valid because, after ratification, they are regarded as having bound the principal or the minor from the moment the original act was performed.

(R. PETERS)

3. In grammar.

Here, *ṣaḥīḥ* usually refers to the "sound" letters, loosely the consonants of Arabic, defined by default as being neither "weak" letters, *muʿtalla*, viz. the semi-vowels *alif*, *wāw*, *yāʾ* [see ḤURŪF AL-HIDJĀʾ], nor vowels, viz. *fatḥa*, *kasra* and *ḍamma* [see ḤARAKA WA-SUKŪN, KASRA]. The criteria of soundness and weakness are purely phonetic and date at least to the 2nd/8th century; Sībawayhi (*flor.* 170/786 [*q.v.*]) and al-Khalīl b. Aḥmad (d. 175/791, e.g. *Kitāb al-ʿAyn*, i, 51, 57, 59) both use *ṣaḥīḥ* and *muʿtall*.

The soundness of a letter (sc. phoneme: *ḥarf* [*q.v.*] denotes grapheme and phoneme alike, which does not imply that the grammarians overlooked the distinction) lies in its stability in all vocalic environments, unlike the weak letters, which are unstable between and after vowels, and in its organic difference from the vowels, which are articulated without any interruption in the air stream, while the sound phonemes, continuant or plosive, always involve some constriction. The morphophonological implications of these articulatory features were minutely observed by the grammarians, who described in detail the various allophones and such sound-changes as assimilation (*idghām* [*q.v.*]), dissimilation, metathesis and substitution (*ibdāl* [*q.v.*], and see al-Nassir, Bakalla, Bohas and Guillaume).

On the morphological level, a verb stem containing no weak radicals is called a "sound verb" *fiʿl ṣaḥīḥ* (or *fiʿl sālim*), with much inconsistency regarding the place of *hamza* in this scheme, and the "sound" plural is likewise *al-djamʿ al-ṣaḥīḥ* as well as the more usual *al-djamʿ al-sālim*.

It has been noted that *ṣaḥīḥ* in later grammar may also denote a "correct" utterance (Versteegh, 34): a possible logical origin is hinted at, though the phrase *kalām ṣaḥīḥ* is already found in Sībawayhi, Derenbourg, i, 353, Būlāḳ, i, 400. More important than origins, however, is the still unexplored peculiarity that the same grammatical term may occur at different levels of analysis, indicating an approach to terminology fundamentally at variance with modern linguistic conventions.

Bibliography: The articles referred to above, especially ḤURŪF AL-HIDJĀʾ, contain extensive bibliographies, to which may now be added the following: G. (M.G. CARTER)

SĀḤIL (A.), European form Sahel, a geographical term meaning "edge, border zone". It is, grammatically, an active participle with a passive meaning (*fāʿil bi-maʿnā mafʿūl*, see e.g. *LʿA*, ed. Beirut

1375/1956, xi, 328a, "eaten away by the sea" whence "shore".

The term has various regional applications, in accordance with the meaning "fringe area, zone".

1. *In the Maghrib.*

(a) The Sāḥil of Tunisia (Sāḥil of Sousse, Sāḥil of Sfax). This is the coastal region of the low steppes of the north, around the towns of Sousse, Monastir and Mahdia, having a maritime climate and rainfall in excess of 300 mm per annum and characterised by the importance of its olive groves and the antiquity of its urban network.

(b) The Sāḥil of Algeria. This is applied to the coastal regions of Algeria, mainly those around Algiers and Oran.

2. *To the south of the Sahara.*

The Sāḥil (in the best known sense of the word) here is defined by the Arabic authors as a southern "shore" of the Sahara, here compared to a sea. The term was taken up in 1900 by the botanist Auguste Chevalier, who posited an opposition in West and Central Africa of increasingly humid zones called Saharan, Sahilian, Sudanian and Guinean.

The Sāḥil zone thus delimited includes several African states, from west to east: Senegal, Mauritania, Mali, Burkina Fasso (Upper Volta), Niger, the northeastern extremity of Nigeria, Chad and the Sudan, with an area of about 4 million km^2. The term is, however, used above all for the central and western part, from Tibesti to the Atlantic Ocean. The Sāḥil does not have any well-marked physical features. Like all the Sahara [see AL-ṢAḤRĀʾ], flat surfaces predominate, either in the form of plains resulting from the levelling of the ancient pre-Cambrian shield, making up the main part of the countryside and interrupted by rare *inselbergs*, or else in the form of essentially sandstone plateaux edged with abrupt slopes making up striking relief features, such as, from west to east, the Tagant and Assaba, the plateaux of Bandiagara and the Hombori, and the Ennedi massif. Really mountainous massifs are rare, apart from the volcanic one of the Djebel Marra in the Sudan, reaching 3,000 m/10,000 feet. Within this little-differentiated topography, the surface is often made up of *regs* [*q.v.*], but the dominant characteristic of the Sāḥil surfaces is the importance of the ergs (*ʿirḳ*). These great stretches of dunes, of which the great Saharan ergs often extend towards the southwest, are actually clothed with a herbaceous vegetation which stabilises the sands; they are made up of extended parallel bands of terrain (several dozen km), and increasingly flattened by water erosion as one travels southwards. Oriented ENE-WSW, and covered with reddish sands, these bands are separated by gullies between the dunes, e.g. the ergs of Trarza and Cayor in Mauritania, the Gourma to the south-east of Timbuctu, the Azaouak to the south-west of the Aïr, the Daza and Djourab to the north-east of Lake Chad and the Goz of Sudan. These ergs are the remnants of important climatic variations which have taken place over the last millennia, and have sometimes brought about an important advance of the desert southwards and the fixing of sand dunes, and at other times a retreat of the Sahara northwards accompanied by a considerable extension of Lake Chad and the overflowing of the Niger northwards, as was the case during the period 8,000-2,000 B.C., with the reversion to conditions identical with those of the present time having lasted hardly more than 3,000 years. Over the Sāḥil zone in general, there is shrubby steppeland in the south, becoming bushy in the north, with a weak vegetation covering index, and which is more and more open as one approaches the Sahara. Large, allogenous rivers—the Senegal, Niger, Chari and Nile—bring into the region waters which are often abundant.

The absence of topographical boundaries leads one to describe the Sāḥil as the zone of transition between the Sahara and the more humid regions of tropical Africa. Hence it can only be delimited by means of climatic characteristics, much discussed by writers; thus Ch. Toupet considers as Sāḥilian the band of terrain comprised between the annual mean isohyets of 100 mm in the north and 700 mm in the south, whilst Y. Péhaut limits it to the 150-200 mm band in the north and the 600 mm one in the south. This "climatic" definition is further complicated by the importance of variations in precipitation over the course of the years. The great droughts affecting the Sāḥil since 1967 have brought about displacements of the climatic zones towards the south by several hundred kilometres, and extensive changes for the worse in the natural habitat, worsened by the increases in population and their herds and by the fragility of the sandy soils of the ancient ergs; during years of greater rainfall, the Sahara-Sāḥil boundary retreats northwards, but the deterioration of the habitat is often irreversible and never completely restored. These droughts are due to the marginal position of the Sāḥil in relation to the inflow of rainfall. The Sāḥil in general is characterised by the alternation, in the course of each year, of a long dry season during which the northerly trade-winds (called *Harmattan* when they are continental) and a rainy season corresponding to the influx of humid air of the summer monsoons originating in the Atlantic Ocean (Gulf of Guinea). These monsoons, fairly abundant in the southern part of the Sāḥil, become more and more feeble and irregular as one approaches the Sahara.

The population of the Sāḥil is characterised by a marked decrease in density as one goes from south to north and by the mixture of "blacks" and "whites", more or less Islamised, with a distribution only explicable by what it has been possible to piece together of the history of the region and of the great empires which dominated it, poorly known for the central and western Sāḥil. The first empire, that of Ghāna [*q.v.*], which extended from the southern Sahara as far as Guinea, was described in 1068 by al-Bakrī in his description of West Africa. It was interrupted in the 5th/11th century by the arrival of the Almoravids [see AL-MURĀBIṬŪN], who came from southern Morocco and created an empire stretching from al-Andalus to the western Sāḥil; this did not last, but brought Islam and the Arabic language to the region. In the 7th/13th century, a new empire, that of Mali [*q.v.*], arose, from the Sāḥil to the tropical forest, in the bend of the Niger. After its apogee in the 8th/14th century, it was supplanted a century later by the Songhay empire, whose capital Gao was destroyed by an expedition sent from Morocco in 1591. At the same time, around Lake Chad, the dynasty of the Safawa reigned from the 3rd/9th to the 13th/19th century with various fortunes.

In all these regions, the penetration of Islam was achieved essentially in peaceful ways, favoured by the great empires based on commerce, and whose ruling classes showed themselves fairly tolerant. It was often the nobles and urban populations which became converts, whilst the rural populations, making up the mass of the people, remained animists. This penetration was equally the work of numerous Muslim traders involved in the trans-Saharan commerce, involving above all the export of gold, for which the

Sudan was the main world producer, to the Mediterranean countries, and the slave traffic, which had for long been important, to the lands of the Maghrib. It was likewise favoured by a general movement, since the Middle Ages, of the sedentary black populations, pushed southwards by nomads who were Muslims, and possibly by a deterioration in climate.

The present-day population of the Sāḥil shows a complex pattern of overlapping peoples, including societies often strongly hierarchical in social structure, which can be distinguished by their ways of life: the pure nomads, found especially in the northern Sāḥil, corresponding to the southwards extension of the great Saharan groups: Moors in the west, Touaregs in the centre and Tubus in the east. The semi-nomads, like the Kreda to the east of Lake Chad, regularly increase proportionately, and possess palm-groves or practise stock-rearing and an extensive agriculture at the same time, sometimes organising the transhumance of their herds under the care of herdsmen. The Peuls or Fulbe, a people whose origin is badly known, belong to this category, whilst practising stock-rearing of bovines which are more of a social value than one of food supply. Finally, the cultivators, mainly blacks, have great difficulty in practising dry farming in a climate with such feeble and irregular rainfall; the cultures utilising river water along the great waterways depend on the volume of the flood waters of those rivers, and irrigated systems of agriculture remain rare. Within these activities, formerly highly hierarchical, recent political changes have brought a reversal in the strength of forces; the nomadic Saharan tribes, which were formerly dominant through their razzias and through the slave traffic, have found themselves ruined by the drought, the disappearance of the great caravan traffic and the collapse of social structures, and are subordinate to a political authority in the hands of the sedentary black populations, more quickly susceptible to education.

The peoples of the Sāḥil have often been severely affected by the great droughts which have adversely affected their modes of life at a time when they have been demographically increasing—e.g. it has been estimated that the population of Senegal has increased from one million at the beginning of this century to one of *ca.* 7.5 millions in 1990—and the increase in herds has damaged the environment. Unfavourable economic conditions (decline in the value of primary products and of agricultural products for export), and the division of the Sāḥil into several states with scanty resources, have added to climatic deterioration to make the Sāḥil one of the regions of the globe in the greatest difficulties.

SĀHIR, DJELĀL (Celal Sahir Erozan), Ottoman and early Republican Turkish poet and author, born in 1299/1883, died in 1935.

He was the son of Ismāʿīl Ḥaḳḳī Pasha of Yemen and Fehime Nüzhet of the Tatar Ḥādjī Dāwūd Khān family, herself an author and poet. Sāhir grew up with his mother in Istanbul, attended the Dāwūd Pasha Rüshdiyye and the Wefā Iʿdādī schools and took private French lessons. He began writing poetry at the age of 14, and his poems were first published in *Therwet-i fünūn* [*q.v.*], the journal of the literary group *Edebiyyāt-i djedīde*. When the group renewed itself under the name *Fedjr-i ātī* [*q.v.*], whose motto was art for art's sake, he became for a while the leader of the group. Although they were for the westernisation of Turkish literature, their language remained complex, with much use of the Persian and Arabic lexicons, the use of traditional love themes and writing in *ʿarūḍ*, i.e. the traditional metres of poetry. He left the Faculty of Law in Istanbul after two years and in 1903 was employed at the Foreign Office. After *Fedjr-i ātī* dissolved itself, Sāhir wrote for the journal *Genč ḳalemler* ("Young Pens") during 1911-12, this being the voice of the nationalist movement, advocating use of the national language and a national literature. During this time, Sāhir wrote with the syllabic folk metre of Turkish. He left the Foreign Office and first taught literature in high schools but later became a merchant. He acted chiefly as the founder or editor of various periodicals as well as writing in them (*Seyyāre, Demet, Kitāblar, Türk Yurdu, Bilgi, Khalḳa Doghru* and *Türk Sözü*). These journals were mostly devoted to the promotion of Turkish nationalism during the war years. *Kitāblar*, published in the 1920s, were monthly books containing poems, plays, short stories called *Birindji kitāb....sekizindji kitāb*. He was appointed as a member of the Commission for Language Reform and became a member in the National Assembly for Zonguldak in 1928. In 1932 he was among the founding members of the *Türk Dili Tetkik Cemiyeti*. He died in 1935 in Istanbul, having married three times and having six children.

SAHL b. HĀRŪN b. RĀHAWAYH (or Rāhīyūn, Rāhyūn, Rāmnūy), Persian author, translator, and a poet of great repute who wrote in Arabic in the early ʿAbbāsid period and died in 215/830. He was born in Dast-i Maysān or in Maysān [*q.v.*] in south-eastern ʿIrāḳ. His family, originally from Nīshāpūr, had moved to the Maysān region and then to Baṣra, whence his *nisba* al-Baṣrī.

The period of his youth and early education remains in obscurity. He attracted public attention first as the secretary of Hārūn al-Rashīd's vizier Yaḥyā b. Khālid al-Barmakī (170-87/786-803). Under Yaḥyā, he was charged with the distribution of certain public payments (Ibn ʿAbd Rabbih, v, 58). He survived the fall of the Barmakids, became an intimate of al-Rashīd and acted as his *ṣāḥib al-dawāwīn* (Ibn al-Abbār, *Iʿtāb al-kuttāb*, Damascus 1961, 85-6). It is not known whether he held this office under al-Amīn, although during the pursuing civil war and fratricide which ravaged Baghdād, he remained in the capital and had contact with al-Amīn's vizier al-Faḍl b. al-Rabīʿ (al-Djāḥiẓ, *Bayān*, i, 346). Under al-Maʾmūn he was bound to al-Ḥasan b. Sahl [*q.v.*], and served primarily as the chief director of the House of Wisdom (*bayt al-ḥikma* [*q.v.*]).

Early literary tradition portrays Sahl as the foremost partisan of the Shuʿūbiyya [*q.v.*], though by religious preference he was a Shīʿī (al-Damīrī, *Ḥayāt al-ḥayawān*, Cairo 1887, i, 313). The story known as "Sahl's rooster", related by the zealous Shīʿī poet Diʿbil al-Khuzāʿī [*q.v.*], confirms his ties with the Shīʿīs (al-Djāḥiẓ, *Ḥayawān*, ii, 374-5). However, he seems to have favoured, as many learned men of his

generation did, the Muʿtazilī doctrine and is mentioned next to its leading mentors Abu 'l-Hudhayl, al-Naẓẓām and al-Djāḥiẓ (al-Djāḥiẓ, *Ḥayawān*, vii, 182, 206; al-Thaʿālibī, *Thimār al-ḳulūb*, Cairo 1965, 172).

Sahl found an ardent admirer and friend in his younger contemporary al-Djāḥiẓ, who praised him as a trustworthy gentleman not shy in defending the truth even to his own loss; a superlative orator, master of rhetoric and style, author of many treatises and voluminous books (*Bayān*, i, 52, 89). Still more warmly Abu 'l-ʿAynāʾ [*q.v.*] wrote of Sahl: "God enhanced the worth of the world by letting him be one of its residents!" (al-Tawḥīdī, *al-Baṣāʾir wa 'l-dhakhāʾir*, Damascus 1964, iii_1, 326 n. 1).

In his own time Sahl became outstanding in eloquence and learning, and wrote books in challenge of the Arabic classics (Ibn Nubāta, *Sarḥ al-ʿuyūn*, Cairo 1964, 242). He had a refined taste for the creation of short, semi-lyrical exhortations, whose terse prose aroused the admiration of connoisseurs of the Arabic language. He was equally remarkable for the merit of his poetry. No *dīwān* or collection of poems survives from him. Ibn al-Nadīm (*Fihrist*, ed. Tadjaddud, 191) estimated his poems only at about fifty pages. Many of these, adorned with maxims and admonitory precepts, are extant in scattered *adab* works. By his wisdom and prudence and his literary aptitude, he acquired great celebrity and his name became proverbial. People would say: "Sahl b. Hārūn has composed your words!" (Ibn Nubāta, 242), or "You speak with the tongue of Sahl b. Hārūn!" (Ibn Bassām, *al-Dhakhīra fī maḥāsin ahl al-Djazīra*, Beirut 1978, ii/2, 729). More than five centuries afterwards, Ibn Khaldūn [*q.v.*], who considered Sahl's *Rasāʾil* as peerless examples of Arabic literary composition, recommended them to the intelligent critic and those with literary taste who desired to master the Arabic language and a high order of eloquence (*Muḳaddima*, tr. Rosenthal, iii, 393).

Together with Ibn al-Muḳaffaʿ, Abān al-Lāḥiḳī [*q.vv.*], and ʿAlī b. ʿUbayda al-Rayḥānī, Sahl belongs to that community of authors and translators of Pahlavi literature who effected a prodigious place for Persian literary, political and cultural traditions among Muslims. The titles of his books clearly reveal his interest for the ancient heritage of Persia. The first field in which he relied heavily on Persian sources was the application of *andarz* or "wisdom" literature in his books of fable, told in the speech of humans, birds and animals (Ibn al-Nadīm, 197). He wrote a *Kitāb Thaʿala wa-ʿAfrāʾ*, and one *al-Namir wa 'l-Thaʿlab* "the Panther and the Fox", in imitation of the revered Pahlavi fable *Kalīla wa-Dimna* [*q.v.*]. From the former only some brief excerpts are extant. The second survives in an abridged form, and has been published. This is told in a continuous narrative without the interjection of independent apologues characteristic of the *Kalīla*. In both books, Sahl creates situations for animals to convey ethical and didactic counsels to his readers, a literary device much favoured by Persians. From the published fragments it cannot be determined whether he translated these from Pahlavi originals or created them himself. Some mediaeval critics found these superior even to their prototype (al-Masʿūdī, *Murūdj al-dhahab*, Beirut 1965-79, i, 89). A striking feature introduced for the first time into Arabic literature by Sahl is the application of an epistolary style in fables. Sahl's success in this field won him the honorable nickname "Buzurgmihr-i Islām", which not only put him in the same rank of Khusraw I Anūshirwān's (531-79) famed vizier Buzurgmihr, but also signified the role he had assumed in the Persianisation of al-Maʾmūn's court, that of the supreme wise man in politics and adviser to the caliph.

Sahl's famous encomium on avarice, *Risāla fi 'l-Bukhl*, whose authenticity is sometimes doubted, forms the beginning of al-Djāḥiẓ's *Kitāb al-Bukhalāʾ*, and is incorporated also by Ibn ʿAbd Rabbih (vi, 200-4). Handling and exaltation of irreverent themes seems to have constituted a challenging arena for talented men to test their literary genius in this period. For the opponents of the Shuʿūbiyya, however, it was easy to charge the author with frugality; and Sahl had to explain that his intention was the opposite (Ibn Nubāta, 244). This was recognised as an intellectual *coup de force* in exhibiting his literary puissance (al-Ḥuṣrī, 831).

Beside composing books of fable and belles-lettres, he also handled political subjects, as in his *Kitāb Tadbīr al-mulk wa 'l-siyāsa*, surely adopting his ideas from Persian political philosophy. Books on politics have left their greatest mark on the Arab-Islamic diplomatic practices. His description of the qualities of the chamberlain, *ḥādjib* [*q.v.*], was based perhaps as much on personal experience as on the lost Sāsānid book *Shāhī* or *Shāhīnī* (al-Djāḥiẓ, *Rasāʾil*, ii, 39). In *Sīrat al-Maʾmūn* (Ibn Nubāta, 242), Sahl treated topics common to *Siyar al-mulūk* which describe royal customs of the Persian kings, dignitaries and heroes. Al-Ṭabarī's long passages on the rise of rivalries between the two brothers al-Amīn and al-Maʾmūn, and anecdotes about al-Maʾmūn recorded on Sahl's authority in other sources, may have had their origin in this book. His treatise on jurisprudence and the function of the *ḳāḍī* [*q.v.*], *Risāla fi 'l-Ḳaḍāʾ*, addressed to the Persian jurist and judge of Baṣra ʿĪsā b. Abān b. Ṣadaḳa b. ʿAdī b. Mardānshāh of Fasā (in office from 211/826 until his death in 220/835), echoed his experience in judicial matters and legal interpretation.

Among Sahl's many translations was the romance *Wāmiḳ and ʿAdhrāʾ* which was supposed to have been compiled at the time of Anūshirwān and presented to him. The famous verse on the wall of Ḳaṣr-i Shīrīn Palace, which pertains to the time of Khusraw Parwīz (590-628), is a direct reference to this romance (Rypka, *Iranische Literaturgeschichte*, Leipzig 1959, 132-3), but we have no indication whether Sahl's translation was in verse or in prose. Not knowing much about the content of this epic, one cannot determine its relationship to the poet ʿUnṣurī's [*q.v.*] New Persian versification of the *Wāmiḳ u ʿAdhrāʾ* romance, but the *Vorlage* of ʿUnṣurī's version was clearly a Greek one and not any intermediate Pahlavi translation. Sahl's book *Adab Ashk b. Ashk*, apparently a compilation of political and wisdom literature attributed to the Arsacid King Ashk b. Ashk, displayed his interest in Parthian subjects. Sahl's books, amounting to some 20 titles—Ibn al-Nadīm listed only 13—were without doubt very popular and of great social value, but al-Djāḥiẓ's claim (*Rasāʾil*, i, 351) to have used Sahl's name to publicise some of his own works is more probably a fiction.

Bibliography (in addition to references given in the text): Sahl's only surviving book has been edited and translated by Abdelkader Mehiri, *An-Namir wa-t-taʿlab (La Panthère et le Renard)*, Tunis 1973, also ed. Mundjī al-Kuʿbī, Tunis 1980. SAHL AL-TUSTARĪ, ABŪ MUḤAMMAD B. ʿABD ALLĀH b. Yūnus b. ʿĪsā b. ʿAbd Allāh b. Rafīʿ, an influential Ṣūfī of mediaeval Islam, was probably born in 203/818 in Tustar, Khūzistān, and died in 283/896 in Baṣra. The essential course of his life can be reconstructed on the basis of fragmentary hagiographical accounts, included in the Ṣūfī primary sources, and incidental references of Islamic historical literature.

Until a short time after his pilgrimage to Mecca in 219/834, al-Tustarī received his basic education from his maternal uncle Muḥammad b. Sawwār (who transmitted *ḥadīth* on the authority of Sufyān al-Thawrī [*q.v.*]) and Ḥamza al-ʿAbbādānī, an obscure spiritual instructor residing at the *ribāṭ* of ʿAbbādān [*q.v.*], where al-Tustarī had a vision of God's supreme name (*ism Allāh al-aʿẓam*) written in the sky with green light from east to west (al-Tustarī, *Tafsīr*, 17, 24; Anṣārī, *Ṭabaḳāt*, 116). Al-Tustarī met his Ṣūfī forebear Dhu 'l-Nūn al-Miṣrī [*q.v.*] at least once in his life, but it is not certain whether he became his direct disciple. After spending some twenty-odd years in his hometown, engaged in austere practices, especially fasting, al-Tustarī emerged with a teaching of his own about the time of Dhu 'l-Nūn al-Miṣrī's death in 245/860 and gathered a group of disciples around himself. Prominent among his disciples were Abū ʿAbd Allāh Muḥammad b. Aḥmad b. Sālim al-Baṣrī (d. 297/909), said to have served al-Tustarī for sixty years, and al-Ḥallādj [*q.v.*] who stayed with him for about two years. About the time when the Zandj [*q.v.*] occupied Tustar for a short time in 263/877, al-Tustarī was summoned from Tustar to the camp of the Ṣaffārids to cure their ailing leader, Yaʿḳūb b. al-Layth [*q.v.*] (cf. Abū Nuʿaym, *Ḥilya*, x, 210), who had been wounded in his defeat by the caliphal regent al-Muwaffaḳ at Dayr al-ʿĀḳūl [*q.v.*] in 262/876. Expelled from his home town for political or doctrinal reasons (al-Sarrādj, *Lumaʿ*, 407, cf. Arberry, *Pages*, 9), al-Tustarī took up residence in Baṣra early in 263/877, though another strand of source evidence would suggest that he had settled there as early as 258/871 when the Zandj sacked the town (al-Makkī, *Ḳūt al-ḳulūb*, iii, 104). In Baṣra, al-Tustarī was welcomed by Abū Dāwūd al-Sidjistānī (d. 275/889 [*q.v.*]) but, because of his claim to be "the proof of God" (*ḥudjdjat Allāh*), became involved in religious controversy with Abū Yaḥyā Zakariyyāʾ al-Sādjī (d. 307/909) and Abū ʿAbd Allāh al-Zubayrī (d. 317/929), two leading Shāfiʿī scholars of the city (al-Shaʿrānī, *Ṭabaḳāt*, i, 67).

Shortly after his death in Baṣra, al-Tustarī's direct disciples split into two groups (cf. Böwering, *Mystical vision*, 75-99). One group selected Baghdād as the centre of activity, either joining the Ṣūfī circle of al-Djunayd [*q.v.*], as did Abū Muḥammad al-Djurayrī (d. 312/924) and Abu 'l-Ḥasan ʿAlī b. Muḥammad al-Muzayyin al-Tirmidhī (d. 328/939), or associating with the Ḥanbalīs in the Muḥawwal quarter of Baghdād, as did Abū Muḥammad al-Barbahārī (d. 329/941 [*q.v.*]) and two crucial transmitters of al-Tustarī's teachings, Abū Bakr Muḥammad b. al-Ashʿath al-Sidjzī and Abu 'l-Ḥasan ʿUmar b. Wāṣil al-ʿAnbarī (d. 312/924). The other group of al-Tustarī's disciples stayed on in Baṣra and found acceptance among the local Mālikīs. It formed the nucleus of a theological school, known as the Sālimiyya, that was organised by Abu 'l-Ḥasan Aḥmad b. Muḥammad b. Aḥmad b. Sālim al-Baṣrī (d. 356/967), who is frequently confused in the sources with his father, al-Tustarī's life-long associate. The most famous exponent of the Sālimiyya, however, was Abū Ṭālib al-Makkī (d. 386/996 [*q.v.*]) who, in his *Ḳūt al-ḳulūb*, frequently cites Abu 'l-Ḥasan Aḥmad b. Muḥammad b. Sālim as "our *shaykh*" and al-Tustarī as "our *imām*". The Sālimiyya, who also adopted ideas propagated by Abū Ḥulmān al-Fārisī al-Dimashḳī (d. *ca.* 340/951), became the target of a lost refutation (*ar-Radd ʿalā Ibn Sālim*) written by the Shāfiʿī (or Ẓāhirī) Ibn al-Khafīf (d. 371/981). Possibly on the basis of this refutation, a list of eighteen objectionable propositions was drawn up in Ḥanbalī circles by Ibn al-Farrāʾ (d. 458/1065 [*q.v.*]) in his *Muʿtamad* (217-21), of which ʿAbd al-Ḳādir al-Djīlānī [*q.v.*] copied and rejected twelve propositions in his *Ghunya* (i, 106-7). The last major exponents of the Sālimiyya were Abū ʿAlī al-Ḥasan b. ʿAlī al-Ahwāzī (d. 446/1055; cf. al-Dhahabī, *Siyar*, xviii, 13-8), Abū Shakūr Muḥammad b. ʿAbd al-Sayyid al-Sālimī (d. shortly after 470/1077; see *GAL*, I, 419; S I, 744) and Abū ʿAbd Allāh Muḥammad b. Yaḥyā al-Zabīdī (d. 555/1160; cf. al-Dhahabī, *Siyar*, xx, 316-9).

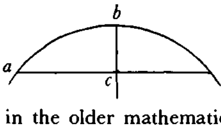
Beginning with Ibn al-Nadīm's *Fihrist*, 186, quite a number of treatises have been ascribed to al-Tustarī in Islamic bibliography. All of these appear to be lost under their titles, but two works attributed to al-Tustarī are extant. They are a Ḳurʾān commentary, *Kitāb Fahm al-Ḳurʾān* (published as *Tafsīr al-Ḳurʾān al-karīm*, Cairo 1326/1908 and 1329/1911), and a collection of al-Tustarī's sayings in three parts with the commentary of Abu 'l-Ḳāsim ʿAbd al-Raḥmān al-Ṣiḳillī (d. *ca.* 386/996), preserved in the collective ms. Köprülü 727 (one part of which, *al-Muʿāraḍa wa 'l-radd*, was published by M.K. Gaafer, Cairo 1980). Many fragments of al-Tustarī's commentary on Ḳurʾānic verses are cited in Sulamī's *Ḥaḳāʾiḳ al-tafsīr*, which is accessible only in manuscript (for a table of references and the parallel citations in Rūzbihān al-Baḳlī's *ʿArāʾis al-bayān*, see G. Böwering, *Mystical vision*, 113-24). Al-Tustarī's extant works are not his own writings, but were compiled by his followers who based themselves on the core of his teachings. The other tracts attributed to al-Tustarī (see *GAS*, i, 647) are marginal or spurious (for an annotated list of Tustarī's works, see Böwering, *op. cit.*, 11-18, and add *Tafsīr al-Ḳurʾān*, ms. Azhar, *Riwāḳ al-atrāk* 7, and the excerpts included in ms. Ẓāhiriyya 9595, fols. 35-43). The two works attributed to al-Tustarī and the considerable body of anecdotes and sayings quoted on

his authority in the Ṣūfī primary sources give a fragmentary yet substantive picture of al-Tustarī's mystical theory and practice.

The central idea of al-Tustarī's mysticism is the Ṣūfī recollection of God (*dhikr* [*q.v.*]), which he put on a firm theoretical basis. All his life he observed the method of recollecting God by repeating a mental prayer, "God is my witness" (*Allāhu shāhidī*, cf. al-Ḳushayrī, *Risāla*, 83) and understanding it as his daily sustenance (*ḳūt*). He interpreted it experientially as the break-through to God, who effects His own recollection within the mystic's heart (*dhikr Allāh bi 'llāh: al-dhikr bi 'l madhkūr*, cf. al-Tustarī, *Tafsīr al-Ḳur'ān*, 25-6, 80). Anchoring *dhikr* in the self-revelation of God at the primordial covenant in pre-existence (*a-lastu bi-rabbikum*, Ḳur'ān, VII, 172), al-Tustarī understood *dhikr* as anamnesis. The mystic rediscovers the primaeval moment before God in the inmost recesses of his soul (*sirr al-nafs*) when he listens to Pharaoh's blasphemous proclamation of his own lordship, "I am your Lord Most High" (*anā rabbukum al-aʿlā*, LXXIX, 24). Listening to God, the true speaker of the Ḳur'ān, the mystic ironically perceives the actual essence of belief flowing from the tongue of unbelief and remembers in his experience the moment when God, in pre-existence, affirmed His oneness and lordship before all humanity. There is only one who can truly say, "I am" (*anā*), God, giving expression to the secret of divine lordship (*sirr al-rubūbiyya*) captured by the mystic in the experience of *dhikr* (cf. Böwering, *Mystical vision*, 187-207). Al-Tustarī's practical Ṣūfī ideal was incessant repentance (*al-tawba farīḍa ʿalā 'l-ʿabd maʿa kulli nafas*, al-Sarrādj, *Lumaʿ*, 407, cf. Arberry, *Pages*, 9) and complete trust in God (*tawakkul*) which he understood as handing oneself over to God like the corpse in the hands of the undertaker (al-Ḳushayrī, *Risāla*, 368).

Al-Tustarī's thought is deeply intertwined with Ḳur'ānic exegesis. He proposed a pattern of Ḳur'ān interpretation that theoretically distinguished four meanings for each verse, literal (*ẓāhir*), allegorical (*bāṭin*), moral (*ḥadd*) and anagogical (*maṭlaʿ, muṭṭalaʿ*). In fact, however, he consistently employed only two levels of meaning, a literal and an allegorical sense, combining *ẓāhir* and *ḥadd* as opposed to *bāṭin* and *maṭlaʿ*. In his theology, al-Tustarī understood God under the symbol of light (*nūr*) on the background of the light verse (*āyat al-nūr*, XXIV, 35) and chose the phrase of "the light of Muḥammad" (*nūr Muḥammad*) to designate the primal man and prototypical mystic, apparently in vague association with logos speculations and Shīʿī terminology. In interpretation of II, 30, and LIII, 13-18, he conceived of Muḥammad as the column of light (*ʿamūd al-nūr*) standing in primordial adoration of God, the crystal which draws the divine light upon itself, absorbs it in its core (*ḳalb Muḥammad*) and projects it unto humanity in the Ḳur'ān.

In his psychology, al-Tustarī played on the double-entendre of *nafas* (breath; life-breath) and *nafs* (soul, self), and perceived the human soul as the theatre of a struggle between two antagonistic tendencies, that of the God-centred orientation of the human heart (*ḳalb*), his spiritual self (*nafs al-rūḥ*), and that of the self-centred inclination of the carnal soul (*al-nafs al-ammāra bi 'l-sū'*), his natural self (*nafs al-ṭabʿ*). Interpreting Ḳur'ān, XXXIX, 42, al-Tustarī traced the two selves to the notion of *tawaffī* (God's taking the souls unto Himself in death, sleep and mystic ascent) and understood each of them as a subtle substance (*laṭīf*), one luminous, the other coarse. Al-Tustarī's notion of faith (*īmān*) did not only include profession with the tongue (*ḳawl*), conformity of action (*ʿamal*) and intention (*niyya*) but also the light of certitude (*nūr al-yaḳīn*), by which the mystic is enabled to anticipate God's final self-revelation (*tadjallī*) experienced in the beatific vision. Al-Tustarī found the basis for his idea of *tadjallī* in Ḳur'ān, XLIII, 70-2, a reference to the people of paradise, rather than in the Ḳur'ānic reference to Moses, who was unable to bear the sight of God's revelation (VII, 143).



There are only fragmentary source texts illuminating al-Tustarī's resolution of the central problem of Muslim theology concerning the interrelation between divine omnipotence and human responsibility. Al-Tustarī's thought attempts to achieve a conjunction of opposites and foreshadows Ashʿarī themes. However, these themes may have been introduced into his *Tafsīr al-Ḳur'ān* by his disciples in the aftermath of al-Ashʿarī [*q.v.*]. God creates both good and evil and possesses two kinds of will, volition (*mashī'a*) and an express will (*irāda*). Since human action is caused by the divine agency, God has to possess divine foreknowledge (*ʿilm Allāh al-sābiḳ*) of it prior to its occurrence. God's providence (*tadbīr*), made explicit in His command (*amr*) and interdiction (*nahy*), runs parallel to God's guidance (*hidāya*), made explicit in His help (*maʿūna*, also termed *wilāya*) and protection (*ʿiṣma*). When man performs an action in conformity with the divine Command and Interdiction, he is granted the divine succour of God's *maʿūna*, i.e. divinely given success (*tawfīḳ*). Should he commit an action in opposition to the divine Command and Interdiction, man places himself outside the divine custody and is deserted by God, who withdraws His *ʿiṣma* and forsakes man (*khidhlān* [*q.v.*]). It is man's duty to turn to God with thanksgiving when he performs a good deed (*ḥasana*) and to seek God's succour through repentance when he commits an evil deed (*sayyi'a*). Whether man conforms to or opposes the divine Command and Interdiction, in each case the action comes from God although it is executed through man and by man (*minhu bihim wa-lahum*, see Böwering, *Mystical vision*, 175-84).

AL-**SAHM** (A.) "arrow". For the use of arrows in archery, see ḲAWS.

1. In science.

a. Geometrical term. If one erects a perpendicular $c\ b$ in the middle of a chord of an arc, which reaches to the arc, this is called *al-sahm*, the versed sine (*al-djayb al-maʿkūs*) of the arc $a\ b$; the sine (*al-djayb al-mustawī*), which corresponds to our sine, is $a\ c$ (see—in

addition to many other passages—al-Khwārazmī, *Mafātīḥ al-ʿulūm* ed. van Vloten, 205). The versed sine played a much more important part in the older mathematics from the Hindus onwards than it does in modern mathematics (cf. e.g. A. von Braunmühl, *Geschichte der Trigonometrie*). Sine and versed sine are measured in the parts of the radius of the circle, the latter being taken as equal to 60 parts or = 1.

b. Astrological term. Ibn al-Ḳifṭī says that the expression *sahm al-ghayb* (the arrow, the hitting of the secret of the future, see *op. cit.*, 327, 338, 410) is astrological. (E. WIEDEMANN*)

c. Astronomical term. *Ṣūrat al-Rāmī*, constellation of Sagittarius, and also *al-Ḳaws*, bow of Sagittarius (cross-bow), is a southern constellation of the ecliptic, which, according to Ptolemy and the Arabs, consists of 31 stars mainly of southern latitude, which are almost all of the 3rd to 6th degrees of magnitude. Ptolemy gives only star 24 of Sagittarius (Arabic, *rukbat al-yad al-yusrā*, elbow of the left arm) the magnitude 2-3, while al-Bīrūnī (*al-Ḳānūn al-Masʿūdī*, Berl. ms. 275, fol. 205b) gives magnitude 2 for stars 24 and 23 (*kaʿb al-yad al-yusrā* = knuckle of the left hand); of Sagittarius in Ulugh Beg, however, except star 3 of Sagittarius (*ʿala ʾl-djānib al-djanūbī min al-ḳaws* = the one south of the bow), which, according to him, is 3-2 in magnitude, they are only of the 3rd or lower degrees of magnitude. This 20 ε Sagittarii is really of 1.9 magnitude (on *ʿUrkūb al-rāmī*, see C.A. Nallino, *Opus astronomicum*, ii, 163). The following stars of Sagittarius are also noteworthy: *Naṣl al-sahm* = point of the arrow, and the so-called "eye of the archer", *ʿAyn al-rāmī*, or, according to al-Bīrūnī, *op. cit.*, *al-Saḥāʾib al-mudaʿʿafa ʿala ʾl-ʿayn* = the nebulous double-star which is in the eye. Neither in al-Bīrūnī nor in Ulugh Beg is there any mention of ostriches (the ostrich going to drink and coming back from drinking) which are mentioned by L. Ideler (see below).

Among the Greeks, Sagittarius was called ὁ τοξότης; among the Romans, Sagittarius, Sagittifer and Arcitenens. There is no evidence that the ancient Egyptians or Babylonians knew of *al-Ḳaws* as a bow-constellation. The bow-constellation of the latter was the bow-shaped group of stars ε δ τ Canis majoris + κ λ Puppis.

(C. SCHOY*)

2. In law.

Here, *sahm*, pl. *ashum*, is found in two separate contexts. In *farāʾiḍ* [*q.v.*] (the allotted portions), it refers to the fixed share of an heir (*wārith*).

Sahm is also used in partnership (*sharika*) and profit-sharing (*muḍāraba*). As a term used in modern share companies (*sharikat al-ashum*), it is defined as a partial ownership of a large capital (*ḥuḳūḳ milkiyya djuzʾiyya*). The holder is called *musāhim*. *Sahm*, unlike the commercial bond *sanad*, is permitted in Islamic law because it contains no interest. According to al-Ḳarḍāwī, *zakāt* is only required on self-generating shares in companies that do not change the essence of their trading commodity, like import-export companies or dealers in crude oil. The shares in these examples are seen as the actual active capital, therefore they are liable to *zakāt*. *Zakāt* is not paid on shares which do not generate profit directly. An example of this is shares in companies that provide public services. However, Abū Zahra, ʿAbd al-Raḥmān Ḥasan and ʿAbd al-Wahhāb Khallāf maintain that all shares should be treated as ordinary capital. With regard to trading in *ashum*, it appears to be a *de facto* practice in most Muslim countries, including Saudi Arabia and the Gulf States. This is despite the fact that Islamic law views it with suspicion, likening it to gambling (*maysir* [*q.v.*]) and prohibited speculation.

(MAWIL IZZI DIEN)

AL-SAHMĪ, ḤAMZA B. YŪSUF al-Ḳurashī al-Djurdjānī, Abu ʾl-Ḳāsim (b. at an unknown date towards the middle of the 4th/10th century, d. 427/1038 at Nīshāpūr), traditionist and legal scholar.

A native of Gurgān [*q.v.*] in the Caspian coastlands, where he was a *khaṭīb* and preacher, his major work, and apparently the sole surviving one, is his *Taʾrīkh Djurdjān* or *Kitāb Maʿrifat ʿulamāʾ ahl Djurdjān*, essentially a *ridjāl* [*q.v.*] work devoted to the scholars and *muḥaddithūn* of his native province, to which is prefixed (ed. Ḥaydarābād 1369/1950, 4-18) a brief historical introduction on the Arab conquest of Gurgān and its Arab governors. His information on the scholars of Gurgān was subsequently used by later writers such as al-Samʿānī, Ibn ʿAsākir, Yāḳūt, al-Dhahabī [*q.vv.*], etc. Ḥādjdjī Khalīfa also mentions of his work a *T. Astarābādh* and a *K. al-Arbaʿīn fī faḍāʾil al-ʿAbbās*, whilst his *Suʾālāt ʿan al-Ḥāfiẓ al-Dāraḳuṭnī* [*q.v.*] is quoted by later writers on *ḥadīth*.

Bibliography: See the introd. to the Ḥaydarābād edn. of the *T. Djurdjān* by ʿAbd Allāh b. Yaḥyā al-Yamānī; Ziriklī, *Aʿlām*, ii, 314; F. Rosenthal, *A history of Muslim historiography*², Leiden 1968, 446, 458, 465, 523; Brockelmann, I², 407-8; Sezgin, *GAS*, i, 209.

(C.E. BOSWORTH)

ṢAḤN-I THAMĀN or MEDĀRIS-I THAMĀNIYYE, the eight *medreses* or colleges [see MADRASA] founded by the Ottoman sultan Meḥemmed II [*q.v.*] as part of the ancillaries to his great Fātiḥ Mosque, the whole forming a *külliyye* [*q.v.*] or complex.

The *külliyye* was begun in 867/1463 and completed in 875/1471, and the architect responsible was one Sinān, called variously "the Elder", to distinguish him from the great architect of the following century, Ḳodja Sinān [see SINĀN], or *ʿĀtiḳ* or *Āzādli* "the freedman", implying that he had been of non-Turkish slave status. The eight *medreses* were situated to the east and west of the Mosque, the first group of higher *medreses* being called the Akdeñiz or "Mediterranean" group and the second one the Ḳaradeñiz or "Black Sea" group. There were further, lower (*Tetimme*) *medreses*, a hospital, an *ʿimāret* [*q.v.*], a *tābkhāne* or hospice, a library and the two tombs for the sultan himself and his wife Gülbahār Sulṭān, in the complex.

Each of the Ṣaḥn *medreses* had domed rooms (*ḥüdjres*) and a lecture room, with a total of 120 rooms for resident students who, according to the *waḳfiyye* for the whole complex, had a stipend of two *aḳčes* a day; there

were also day students, of which the 19th century historian Aḥmed Djewdet Pasha [*q.v.*] was one (*Tedhākir*, iv). The basic stipend of the *müderrisīn* was 30 *akčes* a day. Little definite is known about the organisation and curricula of the *Tetimme medreses*; their buildings have now disappeared, though those of the Ṣaḥn-i Thamān survive.

The Ṣaḥn-i Thamān produced a large number of scholars and jurists, some of whom played leading roles in the Ottoman state and society; like most of the surviving buildings in the complex, it was much restored and rebuilt over the centuries.

(M. Ipsirli)

ṢAḤNA, a small town in the Zagros Mountains of western Persia on the highroad between Kangāwar and Bīsutūn at 61 km/38 miles from Kirmānshāh [*q.v.*]. The district of Ṣaḥna contains about 28 villages inhabited by settled Turks belonging to the tribe of Khodābandalū (of Hamadān). At Ṣaḥna there are a few Ahl-i-Ḥakk [*q.v.*], who are in touch with their spiritual superiors in Dīnawar [*q.v.*], a frontier district in the north. Ṣaḥna must not be confused with Sinna [*q.v.*] or Sanandadj [*q.v.*], the capital of the Persian province of Kurdistān, the former residence of the *Wālīs* of Ardalān [*q.v.*]. Quite near Ṣaḥna on the steep bank of the stream are two funerary chambers carved out of the rock and dating in all probability from the Achaemenid period. Yāḳūt, *Buldān*, ed. Beirut, iii, 195, spells Saḥna (with *sīn*), and further mentions another Saḥna near Anbār in ʿIrāḳ.

Modern Ṣaḥna is the chef-lieu of a *bakhsh* of the same name in the province of Kirmānshāh (long. 47° 33′ E., lat. 34° 29′ N., alt. 1,342 m/4,400 feet). In *ca.* 1950 the population of the *bakhsh* was 47,500; by 1991 the population of the town alone was 29,275 (*Preliminary results of the 1991 census*, Statistical Centre of Iran, Population Division).

Matheson, *Persia, an archaeological guide*², London 1976, 124-5. (V. Minorsky*)

SAḤNŪN, Abū Saʿīd ʿAbd al-Salām b. Saʿīd b. Ḥabīb b. Ḥassān b. Hilāl b. Bakkār b. Rabīʿa al-Tanūkhī (160-Radjab 240/777-December 855) (nicknamed Saḥnūn, it is said, on account of his shrewdness, or from the name of a bird), a Kairouan *faḳīh* who played a decisive role in the conversion to the Mālikiyya [*q.v.*] of Muslim Spain and of the entire Maghrib where, even today, there exist only a few Ibāḍī pockets (the island of Djerba and Mzab), and a small number of Ḥanafīs.

The question as to whether Saḥnūn was an Arab by pedigree or by virtue of clientship was sometimes asked, and was resented by Saḥnūn; he was in no doubt as to the authenticity of his Arab genealogy. Although not common, the name Saḥnūn (cf., possibly, the diminutive of the form *faʿlūn*, which expresses affection, as in Khaldūn, Zaydūn, Saʿdūn and Ḥamdūn) is attested throughout the Muslim West, in Spain (Ibn Ḥayyān, *Muḳtabis*, Paris 1937, 79, 81, 113), in the central Maghrib (Brockelmann, S II, 715), and at Kairouan, where another *faḳīh* of the same period, Saḥnūn b. Aḥmad b. Yalūl, bore the same name (M. Talbi, *Biographies Aghlabides extraites des Madārik du Cadi ʿIyāḍ*, Tunis 1968, 202, 203). The form Suḥnūn, still in use today, is erroneous (Ibn Makkī al-Ṣiḳillī, *Tathkīf al-Lisān*, Cairo 1966, 243).

Saʿīd, Saḥnūn's father and a native of Ḥimṣ [*q.v.*] in Syria, was probably a soldier in the army of Yazīd b. Ḥātim al-Muhallabī who, in 155/772, had brought Ifrīḳiya into the ʿAbbāsid orbit, and is said to have received, as a reward for his services, a modest allocation of land in the Sahel of Tunisia. Saḥnūn, who remained a farmer throughout his life, made considerable improvements to the fertility of the land and was thus enabled to exchange poverty for prosperity, allegedly without any change in his style of living. Even after becoming a prestigious *faḳīh* he would still go out, with his plough and his team, to work personally in his fields. Saḥnūn is described as "a man of average height, with light brown skin, a handsome beard, long hair, large eyes and broad shoulders" (Talbi, *op. cit.*, 95). He wore a string of beads around his neck; in the countryside he wore a woollen tunic, with a towel around his head; and in the town, in winter, he dressed in a black burnous. He is known to have had a daughter, Khadīdja, who remained a spinster and whom he held in the very highest of regard, and a son, Muḥammad, whom he educated with care and who became in his turn a brilliant *faḳīh*.

In the time of Saḥnūn, Kairouan was already a major metropolis in all respects: with its opulence, the diversity of its population, its expansionist policy in Sicily—an operation sponsored and directed by a *ḳāḍī*, Asad b. al-Furāt—and its numerous *faḳīhs*. All the trends of Muslim thought were represented there: Muʿtazilī, Murdjiʾī, Sunnī, Ibāḍī, Ḥanafī (then the majority trend) and Mālikī. In the mosques as well as in private dwellings, in the court or in the *ribāṭs*, discussions were animated, and relations often strained. There were mutual accusations of *kufr* (heresy), and copious exchanges of curses. It was in this environment that Saḥnūn was born and nurtured.

Many of the Kairouanese masters, including Asad b. al-Furāt who ultimately sided with the party of the Ḥanafīs, had studied directly under Mālik [*q.v.*], and it was with them that Saḥnūn served his first apprenticeship. Two of his masters exerted a particularly decisive influence on him: Buhlūl b. Rāshid (d. 183/799), who was more of an ascetic than a *faḳīh*, and most of all the Tunisian ʿAlī b. Ziyād (d. 183/799) who had been the first to introduce the *Muwaṭṭaʾ* of Mālik into Ifrīḳiya. All that remains of his version is a fragment recently edited by al-Shādhilī al-Nayfar (Beirut 1980, 1984).

Saḥnūn made his way to the East, for purposes of *riḥla*, to complete and perfect his education, either in 178/794 or in 188/804. The latter date is by far the more plausible. The list of his masters in the East includes 21 names; among these, the figure of the disciple of Mālik, the Egyptian Ibn al-Ḳāsim al-ʿAtakī (d. 191/807), stands out prominently. Asad b. al-Furāt (d. 212/827) had already preceded Saḥnūn in visiting Ibn al-Ḳāsim. From Saḥnūn's questions to the latter,

starting from a Ḥanafī outline, and after discussion, the *Asadiyya* was born, the fruit of a compromise, of a kind of Ḥanafī-Mālikī syncretism. Almost from the moment of its completion, the *Asadiyya* wielded an enormous impact, first in Egypt, then in Ifrīḳiya. With it an era, that of *ḥadīth*, came to an end, and another began: that of *masāʾil*, of prepared solutions. It was a sort of code which responded to a pressing need and arrived at the right time.

Armed with a copy of this book, obtained by not the most scrupulous of means, Saḥnūn took the road to Fusṭāṭ in his turn. His *riḥla* was to last three years. Under the direction of Ibn al-Ḳāsim the *Asadiyya* was submitted to a new analysis, in a spirit of greater fidelity to the teaching of Mālik. Saḥnūn gave the text thus revised the title of *Mudawwana*, a name borrowed from another disciple of Mālik, Ashhab (d. 204/819). Barely had it become known when the *Mudawwana*—the term is currently employed in Morocco with the meaning of code—eclipsed the *Asadiyya* completely. As evidence of this eclipse, only a few pages of the *Asadiyya* survive, while the *Mudawwana* has been the object of numerous commentaries and summaries [see MĀLIKIYYA, vol. VI, at 278b). Its influence was decisive in the crystallisation and diffusion of the *madhhab* of Mālik throughout the Muslim West, as is proved by the fact that the Almohad caliph Abū Yūsuf [*q.v.*], in his attempt to eradicate Mālikism, consigned the work to the flames, thus paying it the ultimate tribute. The *Mudawwana* was edited in the name of Mālik, Saḥnūn's recension after Ibn al-Ḳāsim (Cairo 1323/1905-6).

Like Asad, Saḥnūn had begun his career teaching the Ḳurʾān to children in a building (*bayt*) rented for this purpose (ʿAbd al-Ḥamīd al-Munīf, *Adjwibat Muḥammad b. Saḥnūn*, in *al-Nashra al-ʿilmiyya li 'l-Kulliyya al-Zaytūniyya*, Tunis 1982-3, vi, 239). On his return from the East in 191/807, henceforward enjoying the prestige conferred by the *riḥla*, he established himself as a teacher. He was then about thirty years old, with a long career in education, approximately half a century, ahead of him. Unlike Asad for example, he never seems to have taught in the Great Mosque of Kairouan. As opposed to primary education, higher education was offered free of charge. Saḥnūn gave his courses sometimes in Kairouan, at other times, according to the seasons, at his agricultural property, at Manzil Ṣiḳlāb in the Sahel. It was there that one of his most illustrious disciples, Yaḥyā b. ʿUmar (d. 289/902) first made his acquaintance. The students were received at his residence, according to the time of year, in a room set aside for the purpose, or in front of the main entrance. Armed with their books—they had previously made their own copies of the *Mudawwana*, and other works as well—and their ink-wells, they took their seats on the ground. Some brought mats. A student was nominated to read the text, and the master made comments, sometimes with angry vehemence. As the prestige of the master was consolidated, students flocked in from all directions, especially from Muslim Spain. The place was often crowded, and the students were of all ages and all classes. The future *ḳāḍī* Ibn Ṭālib (d. 275/888), of aristocratic family, began attending Saḥnūn's courses when he was barely an adolescent. Saḥnūn noticed him and urged him to wear "the scholarly habit". "When the next course began," Ibn Ṭālib relates, "I presented myself with shaved head, and dressed in the manner of scholars" (Talbi, *op. cit.*, 209). The throng which gathered around Saḥnūn was great, and somewhat bizarre. "His courses were attended by more pious people (*ʿubbād*) than genuine students" (Talbi, *op. cit.*, 119). Some slept openly. The master did not object, considering that even thus they were gaining the benefit of *samāʿ* (audition). The popularity of his courses is clearly illustrated by the fact that miraculous phenomena were associated with them; it is related in all seriousness that the *djinn* themselves attended them.

In certain circumstances, prestige inevitably attracts controversy. Having become, with advancing age and after the death of Asad, the undisputed leader of Ifrīḳiyan. Sunnism, Saḥnūn also became a legitimate target. In Shaʿbān 231/April 846, the old quarrel regarding the nature of the Ḳurʾān—created according to the Muʿtazilīs, uncreated according to the Sunnīs—became suddenly acrimonious. In Baghdād, al-Wāthiḳ declared his hostility towards the Sunnīs while in Kairouan, Abu Djaʿfar Aḥmad, who had usurped power at the expense of his brother, the *amīr* Muḥammad I, seized the opportunity to kill two birds with one stone, bringing his policy into line with that of the caliphate, as was traditional, and at the same time offering pledges to the Muʿtazilīs who had supported him in his confrontation with the Sunnīs. Aḥmad b. Naṣr, a fervent representative of the doctrine of the uncreated Ḳurʾān, was executed in Baghdād by al-Wāthiḳ personally in Shaʿbān 231/April 846. The following month, Saḥnūn, who had taken refuge in the *ribāṭ* of Kaṣr Ziyād in the Sahel, was arrested and transferred to Kairouan. A trial took place in the Palace in the course of which the Muʿtazilī *ḳāḍī* Ibn Abi 'l-Djawād, who had held this post for eighteen years and had sided with the usurper, demanded his execution. More fortunate than Aḥmad b. Naṣr, Saḥnūn was merely placed under house arrest. This did not last long; the following year the *amīr* Muḥammad I regained power, sent his brother into exile in the East, dismissed his *ḳāḍī* Ibn Abi 'l-Djawād and, in accordance with the movement which had begun in the East with the accession of al-Mutawakkil, practised a policy of reconciliation with the Sunnīs.

It was in these circumstances, and after protracted negotiations, that Saḥnūn was appointed *ḳāḍī*, with full powers (Monday, 4 Ramaḍān 234/1 April 849). He was then 74 years old. He was elevated to this post by a Sunnī consensus, and he was helped in particular by the support of the Ḥanafī *faḳīhs*, who were then broadly in the majority, and of their leader Sulaymān b. ʿImrān. As a means of consolidating the Sunnī consensus, Saḥnūn involved the latter in the exercise of his functions, and began taking important measures designed to strengthen Sunnism and to reinforce the power of the *ḳāḍī*. For audiences he set aside a special room to which only plaintiffs were admitted, having submitted a written application, in person and in turn, without the option of being represented by third parties, whatever the social rank of the applicant.

Released, as was to be expected, by the authorities, the Muʿtazilī Ibn Abi 'l-Djawād, son-in-law of Asad, was placed under arrest, officially on a charge of financial embezzlement, something which the accused persisted in denying until the end. Naturally, the underlying motive for the indictment was otherwise. In addition to personal motivations, Saḥnūn had decided to strike a blow against heresy. He was in fact, so it is related, very severe in his opposition to the innovators (*ahl al-bidaʿ*), of whom Ibn Abi 'l-Djawād was not one of the least. Day after day, with the object of extorting the desired confession from him, Saḥnūn had him flogged in the courtyard of the Great Mosque, until he died. This death, allegedly, weighed heavily on his conscience, but this did not

deter him from pursuing energetically his policy of the repression of heresy, in other words the freedom of independent thought.

Hitherto, in the multiple circles of scholarship, representatives of all tendencies were able to express themselves freely in the Great Mosque of Kairouan. In a process amounting to a purging of the community of scholars there, Saḥnūn put an end to this "scandal". He dispersed the sects of the *ahl al-bidaʿ*; the leaders of heretical sects were paraded ignominiously, and some were compelled to recant in public. Saḥnūn was one of the greatest architects of the exclusive supremacy of Sunnism in its Mālikī form throughout the Muslim West.

Like all Sunnīs, he condemned recourse to the sword "even against the unjust *imāms*" (al-Mālikī, *Riyāḍ*, Beirut 1983, 368), which does not mean that the barometer of his relations with the authorities was set fair. From the outset he took the position of guarantor of an intransigent justice, upright and equal for all—including the entourage of the *amīr*—and of redresser of wrongs, which often led him into vehement confrontation with Muhammad I, in particular with his insistence on the release of numerous women unjustly condemned to slavery in the course of various operations aimed at the repression of insurrections. On numerous occasions he felt obliged to offer his resignation. Although he did not accept this resignation the *amīr*, tired of his criticisms and of the incessant complaints of his entourage, ultimately gave him an associate in the person of al-Ṭubnī, a *ḳāḍī* reputedly ignorant but complaisant. Some time later, in the morning of Sunday 7 Radjab 240/2 December 854, Saḥnūn died, depressed and embittered. As required by Tradition, he was buried in the afternoon of the same day. As a supreme tribute, or for reasons of political expediency, the *amīr* conducted the funeral prayers in person. His Muʿtazilī entourage was not so forgiving: "He accused us, and we accuse him, of heresy", they said (Talbi, *op. cit.*, 133). His mausoleum, in the outskirts of Kairouan, is the object of constant veneration.

The name of Saḥnūn remains associated with the definitive triumph of Mālikism throughout the Muslim West, a triumph which Ibn Khaldūn, as a sociologist, explains by reference to Bedouinism (*Muḳaddima*, Beirut 1956, 810-11). This explanation does not take account of the fact that it was Ḥanafism which enjoyed a broad majority at the outset. In the reversal of the situation, it is therefore necessary to stress the exceptional role played by Saḥnūn. At his initiative, and by means of his prestige, Kairouan became a major centre for the study and diffusion of Mālikī *fiḳh*. He left, it is said, some 700 disciples, all of them "truly shining lights in their respective towns" (Talbi, *op. cit.*, 120). Among them, we have recorded 57 in Muslim Spain.

But Saḥnūn was not only a great *faḳīh*. His knowledge was matched by his piety, and by a life which was austere to the point of asceticism. Although wealthy—at the end of his life he possessed 12,000 olive-trees (*ibid.*, 163)—he disposed of his income in the form of alms and continued to live a life of poverty. He was easily moved to tears, and frequently sought seclusion in the *ribāṭ* of Ḳaṣr Ziyād. Rather curiously, and in a manner contrary to much of Tradition, he preached a version of monasticism: "If one can get by without a wife," he said, "it is preferable to renounce marriage" (al-Mālikī, *op. cit.*, 364). "In him there were qualities," wrote Abu 'l-ʿArab, "which were not to be found combined in any other: perfect knowledge of the law (*fiḳh*), sincere piety, rigour in the application of justice, contempt for temporal things, simple tastes in food and clothing, generosity and refusal to accept anything from princes" (*Ṭabaḳāt*, Algiers 1914, 101).

Saḥnūn was a great master of *fiḳh* and also a man of rigorous and demanding ethics. It is this which explains his success, and the constant veneration in which he is still held.

(M. Talbi)

AL-ṢAḤRĀʾ (A.), in English the Sahara, the name given to the desert in the northern part of Africa. *Ṣaḥrāʾ* is the feminine of the adjective *aṣḥar* "fawn, tawny coloured". It is applied by certain authors to an ensemble of stony terrain, steppelands and sands (cf. al-Idrīsī, ed. de Goeje, 37 n.), whilst the term *mudjdiba* designates more particularly terrain covered with moving sands and totally waterless (see Abu 'l-Fidāʾ, 137, tr. Reinaud, ii/2, 190). Leo Africanus uses it as a synonym for "desert" in general, see Schefer's ed., i/1, 5.

1. *History of the term.*

The Arabic authors provide only fragmentary and often vague items of information on the Sahara. The only region which they know with some precision is the northern zone, bordering on Ifrīḳiya and the Maghrib, the zone within which Ibn Khaldūn (*Hist. des Berbères*, ed. de Slane, i, 190) includes the Tafilalt, Touat, Gourara, Fezzan and even Ghadāmis. These authors further disagree on the boundaries of the Sahara. Thus al-Bakrī asserts that the sands mark the beginning of the "land of the blacks" (*Masālik*, Algiers 1911, 21, tr. de Slane, 49). Ibn Khaldūn, on the contrary, states that this land is separated from Barbary by a vast region formed from deserts "where one risks dying of thirst". One also finds here and there some information on the parts of the desert crossed by caravan routes (e.g. on the western Sahara; cf. the description of the desert called Nisar or Tisar by al-Idrīsī, Yusr by Abu 'l-Fidāʾ) or on certain trade centres like Tadmakka and Awdaghust [*q.v.*] (al-Bakrī, 339). Leo Africanus sums up the items of information given by his predecessors. He identifies the Sahara with the Libya of the ancients (i, 5) and attempts a regional division based on the peoples there. He distinguishes five parts to the Sahara: (1) the desert of the Zenaga from the Ocean to the salt workings of Tegaza; (2) the desert of Wanzigha, from the salt workings of Tegaza to the Aïr towards the east and the desert of Sidjilmāsa [*q.v.*] to the north; (3) the desert of Targa (Touareg), bounded in the west by Ighidi, to the north by Touat, Gourara and the Mzāb [*q.v.*] and to the south by the kingdom of Agades; (4) the desert of the Lamta [see LAMṬA], bounded on the north by the deserts of Ouargla and Ghadāmis, and on the south by the deserts which stretch as far as Kano; and (5) the desert of the Bardawa, that between the desert of the Lamta in the west, the desert of Awdjila in the east, Fezzan to the north and Bornu to the south (tr. Schefer, iii, 267 ff.).

2. *Boundaries.*

The present-day Sahara is bounded on the west by the Atlantic; on the north by the chains of the southern Atlas from the Moroccan High Atlas to the hills of Gafsa in Tunisia; then by the Mediterranean, then Libya (apart from some better-watered areas of Tripolitania and Cyrenaica) as far as Egypt; on the south by the Sāḥil [*q.v.*] and its extensions to the Sudan. To the east, some authors end it at the Nile valley, whilst others extend it as far as the Red Sea and include with it the deserts of Arabia, which in effect form part of the same, diagonal-running arid region extending from Mauritania to the deserts of China, in which the Red Sea is the only topographical interruption, though not climatically. The area of the Sahara may be estimated at between 8.5 million and 9.5 million km² according to the criteria adopted by various authors for its boundaries.

3. *Physical geography.*

(a) Climate and vegetation. The Sahara is characterised above all by its desert climate, linked to the great anticylones which often fix themselves there. The great scarcity and irregularity of rainfall, as well as its pronounced isolation, make the southern part of the region one of the hottest of the globe, where the average annual temperature can reach 30°. These two factors join together to make the air extremely dry and to bring about intense evaporation, even if there are notable differences between the central region of the desert and its fringes; on the periphery, rainfall, though feeble, arrives at least once a year, and the action of water running, favoured by the absence of vegetation cover, remains the predominant factor modifying the natural milieu in the semi-arid and arid areas, when these are not too pronounced; the steppe lands to the north, more complex in the Sāḥil [*q.v.*] to the south, mark the transition to wetter regions and form milieux relatively more favourable to human activity and to pastoralism. It is only in the central part of the Sahara that the action of water becomes negligible in the areas which are completely arid and hyperarid; effective rainfall there is so rare, and separated in time by several years, that the action of temperature and, above all, that of the wind, becomes the essential factor making for erosion of a virtually fixed environment, such as can be observed in the great plains of Tanezrouft on the Algerian-Mali frontier and of Ténéré on the Algerian-Niger frontier, or in the *sarīrs* of southern Libya. In the desert proper, vegetation is extremely sparse, apart from in certain wadi beds where some spiny trees manage to maintain themselves by deriving water from deep underground.

The abundance of prehistoric artefacts in the most desolate regions of the Sahara point to the region having undergone climatic modifications. Since the beginning of the Quaternary, it has been affected by alternate phases of humidity and dryness connected above all with changes in the earth's orbit. The last humid phase, the better known, took place mainly between 6,000 and 2,000 B.C. It affected the whole of the Sahara, and conditions were clearly more favourable, as shown by frequent traces of lake- dwelling sites which allowed the installation of Neolithic peoples throughout almost all the desert. These peoples covered the sandstone rock faces with numerous carvings and paintings depicting the fauna of wet zones.

(b) Relief. The mountainous massifs, even if at times important, cover only a small part of the Sahara. They number three. The Tibesti (21° N, 18° E), the most extensive and the highest, reaching 3,400 m/10,300 feet; the Hoggar [see AHAGGAR] (23° N, 6° E), slightly lower at 3,000 m/9,000 feet; and the Aïr (18° N, 8° E), only reaching 2,300 m/7,000 feet. Other massifs, such as the Adrar of the Ifoghas and the Adrar of Atar [see ADRAR], are clearly of lesser importance and are only remarkable in relation to the surrounding plains. In essence, the greater part of the Sahara is made up of vast flat regions, of diverse origin and divisible into two groups. The vast erosion surfaces which have levelled the ancient shields of the African plate formation cover the greater part of the Sahara; they are often interrupted by residual reliefs with steep slopes, called in the Earth Sciences by German terms, *inselbergs* when they are isolated, and *inselgebirge* when they form small mountainous massifs covering a small part of the surface (e.g. the "massif" of the Eglab on the Algerian-Mauritanian border). The other surfaces are made up of sedimentary coverings of the base, forming plateaux and called *ḥamādas* when they are not too worn by erosion. These coverings are sometimes ancient (sandstone *tassilis* around the Hoggar and Tibesti massifs, often much dissected by erosion), and sometimes more recent (the great Mesozoic *ḥamādas* of the Tademaït plateaux to the north of In Salah, and the recently-formed *ḥamādas* of the southern piedmont region of the Saharan Atlas). The greater part of these surfaces is covered by the *reg* [*q.v.*], occasionally covered by a thin sandy surfacing. In effect, contrary to an idea frequently put forward, the sand dune massifs making up the *ergs* hardly cover more than one-sixth of the area of the Sahara, even though they may at times make up very extensive ensembles like the Great Western Erg (*ca.* 80,000

km²) and the Great Eastern Erg in the north of the Algerian Sahara, and the Edeyen (a Berber term) of Murzouk in Libya, or the Great Erg of Bilma (Chad-Niger), at the point of contact between the Sahara and the Sāḥil. Watercourses (*wādīs*) are rare, above all in the hyper-arid central part; their valleys are often very wide and their beds, which are not commensurate with the current quantity of water transported, are favourable spots for human activity; they are the heritage of the more humid climatic variations of the Quaternary period.

4. *Human geography and population.*

The ancient human population of the Sahara is complex, and has its roots in the distant past. One must in fact go back to the beginnings of the Neolithic period (*ca.* 8,000 B.C.) in order to see how, each time when the climate becomes more wet, the desert becomes repopulated on the its margins—Maghrib, Nile valley, the Sāḥil. The population was already varied, as is seen in the diversity of the axes of population. All through the Neolithic period, the ancestors of numerous present peoples of North Africa lived in the Sahara: Palaeoberbers, between North Africa, the Tropic of Cancer and the Nile, negroid Sudanese, and Nilotic peoples. Rock art shows this diversity: in the Tassili n'Ajjer, the Acacus, the Ahaggar, etc., are carved and, above all, painted scenes of hunting, livestock rearing and daily life which inevitably evoke the nomads of the Sahara and the northern Sāḥil—Moors, Touaregs, Tubus, Peuls or Fulanis, etc.

Growing desiccation led to, from 2,000 B.C. onwards and even earlier in the Egyptian Sahara, a retreat of human occupation; hunters, pastoralists and primary agriculturists had to follow southwards the retreat of the isohyets. In the eastern Sahara, numerous Palaeoberber groups (including the Lebu, who provided the ethonym "Libyan") were compelled, often with sucess, to penetrate into the Nile valley, where the Libyans or Tehennu played an important role in the birth and florescence of Pharaonic civilisation.

From the beginning of the present era, desiccation became general. Except for a few refuge areas, valleys or mountains, the Sahara henceforth made obligatory an economy and way of life which only certain human groups were ready to accept, and which was to allow them to control the Saharan expanses: Berbers (Lawāta, Sanhādja, Zanāta, Lamṭa, Hawāra, etc., ancestors more or less directly of the white-skinned nomads, Moors and Touaregs, of historical times), Tubus, Zaghāwa (between Fezzan, Tibesti, Lake Chad and Kordofan), etc.

The Romans, masters of Egypt and North Africa at this time, knew hardly anything of the Sahara. They were content with military campaigns of intimidation or of reconaissance, without any intention of colonisation, and with a simple, necessary belt of southern defences for controlling the nomads of the northern Sahara. Only Fezzan, under control of the Garamantes, to some extent vassals from A.D. 69 onwards, was frequented by the Romans, for reasons as much commercial as political, starting from the Libyan littoral and from the Nile valley.

The economy was based on stock rearing (goats and, above all, camels), the razzia and war, domination of the oases (where traces of the Neolithic period population survived) and the beginnings of caravan trade, initiated by the very rapid growth in the number of dromedaries.

At this time, the Sahara was already a barrier, as much climatic as cultural, between the Nile, North Africa and the Sāḥil. Each ensemble of territories now developed specific characteristics. Commerce and the advent of Islam, however, were to bring them together again, for, in future, the Sahara itself was only to be attractive because of the possibility of being out of sight there, as with the Khāridjites of Mzāb or of Sidjilmāsa, where were to be found certain Arab tribes which had been pushed back or were particularly adventurous.

Contrariwise, between the introduction of the dromedary and the lure of the rich markets of the Maghrib (from Fāṭimid times onwards) and of Europe, an economic system based on interchange developed progressively across the desert. From the 8th century onwards, bands of Arab traders coming from the Maghrib established themselves in the lands of the Sāḥil, which the Arab geographers and travellers describe (Ibn Ḥawḳal, al-Bakrī, Ibn Baṭṭūṭa, etc.). Towns either developed or were created (Awdaghust, Ghāna, Djenné, Gao, Tademekka, Agadès, etc.). From the 13th century, the Sāḥil profited extensively from the system, by controlling exports—and not only those of gold—across the desert.

The 14th century was the golden age for these trans-Saharan relations. The Meccan Pilgrimage of the king of Mali, Mansa Mūsā [*q.v.*], in 1324, was the apogee of this, so impressive was its richness. But from the end of the 15th century onwards, the more and more exigent presence of Europeans on the Atlantic coasts of Africa disturbed trans-Saharan relations and made human relations harder.

Around the 10th century, a period of climatic remission allowed a number of peoples of the Sāḥil—Soninke, Bambara, Soghaï, Mossi, Zarma, Hausa, Peul or Fulani, Kanuri, Kanemi, etc.—to re-establish themselves as far as the 20° latitude north, where they could now for the first time practise stock rearing and even, at times, agriculture. They also formed political entities, straddling the Sahara and Sāḥil, which were the first ones in that region and which clashed, towards the north, with those of the Berbers and Arabs.

Arab penetration was in fact an early one, along the tracks, which became the axes for human, commercial, intellectual and religious penetration. From the outset of their conquest of North Africa, they were attracted by the Sahara, in respect of gold and of slaves from its southern fringes. The first moves date from 666 (Fezzan and possibly Kawar), 682 (Sūs) and 734-5 (from Morocco towards Senegal). But during the 7th-8th centuries, the Arabs were still too much strangers to the Sahara for them to establish themselves there for any lengthy duration.

In the western Sahara, there was a strong current of contacts between Morocco and the Sāḥil, where the town of Awdaghust became important from before the 7th century. At the opening of the 11th one, Berbers of Mauritania—the Almoravids [see AL-MURĀBIṬŪN]—launched themselves in an immense politico-religious movement of conquest, of which the Berber-Sudanese front was as important as the Moroccan-

Hispanic one. The region then fell once more into an indrawn state, troubled only by the progressive and irresistible movement, as far as the banks of the Senegal, of Arab tribes coming from Morocco, who gradually were to form, together with the Berber substratum, the basis of the Moorish peoples of the western Sahara.

In the Niger bend, Gao was already a powerful, and Muslim, town in the 8th century, frequented by the Massouf Berbers, living between Mauritania and Mali. Its relations with the Mag̲h̲rib (Tāhart, G̲h̲adāmis, G̲h̲āt, Tunis and Tripoli) and with Egypt, and even with Spain, were close. Timbuctu [*q.v.*], founded in the 12th century, was another of these staging-post towns of the desert. The kingdom of Mali [*q.v.*] was a truly international power, which the Ottoman empire, the Ḥafṣids of Tunis and the Moroccan dynasties had to take into account. But the region was frequently devastated by the rivalries of the peoples of the Sāḥil (Soninke, Songhaï, Mossi, Peul or Fulani, etc.), the Touaregs (who definitively seized the Aïr from the Hausas in the 12th century) and, later, the Moroccans, who endeavoured, without great success, to establish their power in the Sāḥil in the 16th century by destroying the Songhaï empire (battle of Tondibi, 1591).

In the eastern Sahara, there were several large groupings, along axes to the Mediterranean, by means of two main routes, Aïr-Ahaggar and Kawar-Djado, with Fezzan as a staging-post. The kingdom of Bornu [*q.v.*] was the most important of these between the 16th and 18th centuries, in contact with the Ottomans, who controlled Cairo, Tripoli and Tunis, and who were above all interested in the slave traffic. The Tubus, long established between Fezzan, Djado, Ennedi and Lake Chad, resisted all pressures.

Yet further to the east, relations existed between the Chad basin and the Nile valley in the Sudan, via Ennedi and Dārfūr [*q.v.*].

The Europeans did not really appear until the 18th century. Previously, only the coastlands were known to them above all, to the Portuguese. The account of the Moroccan Leo Africanus [*q.v.*], who crossed the Sahara between 1510 and 1514, gave Europe access to knowledge which, alone amongst outsiders, was at that time accessible only to the Arabs. In the 19th century, the Europeans acquired for themselves the means for exploring the interior of Africa, for varying reasons, amongst which were prominent a desire to combat the places of origin for slavery and a search for new economic outlets. All through this century, numerous explorers laid down the ways for colonisation, which was often violent and which excited strong reactions, frequently led by the Muslim Ṣūfī orders of the Sāḥil, linked as they were with the Orient and the Mag̲h̲rib. These last played an essential role in the definitive Islamisation of the Sāḥil. One may mention, amongst the main explorers, before they yielded place to military men, Mungo Park, Laing, Caillé, Barth, Duveyrier, Rohlfs and Nachtigal.

5. *The contemporary Sahara.*

Insofar as agriculture has not been able to develop

in the desert except under the beneficent effect of irrigation (this marking the great difference between it and the countries of the Sāḥil, where one can speak of dry farming, under conditions of rainfall, as likewise in the lands bordering the northern edge of the Sahara), men have systematically colonised the more low-lying parts. These zones, on one hand, can benefit, all along the northern edge of the desert, from the flowing of streams whose waters can be diverted towards agricultural lands, and, on the other hand, they allow the underground water level to be reached more easily by means of wells from which water is raised by manpower, animal power or mechanical pumps. But since the end of the last century, the resources of the deep water table have been tapped through deep bore-holes, in this instance, artesian wells (water under pressure, hence spurting out) and provide a supplementary advantage. The most abundant resources are those of the so-called Albian water table (or the Intercalary Continental ones), utilised in the Algerian and Tunisian Sahara, which is also the origin of the Great Artificial river of Libya, an enormous aqueduct which transfers water towards the coastal zones. But inasmuch as the Intercalary Continental water table is made up of fossil water (the results of the last rainfall of the Quaternary period), the question must be posed, how long can this hydraulic source last? The question remains nonetheless pressing because it is these deep bore holes which are the basis for the spectacular development of the palm groves of the Algerian lower Sahara and the nearby Tunisian Sahara, comprising a commercial agriculture founded on the production of dates of exceptional quality (the "deglet nour") which has supplanted the self-subsistence agriculture which was for long the only one practiced in the oases. It is equally true that agriculture, even in regard to the date palm groves which best characterise the Saharan oasis and which furnish an important part of the food supply, has only, over the centuries, played a secondary role in the economy of the Sahara, and has never allowed the local peasants to become rich. For long, it has merely been the indispensable complement of urban development.

For the Sahara, the necessary means for passage between black Africa and the Mediterranean before maritime routes began to provide an alternative means of trade relations, has known quite a florescence of towns, mainly on its borders, the best known being Sid̲j̲ilmāsa (whose ruins lie near the town of Rissani in Morocco), Timbuctu (in modern Mali); in Algeria, Ouargla and Ghardaïa, and in Tunisia, Tozeur, were the termini for trans-Saharan caravans, whilst the towns of the Mauritanian Adrar (e.g. Atar) or of the Libyan desert (Ghat, G̲h̲adāmis) played the roles of staging-posts in the journey across the desert. These functions of the town, for long dormant after the disorganisation of traditional connections consequent on the partition of Africa by competing colonial powers, today enjoy a new vigour, but in a totally different context. This arises within the framework of new economic resources, utilising underground ones, notably hydrocarbons, above all in the Algerian and Libyan Saharas, and, much less, in Tunisia; also, there has been a diversification in employment, of which the towns have been the main beneficiaries, so that the pressure of urban populations weighs more and more heavily on the organisation of the Saharan region. Manufacturing and industrial activities, and administrative expansion—in order the better to control the Saharan region—and the growth of commerce, have all given a new vigour to the towns, whose populations have swollen enormously.

Because of this, the oasis societies have undergone deep changes, since the ways of urban consumption and ways of life have expanded rapidly, as much amongst the sedentaries as amongst the nomads. Many of the traditional modes inherited from the past, whose management has been perfectly mastered by the local populations, will probably continue to have their *raison d'être*. But the most spectacular evolution stems from the development of agriculture for the market, mainly based on the cultivation of out-of-season vegetables which the Sahara can produce, given its latitude and the length of sunshine there; the agricultural populations which have been best able to adapt to market demands are from those parts of the Sahara which are the best supplied with towns, with mercantile traditions, with the best food supplies and labour resources, and most easily linked to the great centres of consumption, i.e. the towns of the Mediterranean littoral and the export outlets. Furthermore, the Saharan expanses, by virtue of their rich hydraulic reserves, are more and more considered as reserves of land, immense regions to be colonised, whose value for intensive agriculture (mainly based on cereals, above all wheat) may possibly allow of a solution to the problem of finding food supplies (at least on the local scale; for the national scale, this is a utopian dream). Whence the increased number of deep boreholes which supply the self-propelled sprinklers and which create a new landscape, that of agribusiness, whose real place in the desert will be determined in the future.

In this context, nomadism is only a residual, very much a minor, activity, despite the tenacious legend which sees the Sahara as essentially a land of nomads. Decades of unrestrained urbanisation have in fact radically modified the general picture, apart from the effects of the long periods of desiccation which have affected the fringes of the desert (where the most numerous groups of nomads live) and which have erased the complementary factors (climatic, whence vegetational) making up the support for nomadic life. A new complementarity, this time based on relationships with the town, has replaced these latter ones; the nomad may now raise livestock for slaughter on the account of his relatives who have become sedentarised, or he may now become an adjunct of tourism (guide or camel-driver accompanying excursionists), or yet again he may have become an agriculturist once more, often aided by the state, which endeavours to settle the nomads—unless these principal sources of income stem from what is regarded as a side-activity, the nomad himself having kept up a semi-way of life as a nomadic herdsman, with the family continuing to live in a tent. In sum, the abandonment of vast pastoral areas has as its corollary the end of a certain control over the expanses which the nomads enjoyed; the Saharan expanses have never been so empty, and the contrast between the towns where men and activities are now concentrated and the pasture lands which have now become useless, has never been so brutal.

Development policies applied to the Sahara all end up, whatever the political options chosen by the various states, in processes which inevitably converge on the same constant: a state-directed structure and a multiplication of relationships which bring about forms of association in the most varied fields. In practice, all of these work together to break up the isolation which was once the common lot of the Saharan peoples: a good network of roads, access to wage-earning employment, the developing role of the towns within the framework of a voluntarist policy and the generalising of a market economy. In sum, in a few

decades only we have witnessed a process of integration in the sense used in politics, i.e. entry into a vast grouping which is transforming the life of the Saharan peoples by bringing them fully into the process of state-building.

That the Sahara is going to be, in the future, an expanse which not only retains its population but attracts people as well, is the tangible proof that it has become part of the development process. The attachment of these immense Saharan expanses to the Mediterranean province of each of the states involved constitutes a geopolitical factor of first-rank importance.

(J. BISSON)

SAHSARĀM, variously spelt as Sahasrām, Sasarām, Sassaram, Sasiram, a small town in the S̲h̲āhabād district of Bihār in India (lat. 24° 58′ N., long. 84° 01′ E.), associated with the name of S̲h̲īr S̲h̲āh Sūr (946-52/1539-45 [see DIHLĪ SULTANATE]), initially as his military *iḳṭāʿ* and subsequently as his burial place, this last considered to be "one of the grandest and most imaginative architectural conceptions in the whole of India" (P. Brown, *Indian architecture*, 84). Legend ascribes the name to "certain Asura or demon who had a thousand arms, each holding a separate plaything" (*Imperial Gazetteer of India*², xxii, 111). East of the town, near the summit of a spur of the Kaimur range is a Buddhist site where, in a small cave, there is an important Asōka inscription. Here also stands the tomb of Pīr Čandan S̲h̲ahīd. Abu 'l-Faḍl mentions Sahsarām as one of the 18 *maḥalls* of the *sarkār* of Rōhtās [*q.v.*] and refers to its revenues, climate, military contingents, etc.

The main attraction of Sahsarām is a group of royal tombs of S̲h̲īr S̲h̲āh, his father Ḥasan Sūr, his son Salīm S̲h̲āh and the architect ʿAlawal K̲h̲ān, each of which has its own marked architectural character. S̲h̲īr S̲h̲āh's tomb is an "architectural masterpiece". It stands in a vast artificial lake with an octagonal hall surrounded by an arcade which forms a gallery. Its imposing structure rises in five stages to a total height of about 45.5 m. Spreading out to the water's edge is a continuous plinth of steps. The tomb chamber has inscriptions carved on the *ḳibla* wall. The roof is supported by four Gothic arches. Brown, *op. cit.*, 85, considers the tomb structure "an inspired achievement, a creation of sober and massive splendour of which any country would be proud."

Other buildings of Sahsarām worthy of mention are the *Ḳalʿa*, the *ʿIdgāh* and the *ḥammām* or Baths.

(K.A. NIZAMI)

AL-**SAḤŪL**, the name of both a town and a *wādī* in Yemen. The town lies on the road from Ibb [*q.v.*] to al-Mak̲h̲ādir near the ruins of Ẓafār al-As̲h̲rāf, in ancient times the capital of the Ḥimyarite kingdom (see Smith, *Ayyūbids*, ii, 216). For Wādī Saḥūl, see *Eduard Glaser's Reise nach Mârib*, ed. D.H. Müller and N. Rhodokanakis, Vienna 1913, charts 2-3. Al-Saḥūl was called *Miṣr al-Yaman* on account of its wealth in corn, and was celebrated for the so-called Saḥūlī cloaks (*saḥūliyya*) made there of white cotton. The Prophet is said to have been shrouded (*kufina*) in two of them for burial. Al-Saḥūl is mentioned in connection with the journey made by Asad al-Dīn Muḥammad b. Badr al-Dīn Ḥasan from D̲j̲uwwa via Wuṣāb to D̲h̲amār [*q.v.*] (see al-K̲h̲azrad̲j̲ī, i, 111; on Asad al-Dīn, see AL-MAHDĪ LI-DĪN ALLĀH AḤMAD, 1; RASŪLIDS, and Serjeant-Lewcock, *Ṣanʿāʾ*, 64-6).

(E. VAN DONZEL)

ṢAHYŪN (present-day (Arabic) ṢALĀḤ AL-DĪN; Greek SIGON; Frankish SAÔNE), a stronghold of the D̲j̲abal al-ʿAlawiyyīn (Nuṣayrī Mountains), situated about 25 km/15 miles north-east of the Syrian port of

al-Lādhiḳiyya (Latakia), near the town of al-Ḥaffeh. The castle occupies a narrow, east-west running spur, isolated by a rock-hewn fosse on the east, and protected by deep ravines on the north and south. The principal extant constructions are the remains of a Byzantine citadel on the highest, middle point of the site; extensive and better-preserved Frankish fortifications, including a massive keep, walls and bastions at the eastern end; and a mosque and a *ḥammām* bearing the name of the Mamlūk ruler Ḳalāwūn.

The earliest attested occupier was a dependant of Sayf al-Dawla [*q.v.*] the Ḥamdānid ruler of Aleppo. In 975/364-5, he surrendered the castle to the Byzantine Emperor John Tzimisces. The site remained in Byzantine hands until the beginning of the Crusades. By 513/1119, the castle was in the possession of the Frankish Count Robert the Leper, from whose descendants Ṣalāḥ al-Dīn wrested it in 584/1188. The Ayyūbid ruler gave the place to his lieutenant Mankurūs b. Khumārtigin. The latter's heirs ruled it until 671/1272, when it was handed over to the Mamlūk al-Ẓāhir Baybars. The castle subsequently became the refuge of Sunḳur al-Ashḳar, an *amīr* of Baybars' successor Ḳalāwūn, in al-Ashḳar's rebellions against Ḳalāwūn, until their dispute was resolved in 685-6/1287. For at least the next century under the Mamlūks, Ṣahyūn seems to have flourished. Abu 'l-Fidāʾ reports a town as having grown up next to the castle. Traces of extensive settlement are still visible to the east of the fosse. Later, however, the entire site was abandoned.

(D.W. Morray)

ṢĀʾIB, Mīrzā Muḥammad ʿAlī, Persian poet of the 11th/17th century.

The precise date of his birth is not known, but it is presumed that he was born around 1010/1601-2. His father, Mīrzā ʿAbd al-Raḥīm, was a leading merchant of Tabrīz. When Shāh ʿAbbās I (r. 985-1038/1587-1629) made Iṣfahān his capital he caused many merchants from Tabrīz to settle there, in the quarter named ʿAbbāsābād. At this time Ṣāʾib's father moved to Iṣfahān, where the poet is said to have been born. In his verses, however, Ṣāʾib often invokes his connection with Tabrīz, and consequently he is referred to both as Iṣfahānī and as Tabrīzī.

Ṣāʾib's early upbringing took place in Iṣfahān. He obtained his education at home, and became involved in poetical exercises at a young age. He is reported to have received his training in poetry from Ruknā Masīḥ of Kāshān (d. 1066/1655 or 1070/1659-60) and from Sharaf al-Dīn Shifāʾī (d. 1037/1628), although this is discounted by some recent authorities. During his youth he made a pilgrimage to Mecca and also visited the shrine of ʿAlī al-Riḍā in Mashhad.

Towards 1034/1624-5, Ṣāʾib set out for India. His decision was, allegedly, in reaction to the conduct of some self-seeking individuals who were engaged in poisoning the ears of Shāh ʿAbbās I against him. It is also possible that, like other Persian poets of his age, he was drawn to the Mughal court in expectation of rich rewards. His journey took him through Harāt and Kābul, where in the latter place he found access to Muḥammad Riḍā Aḥsan Allāh, popularly known as Ẓafar Khān (1013-73/1604-63), who served as administrator on behalf of his father Khʷādja Abu 'l-Ḥasan Turbatī (d. 1042/1633), a distinguished Mughal nobleman. Ṣāʾib benefited from the generosity of Ẓafar Khān, and the two men struck up a friendship which seems to have continued even after the poet's return to Persia.

At the beginning of Shāh Djahān's reign (1037-69/1627-58), Zafar Khān was called back from Kābul to the royal court, and Ṣāʾib accompanied his patron to India. It is said that the Emperor bestowed upon the poet the title of Mustaʿidd Khān and appointed him to the command of 1,000 horsemen, which carried with it an award of 20,000 rupees. In the middle of Rabīʿ II/November 1629, Ẓafar Khān was sent to the Deccan, and Ṣāʾib accompanied him. While the poet was staying in Burhānpūr [*q.v.*], he received the news that his father had arrived in Āgra from Iṣfahān with the intention of inducing his son to return home. Upon hearing this, Ṣāʾib composed a *ḳaṣīda* in which he expressed the wish to return to Persia. In 1042/1632, Ẓafar Khān was made governor of Kashmīr, and he took Ṣāʾib with him. The poet visited Kashmīr, and thence proceeded to Persia with his father.

Ṣāʾib's stay in India lasted for some seven years. His verses show that he missed his homeland and longed to go back; thereafter, he did not make any other long journey. He would sometimes visit places inside Persia, but only to meet poets and learned men in connection with his literary activities. His fame kept growing, and his works were in demand from rulers and dignitaries. He was appointed by Shāh ʿAbbās II (r. 1052-77/1642-66) as his poet-laureate—a position in which he reportedly enjoyed almost the same privileges as any minister. In his old age, he never set foot outside Iṣfahān, and was later buried in the same retreat where he stayed. Opinions differ regarding the date of his death, which is placed variously between 1080/1669-70 and 1088/1677-8.

Ṣāʾib is described as a devoutly religious man. According to the *Khizāna-yi ʿāmira*, he was a Sunnī. Despite his religious affiliation, he was well-liked by all classes of Persians, who were chiefly Shīʿī, because of his discretion as regards religious beliefs. Unlike many poets, he was free from greed, rivalry and malice. He often chose the works of other poets as a model for his own poems, acknowledging his source by name as a mark of appreciation.

The poetical output of Ṣāʾib is extremely voluminous. The total number of verses ascribed to him varies from 80,000 to 125,000. Likewise, estimates also differ regarding the size of his *mathnawī Ḳandahār-nāma* ("The book of Ḳandahār"), which he composed to commemorate the capture of the Afghān province by the Persians from the Mughals in 1059/1649. These estimates range from 35,000 to 135,000 couplets. To be sure, the above figures are an exaggeration, but, as Shiblī Nuʿmānī has pointed out, there can be no doubt that Ṣāʾib was the most prolific of the latter-day poets. It is reported that he prepared some collections of his verses according to their subject-matter. One of them, named *Mirʾāt al-djamāl* ("The mirror of beauty"), contained verses relating

to the physical features of the beloved; another, called *Mirʾāt al-khayāl* ("The mirror of thought"), included in its contents allusions to mirror and comb; and yet another, entitled *Maykhāna* ("Tavern"), devoted itself to examples of verses mentioning wine and tavern. In addition, Ṣāʾib put together a selection of the opening couplets from his poems and other verses in a volume which he called *Wādjib al-ḥifẓ* ("Worthy of keeping"). He also compiled an anthology, entitled *Bayāḍ*, which contained a selection of his own verses as well as those of other poets, both old and new.

Ṣāʾib was well-versed in the art of calligraphy, a family legacy which may be traced to his uncle, Shams al-Dīn Tabrīzī (d. 940/1533-4), titled Shīrīn-ḳalam ("Of sweet pen"), who was a master calligrapher of his time. There exist several manuscripts of Ṣāʾib's works in his own handwriting, indicating the poet's skill in the *nastaʿlīḳ* form of calligraphy.

Among the verse forms employed by Ṣāʾib, the predominant one was the *ghazal*. His collection contains some *ḳaṣīdas* and *mathnawīs*, but these constitute an insignificant part of his huge output. It is the quantity and quality of Ṣāʾib's *ghazals* that lend stature to his poetry. The poet sought to change the direction of the *ghazal* by investing it with a new imagery and a refreshing thought pattern. He was careful to avoid stereotypes. Even when presenting a conventional theme, his aim was to transform it so as to convey an impression of novelty. One of the devices he employed very successfully was the *irsāl-i mathal*, in which the poet makes a statement in the first line of the couplet and reinforces it by an example in the second line. With Ṣāʾib, this mode of expression, which could easily become contrived when employed by lesser poets, retained its spontaneity because of his skilful handling.

Ṣāʾib was a leading exponent of the Indian style of Persian poetry (*sabk-i Hindī* [*q.v.*]). He remained a towering figure in the literary world of Persia until his fame suffered a decline in the 18th and 19th centuries when the style which he represented lost its appeal with the local poets and arbiters of taste. This change is reflected in the views expressed by such later writers as Luṭf ʿAlī Beg Ādhar (d. 1195/1781) and Riḍā-ḳulī Khan Hidāyat (d. 1280/1871). Ādhar accuses Ṣāʾib of initiating "a novel and disagreeable style", following which poetical standards underwent progressive deterioration; and Hidāyat declares that the trend which the poet chose for himself was not admired during the author's time. While Ṣāʾib's popularity diminished in his own country, the esteem enjoyed by him in the Indian sub-continent among students of Persian literature has continued unabated over the ages. Lately, the literary scene in Persia has also witnessed a revival of interest in Ṣāʾib, as shown by the successive publication of his poetical works and the appearance of numerous articles about his poetry.

(MUNIBUR RAHMAN)

SĀʾIB KHĀTHIR, influential musician of the early Umayyad period, d. 63/683.

According to the *Kitāb al-Aghānī*, the source for what information we have on him, Abū Djaʿfar Sāʾib Khāthir was a *mawlā* of Persian origin. By trade a food or, possibly, wheat (*ṭaʿām*) merchant in Medina, he became well-known as a singer and was attached to an important patron, ʿAbd Allāh b. Djaʿfar [*q.v.*]. He is also said to have sung, during the caliphate of Muʿāwiya (41-60/661-80), for his son Yazīd and, at the instigation of ʿAbd Allāh b. Djaʿfar, before Muʿāwiya himself. He was killed during the battle of al-Ḥarra, in 63/683.

The Ḥidjāz, and Medina in particular, was a centre of musical innovation during the 1st/7th century, and Sāʾib Khāthir is identified as one of the key figures in this process. He is portrayed in one account as having performed in traditional fashion, singing improvised (*murtadjil*) airs to the accompaniment of a percussion stick (*ḳaḍīb*). But in another, conforming to a standard narrative formula used in the *Aghānī* to encapsulate change, he is said to have been the first musician in Medina to introduce what would become the standard practice of the singer accompanying himself on the lute (*ʿūd*). With Sāʾib Khāthir, too, is associated the absorption and integration of Persian elements, for in reaction to the impression made on ʿAbd Allāh b.

Djaʿfar by the Persian songs of Nashīṭ [*q.v.*], he is said to have set Arabic verse in the same style. It is such developments that were to lead to the elaboration of the sophisticated court-music tradition eventually codified by Isḥāḳ al-Mawṣilī (150-235/767-850 [*q.v.*]) and it is, indeed, Sāʾib Khāthir's song *li-man' l-diyāru rusūmuhā ḳafr*ᵘ that is claimed to initiate the stylistic prototype or first stage of that tradition, the early Umayyad *ghināʾ mutḳan*. Alternatively, this piece is perceived as the earliest instance in Arabic of *ghināʾ thaḳīl*, pointing towards the emergence of a "heavy" vs. "light" (*khafīf*) divide with which will later be associated notions of an Arab vs. Persian stylistic cleavage. That Sāʾib Khāthir was considered to be a major figure in this early period of radical change is also indicated by the roll-call of great Umayyad singers who are said to have learned from him (even if the extent of their indebtedness is impossible to define): Ibn Suraydj, Djamīla, ʿAzza al-Maylāʾ and, in particular, Maʿbad [*q.v.*], to whom, it is alleged, some of Sāʾib Khāthir's own compositions were later attributed.

(O. WRIGHT)

SAʿĪD B. ABĪ ARŪBA, Mihrān Abu 'l-Naḍr al-ʿAdawī al-Baṣrī (born *ca.* 70/689, d. between 155 and 159/771-6), traditionist in Baṣra, *mawlā* of the Banū ʿAdī b. Yashkur. Saʿīd is mentioned among the first who compiled systematic *ḥadīth* collections of the *muṣannaf* [*q.v.*] type (see IBN DJURAYDJ; Juynboll, 22; Van Ess, 63). Among his works were a *K. al-Sunan* and a *K. al-Ṭalāḳ*; none of them is extant. His repute as a traditionist is equivocal; he is generally considered reliable until he became "confused" some ten years before his death. Aḥmad b. Ḥanbal is said to have accused him of tampering (*tadlīs* [*q.v.*]) with *isnāds* [*q.v.*] (al-Dhahabī, *Mīzān al-iʿtidāl fī naḳd al-ridjāl*, ed. al-Badjāwī, Cairo 1963, ii, 152). Probably his reputation was impaired because he adhered to the doctrine of the free will [see ḲADARIYYA]. Saʿīd is known best as transmitter of al-Ḥasan al-Baṣrī [*q.v.*], and of his teacher Ḳatāda b. Diʿāma [*q.v.*], whose *K. al-Manāsik* he edited (Sezgin, *GAS*, i, 32; Van Ess, 143). Via Ḳatāda, he also transmitted Ḳurʾānic exegesis and stories about the prophets (see Khoury, *passim*). A number of people transmitted *ḥadīth* or other materials from Saʿīd, notably ʿAbd al-Aʿlā b. ʿAbd al-Aʿlā al-Sāmī (d. 189/805; Van Ess, 73).

(W. RAVEN)

SAʿĪD B. AL-ʿĀṢ B. UMAYYA, a member of the Aʿyāṣ [*q.v.* in Suppl.] component group of the Umayyad clan in Mecca and, later, governor of Kufa and Medina, died in 59/678-9, according to the majority of authorities.

His father had fallen, a pagan, fighting the Muslims at the battle of Badr [*q.v.*] on 2/624 when Saʿīd, his only son, can only have been an infant. He nevertheless speedily achieved great prestige in Islam not only as the leader of an aristocratic family group but also for his liberality, eloquence and learning. He was in especially high favour with ʿUthmān, and was appointed by that caliph, together with the other Ḳurashīs ʿAbd Allāh b. al-Zubayr [*q.v.*], ʿAbd al-Raḥmān b. al-Ḥārith and the Medinan Zayd b. Thābit [*q.v.*], to prepare a Ḳurʾān vulgate text on the basis of the *muṣḥaf* [*q.v.*] of Ḥafṣa, probably in 32-3/652-4 (see Nöldeke-Schwally, *G des Q*, ii, 48, 50-2, 56). He married two of ʿUthmān's daughters, Maryam and Umm ʿAmr, and also had links with the Marwānid branch of the clan through his marriage to Umm al-Banīn, daughter of Marwān b. al-Ḥakam [*q.v.*].

In 29/649-50 he was appointed governor of Kūfa in succession to al-Walīd b. ʿUḳba, achieving a reputation as a military commander by leading expeditions into Ādharbaydjān and the Caspian provinces. But he incurred unpopularity in unruly Kūfa—to him is attributed the saying that the Sawād [*q.v.*] of ʿIrāḳ was the garden of Ḳuraysh, i.e. meant to be exploited by the Meccans—and his return to his post from Medina at the end of 34/655 was blocked by the *ḳurrāʾ* and other agitators in Kūfa under Yazīd b. Ḳays al-Arḥabī and Mālik al-Ashtar, who proclaimed Abū Mūsā al-Ashʿarī [*q.v.*] governor in the city. Saʿīd fought in defence of ʿUthmān's *dār* in Medina when it was attacked by the rebels of the Egyptian army and was wounded protecting the caliph; but, after at first inclining to the cause of Ṭalḥa, al-Zubayr and ʿĀʾisha, he declined to participate in the Battle of the Camel, and settled in Mecca. He did not participate in the events of Ṣiffīn [*q.v.*] either, but Muʿāwiya in 49/669 appointed him governor of Medina in place of Marwān b. al-Ḥakam, and he remained in office till replaced by the latter in 54/674.

He finally returned to his estates in the Wādī 'l-ʿAḳīḳ at Medina, and died at al-ʿArṣa, most probably in 59/678-9. The leadership of his family then devolved on his son (as many as 14 sons of his are enumerated in the *nasab* literature, e.g. in al-Balādhurī, *Ansāb*, ivb, 136-49) by Marwān's daughter, ʿAmr al-Ashdaḳ [*q.v.*].

Although an Umayyad, Saʿīd had close relations with some members of the Hāshimī family, and it was recalled by them that he had taken no part against ʿAlī in the First Civil War (see Lammens, *Moʿâwia I*[er], in *MFOB*, i [1906], 27-9); early Islamic historical writing is, accordingly, rather favourable to his image.

(C.E. BOSWORTH)

SAʿĪD B. AL-BIṬRĪḲ (not Baṭrīḳ) or Eutychius (263-328/877-940), Melkite patriarch of Alexandria, author of works of medicine, history and apologetics, and one of the most important figures in the Melkite literature of his period.

The only known biographical elements derive from the author himself (ed. Cheikho, ii, 69-70, 86-7, 88) and from his continuator (Yaḥyā, in *PO*, xviii, 713-19); they are repeated, without additional information, in Ibn Abī Uṣaybiʿa. Born at Fusṭāṭ on 27 Dhu

'l-Ḥidjdja 263/10 September 877, Saʿīd b. al-Biṭrīḳ studied medicine and distinguished himself as a practitioner; he was elected patriarch of Alexandria on 8 Ṣafar 321/7 February 933, at the age of sixty, and then received the name Eutychius. To resolve the contradiction between the two items of information—the age and the year—M. Breydy (*Études*, 5 ff.) proposes fixing the accession of Saʿīd to the see of Alexandria on 13 Ṣafar 323/22 January 935 (according to the version given in two manuscripts). His patriarchate was controversial, and darkened by the division of the Melkite community of Egypt into two rival factions and by the spoliations which ensued. Saʿīd died on Monday, 30 Radjab 328/11 May 940 in Alexandria.

(a) *Medicine.*

Saʿīd b. al-Biṭrīḳ is the author of a medical treatise, *K. fi 'l-Ṭibb* or *Kunnāsh* (mentioned by Ibn Abī Uṣaybiʿa), of which a manuscript has been preserved in the Manādīlī collection at Aleppo (cf. P. Sbath, *al-Fihris*, i, 9, no. 23).

(b) *History.*

Saʿīd b. al-Biṭrīḳ is best known for his universal history dedicated to his fellow-physician ʿĪsā b. al-Biṭrīḳ, *K. al-Taʾrīkh al-madjmūʿ ʿalā 'l-taḥḳīḳ wa 'l-taṣdīḳ*, also called by the copyists *Naẓm al-djawhar*, and generally known, since its edition by Pococke, under the title of *Annales*, although this is not strictly speaking a case of annals but of a universal history in which the material is divided chronologically according to the reigns of sovereigns. With this first Christian history in the Arabic language, dealing simultaneously with religious and secular events, Saʿīd intended to offer to the Melkite community a history which would enable it to assert its identity vis-à-vis the other Christian communities, and vis-à-vis the Byzantine and Arab empires.

It begins with the creation of Adam and deals with Biblical history until the Babylonian exile, then expands into a history of the Near East until the birth of Christ, devotes substantial treatment to the beginnings of the Church, to heresies and to councils, to monasticism in Palestine, without, however, neglecting the reigns of Byzantine and Sāsānid sovereigns, and concludes with Arabo-Muslim history, pursued until the fifth year of the caliphate of al-Rāḍī (326/937-8). As he himself explains in the introduction, Saʿīd sets out to make a work of compilation on the basis of various sources which he does not mention, but the most important of which can be identified (cf. Breydy, *Études*, ch. ii): an Arabic version of the Bible, the *Cave of treasures*, the *Alexander Romance*, the history of the Sāsānid kings translated by Ibn al-Muḳaffaʿ [*q.v.*], hagiographical writings (St. Epiphanus of Cyprus, St. Euthymus, St. Sabas, St. John the Almoner, etc.), popular legends (including the Seven Sleepers of Ephesus), and Muslim traditionists such as ʿUthmān b. Ṣāliḥ (cf. Breydy, *La conquête arabe*. Cf. also G. Levi Della Vida, *Two fragments of Galen in Arabic translation*, in *JAOS*, lxx [1950], 182-7). Saʿīd b. al-Biṭrīḳ makes every effort to insert the information thus assembled into a chronological frame supplied successively by the history of the Bible, by the reigns of the kings of Persia, of Alexander, of the kings of Egypt, of Roman emperors, of Sāsānid sovereigns, of Byzantine emperors, and finally, from the time of the Arab conquest, of caliphs. Saʿīd situates the Incarnation in the year 5500, thereby following not the calculations of Byzantine chronographers but the era of Africanus, still used by those whom Grumel dubs "adherents of the mystical 5500" (*La chronologie*, 22 ff., 157).

The *Taʾrīkh* was continued at the beginning of the 5th/11th century by Yaḥyā al-Anṭākī [*q.v.*], who gives interesting details regarding the manuscripts which he has been able to consult: "I have examined a certain number of manuscripts of the book of Saʿīd b. al-Biṭrīḳ, and found that some of them contained history up until the beginning of the caliphate of al-Ḳāhir, in other words, until the year in which Saʿīd b. al-Biṭrīḳ was appointed Patriarch of Alexandria; on the other hand, other manuscripts had been supplemented for some reason by additions on the part of the continuator of the book, which were not to be found in the authentic manuscript. I have seen the authentic manuscript and, besides this, other manuscripts where [the history] reaches the point of the caliphate of al-Rāḍī, that is year 326 of the Hidjra. It is principally on the basis of this manuscript that I have composed this book, because this manuscript is the most complete in exposition and the closest to the period [of the author]. I believe that the reason for the incompleteness at the end of certain of these manuscripts, and for the fact that their account is abridged in relation to what appears in the authentic manuscript, is that the book was copied in the lifetime of the author at different times; the copies of this book becoming known to people, each copy contained in its entirety history up until the moment when [the copy] had been written" (*PO*, viii/5, 709-10).

Today, some thirty manuscripts of Saʿīd's *Taʾrīkh* have been counted (cf. Graf, *GCAL*, 34-5; Breydy, *Études*, ch. iv; J. Nasrallah, *Histoire du mouvement littéraire*, 26-7), which is indicative of the book's success. It was known in the West from the 17th century onwards. In 1642, John Selden edited, translated and commented on a brief extract concerning the preaching of St. Mark and the origins of the Church of Alexandria; in 1661, A. Ecchelensis refuted Selden by producing a new translation of the same passage; in 1658-9, E. Pococke published the complete text of the *Taʾrīkh* on the basis of the manuscripts obtained by Selden (all three copied in Aleppo in the 17th century), accompanied by a Latin translation and index. This translation was reproduced, as were those of Selden and of Ecchelensis, in the *Patrologia* of Migne. In 1906-9, L. Cheikho, alone for the first part, in collaboration with Ḥ. Zayyāt and B. Carra de Vaux for the second, re-edited the Arabic text on the basis of the manuscript of the Zayyāt collection while giving the variants according to the Pococke edition, to which B. Carra de Vaux added a collation with two manuscripts of the Bibliothèque Nationale de Paris; this edition also contains the continuation owed to Yaḥyā al-Anṭākī. In 1987, B. Pirone produced an annotated translation into Italian, according to Cheikho's text.

The manuscripts, even though they differ on the date of the end of the chronicle and contain more or less significant variants, represent the same recension of the text. Nevertheless, one manuscript stands out from the others: the ms. Sin. Arab. 580 (582) of Saint Catherine's Monastery in the Sinai, considered an anonymous chronicle (the manuscript is mutilated at the beginning and at the end) until Breydy claimed to have identified it as the original, and even autographical, recension of the *Taʾrīkh* of Saʿīd b. al-Biṭrīḳ, henceforward regarding all the other manuscripts as bearers of a version adapted and amplified in Antiochian circles in the 11th century, perhaps by Yaḥyā himself. Breydy bases his conclusion on three arguments: (1) The script of Sin. Arab 580 (582) makes it possible to date this manuscript at the beginning of the 10th century (a cursive Kūfic, sometimes poorly deciphered by the authors of the later recen-

sion, examples in *Mamila ou Maqella?*, 73-4, and in *Études*, 33-4); (2) The statement by Yaḥyā himself (*PO*, xviii/5, 708-9) that after his arrival in Antioch he had revised his own work with the aid of chronicles which then became available to him, and that he had intended to correct in the same manner the *Taʾrīkh* of Saʿīd which he considered flawed and incomplete. Although he adds that he abandoned this project, Breydy thinks that he, or others, did not resist the temptation; (3) The fact that all the manuscripts of the *Annales* belong to the Antiochene Melkite circle, and the late date of a number of copies (the earliest do not date back beyond the 13th-14th centuries). Comparison between the so-called Alexandrian recension of Sin. Arab. 580 (582) and the so-called Antiochene recension of the Pococke and Cheikho editions, outlined in *Études*, ch. v., has not been made in detail by Breydy except with regard to the taking of Jerusalem by the Persians and its reconquest by Heraclius (in *Mamila ou Maqella?*); it permits him to establish the Arabo-Jacobite origin of the first version, while the additions and glosses of the second would seemingly derive from Byzantine sources found at Antioch. Only a critical edition taking account of the entirety of the manuscript tradition, comparison between the two versions, and precise study of the origin of the additions, could definitively confirm, or refute, the conclusions of Breydy.

The vehement opposition displayed by Saʿīd b. al-Biṭrīḳ towards other Christian persuasions led to ripostes, among others, from the Copt Sāwīrus (Severus) Ibn al-Muḳaffaʿ [*q.v.*] in his *Kitāb al-Madjāmiʿ* (P. Chebli, *Réfutation de Saʿīd ibn Batrīq (Eutychius). Le livre des conciles*, in *PO*, iii [1905], 121-242) and from the Nestorian Elias of Nisibis (L. Horst, *Das Metropoliten Elias von Nisibis Buch vom Beweis der Wahrheit des Glaubens*, Colmar 1886, 23, 56 ff.). The few lines in which Saʿīd denies the perpetual orthodoxy of the Maronites (ed. Cheikho, i. 210), repeated by William of Tyre (*History*, ed. R.B.C. Huygens, 1018, cf. R.W. Crawford, *William of Tyre and the Maronites*, in *Speculum*, xxx [1955], 222-8), drew down upon Saʿīd the fury of the Maronites, from Ecchelensis to historians of the present day. A rigorist Muslim, Ibn Taymiyya [*q.v.*], refuted in his turn the Chalcedonian views espoused by Saʿīd, not out of affection for Nestorian or Monophysite doctrines but to show the contradictions of the Melkite doctrine (G. Troupeau, *Ibn Taymiyya et sa réfutation d'Eutychius*, in *BEO*, xxx [1978], 209-20). Numerous later authors made use of Saʿīd's *Taʾrīkh*, among others al-Masʿūdī [*q.v.*] who met him in Fusṭāṭ (*Tanbīh*, ed. De Goeje, 154, tr. B. Carra de Vaux, *Le Livre de l'avertissement*, 212; cf. also idem, *Murūdj*, tr. Ch. Pellat, ii, 493), George the Friar (cf. P. Schreiner, *Fragment d'une paraphrase grecque des Annales d'Eutychès d'Alexandrie*, in *Orientalia Christiana Periodica*, xxxvii [1971], 384-390), William of Tyre for his chronicle of Arab sovereigns (a work which is lost, but mentioned in the prologue to his *History*, ed. Huygens, 100; cf. H. Möhring, *Zu der Geschichte der orientalischen Herrscher des Wilhelm von Tyrus. Die Frage der Quellenabhängigkeiten*, in *Mittellateinisches Jahrbuch*, xix [1984], 170-83), not to mention Ṣalība b. Yūḥannā, al-Makīn [*q.v.*] and al-Maḳrīzī [*q.v.*].

Furthermore, it has been established that the account of events in Sicily for the years 827-965, which follows the *Annales* of Saʿīd b. al-Biṭrīḳ in the Cambridge manuscript and is for this reason generally known as the *Cambridge chronicle* (for editions and translations of this text, see Brockelmann, I², 155), is to be attributed not to Saʿīd but to an Arab compiler of the 11th century who followed a Greek text (cf. Vasiliev, *Byzance et les Arabes*, i, 342-6, ii, 2, 99-106). Nasrallah possessed in his personal library another manuscript of the *Annales* with this same addition (*Histoire du mouvement littéraire*, 27, 54). Similarly, a letter edited in Paris in 1642 and on numerous subsequent occasions should not be attributed to Saʿīd (contrary to the affirmation of Brockelmann, I², 154) but to Eutychius, patriarch of Constantinople (552-65) who was in correspondence with Pope Vigilius.

(c) *Apologetics.*

Saʿīd b. al-Biṭrīḳ undertook the defence of the Chalcedonian faith not only in his *Taʾrīkh* but also in a work of apologetics which has not been preserved: *K. al-Djadal bayn al-mukhālif wa 'l-naṣrānī* (mentioned by Saʿīd himself, *Annales*, ed. Cheikho, i, 176, and by Ibn Abī Uṣaybiʿa). Nasrallah (*op. cit.*, 31) has advanced the hypothesis that the three long refutations of the Nestorians and the Jacobites (ed. Cheikho, i, 159-61, 161-75, 196-7), which interrupt the narration and are introduced by the expression *ḳāla Saʿīd b. al-Biṭrīḳ al-mutaṭabbib*, were inserted at a later stage, and that the first and the third of these passages are borrowings from the *K. al-Djadal*; as for the second of these passages, on account of its similarity to another work of apologetics, the *K. al-Burhān*, it poses a new problem, that of the attribution of this work to Saʿīd. On the basis of the presence of the same passage in both books—the *Taʾrīkh* and the *K. al-Burhān*—G. Graf (*Ein bisher unbekanntes Werk*, and *GCAL*, ii, 37) considered that Saʿīd was the author of the *K. al-Burhān*. While it is certain that this treatise was composed in Arabic by a Chalcedonian before 944 (since it situates in Edessa the mandilium which was transferred to Constantinople in that year, which is confirmed by a note to Sin. Arab. 75, composed in 982, declaring that its author inherited this manuscript from his grandfather, cf. Nasrallah, *op. cit.*, 32-3), the attribution to Saʿīd is today not considered valid (criticism of Graf's hypothesis, notably from F. Tautil, in *al-Mashrik*, xxvii [1929], 914-19, and Nasrallah, *op. cit.*, 31 ff.).

(Françoise Micheau)

SAʿĪD b. **ḤUMAYD** b. Saʿīd al-Kātib, Abū ʿUthmān, ʿAbbāsid scribe, epistolographer and poet. His exact dates are unknown, but he was probably born in the last years of the 3rd century A.H. and died after 257/871 (or 260/874), the year of Faḍl al-Shāʿira's death [*q.v.* in Suppl.]. His family came from the lower Persian nobility—he himself is sometimes called *al-dihḳān*—and he claimed royal Persian descent. He seems to have held various lower provincial offices, before stepping into the limelight as the *kātib* of Aḥmad b. al-Khaṣīb, vizier to al-Muntaṣir (r. 247-8/861-2 [*q.v.*]), for whom he drew up the *bayʿa* declaration (preserved by al-Ṭabarī, *Taʾrīkh*, ix, 235, tr. J. Kraemer, 199-202; al-Sāmarrāʾī, 74-8). Under the latter's successor, al-Mustaʿīn (r. 248-52/862-6 [*q.v.*]), he headed the *dīwān al-rasāʾil* (al-Ṭabarī, ix, 264, tr. G. Saliba, 13).

He was, however, less of a career administrator, comparing, as he did, the government service with a bath-house: if you are inside, you want to get out, and if you are outside, you want to get in (Ibn Abī ʿAwn, *al-Tashbīhāt*, ed. Muḥ. ʿAbd al-Muʿīd Khān, Cambridge 1950, 316); his favourite ambience was the literary salons of his time, especially that of the famous poetess, songstress, and lute-player, Faḍl al-Shāʿira. With her he had a stormy love relationship, which occasioned a fair amount of poetry on both sides. But his love poetry and, if we can trust the anecdotes, his love life, was by no means restricted to females.

Ibn al-Nadīm lists a collection of his poetry (*Fihrist* 123^{23}; 166^{18-19} [50 folios]) and a collection of his letters (*ibid.* 123^{23}). Neither has been preserved, but the specimens and fragments transmitted in secondary sources have been collected by al-Sāmarrāʾī (see *Bibl.*). He lists 43 pieces of prose, many of which are short sayings, while only two are lengthy documents. One is the *bayʿa* for al-Muntaṣir (see above), the other presents a description of a battle during the civil war between al-Mustaʿīn and al-Muʿtazz [*q.v.*], written on 24 Ṣafar 251/25 March 865 (reading *bakīna* for *khalawna* in the text) at the behest of the governor of Baghdād, Muḥammad b. ʿAbdallāh b. Ṭāhir, to be read in the Friday mosque (al-Ṭabarī, *Taʾrīkh*, ix, 296-303, tr. Saliba, 50-8; al-Sāmarrāʾī, 105-17). The collected poems and fragments of such run into 73 (plus 17 doubtful) items; the longest has thirteen lines. Ibn Abī Ṭāhir Ṭayfūr (d. 280/893 [*q.v.*]) presents Saʿīd b. Ḥumayd as a very able plagiariser (*Fihrist*, 123^{20-1}), remarking that, if one were to say to his prose and poetry "Return to your originators", nothing would stay with him. This is, however, not an original critique, either. According to the anecdotes, he was a facile improviser, and his poetry cannot be expected to be highly innovative. Most of the preserved pieces are in the *ghazal* genre; they are smooth and elegant.

His *shuʿūbī* attitude [see SHUʿŪBIYYA] emerges from the title of another book, now lost, that reads *K. Intiṣāf al-ʿadjam min al-ʿarab*, "Demanding justice for the Persians from the Arabs", also known as *al-Taswiya* "The equalising" (*Fihrist*, 123^{22-3}). The choice of words here shows him to be a moderate who did not claim superiority for the Persians.

Saʿīd b. Ḥumayd had a number of namesakes—al-Sāmarrāʾī enumerates five of them (*op. cit.*, 32-4)—of which Abū ʿUthmān Saʿīd b. Ḥumayd b. al-Bakhtakān (*Fihrist*, 123^{27-30}) was easily confused with our man due to the similarity in name as well as in *shuʿūbī* conviction.

Bibliography: The main sources for his life and his works are Ṭabarī, tr. J. Kraemer, *The History of al-Ṭabarī*, xxxiv, *Incipient decline*, Albany 1989, tr. G. Saliba, xxxv, *The crisis of the ʿAbbāsid caliphate*, Albany 1985, index; and Iṣbahānī, *Aghānī*, ed. ʿA.A. Farrādj, xviii, Beirut 1959, 90-102 (on Saʿīd b. Ḥumayd), xix, Beirut 1960, 257-71 (on Faḍl al-Shāʿira). For other sources, see *GAS*, ii, 583. Study and collection of works by Yūnus Aḥmad al-Sāmarrāʾī, *Rasāʾil Saʿīd b. Ḥumayd wa-ashʿāruh*, Baghdād 1971.

(W.P. Heinrichs)

SAʿĪD b. **SULṬĀN** b. Aḥmad b. Saʿīd Āl Bū Saʿīdī, ruler of ʿUmān and Zanzibar (b. Muscat 1791, d. at sea on 19 Oct. 1856). He and his brother Sālim succeeded jointly in 1806, but shortly were usurped by their cousin Badr, whom Saʿīd assassinated. Sālim had the title Imām, but was a nonentity; the effective power was in Saʿīd's hands. When Sālim d. Saʿīd was not elected to the imāmate, he preferred using the title Sayyid, used without distinction by all the princes of the family. Nevertheless, European sources frequently refer to Saʿīd as Imām. He never used the title Sulṭān.

The fissiparous ʿUmānī tribal system, family quarrels, Wahhābī expansionism in central Arabia, and disputes with other Gulf states, together with Anglo-French rivalry, complicated the earlier part of his reign. Muscat, nevertheless, was pivotal in the western Indian Ocean in a lively commerce which had attracted resident Indian merchant houses. Saʿīd developed an army with Balūčī and other mercenaries, and also a fleet which could also serve mercantile ends. The grandson of its commander, Abdalla Saleh Farsy, was Saʿīd's Swahili biographer.

In 1698 the preceding Yaʿrubī dynasty had acquired the eastern African coast from Mogadishu to Tungi in northern Mozambique. Control was little more than nominal. In Mombasa [*q.v.*] the Mazarʿi *liwalis* had made themselves virtually independent, as had the Sultans of Pate and Kilwa [*q.vv.*], and petty rulers in Pemba, Tumbatu and Zanzibar, save for the occasional payment of tribute. In 1822 the Mazarʿi had seized Pemba [*q.v.*], and Saʿīd sent an expedition against them. In 1827 he came to enforce his authority over the Mazarʿi in person; in 1824-6 they had attempted independence under British protection, which was disowned by Whitehall.

By 1834 Saʿīd had determined to move his capital to Zanzibar, which he had first visited in 1828. He now divided his time between Muscat and Zanzibar almost equally, only finally settling in Zanzibar in 1840. Apart from tax revenue, his move was primarily commercial. After 1839 Indian caravans, that is, caravans funded by the Indian merchant houses, went inland, for ivory, slaves and other products of the interior. The caravans were armed, for Saʿīd had no ambitions for an interior empire. The changes were formalised by the establishment of consulates: United States (1837), Britain (1841), France (1844), whose countries, with Germany, became the principal buyers. Commerce was his principal preoccupation, and his own ships exported goods to India and

Arabia, and occasionally to Europe and to China. The range of his interests is exemplified in 1845, when he sent an Arab horse as a present to the American President, and himself received an Imperial dinner set of sixty-four pieces from the Chinese Emperor, of a kind of porcelain reserved for the Imperial Family alone.

From 1822 he was under pressure to end the slave trade, when he was forced to forbid the sale of slaves to Christian powers. In 1845 he was persuaded into a further treaty prohibiting both import and export of slaves from his African dominions. Since he had no control inland it was not difficult to evade these provisions.

The prosperity of Zanzibar, and in particular the wealth that accrued from the clove trade, in which Zanzibar now led the world, was to a great extent dependent on Saᶜīd's patriarchal administration. He developed no constitutional or commercial system. He sat publicly daily to hear cases like any desert chieftain. Commercially, he was dependent on the ability and good will of the Indian merchants, whose immigration he encouraged. Mosques, palaces in the town and the countryside, and the packed houses in Zanzibar town spoke of the success of his regime.

His only existing portrait, painted from memory after an audience by an American naval officer, can be seen in the Peabody Museum, Salem, Massachusetts. An intimate portrait of his private life is given in the *Memoirs of an Arabian Princess* by his daughter Salme (so she pronounced Sālima), written in 1886. He had no children by his legal wives, but of his *surias*, chiefly Circassians, with some Georgians, Assyrians and Ethiopians, some seventy in all, twenty-five sons were born and an unknown number of daughters. Strict in his observance of the daily prayers, he delighted in lavish generosity at the great festivals; his personal life was of the simplest. He was an accomplished horseman and practical seaman. Saᶜīd, wrote a British consul, was "most truly every man's friend; he wishes to do good to all."

(G.S.P. FREEMAN-GRENVILLE)

SAᶜĪD b. ZAYD b. ᶜAmr b. Nufayl ... b. ᶜAdī b. Kaᶜb b. Luʾayy, a Companion of the Prophet from the tribe of Ḳuraysh̲ [*q.v.*] and one of Muḥammad's earliest converts.

His mother was Fāṭima bint Baᶜd̲j̲a b. Umayya of the clan of K̲h̲uzāᶜa. His *kunya* was Abu 'l-Aᶜwar or Abū T̲h̲awr. He was one of ᶜUmar b. al-K̲h̲aṭṭāb's cousins and at the same time his brother-in-law through his wife, who was ᶜUmar's sister, as well as through ᶜUmar's wife who was his sister. He assumed Islam before Muḥammad entered the house of Zayd b. al-Arḳam and ᶜUmar's conversion is said to have taken place under the influence of Saᶜīd and his family.

His father, Zayd b. ᶜAmr, was one of the *ḥanīfs*; he was much interested in monotheism, refused to worship idols, warned his contemporaries against idolatry and confessed the "religion of Abraham" [see ZAYD b. ᶜAMR]. It is said that he died in the year when the Kaᶜba was rebuilt, an event in which also Muḥammad is said to have taken part.

Saᶜīd migrated with the Muslims to Medina, where Muḥammad "brothered" him with Rāfiᶜ b. Mālik al-Zuraḳī, or, according to others, with Ubayy b. Kaᶜb.

When the rumour of the return of the Ḳuraysh̲ caravan from Syria reached Medina, Saᶜīd, together with Ṭalḥa b. ᶜUbayd Allāh, was sent on scouting service. They met the caravan at al-Ḥawrāʾ and hurried back to Medina to report the news. But Muḥammad was already on his way to Badr, and the battle took place without their taking part in it. They nevertheless obtained their portion from the booty. Saᶜīd was present at all the other *mas̲h̲āhid* and distinguished himself in the battle of Ad̲j̲nādayn [*q.v.*] (13/634), where he was at the head of the cavalry in the battle of Fiḥl [see FAḤL] (13/634), where the infantry was under his command, and in the battle of the Yarmūk [*q.v.*] (15/636).

At ᶜUmar's death, Saᶜīd belonged to those who promoted ᶜUt̲h̲mān's election as caliph. Yet he was not content with his government, though he did not join the ᶜAlid party.

He died in 50 or 51/670-1 in ᶜAḳīḳ near Medina, where he was buried. It is said that he reached the age of over 70 years. According to others, he died as governor of al-Kūfa under Muᶜāwiya.

Saᶜīd never played a significant role in the Muslim community. He was honoured because of his early conversion and belongs to the ten who were promised Paradise (*al-ᶜas̲h̲ara al-mubas̲h̲s̲h̲ara*). Muḥammad is sometimes (Aḥmad b. Ḥanbal, *Musnad*, i, 187-8) represented as ascending mount Ḥirāʾ or Uḥud with some of his Companions. As the mountain begins to tremble, he says: "Stand fast, O mountain, for on thee walk a prophet, a *ṣiddīḳ* and witnesses." Then he proceeds to beatify his Companions, among whom Saᶜīd mentions himself in a veiled manner in some traditions. Some of the forms of this report may remind us of Jesus' transfiguration on the mountain (Matt. xvii).

Saᶜīd belonged to those whose curse (*duᶜāʾ*) was efficacious. This is illustrated in the story of a woman who, being cursed by him, became blind and was drowned in a well into which she happened to fall because of her blindness.

Saᶜīd's *musnad*, i.e. the traditions handed down on his authority, is to be found in Aḥmad b. Ḥanbal's *Musnad*, i, 187-90.

SAᶜĪD (ABĪ) YAᶜḲŪB YŪSUF AL-FAYYŪMĪ [see SAᶜADYĀ BEN YŌSEF].

SAᶜĪD ABŪ BAKR (1317-67/1899-1948), Tunisian man of letters, who had an original and rich career as a self-taught poet, writer and journalist, all at the same time.

He was born at Moknine in the Tunisian Sāḥil on

28 October 1899 into a modest family of rural origin. His first studies were at the local Ḳurʾānic school of the town, where he speedily revealed himself to his teachers as one possessing a lively intelligence and, in particular, a precocious poetic talent. He composed his first verses at the age of eleven, and an anecdote is retailed about this, generally reported and related by those who had known him: he dealt with his subject of school composition in verse, at the same time preventing his masters from making the slightest correction. For financial reasons, he was unable to proceed to secondary studies, and it was from a lawyer and literary man from the Sāḥil region, one Rādjiḥ Ibrāhīm, who practiced at Sousse, that he found encouragement, both moral and material. This last made Saʿīd his secretary and placed his personal library at his disposal. Saʿīd profited from this to complete his education, as a genuine autodidact. Soon afterwards, he made contact with certain organs of the press in the capital Tunis, becoming a correspondent for them. Having mastered Arabic and French, and even Hebrew, with the encouragement of his patron Rādjiḥ Ibrāhīm, he went to Tunis and established himself there permanently, working as an editor for various newspapers and journals, such as *al-Fadjr*, *al-Badr*, *al-ʿArab*, *Lisān al-Shaʿb*, *al-Nadīm*, *al-Wazīr* and *al-Ṣawāb*, in the last of which he published his first poem, on 21 May 1920. This made him famous on account of its subject, the rights of the Tunisian woman (whose interests he hymned in several of his poems) to liberty, education, culture and total emancipation, thereby recalling Ṭāhir al-Ḥaddād, another contemporary man of letters who was, like Saʿīd Abū Bakr, a strong defender of the rights of women.

But it was in *al-Nahḍa* that he made his career, and it was there that he came to prominence through his rich and colourful style, publishing there a long article on the sessions of the First Constituitive Congress of the Néo-Destour Party held at Ksar-Hellal on 2 March 1934. It was there also, as in *al-Nadīm* too, that he began and continued regularly to publish his poems of a social and political character, in particular, summoning the people to "awake from their torpor" and their miserable circumstances, and employing a revolutionary emphasis and an innovative style. Saʿīd had little regard for the rigorous rules of prosody, and he appeared as an avant-garde poet for whom the restraints of metrics and rhyme were not to constitute a barrier to expression of basic feelings ideas and thought. This appeared quite clearly in his two poetic collections: *al-Saʿīdiyyāt*, published in 1927 in one volume (2nd ed. 1981) and *al-Zaharāt*, published at an unspecified date.

On another level, one should mention that Saʿīd brought out, from the 1930s to the beginning of the Second World War, an illustrated journal called *al-ʿĀlam al-muṣawwara*, which became, for a time, *al-ʿĀlam al-adabī*, and then, after October 1940, in an illustrated form, *Tūnis al-muṣawwara*, this being the main means whereby he earned his livelihood. After a long gap due to the Second World War, this journal re-appeared in July 1947. As a great lover of art, Saʿīd assiduously frequented not only the men of letters but also the artistic circles in the capital, where he learnt to play the violin and got to know a girl of the Tunis petite bourgeoisie, whom he married.

He was equally fond of travelling, and visited, as well as France, Algeria (in particular, the Constantine region), Morocco and Spain, especially Andalusia, with its main cities (Granada, Cordova and Seville). With regard to this last region, "melting-pot of Arab-Islamic civilisation", he wrote a travel narrative, in the fashion of an Ibn Baṭṭūṭa, with the title *al-Andalus ka-annaka tarāhā* (1931).

On 29 January 1948 he died, and was buried at Tunis. After the achievement of Independence, his remains were moved to the Mausoleum of Martyrs in his native town of Moknine, and this last has, for several years, and in homage to the person and his work, organised regularly a cultural and artistic festival in his memory. His name has been given to one of the main streets of the capital as well as in towns of the interior.

(H. Chaouch)

SAʿĪD b. Yaʿḳūb al-**DIMASHḲĪ**, Abū ʿUthmān, physician and translator of Greek scientific works into Arabic. As one of the leading physicians of his time, he enjoyed the favours of the vizier ʿAlī b. ʿĪsā (d. 334/946 [*q.v.*]). When the latter endowed a hospital in the Ḥarbiyya quarter of Baghdād in 302/914-15, he appointed Abū ʿUthmān as chief physician with the joint responsibility of supervising the hospitals of Baghdād, Mecca and Medina (Ibn Abī Uṣaybiʿa, i, 234, ll. 8-10, according to Thābit b. Sinān; cf. Ibn al-Djawzī, *al-Muntaẓam*, vi, 128; on the vizier's measures for public health, see *ibid.*, 221-2, and al-Ḳifṭī, *Ḥukamāʾ*, 193-4).

As a translator, he served not only the demands of the medical profession but showed equal competence in mathematics and philosophy. Together with Isḥāḳ b. Ḥunayn and Thābit b. Ḳurra [*q.vv.*], the most eminent transmitters of Hellenistic science in his generation, he was close to the Shīʿī *mutakallim* and heresiographer al-Ḥasan b. Mūsā al-Nawbakhtī (*q.v.*; and see Ibn al-Nadīm, *al-Fihrist*, 177).

Of his medical works, versions of Galen's *De pulsibus ad tirones* (with a commentary ascribed to Johannes Philoponus) and *De nervorum dissectione*, and of *De urinis* by Magnus of Emesa, are extant in manuscript; his own tabular compendium of *De pulsibus* is lost (see Sezgin, *GAS*, iii, 82, 90, 159; M. Ullmann, *Die Medizin im Islam*, Leiden 1970, 81, 90). His translation of the commentary of Pappus on Euclid's *Elements*, book X (on commensurable and incommensurable magnitudes [irrationalities]) has preserved a valuable document, lost in the original Greek, of the late Alexandrian tradition of mathematics (see Sezgin, *GAS*, v, 175; ed. W. Thomson, with G. Junge, *The commentary of Pappus on book X of Euclid's Elements*, Cambridge, Mass. 1930; German tr. H. Suter, *Beiträge zur Geschichte der Mathematik bei den Griechen und Arabern*, Erlangen 1922, 9-78).

His lasting importance as a translator lies in his philosophical work, where his scope went far beyond the ethical Platonism and Galenism of the medical

tradition, as attested in his own *masāʾil* on Galen's *De moribus* (lost, see Ibn Abī Uṣaybiᶜa, i, 234) and a chapter of sayings in the *Ṣiwān al-ḥikma* (ed. Dunlop, 125-6). An ethical treatise *Faḍāʾil al-nafs*, attributed to Aristotle and otherwise unknown, is quoted by Miskawayh in Abū ᶜUthmān's version (*Tahdhīb al-akhlāḳ*; ed. Ḳ. Zurayk, Beirut 1966, 86-91; see S. Pines, *Un texte inconnu d'Aristote en version arabe*, in *Archives d'histoire doctrinale et littéraire du moyen-âge*, xxiii [ann. 31: 1956], 5-43, esp. 16). His translation of Aristotle's *Topica*, books I-VII, became the definitive version of this fundamental textbook of logical reasoning (ed. ᶜAbd-al-Raḥmān Badawī, *Manṭiḳ Arisṭū*, Cairo 1948-52, 467-689 = ²Kuwayt 1980, 487-725), finished before 298/910-11, the date of a copy taken from Abū ᶜUthmān's exemplar (see *ibid.*, ¹532). Even more widely read was his rendering of Porphyry's introduction (*Isagoge*) to Aristotle's *Categories* (ed. Badawī, *Manṭiḳ Arisṭū*, ¹1019-68 = ²1055-1104). A partial translation of Aristotle's *Physics*, comprising at least books IV (with the commentary of Alexander of Aphrodisias, Ibn al-Nadīm, *Fihrist*, 250.14) and VII is quoted by the Arab commentators (ed. Badawī, Arisṭūṭālīs, *al-Ṭabīᶜa*, Cairo 1962, 318 l. 2, 754-5). His version of Aristotle's *De generatione et corruptione* (*Fihrist*, 251 l. 3) may have formed the basis of a compendium written by his patron, al-Nawbakhtī (mentioned in the *Fihrist*, 177).

Of particular interest, and indicative of his philosophical leanings, is a number of treatises by (and attributed to) Alexander of Aphrodisias; some of these were translated by himself, but others were collected by him from earlier work done by a circle of translators around al-Kindī [*q.v.*], and transmitted as al-Dimashḳī's work in later copies. In view of Alexander's rôle as a mediator between Peripatetic and Neoplatonic thought, and due to the inclusion of excerpts from the *Elements of theology* by Proclus into the Arabic *Theology of Aristotle* drawn upon by al-Dimashḳī, he contributed to the integration of Hellenistic philosophy in the Aristotelianism of the *falāsifa*. (See J. van Ess, *Über einige neue Fragmente des Alexander von Aphrodisias und des Proklos in arabischer Übersetzung*, in *Isl.*, xlii [1966], 148-68; G. Endress, *Proclus Arabus*, Beirut-Wiesbaden 1973, 35-38, 58-61, 75-6; F.W. Zimmermann, *The origins of the so-called Theology of Aristotle*, in *Pseudo-Aristotle in the Middle Ages*, London 1986, 110-295, esp. 130, 184 ff.).

SAᶜĪD EFENDI, later **PAS͟HA**, Meḥmed Čelebi-zāde, Ottoman Turkish official and Grand Vizier, born in Istanbul at an unknown date, died in 1174/1761. He was the son of the statesman and diplomat Mehmed Yirmisekiz Čelebi Efendi [*q.v.*], and accompanied his father on his diplomatic mission to France in 1132/1720-1. After a career as a secretary in the *Dīwān-i Humāyūn*, he himself was sent on embassies to Sweden and to France (1154-5/1741-2), and in 1169/1756 became Grand Vizier to ᶜOthmān III [*q.v.*] for five-and-a-half months. He finished his career as governor of Egypt and then of Adana and Marᶜash, dying in the latter place.

He was the author of *inter alia* a collection of poetry and a dictionary of materia medica, the *Fewāʾid ül-müfredāt*, but a particular claim of his to fame was his association with Ibrāhīm Müteferriḳa [*q.v.*], the pioneer printer of Islamic Turkish books in Turkey, being with Ibrāhīm the joint grantee of the original *firmān* issued by Aḥmed III for the establishment of a printing press in 1139/1727 [see maṭbaᶜa. 2. In Turkey].

Bibliography: See that to meḥmed yirmisekiz čelebi; also Alaettin Gövsa, *Türk meşhurları ansiklopedisi*, s.v.; *Türk dili ve edebiyatı ansiklopedisi*, ii, 128-9. (Ed.)

SAᶜĪD PAS͟HA, Muḥammad, youngest son of Muḥammad ᶜAlī Pas͟ha [*q.v.*] and hereditary viceroy of Egypt, theoretically under Ottoman suzerainty, 1854-63. He was styled Pas͟ha, but was already known in informal and unofficial usage as Khedive before this latter title was formally adopted after his death [see k͟hidīw].

Born in 1822, his father had had a high opinion of his capabilities and had sent him at the age of only nineteen to Istanbul for negotiations over the tribute payable by Egypt to the Porte. Saᶜīd's uncle and predecessor in the governorship of Egypt, ᶜAbbās Ḥilmī I b. Aḥmad Ṭūsūn [*q.v.*], had endeavoured to change the succcession arrangements in the Ottoman *firmān* of 1841, providing that the succession should go to the eldest living descendant of Muḥammad ᶜAlī's line, in favour of his own progeny, hoping that his son Ilhāmī Pas͟ha would succeed him. ᶜAbbās's death was briefly concealed, but Saᶜīd nevertheless managed to succeed without difficulty in July 1854.

ᶜAbbās Ḥilmī had been both zealous in guarding his rights *vis-à-vis* the Ottoman sultan and also suspicious of European pressures on Egypt and of foreigners in general. Saᶜīd, however, was less mistrustful of the West and its new techniques, having had several European tutors, and had an especial fondness for French culture; he appeared as a mild and benevolent ruler, more popular than his secretive, traditionalist predecessor. But he was also somewhat weak and susceptible to advice from interested parties, so that he succumbed to the charm of Ferdinand de Lesseps and granted to him the famous Suez Canal concession (see below).

Possibly influenced by outside advisers, Saᶜīd revived many of his father's economic, social and legal policies, whilst relaxing the extreme centralisation of Muḥammad ᶜAlī's time. He promulgated the first comprehensive law in Egypt on private landed and immoveable property, granting the right freely to dispose of this, and abolished the state monopoly over agricultural products (1858) (see G. Baer, *A history of landownership in modern Egypt 1800-1950*, London 1962, 7-10); these measures paralleled similar reforms in Turkey under the *Tanẓīmāt* [*q.v.*]. Saᶜīd was interested in railways and other forms of communication. The railway between Cairo and Alexandria was finished and a concession granted to the Eastern Telegraph Co. In 1854 the first River Navigation and Transport Co. in Egypt was founded, and in 1857 a commercial

Navigation Co. to help foreign trade. Above all, in 1854 de Lesseps received his first Suez Canal concession, confirmed by the Pasha in 1856. The European powers, including both France at the outset and Britian, tried by diplomacy to hinder the project, but work was begun in 1859 by peasant corvee labour and continued for a decade; the seaport at the northern end of the Canal was named Port Saᶜīd [*q.v.*] after the Pasha (see D.S. Landes, *Bankers and Pashas. International finance and economic imperialism in Egypt*, London 1958, 69 ff., 173 ff.; D.A. Farnie, *East and West of Suez. The Suez Canal in history 1854-1956*, Oxford 1969, 32 ff.).

In the financial sphere, the Bank of Egypt was founded in 1854 and the process began during Saᶜīd's reign whereby European financial and commercial influence became pervasive. The Pasha's financial needs for his military ventures (see below) and his public works led him to seek a £ 3 million loan from a London banking house, a harbinger of the disastrous financial policies which were to drag down his successor Ismāᶜīl [*q.v.*] (see Landes, *op. cit.*, 62 ff.).

Saᶜīd did not favour an expansionist policy in the Sudan, and left its governorship to Prince Ḥalīm; on the occasion of a visit to Kharṭūm [*q.v.*] in 1857, he made the first attempts to abolish the traffic there in black slaves. He did, however, continue the Egyptian contingent of 8,000 men which ᶜAbbās Ḥilmī had sent to the Ottomans' side when the Crimean War broke out, and he also sent a regiment to assist the Emperor Napoleon III in his endeavour to maintain the Archduke Maximilian on his throne in Mexico.

Saᶜīd died in Alexandria on 17 January 1863 and was buried there. His nephew Ismāᶜīl b. Ibrāhīm Pasha [*q.v.*], who had already been prominent during Saᶜīd's reign on diplomatic missions, including to Paris in 1855, as regent within Egypt and as *Sirdār* or Commander-in-Chief of the Egyptian Army in 1861, succeeded him without difficulty.

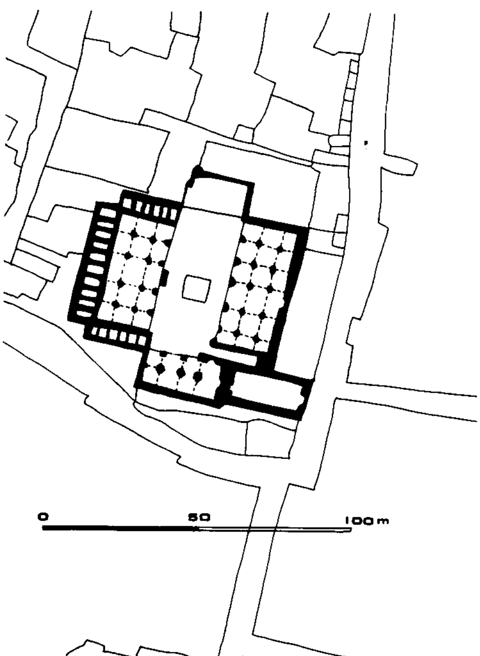
(C.E. Bosworth)

SAᶜĪD AL-DĪN Muḥammad b. Aḥmad **FARGHĀNĪ**, often called Saᶜīd-i Farghānī, author of important Ṣūfī works pertaining to the school of Ibn al-ᶜArabī. Sometimes the form Saᶜd al-Dīn is found, but this seems to be a copyist's correction of the unusual form. On a manuscript of his *Mashāriḳ al-darārī* dated 678/1279-80 (Esad Ef. 1511), the name is given as in the title of this entry, with "Kādānī" added after the *nisba* Farghānī. Ḥādjdjī Khalīfa gives death dates of 691/1292 and *ca.* 700/1300-1 (ed. Flügel, no. 365); Osman Yahia prefers 695/1296 (introd. to Sayyid Ḥaydar Āmulī, *Kitāb Naṣṣ al-nuṣūṣ*, Tehran 1975, 18); Brockelmann has 699/1299 (S I, 812).

Little is known of Saᶜīd al-Dīn's life. In his *Manāhidj al-ᶜibād* (Istanbul 1988, 184) he tells us that he entered Ṣūfism at the hand of Shaykh Nadjīb al-Dīn ᶜAlī b. Buzghush of Shīrāz (d. 678/1279), a disciple of Shaykh Shihāb al-Dīn ᶜUmar Suhrawardī. Later, he benefited from Shaykh Ṣadr al-Dīn Ḳūnawī (d. 673/1274), and then from Shaykh Muḥammad b. al-Sukrān al-Baghdādī and "others." Ḳūnawī tells us that Farghānī and several other scholars were his companions when he travelled in the year 643/1245-6 to Egypt and began teaching Ibn al-Fāriḍ's famous *ḳaṣīda, Naẓm al-sulūk* (also known as *al-Tāʾiyya*). Several people took notes with the aim of composing books, but only Farghānī was successful (letter of approval to Farghānī, *Mashāriḳ al-darārī*, ed. S.Dj. Āshtiyānī, Mashhad 1398/1978, 5-6, 77-8). Sibṭ Ibn al-Fāriḍ quotes Shams al-Dīn Ikī (d. 697/1298), a disciple of Ḳūnawī's and *shaykh al-shuyūkh* in Cairo, to the effect that after lecturing on *ḥadīth* in Arabic, Ḳūnawī would recite one verse of *Naẓm al-sulūk* and explain its meaning in Persian, and it was these explanations that Saᶜīd al-Dīn recorded (Th.E. Homerin, *From Arab poet to Muslim saint*, Columbia, S.C. 1994, 29; cf. Djāmī, *Nafaḥāt al-uns*, ed. M. Tawḥīdīpūr, Tehran 1336/1957, 542).

Farghānī is best known for his Persian and Arabic commentaries on *Naẓm al-sulūk*. The full name of the first is *Mashāriḳ al-darārī al-zuhar fī kashf ḥaḳāʾiḳ naẓm al-durar*, while the second is called *Muntahā 'l-madārik wa-mushtahā lubb kull kāmil aw ᶜārif wa-sālik* (2 vols., Cairo 1293/1876). Ḳūnawī's just-cited letter of approval is appended to the end of the introduction to the Persian text. The Arabic commentary is half again as long as the Persian and includes a much expanded introduction, without Ḳūnawī's letter; it was being read in Cairo as early as 670/1271 (Massignon, *The Passion of al-Ḥallāj*, Eng. tr. Princeton 1982, i, 44). Both works were widely cited as authoritative expositions of the teachings of Ḳūnawī. Djāmī was particularly fond of *Muntahā 'l-madārik* and called its introduction an unparalleled exposition of "the science of reality" (*Nafaḥāt*, 559).

Farghānī's third work, the Persian *Manāhidj al-ᶜibād ilā 'l-maᶜād*, outlines the five pillars of Islam along with basic Ṣūfī *ādāb*. It was not as widely read as the other two, but it gained more readership than it might have because Ḳuṭb al-Dīn Shīrāzī (d. 710/1311 [*q.v.*]), who studied *ḥadīth* with Ḳūnawī, incorporated it into his philosophical encyclopedia, the *Durrat al-tādj*, as the last and "most important" part of the book (see J. Walbridge, *A Sufi scientist of the thirteenth century: the mystical ideas and practices of Quṭb al-Dīn Shīrāzī*, in L. Lewisohn (ed.), *The legacy of mediaeval Persian Sufism*, London 1992, 323-40; idem, *The science of mystic lights. Quṭb al-Dīn Shīrāzī and the Illuminationist tradition in Islamic philosophy*, Cambridge, Mass. 13, 176-8). According to Ḥādjdjī Khalīfa, the *Manāhidj* was translated into Arabic with the title *Madāridj al-iᶜtiḳād* by Abu 'l-Faḍl Muḥammad b. Idrīs al-Bidlīsī. Ḥādjdjī Khalīfa (no. 1263) also attributes a commentary on Ibn al-ᶜArabī's *Fuṣūṣ al-ḥikam* to Saᶜīd al-Dīn, but the ascription is unlikely. Another book that is often attributed to Farghānī is the important unedited compendium of *Ṣūfī* technical terms, *Laṭāʾif al-iᶜlām fī ishārāt ahl al-ilhām*; some of the definitions are indeed taken from *Muntahā 'l-madārik*. However, neither the style of the work nor what the author says about himself allows for this attribution; he speaks of his own works on *kalām* (under the definition of *al-rūḥ*) and mentions (under *al-ᶜilm al-ladunī*) that he was a disciple of ᶜAlāʾ al-Dawla Simnānī (659-736/1261-1336 [*q.v.*]).



The *Mashāriḳ al-darārī* and *Muntahā 'l-madārik* are important as two of the earliest commentaries on Ibn al-Fāriḍ's poem, but their main significance lies in their formative influence on the way in which the teachings of Ibn al-ᶜArabī were developed. Like Ḳūnawī, Farghānī singled out certain of Ibn al-ᶜArabī's discussions and technical terms for emphasis. The net result was that Ibn al-ᶜArabī's well-known followers were drawn much closer to the philosophical

mode of expressing Islamic teachings than was the Shaykh al-Akbar himself. Farghānī's introduction to *Muntahā 'l-madārik* is an especially good example of a dense philosophical and relatively systematic exposition of Ibn al-ᶜArabī's teachings. It provides a better survey of the technical terms and discussions that were to play major roles in theoretical Ṣūfism in the coming centuries than does Ibn al-ᶜArabī's own *Fuṣūṣ al-ḥikam*, which was to be the object of over one hundred commentaries.

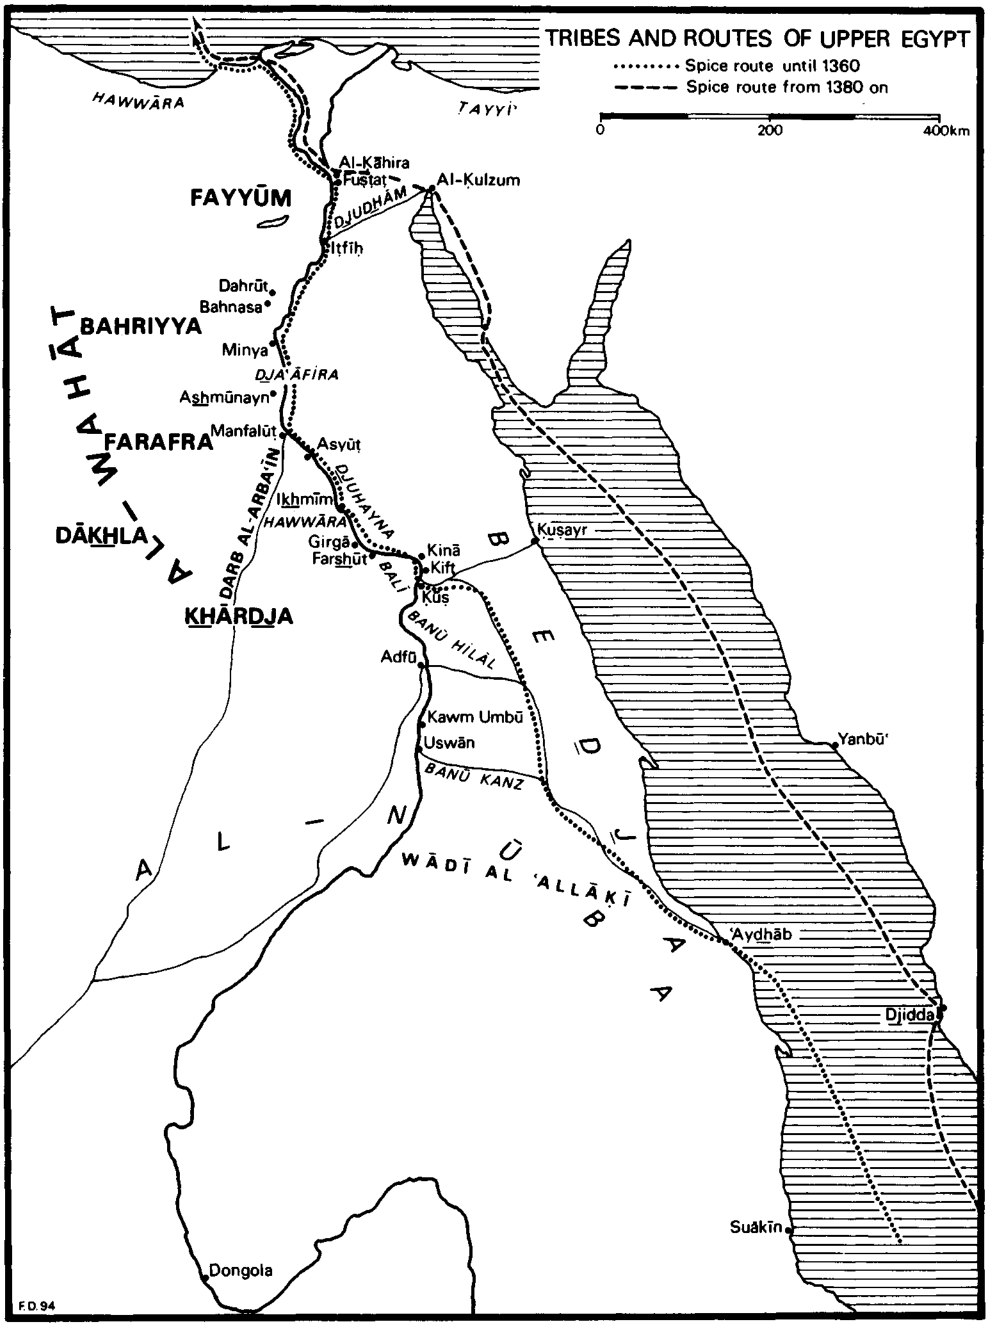
SAᶜĪD AL-**SUᶜADĀʾ**, the name of a *khānḳāh* or establishment for Ṣūfīs at Cairo founded during the Ayyūbid period in a former Fāṭimid house within al-Ḳāhira, now in the modern Djamāliyya street (*Index des monuments historiques*, no. 480).

In Fāṭimid times it was a dwelling facing the *Dār al-wizāra*, at that period the ministry of justice. Some famous persons dwelt there, such as the vizier Ṭalāʾiᶜ b. Ruzzīk [*q.v.*], who had a tunnel dug to connect it with the *Dār al-wizāra*. It was at this point that it acquired its name of Saᶜīd al-Suᶜadāʾ "the Supremely-happy one", from the name of the person thus styled, the *ustādh* Ḳanbar (or ᶜAnbar), an instructor at the great palace under al-Mustanṣir [*q.v.*] (al-Maḳrīzī, *Khiṭaṭ*, ii, 415).

Khānḳāh Saᶜīd al-Suᶜadāʾ: plan as it was in 1987 (CEAA, Versailles).



With the change of dynasties, the Fāṭimid palaces were destroyed, but this one was spared. At an early date, Ṣalāḥ al-Dīn installed there the Kurdish *amīrs* of his government and then, in the framework of his policy for the restoration of the Sunna (in which he founded not only *madrasas* but also *khānḳāhs*), he made it over to Ṣūfī *fuḳarāʾ* who had come from a distance. He appointed over it a *shaykh* with a salary, whilst the Ṣūfīs themselves received a daily allowance of bread, meat and provisions from the revenues of the *waḳf* instituted in 569/1173-4. These properties comprised a garden in the district of Birkat al-Fīl and Ḳaysariyyat al-Sarrāb in Cairo, and part of Dahmur in al-Bahnasiyya. Saladin also built nearby a *ḥammām* for the Ṣūfīs (still functioning in the 19th century and called the "Ḥammām al-Djamāliyya", used by men and women, see ᶜAlī Pasha Mubārak, *Khiṭaṭ djadīda*, ii, 218).

This was the first *khānḳāh* in Egypt, and its head was appointed *shaykh al-shuyūkh*—this until this post reverted to the *shaykh* of the *khānḳāh* of Siryāḳūs in 724/1324—so that it was thus at the head of "official" Ṣūfism. From this time onwards, this place acquired the name of Duwayrat al-Ṣūfiyya, little house of the Ṣūfīs. It also sheltered Muslim travellers requiring shelter, religious hospitality being one of the basic duties in the Muslim world at this period. Since it was a *khānḳāh*, the *khuṭba* was not given there, and on Fridays the Ṣūfīs went to pray in the mosque of al-Ḥākim; later, when the mosque of al-Aḳmar had been restored, they went there for their worship. The Ṣūfīs of this *khānḳāh* were so famed that the people, in order to acquire their *baraka*, came each Friday from al-Fusṭāṭ and al-Ḳāhira to join with them in their procession to the mosque of al-Ḥākim. Al-Maḳrīzī (*Khiṭaṭ*, ii, 416) says that 300 Ṣūfīs were accommodated there. In addition to their daily bread and meat, they received confectionery, soap and a wardrobe (eight sets of clothing a year); in 708/1309 their emoluments were increased (idem, *Sulūk*, ii, 50). This prosperity lasted until the crises of 806/1403-4, when the kitchens had to be closed (idem, *Khiṭaṭ*, ii, 416). From the second half of the 9th/15th century onwards, the *khānḳāhs*, closely linked to the secular power, lost some of their prestige, and, with the decline of their *waḳfs*, some of their revenues. Saᶜīd al-Suᶜadāʾ did not escape this process.

From the architectural viewpoint, this monument, rebuilt in the Mamlūk period (Fernandez, 22), displays a plan with a central court surrounded by four *īwāns*, the eastern one being the prayer room, and there are cells for the residents. A minaret was built at a late date, in the 780s/1380s, by the *shaykh* Shihāb al-Dīn Aḥmad al-Anṣārī (al-Maḳrīzī, *Khiṭaṭ*, ii, 416). This monument was classified by the Committee for the Preservation of Islamic Monuments in 1931.

AL-**ṢAᶜĪD** or ṢAᶜĪD MIṢR, the term which in Arabic denotes Upper Egypt, this being, in the strict sense of the term, the serviceable section of the Valley of the Nile (from 5 to 10 km in breadth by some 900 km in

length), situated between Cairo and Aswān [*q.v.*]; to this should be added the Fayyūm [*q.v.*], considered one of the provinces of Upper Egypt, and the nearby oases in the western desert (al-Wāḥāt: Baḥriyya, Farāfra, Dākhla, Khārdja [*q.vv.*]), over which the authorities of the Valley have been obliged to exercise supervision; finally, to the east, the security of the tracks crossing the mountainous region between the Nile and the Red Sea has also been the responsibility of these authorities. The history of the Ṣaʿīd cannot be understood without consideration of these routes and of the populations which made use of them at different times; measures taken to control them were often the basis of the importance successively attained by different towns in the Valley.

1. History.

According to Ibn ʿAbd al-Ḥakam (*Futūḥ Miṣr*, 169), the Arab troops arriving from the north, in the year 20/641 or shortly thereafter, at first ignored the existence of the Fayyūm and proceeded along the Valley under the leadership of ʿAbd Allāh b. Saʿd, to whom control of Upper Egypt had been entrusted from the outset, until they encountered the forces of the kingdom of Nubia [see NŪBA]. An official treaty or *baḳṭ* [*q.v.*], a revival of the Graeco-Roman *pactum*, was established with the Nubians from 31/652 onwards. But

in the interests of maintaining a recognised border, it was logical that the principal garrison of Upper Egypt should be established at Aswān, while in the Valley there were located only a few Arab military installations ranged along the Nile, quite isolated among the Coptic populations, which sometimes comprised large conurbations such as As̲h̲mūnayn and Ak̲h̲mīm (al-Balād̲h̲urī, *Futūḥ al-buldān*, 217). From the outset, Upper Egypt seems to have had its own governor, distinct from the governor of Fusṭāṭ (al-Kindī, *Wulāt*, 11; Ibn ʿAbd al-Ḥakam, *Futūḥ Miṣr*, 173), but this may have applied only in the context of the maintenance of order; the governor of Fusṭāṭ spent six months in Upper Egypt in 112/730 with the object of establishing there the basis of a taxation system. Anti-fiscal revolts seem to have erupted from the end of the 1st/7th century onward, before the great revolt of 121/739, which was suppressed with severity (al-Kindī, *Wulāt*, 81). Subsequently, Upper Egypt does not seem to have been involved in the other revolts occurring in the Delta.

Onomastic analysis of the funeral inscriptions of the cemetery of Aswān, which are known to this day, shows that conversions must have begun at a fairly early stage around the southern garrison. Furthermore, an Arab immigration, apparently with a Ḳaysī majority, took place directly from the Ḥid̲j̲āz, across the Red Sea. Overall, the Arab population of Upper Egypt increased considerably in the course of the 3rd/9th century. On the one hand, possibly following measures taken under al-Muʿtaṣim in 218/831 to remove Arabs from the army, two substantial Yemenī groups moved from the region of Fusṭāṭ towards Upper Egypt, the D̲j̲uhayna towards the region of As̲h̲mūnayn and the Balī towards Ak̲h̲mīm, and there were others who moved further to the south between the Nile and the Red Sea. On the other hand, during the caliphate of al-Mutawakkil (232-47/847-61), an important Ḳaysī group of Rabīʿa (of the Banū Ḥanīfa of Yamāma) crossed the Red Sea and established itself in the Wādī ʿAllāḳī [*q.v.*] in the mountains to the south of Aswān, to extract gold there, setting negro slaves to work in the mines. It was probably this influx of Arab groups which provoked the reaction of the Bed̲j̲a [*q.v.*], populations of Hamitic language, partially converted to Christianity, living between the Nile and the Red Sea, who used to frequent the Valley for purposes of trade. Efforts were made to establish a *modus vivendi* with them, in order to facilitate trade and prevent incidents at the times of their visits to the Valley. In the 3rd/9th century they carried out raids on Aswān, Ḳūṣ [*q.v.*] and Ḳifṭ [*q.v.*], where defensive measures had to be taken. An initial military action aimed at pacification, led by a caliphal governor with authority over the lands of the Red Sea from the Gulf of Suez to Aswān (*ca.* 232/847), was compromised by the arrival of Arab gold prospectors in territory belonging to the Bed̲j̲a. Fresh military operations were necessary, as well as reinforcement of the Arab groups. The situation did not begin to stabilise until *ca.* 255/870, when a certain ʿAbd al-Raḥmān al-ʿUmarī, who claimed to be an ʿAlid, detached for himself an autonomous enclave in the region of the mines and beyond, relying on the support of groups of Rabīʿa and D̲j̲uhayna in his conflict with the Bed̲j̲a and the Nubians. Subsequently, the Rabīʿa joined forces with the Bed̲j̲a to drive out the D̲j̲uhayna, who probably emigrated towards Sawākin [*q.v.*]. The Bed̲j̲a thus entered into Arab tribal alliances, were gradually converted to Islam and became useful auxiliaries against the Nubians. This activity in the region of the mines, with its port on the Red Sea, ʿAyd̲h̲āb [*q.v.*], beginning at this time to engage in commerce beyond the simple provisioning of the mines, made of Aswān, which was trading on equal terms with Nubia, a vigorous city, the only Muslim city of Upper Egypt (even if all its inhabitants were not Muslims). The proximity of the Ḥid̲j̲āz accounts for the cultural activity of the place, especially in the realms of *ḥadīth* and of *fiḳh*. The city attained the zenith of its prosperity in the 3rd/9th and 4th/10th centuries.

During these two centuries, certain characteristics of Muslim Upper Egypt became evident. With the numbers of Muslims in Egypt increasing, and the importance of Fusṭāṭ to the north recognised, Upper Egypt, poorly controlled by distant Aswān (which still had its own governor), was a natural refuge for any revolt against the power of the north, which was not always successful in its pursuit of a rebel towards the south: such was the case for example with the troops of Ahmad b. Ṭūlūn [*q.v.*], beaten to the north of Ḳūṣ in 256/870 before defeating, near Ak̲h̲mīm, Ibn al-Ṣūfī, an ʿAlid who ultimately escaped by way of ʿAyd̲h̲āb (al-Kindī, *Wulāt*, 213). Furthermore, since the Mag̲h̲rib had also become a country with a large Muslim population, and was above all an operational base for Fāṭimid ambitions, pressure was exerted on Upper Egypt by way of the western routes, controlled by Berber populations which also dominated the oases. In 307-9/919-21, Fāṭimid troops succeeded in reaching Upper Egypt, and in 323/935, a pro-Mag̲h̲ribi armed group briefly controlled the Fayyūm before being obliged to withdraw westward via Alexandria and Cyrenaica. The Valley of the Nile, in spite of the multiplicity of communications between north and south, had still not yet acquired a solid unitary organisation in the context of a strong Muslim state. Shortly after the installation of the Fāṭimids in Cairo, in 361/973 a *s̲h̲ayk̲h̲* of the Banū Kilāb (Ḳaysīs), rebelled in Middle Egypt in the name of the ʿAbbāsids, and from 362/973 to 364/975, the region between Ak̲h̲mīm and Asyūṭ [*q.v.*] was held by elements favourable to the Carmathians [see ḲARMAṬĪ]. Gradually, the Fāṭimid power was able to unify the Valley firmly and to impose between Arab groups a functional equilibrium, which was the foundation for the flowering of mediaeval Upper Egypt. Thus the caliph al-ʿAzīz (365-86/976-96 [*q.v.*]), installed in the southern part of Upper Egypt the Banū Hilāl [*q.v.*] and the Banū Sulaym (Ḳaysīs), some of whose members seem already to have moved into the region of the mines (it is known that the Banū Sulaym worked mines in Arabia), if not into the oases of the west. They should be distinguished from their fellow-tribesmen of the Delta, previously installed, whom the caliphs were to expel to the Mag̲h̲rib in the 5th/11th century on account of their frequent revolts. In Upper Egypt the Banū Hilāl were loyal supporters of the ruling power, and to the south, the Cairo government also relied on the Rabīʿa (Ḳaysīs) to protect the Nubian frontier: it was at the beginning of the 5th/11th century that the title *Kanz al-Dawla* appeared for the first time, bestowed by the caliph on the *s̲h̲ayk̲h̲* of the Rabīʿa. Subsequently, the name Banū Kanz came to be applied to this composite tribal group (Rabīʿa and Bed̲j̲a), the ancestors of the present-day Kenouz. Thus the Cairo government preferred to rely in the south on the dominant Ḳaysī groups (Banū Hilāl, Rabīʿa), while in the north the Yemenī groups (Balī, D̲j̲uhayna) were considered less dependable. First installed in the region of As̲h̲mūnayn, the D̲j̲uhayna had been forced to move towards Asyūṭ, since the Fāṭimids had installed in their place members of the D̲j̲aʿāfira (from

Ḳuraysh), to contain them towards the north. Ḳaysī groups thus played an official role, also controlling the most important routes linking the Valley of the Nile with ʿAydhāb, which was initially the point of access to the Ḥidjāz, which the Fāṭimids hoped to dominate, later a centre for the importation of spices which were transported towards Cairo and Alexandria.

In the 5th/11th century, the unification of the Valley of the Nile from Fusṭāṭ to Aswān, promoted by Fāṭimid policy, ultimately found expression in major changes, essentially resulting from the crisis which destabilised the caliphate in the 460s/1070s. Between 459/1067 and 466/1074, it is known that negro troops, in conflict with other elements of the army, expelled from the Delta and from Cairo, arrived and established themselves in the region of Aswān, and that all the Bedouin groups of Upper Egypt, from the Djaʿāfira in the north to the Banū Kanz in the south (evidently including the Yemenī groups), withdrew from obedience to the government. When normality was restored in 469/1077 by Badr al-Djamalī [*q.v.*], it was announced that the authorities had decided (perhaps because the Banū Hilāl had remained loyal), to establish a new centre for the maintenance of order in Upper Egypt at Ḳūṣ, at the limit of their zone of settlement, in a locality hitherto essentially Coptic. In 467/1075, the expressions Upper Ṣaʿīd and Lower Ṣaʿīd are encountered for the first time (*Sidjillāt mustanṣiriyya*, 185): Ḳūṣ became the capital of Upper Ṣaʿīd. Its importance grew gradually: following its selection by the authorities, the track from Ḳūṣ to ʿAydhāb became the principal caravan route towards the Red Sea; in 516/1122 a mint was established there, which no doubt continued to function until the arrival of the Ayyūbids. From the 530s/1130s onward, the governors of Upper Ṣaʿīd acquired, on account of their resources and the troops at their disposal, such status in the Fāṭimid realm that they intervened directly in the crises which marked the end of the caliphate. The result was evidently the laying of the foundations of a Muslim city at Ḳūṣ. The authority of the governor often extended to the north as far as Akhmīm. In Lower Ṣaʿīd, the importance of Asyūṭ also grew, while in the north again, Minya, the object of concern on the part of the authorities (as evidenced by the foundation of its mosque by Ṭalāʾiʿ, before 549/1154) gradually gained ascendancy over Ashmūnayn. In the far south, Aswān, although deprived of a major part of its administrative and economic role, nevertheless remained in the 5th/11th century the single major Muslim conurbation of Upper Egypt (the majority of the mausolea which have survived into the present date from this period), and the only true centre of culture and of the diffusion of Shīʿism.

The transition from the Fāṭimids to the Ayyūbids was a difficult period for Upper Egypt, precisely because Shīʿism had spread there and because the new arrivals, the Ghuzz as they were called in Egypt, immediately set about imposing the system of *iḳṭāʿs* [*q.v.*], which was not to the liking of the Arab groups. In 570/1175 the whole of Upper Ṣaʿīd rose in revolt with the object of restoring the Fāṭimids; the failure of the revolt did not discourage the Shīʿīs of Ḳifṭ, who in 572/1177 were subjected to harsh repression; arrests continued to take place for a long time, and Shīʿī groups survived in the south of Upper Egypt, towards Edfou, until the Mamlūk period. The reconquest of Upper Egypt by Sunnism was, however, encouraged by the fact that, since the end of the 5th/11th century and the installation of the Crusaders in Palestine, all the Pilgrims from the Muslim West, which had remained Sunnī, were obliged to utilise the routes of Upper Egypt towards ʿAydhāb and the Ḥidjāz, which led sometimes to the implantation of Maghribī communities in the cities of the Valley, even to the creation of small localities with a Maghribī majority (such as Damāmīn, to the north of Ḳūṣ) and to the installation of fervent Sunnīs, zealots of the Sunnī counter-reformation, at Minya, at Asyūṭ and at Ḳenā [*q.v.*] in particular (ʿAbd al-Raḥīm al-Ḳināʾī, d. 592/1195) and in its surrounding region, which became the most important departure-point for Pilgrims leaving the Valley for the Ḥidjāz. Even after Saladin had succeeded in overthrowing the kingdom of Jerusalem, Maghribī pilgrims continued to pass in large numbers through Upper Egypt, in the footsteps of their elders. It was in part as a result of their activities, and the use of their *ribāṭs*, that Sunnism was enabled to recapture the territory: Aswān had its *madrasa* before the end of the 7th/13th century and the first *madrasa* of Ḳūṣ was founded in 607/1210. For Upper Egypt, the first half of the 7th/13th century was a period of peace and prosperity, of agricultural progress (sugar-cane) and commercial activity instigated by the Kārimī [*q.v.*] merchants, and of urban growth.

The fall of the Ayyūbids was marked in Upper Egypt by a major Bedouin revolt, possibly beginning after the arrival of Louis IX at Damietta in 647/1250 (which had drawn the majority of the troops towards the north). It was led by the *Sharīf* Ḥiṣn al-Dīn Thaʿlab, of the Djaʿāfira, to the north of Asyūṭ, against the military régime which, even before the accession to power of the Mamlūks, had been felt to be increasingly oppressive. The revolt was finally crushed in 653/1255, but it was only the first manifestation of refusal on the part of the Arab groups to accept the military régime. In the Valley, order was firmly restored. The system of *iḳṭāʿs* once more functioned regularly (stockbreeding no doubt contributed substantially to the burgeoning revenues), and following the reforms of 727/1327 there was a privatised system for administration of *iḳṭāʿs*, which gave to the clerks, most of them Copts, a role which could only contribute to the prosperity of their community. But on the other hand, the movement towards the creation of Muslim élites in the *madrasas* of Upper Ṣaʿīd (it is known that 16 *madrasas* existed at Ḳūṣ, and there were others in other localities), renewing the activity previously exercised by Aswān, let to a more thorough Islamisation of this region, while Middle Egypt remained sparsely Islamised. The Arabs were kept under strict supervision, and the authorities continued to rely on the same tribal groups. When in 671/1272 sultan Baybars [*q.v.*] inflicted the first blows against the Nubian kingdom, the Banū Kanz offered their assistance; it is known that this led to the installation at Dongola of a Muslim prince in 716/1316, and to the control, at least temporary, of the Banū Kanz over Nubia; but this was also the end of a sedentary power whose presence hitherto had played an important role in denying access to the Bedouin tribes, to the east of the Nile, but also to the west. Meanwhile, in Upper Egypt, Balī and Djuhayna (Yemenīs) remained hostile, taking advantage of all the opportunities offered by political troubles in Cairo, or by Mongol aggression, to rebel in the region of Asyūṭ and of Manfalūṭ, or to cause disruption on the routes between the Nile and the Red Sea. The definitive accession to power of al-Malik al-Nāṣir Muḥammad [*q.v.*], which owed much to the Bedouin of Syria, seemed to mark an improvement in relations between the Mamlūk power and the Arab groups; it was manifested especially by a relaxation of the strict supervision hitherto exercised over the tribes. Groups

of Ṭayyiʾ and of Djudhām [*q.vv.*, Yemenīs] thus came from Syria to join the Yemenī groups of Middle Egypt, and by way of the *darb al-arbaʿīn*, their advance towards Central Africa, which was quite unhindered, began from Manfalūṭ. From 721/1321-2 onward, Manfalūṭ (already a royal *iḳṭāʿ*), became a famed slave market (al-Udfūwī, *Ṭāliʿ*, 427). The result of these developments appeared after the death of the great sultan: the Yemenī groups (under the leadership of the ʿArak, from the Djudhām rather than the Djuhayna), more numerous and enriched by their new activities, became uncontrollable, provoking ever more violent incidents (745-55/1345-55), to the point where the ruling power was forced to make concessions, agreeing to rely henceforward on the support of these Arab groups which had hitherto been hostile, entrusting to them responsibility for the maintenance of order and some *iḳṭāʿ*s.

The consequences of this evolution were significant in an Upper Egypt where epidemics, from the mid-8th/14th century onward, rendered more precarious the sedentary structures confronting the nomads. The Yemenī groups, which had outflanked the Banū Kanz by way of the south, forced them to withdraw towards Aswān, and from 767/1365-6 onward the latter, turning hostile, made the route to ʿAydhāb impassable (al-Maḳrīzī, *Khiṭaṭ*, ed. Wiet, iii, 300; from this date, the port ceased to be a centre for major commerce, and there are no grounds for suspecting deliberate destruction on the part of a Mamlūk sultan). The transport of spices was for some time conducted by way of Ḳuṣayr [*q.v.*], and then, as the extortions practised by the Mamlūk authorities in Upper Egypt proved a greater threat to the merchants than the aggression of the Bedouin, the merchants preferred to tackle the difficulties of navigating in the Red Sea, unloading the precious merchandise at Ṭōr, at the foot of the Sinai peninsula, where a port and a market were being developed (Ibn Duḳmāḳ, *Kitāb al-Intiṣār*, 54); from here, spices were transported directly to Cairo and no longer passed through Upper Egypt. The cessation of this traffic had the effect that Upper Egypt, increasingly difficult to control, lost much of its interest for the Mamlūk authorities and its development stagnated, although efforts were made for some time to protect Aswān, encircled at it was by the Banū Kanz. In the north, it was also necessary to forestall trouble. In 780/1378, a post of *nāʾib al-salṭana* (a sort of Prefect of Upper Egypt) was created and inaugurated at Asyūṭ. The centre of gravity of Muslim Upper Egypt was thus relocated: the regions of Asyūṭ and Akhmīm, still used for access to the Ḥidjāz by way of Ḳuṣayr, seemed at this stage more buoyant than the south. But the sultanate was no longer able to maintain in the country sufficient forces to impose its authority. In 782/1380, the grand *amīr* Barḳūḳ [*q.v.*], soon to be sultan, took the decision to install in the region a group of Hawwāra [*q.v.*] Berbers, hitherto in Behera, where pressure from the Bedouin was proving too strong (al-Maḳrīzī, *Bayān*, 60). They became the new supporters of the authorities against the Arab groups, more efficacious than the *nāʾib* of Asyūṭ (a function which seems not to have lasted long); the time of Asyūṭ was yet to come. The control of the Bedouin was now the principal problem in Upper Egypt. It was handled to an increasing extent by the annual dispatch of *amīrs* from Cairo, in missions known as *kashf*, which had hitherto consisted in guaranteeing security during harvests (Upper Egypt paid taxes in kind), and in inspecting the condition of the canals. From 784/1382 onward, an *amīr* of the *kashf*, whose powers extended to Bahnasā and Aṭfīḥ [*q.vv.*], was installed in the Fayyūm, no doubt to prevent too many Bedouin groups from following the Hawwāra towards the south. The latter were installed at Girgā [*q.v.*]. They supported Barḳūḳ loyally in his efforts to maintain himself in power in Cairo (in 791/1389) as well as against the Banū Kanz of the south, now in full revolt. In fact, other Bedouin had already succeeded in bypassing the barrier of the Fayyūm: other Hawwāra, hostile, who had installed themselves near Dahrūt, to the north of the ʿArak, as well as Fazāra (Dhubyān, Ḳaysīs) who had settled near Minya and were perhaps the originators of the links which were established from the 9th/15th century between this town and central Africa. New arrivals also came from the east, including the Aḥmadī, who, according to Ibn Ḥadjar, were Balī from the region of Yanbūʿ, coming from Arabia to rejoin their displaced fellow-tribesmen to the north of Ḳūṣ.

Upper Egypt at the end of the 8th/14th century was thus traversed by Bedouin groups, the most submissive of which could only be obedient to a stable power. At the time of the second Mongol invasion, political disorders and then a plague provoked a crisis at the beginning of the 9th/15th century in which the Mamlūk state narrowly avoided total dissolution. There can be no doubt that the insurrection was general; in 804/1401, the *nāʾib al-salṭana* of Asyūṭ and the governor of Manfalūṭ were both killed by Bedouin. Subsequently, nothing is known of events in Upper Egypt until 816/1413, at which date the sultan's *ustādār* brought from Upper Egypt to Cairo horses, camels, cattle, sheep, cereals, weapons, slaves, gold and jewellery seized forcibly as compensation for taxes which had not been paid during the crisis. It was not until the sultanate of Barsbāy [*q.v.*] that the administration of Upper Egypt regained a more regular aspect, less suggestive of official pillage of the land. At Girgā, the Hawwāra had become respectable landowners; the *amīr* Muḥammad b. ʿUmar b. ʿAbd al-ʿAzīz had founded the old mosque of the town; his successors, some of whom absorbed good Islamic culture and were regarded as saintly men, were now accepted by the Muslim élite of the region; agricultural land was exploited and the production of sugar cane kept the presses supplied. The sultan, whose authority no longer extended as far as Aswān (the land of the Banū Kanz began at Kom Ombo) was obliged to reckon with the *amīrs* of Girgā to the south, while to the north, two *kāshifs* (the term is still in use) were installed at Asyūṭ (where there was no longer a *nāʾib*) and in Middle Egypt, overriding the authority of the governors. Beginning with the decade of the sixties of the 9th/15th century, the sultans attempted to restore their authority overall, including over the *amīrs* of Girgā, but difficulties encountered anew by the régime in the second phase of the sultanate of Ḳāyitbāy [*q.v.*], foiled these aspirations. After the death of this sultan there was even a resumption of large-scale fiscal expeditions to Upper Egypt, these being the only means of collecting taxes, conducted this time by royal *dawādārs*. The Bedouin had clearly decided to exploit the opportunities provided by the confrontation with the Ottomans. After the defeat of the Egyptian army (922/1517), Ṭūmānbāy, the last sultan, attempted to go and regroup his forces in Upper Egypt, but was unable to move beyond Girgā. The *amīr* of the Hawwāra responded to his appeal for help with a declaration of loyalty to the Ottoman sultan Selīm. The latter, once installed in Cairo, awarded him direct authority over the whole of Upper Egypt, while the powers of the governor of Cairo were limited to the city and to the Delta.

The Ottoman state officially recognised the authority of the Banū ʿUmar b. ʿAbd al-ʿAzīz until the beginning of the 11th/17th century; from 980/1570 onward, advantage was taken of familial tensions among the Banū ʿUmar to install at Girgā an Ottoman detachment under the orders of a *sandjak*, who exercised authority in conjunction with the *amīr*. In 1019/1610 or later, the power of the Hawwāra *amīrs* came to an end, and the *sandjaks* were replaced by beys. Ottoman administration was thus ultimately established in Upper Egypt and the land was divided into *kāshifliks*. The beys succeeded for some time in controlling the Bedouin and endowed Girgā with new monuments. The wealth of Upper Egypt made them important personnages, who intervened in the political struggles of Cairo. But from the 1660s onward, the succession of beys at Girgā proceeded at a more rapid rate, and there was a resurgence of Bedouin power, especially at Akhmīm and Farshūṭ. Pursuing the old Bedouin policy of infiltration of the state, the Bedouin *amīrs* allied themselves with the main body of the army, as Janissaries and *ʿazabs*, and obtained by this means fallow land which they restored to fertility; and commerce with the lands of Black Africa brought them additional resources. They intervened thereafter in the nomination of the beys at Girgā, and the 12th/18th century was once more for Upper Egypt a period of Bedouin hegemony; the beys and the *kāshifs* were less powerful than them and were regarded as strangers in the land. Out of the conflicts between the numerous candidates for power among the Bedouin, from the 1150s/1740s onwards, another major Hawwāra family emerged, the Banū Hummām of Farshūṭ, who succeeded in imposing their authority until the intervention of the Cairo authorities in 1183/1769. Under their domination, the south of Upper Egypt enjoyed a degree of prosperity; the commerce of Ḳuṣayr increased, leading to the resurgence of Ḳenā, and caravans of slaves arrived from the sultanate of Fundj [*q.v.*] under the protection of ʿAbābda Arabs (the heirs of the Banū Hilāl, competing for control of the routes with the heirs of the Yemenī groups, Banū Wāṣil and Maʿazza). But further to the west of the Nile, the route of the *darb al-arbaʿīn* under the protection of the Banū ʿAdī (belonging to the Yemenī group of the Lakhm), evaded the control of the Hawwāra *shaykhs* and gave Asyūṭ its opportunity. When at the end of the 12th/18th century the Hawwāra were decisively defeated, Girgā lost its pre-eminence and Asyūṭ finally replaced it; commerce with the Negro lands was to bring it to its zenith in the 19th century. In the context of the revival of the state, Upper Egypt was to lose some of its specific nature. After it had offered a means of strategic retreat to the opponents of Muḥammad ʿAlī, the victory over the beys in Ṣafar 1226/February 1811, between Ḳūṣ and Ḳenā, gave the signal for the massacre of the Mamlūks in the Citadel of Cairo, and one of the ancient roles of Upper Egypt came to an end. In 1227/1812, a new survey of territories definitively shattered the power of the Bedouin.

The influx of these populations has conditioned the history of Upper Egypt. The census of 1898 indicates the strongest Bedouin concentrations in the zones of access to the Valley in the north (they represent more than 10% of the population in the province of Beni Suef, the former governorate of Aṭfīḥ, and more than 16% in the Fayyūm) and in the zones of egress to the south (in Nubia, where Aswān is still situated they also account for more than 10%), in contrast to the centre (Minya: 6.6%; Asyūt: 3.7%; Girgā: 1.5%; Ḳenā: 4.4%), where their role has, however, been considerable. When the epidemics of the second half of the 8th/14th century had enfeebled the Mamlūk authorities, who reacted to the crisis with brutality alone, and when in consequence major commerce was diverted from Upper Egypt, depriving it of an important factor of development, the Bedouin influx had the effect that neither Asyūṭ nor Girgā was able to carry on establishing the productive works of the Muslim élites, begun by Aswān (9th-10th centuries) and Ḳūṣ (12th-14th). This explains the presence of the significant Christian minority in Middle Egypt, a part of the Valley the history of which has yet to be written.

2. Dialects.

In a broader sense, the Arabic dialects of the Ṣaʿīd are those of the peasants and the Bedouins who dwell in the Nile valley, the oases of the Western Desert and the Eastern Desert. In a narrower sense, the dialects of the Ṣaʿīd are those of the peasants, as they are spoken in the Nile Valley from al-Djīza in the north to Aswān in the south where the domain of the Nubian language begins. There are super-regional varieties used in popular songs, ballads etc., and poetry by ʿAbd ar-Raḥmān al-Abnūdī is available in printed form.

These peasant dialects are relatively well known through the data collected for the Egyptian dialect atlas and other, more detailed studies (see *Bibl.*).

Some principal isoglosses which distinguish these Ṣaʿīdī dialects from those of peasants in the north (in brackets) are:

(1) preservation of long vowels before consonant clusters: *māska* (*maska*)
(2) the closed antepenultima receives stress: *mádrasa* (*madrása*)
(3) no stress on the *-it/-at* of the 3.f.s. perfect: *ḍárabitu, ḍarábitu, ḍúrubta* etc. (*ḍarabítu*)
(4) 1.s. perfect *gīt* "I came" (*gēt*)
(5) plural forms as *bibān* "doors", *fīsān* "axes" (*ibwāb, fūs*), and *dukūra* "males", *sibūʿa* "lions" (*dukúra, sibúʿa*)
(6) numerous lexical items: *ṭūrya* "hoe" (*fās*), *fās* "axe" (*balṭa*), *zaʿaf* "palm leaves" (*xūṣ*), *farrūğa* ~ *farrūga* "chicken" (*farxa*), *baḥḥa* ~ *biḥḥa* ~ *buḥḥa* "duck" (*baṭṭa*), *ḥawš* ~ *ḥōš* "stable, cow shed" (*zirība* ~ *zirbiyya*)

Two major groups of dialects can be distinguished within the Ṣaʿīd: Middle Egyptian (ME) from the outskirts of al-Djīza to Abū Tīdj (some 25 km south of Asyūṭ) and Upper Egyptian (UE) proper from Abū Tīdj to Aswān. Whereas ME has basically the same rules of elison and insertion of /i/ as the Delta dialects, excluding those of the Sharḳiyya province, UE is strongly influenced by Bedouins, apparently of western origin, who settled there in the past and intermingled with the local population. Therefore, in ME there is no elision of /i/ after -CC *yiktibu* "they write" and insertion takes place after -CC *ibnə kalb* "son of a dog", in contrast to UE *yíktbu* ~ *yíkətbu* and *ibən kalb*, except UE 2 (see below) which resembles Southern ME (SME) not only in this respect. Further, all UE dialects show glottalised /ṭ/ [ƭ] like the Awlād ʿAlī at the Mediterranean littoral, a verbal noun of the IInd stem of the type *xaṭṭīṭ* ~ *ziṭṭīṭ* "furrowing" (*taxṭīṭ*) and the plural types *fiʿʿilla, fiʿʿēl, fuʿʿūl* as in *ḥṣinna* "horses", *biṭṭēš* ~ *buṭṭūš* "buffalo calves". The dialec-

tological distinction between ME and UE is consistent with differences in the material culture of the peasants, see Winkler, 1936, 455. ME and to some extent UE 2 seem to represent an older type of Ṣaʿīdi Arabic less influenced by Bedouins.

Other isoglosses permit further subdivision of the two groups: Northern ME with two subgroups: NME 1 (south of al-Djīza, northern Banī Swayf province and al-Fayyūm), NME 2 (southern Banī Swayf from al-Fashn to al-Minyā), SME (to Abū Tīdj), UE 1 (approximatively to Nadjʿ Ḥammādi, on the east bank from Ḳūṣ farther south to the altitude of Armant, on the west bank from al-Ballāṣ to al-Ḳurna), UE 2 (the Ḳenā bow on the east bank approximatively from Nadjʿ Ḥammādi to Ḳūṣ and on the west bank to al-Ballāṣ), UE 3 (on the west bank from al-Ḳurna (al-Baʿīrāt) to Esna), UE 4 (on the west bank from Esna to Gharb Aswān, on the east bank from the latitude of Armant to Aswān). Linguistic borders in UE tend to be somewhat blurred and the dialects may differ from village to village. The distinctive features of these dialect groups include:

(7) preservation of /i/ after -vC: *misikit* "she took" in NME, a feature which sets NME apart from SME and links it to the western and northern parts of the Delta and the oases
(8) insertion of /a/ in a cluster -Cr-: *bukaṛa* "tomorrow" in NME 1 which separates NME 1 from NME 2 with the borderline near al-Fashn; /g,ǧ for /*ḳ/ and /*ǧ/ instead of /ʾ,g/ beginning from NME 2 to the south
(9) /g,ǧ/ for /*ḳ/ and /*ǧ/ instead of /ʾ,g/ beginning from NME 2 to the south
(10) preservation of diphthongs /aw/ and /ay/ in NME 1: *hawn* "mortar", *bayt* "house" (*hōn, bēt* elsewhere)
(11) allomorphy of the IInd and IIId stems: one allomorph for perfect and imperfect in NME: *kallam - yikallam* (NME 1), *killim - yikillim, ʿallim - yiʿallim* (NME 2), in contrast to two allomorphs with morphological distribution in SME and UE: *kallam - yikallim*
(12) preservation of /a/ in *katīr* "much" and *yitmasik* "he was seized" in SME and UE 2 (*kitīr, yitmisik* elsewhere)
(13) paradigmatic levelling in the imperfect, either complete, such as *niktib - nikətbu* in UE 1 and UE 3, or incomplete, such as *aktib - niktibu* in UE 2. There is no such levelling in ME and UE 4.
(14) genitive exponent: *shuġl* in UE 1, *hinīn* in UE 2, *ihnīn* in UE 3, 4, *allīl* ~ *allēl* in UE 4
(15) Ist stem perfect i-type: *kíbir* in ME and UE 2, UE 4, *kbír* in UE 1, *íkbir* in UE 3
(16) *ba*-prefix for present tense in UE 2 and UE 4
(17) *gáhawa*-syndrome in UE 1 and UE 3: *aḥamaṛ* "red"
(18) stress on the final syllable of words like *shtā* "winter" in UE 1 and UE 3 (*šíta* elsewhere)
(19) vowel alternations a > i,u in UE 3: *masak* "he took" - *misikat* "she took", *bagaṛ* "cows" - *buguṛa* "a cow"
(20) /a/ in word-initial position instead of /i/ in UE 4: *anta* "you m.", *aḥna* "we", *alli* "which", *al-* "the", *atfaḍḍal* "please", *ambāriḥ* "yesterday", *amm* "mother" etc. a feature shared with Central Sudan.

Fem.pl. forms, a Bedouin feature, such as *yíkətban* "they write" occur in UE 3 and 4. For historical aspects, see Woidich, 1994; for Coptic remnants in the lexicon, see Behnstedt, 1981.

Very little is known about the speech of Bedouins found mostly at the fringes of the Nile valley, the Oases and in the Eastern Desert. The dialects of the four Western Oases are closely related to ME by syllable structure, but deviate in many other respects (see Behnstedt-Woidich, 1982). The ʿAbābida in the Eastern desert (Bīr Umm ilFawaxīr) seem to speak a Sudanese type of dialect, with *riǧílha* "her leg" and with a stressed final vowel in *ḥablī* "my rope" and *ḥamṛā* f. "red".

(M. WOIDICH)

ṢĀʿID AL-ANDALUSĪ, ABU 'L-ḲĀSIM ṢĀʿID B. AḤMAD b. ʿAbd al-Raḥmān al-Taghlibī, called AL-ḲĀḌĪ ṢĀʿID (420-62/1029-70), Spanish Muslim author.

He was born at Alméria, where his parents had taken refuge during the civil wars which devastated Cordova, their place of origin, and his grandfather had been *ḳāḍī* of Sidonia. His father died as judge of Toledo in 449/1057, and Ṣāʿid was to succeed him there in 460/1068 till his death there in 462/1070. The sweep of his life reflected these circumstances. Born of a line of legal officials, he received a solid legal education at Alméria and then Cordova, following, according to Ibn Bashkuwāl, Ibn Ḥazm's teaching. But the formation of the Taifas, the relative decline of the caliphal capital compared with the new provincial ones, the search for knowledge and for patrons, all led him to Toledo. There, in the reign of al-Maʾmūn b. Dhi 'l-Nūn (429-67/1038-75), the "philosophical" sciences—mathematics, astronomy, logic and medicine—were enjoying a renaissance, and he was henceforth to devote himself to these.

Three works are attributed to Ṣāʿid: a *K. fī Iṣlāḥ ḥarakāt al-nudjūm*, on the correction of earlier astronomical tables; a *Djawāmiʿ akhbār al-umam min al-ʿArab wa 'l-ʿAdjam*, a universal history; and finally, his *Ṭabaḳāt al-umam*, a classification of the sciences and of the nations. Only this last work survives.

Its translator, R. Blachère, was astonished at the authority attributed to it already by the eastern scientific encyclopaedists, like Ibn al-Ḳifṭī and Ibn Abī Uṣaybiʿa. Ostensibly, the 80 pp. of the *Ṭabaḳāt* hardly merit so much honour. Their main point revolves round distinguishing at the outset, amongst the peoples of the world, those who do not know "philosophy"—Turks, Chinese, Berbers, etc.—from those who have achieved merit in them—Indians, Persians, Chaldaeans, Egyptians, Greeks and *Rūm*, Arabs and Jews. In all, there are thus eight nations for whom Ṣāʿid briefly cites, when he knows of them, their scholars and chosen disciplines.

The catalogue is rudimentary, but has a certain guiding thread. Science goes from East to West, from India to Spain, which holds its last living embodiment. Above all, these eight peoples have handed down the sciences according to the strict historical

continuity—or geographical contiguousness—required by the *isnād* in the religious sciences, i.e. the chain of guarantors for a fact which one wishes to carry back, generation by generation, to the Prophet or his Companions. The success of Ṣāʿid's little work may well have stemmed from this trait, as set out in its title, *Ṭabaḳāt al-umam* "The generations of the nations". The *ḳāḍī* of Toledo thereby inserts within the classification of the philosophical sciences a principle directly inherited from the religious science disciplines, much more familiar to the immense majority of his readers. He established the truths of mathematics or astronomy as one would do for *ḥadīth*, by an irreproachable *isnād* which attests their exact transmission and preserved integralness, right from their origins.

From this point onwards, a question arises. Should one see in Ṣāʿid, in accordance with M.-G. Balty-Guesdon, one of those philosophers of which al-Andalus offers examples in the 6th/12th century, one of those who aimed at tracing the crucial frontier between rational knowledge and revealed religious dogma? Or should one, on the contrary, see in him the conciliator of two classes of the sciences which he knew well, as a judge by day and an astronomer by night? The plan and the guiding thread of the *Ṭabaḳāt*, as also the discrete reference to prophetic sources for all knowledge—the Semitic origin ascribed to Greek philosophy, the privileged place of the Jews at the end of the chain of nations—incline one rather to the second view.

ṢĀʿID AL-BAGHDĀDĪ, ABU 'L-ʿALĀʾ ṢĀʿID B. AL-ḤASAN al-Rabaʿī al-Lughawī, poet and grammarian in Muslim Spain (*ca.* 339-417/*ca.* 950-1026).

Born at Mawṣil or in its region, educated in poetry and the linguistic sciences at Baghdād, Ṣāʿid arrived *ca.* 380/990 in Spain, probably attracted by the news of the largesse lavished by its princes on scholars who came to them from the East. All the sources agree in describing him as a facile poet, with an untidy appearance, an incorrigible drunkard and a perpetual spendthrift. But he knew how to ask for money with the same lightness of touch that he employed in spending it. Al-Andalus was at the peak of its might under the rule of the *ḥādjib* al-Manṣūr [*q.v.*], who had relegated the Umayyad caliph to the background. It was to the presence of this all-powerful minister that Ṣāʿid was admitted, and recompensed on a princely scale for his talents. One day, when he was short of cash, he made a shirt out of all the purses which he had received and, according to the source, dressed himself in it or dressed his slave Kāfūr in it. He appeared thus before the *ḥādjib*, whilst praising him for having given enough to cover a man with a tunic but which unfortunately revealed the bottoms, open to view and empty, of his money bags. Al-Manṣūr laughed, and opened up his coffers.

The minister's favour had, however, a more profound effect. As the seat of a caliphate since 317/929, Cordova intended to surpass Baghdād, and held mastery of the Arabic language as one of the stakes in this contest. The Andalusians freely admitted the fluency of the Easterners, but they stressed the solecisms which these Arabs, over-confident in their own natural speech, inflicted on the language of the ancient poets. The grammarians al-Ḳālī [*q.v.*], who came from Baghdād, and al-Zubaydī had thrown lustre on the reigns of the caliphs ʿAbd al-Raḥmān III (d. 350/961) and al-Ḥakam II (d. 365/976). Al-Manṣūr's usurpation added a question to the debate. The minister had in his turn to overshadow, by his merits, the glory of his masters, as they themselves had claimed to throw the star of Baghdād into the shade. Ṣāʿid was openly welcomed as the al-Ḳālī of al-Manṣūr. His major work *Fuṣūṣ fī 'l-ādāb wa 'l-ashʿār wa 'l-akhbār*, written in 385/995, prided itself on thrusting the *Nawādir* of the old master into oblivion without borrowing the least example from that work.

In practice, Ṣāʿid's preferences were for lexicography (*lugha*) rather than for grammar, and for the poetry which constituted its treasury. Put to the test when he first came to court, Ṣāʿid became worried over the grammatical obscurities which were hurled at him, but triumphed in the explanation of a verse by Imruʾ al-Ḳays. He could not have done anything better to please the *ḥādjib*, who on every occasion cultivated the purest of the Arabic values upon which the Cordovan caliphate aimed to base itself. The only other work of Ṣāʿid's which is mentioned was precisely a "story" in the Bedouin taste which he wrote for his master.

Altogether, the opinion of posterity in al-Andalus remained a guarded one. The Easterner was reproached for his boastfulness, and in this there may perhaps have been a discreet condemnation of the regime which he served. According to al-Maḳḳarī, the Arab Ṣāʿid came out worst in a linguistic dispute with a knowledgeable young slave boy. Above all, Ibn al-ʿArīf [*q.v.*], the tutor of al-Manṣūr's children, after having failed in convincing the latter of Ṣāʿid's plagiarism, ridiculed Ṣāʿid by inventing a factitious book and author whom Ṣāʿid soon claimed to have read. Al-Manṣūr was furious, and had the *Fuṣūṣ* thrown into the river, before pardoning him. The world of scholarship was less indulgent.

After al-Manṣūr's death (392/1002), Ṣāʿid was less often seen in the entourage of his son al-Muẓaffar [*q.v.*]. Ibn Ḥazm, then aged 12, saw him, however, still declaiming one of his poems. The civil warfare (399-422/1009-31) caused him to move to Dénia, and then to Sicily, where he died, in 417/1026 according to Ibn Ḥazm.

SAÏDA [see SAʿĪDA].

SAʿĪDA (French form, SAÏDA), a town of Algeria, the chef-lieu of the department (*wilāya*) of the same name, situated 175 km/108 miles from Oran (Wahrān [*q.v.*]) and 95 km/59 miles from Mascara (al-Muʿaskar [*q.v.*]), at an altitude of 900 m/2,950 feet. It is on the wādī Saʿīda, in touch with the Causse of Oran (hills of Saïda) and the High Plains, limestone plateaux which form part of the Atlas of the Tells, to

the east of the hills of Ouarsenis (Wans̲h̲arīs). The town had about 30,000 inhabitants and the department about 200,000 in 1987. The region is suitable for raising cereal crops and for sheep rearing.

The recurrent strategic position which the site has retained through history, ever since it was occupied by a Roman settlement, was highlighted in modern times when it became one of the headquarters of the *amīr* ʿAbd al-Ḳādir [*q.v.*], who built a fort there but dismantled it in 1841 on the approach of French troops under General Bugeaud. In 1844, General Lamoricière constructed from it another fort slightly to the north, which became the nucleus of the present town.

SAʿĪDĀ GĪLĀNĪ, Indo-Persian poet of the 11th/17th century.

Details are lacking regarding his early life. He went to India from his native Persia during D̲j̲ahāngīr's reign (1014-37/1605-27), and lived on to serve under his successor S̲h̲āh D̲j̲ahān (1037-68/1628-58). Apart from poetry, he was skilled in calligraphy, engraving and assaying of precious stones. D̲j̲ahāngīr gave him the title of Bēbadal K̲h̲ān, perhaps as an appreciation of his talent since *bēbadal* means "matchless". In addition, he was appointed officer-in-charge of the royal jewellery, a position which he continued to hold during S̲h̲āh D̲j̲ahān's reign. Under the latter ruler, he also received the command of 800 infantry and 100 cavalry.

In 1037/1628, soon after becoming emperor, S̲h̲āh D̲j̲ahān decided that a lavish throne, inlaid with gems, should be constructed for his personal use. The charge of this enterprise, which later materialised in the celebrated Peacock Throne (*Tak̲h̲t-i Ṭāwūs*), was entrusted to Saʿīdā Gīlānī, who supervised the project. It took seven years for the completion of the throne, which was inaugurated on Nawrūz 1044/23 March 1635. To commemorate this event, Saʿīdā Gīlānī composed a *ḳaṣīda* of which only remnants have survived. The *ḳaṣīda* is said to have contained 134 couplets, each line of which carried a chronogram. Some of the chronograms were related to S̲h̲āh D̲j̲ahān's birth (1000/1592), some to his coronation (1037/1628) and the majority to his gracing the Peacock Throne for the first time.

There is no information as to when or where Saʿīdā Gīlānī died. That he was still living in 1047/1637-8 is confirmed by one of his chronograms of that date commemorating the completion of a mosque built by S̲h̲āh D̲j̲ahān in Ad̲j̲mēr.

Very little can be said about Saʿīdā Gīlānī as a poet, since his extant writings are limited to a handful of pieces scattered in the historical accounts of the period. He is reported to have composed a *mat̲h̲nawī* of some 5,000 couplets dealing with D̲j̲ahāngīr's reign. His poetry earned for him royal recognition. On 14 S̲h̲ahrīwar 1027/26 August 1618 he was rewarded handsomely by D̲j̲ahāngīr for a *ḳaṣīda* composed by him for the emperor, and in 1042/1633 he received a similar treatment from S̲h̲āh D̲j̲ahān for composing a poem which described the courage of Prince (afterwards Emperor) Awrangzīb in an elephant combat. Saʿīdā Gīlānī's special skill lay perhaps in the making of chronograms. Apart from those mentioned earlier, he composed them on such events as D̲j̲ahāngīr's conquest of the fort Kāngra (1029/1620), his building a mosque there (1031/1621-2) and the death of his wife Mumtāz Maḥall (1040/1631 [*q.v.*]).

(MUNIBUR RAHMAN)

ṢĀʾIFA (A.), pl. *ṣawāʾif* (<*ṣayf* "summer"), summer raid or military expedition (see Lane, 1756; Dozy, *Supplément*, i, 857).

1. In the Arab-Byzantine warfare.

The term is used by the early Islamic historians to denote the raids of the Arabs into Byzantine Anatolia. These were normally mounted annually, over a period of some two centuries, beginning during the governorship in Syria of Muʿāwiya b. Abī Sufyān [*q.v.*], i.e. from *ca.* 640 onwards. They tailed off in the 3rd/9th century as the ʿAbbāsid caliphate became racked by internal discord and as the Macedonian emperors in general turned the tables and took the offensive against the Arabs.

These expeditions were launched during the summer months, in order to avoid the harsh wintry conditions of the Anatolian plateau, from bases in the *t̲h̲ug̲h̲ūr* or frontier zones of northern Syria and northern Mesopotamia. The ways of entry through the Taurus and Anti-Taurus mountains included the Cilician Gates [see CILICIA], approached from bases like al-Maṣṣīṣa and Ṭarsūs [*q.vv.*], and the famous pass (*darb*) of al-Ḥadat̲h̲ [*q.v.*] between Marʿas̲h̲ and Malaṭiya [*q.vv.*]. Such historical sources as al-Yaʿḳūbī, K̲h̲alīfa b. al-K̲h̲ayyāṭ and al-Ṭabarī are normally careful to list for each year the *amīr* who led the summer raid. This command was of premier importance. Sometimes caliphs like Muʿāwiya, Sulaymān b. ʿAbd al-Malik, Hārūn al-Ras̲h̲īd or al-Muʿtaṣim personally led their armies, or else the command would be held by some member of the ruling family, such as the Umayyad prince Maslama b. ʿAbd al-Malik [*q.v.*] or the ʿAbbāsid ones Ṣāliḥ b. ʿAlī b. ʿAbd Allāh b. al-ʿAbbās and his son ʿAbd al-Malik.

2. In Muslim-Christian warfare in Spain.

Given that Muslim Spain (al-Andalus) was geographically a European entity with Marches (see below), beyond which there was at all times an independent Christian presence to be reckoned with, the appearance of the *ṣāʾifa* in Umayyad Spain is not surprising. Of the importance it came to assume in Iberian Peninsular history one clear indication is the passage of *al-ṣāʾifa* into Castilian as *aceifa* (whence, for instance, *salir en campaña de aceifa* "go on a summer campaign"). Although in Arabic chronicles such expressions as *ghazā/aghzā bi 'l-ṣāʾifa* "lead/send (s.o.) to lead the *ṣāʾifa*" occur mainly in the context of expeditions against the Christian north of the Peninsula, they occur also in the context of campaigns within al-Andalus itself against centres of rebellion or Viking raiders [see AL-MADJŪS]. Thus it was not with the identity and location of the enemy that *ṣāʾifa* was primarily and originally associated, but with the time of year at which an expedition was launched—which could be as early as 1 May or as late as the end of July, though the norm would seem to have been at a time midway between these two extremes. When necessary, expedient or limited in scope, campaigns were conducted outside the summer season and likewise took their name from the time of the launch. Hence one in winter was a *shātiya*, one in spring a *rabīʿiyya* and one in autumn a *kharīfiyya* (on these last two in the time of the ʿĀmirid al-Manṣūr (below, para. 4), see al-ʿUdhrī, in *Bibl.* below, 79, 80).

By the end of the reign of Alfonso I, king of Asturias (739-57) and conqueror of much of northwest Spain and Portugal, perhaps as much as a quarter of the Peninsula formed no part of al-Andalus, and of that proportion a fair share was an uninhabited *limes* known as the Marches (*al-thughūr*). Of these there were originally three: the Upper (*al-aʿlā*), the Middle (*al-awsaṭ*), and the Lower (*al-adnā*). Each was controlled, not by a civil governor, but by a military commander (*ḳāʾid*) based at Saragossa, Toledo and Mérida, respectively. Such was the position during the Emirate of the 3rd/9th century, though with the gradual contraction of al-Andalus changes had already begun to take place that in the long run were to result in the reduction of the *thughūr* to two: the Upper, or Farther (*al-aḳṣā*), still based on Saragossa and covering Navarre and the North-East, and the Middle, or Hither (*al-adnā*), covering Castile and the Kingdom of Léon, not from the increasingly remote Toledo, but from Medinaceli (Madīnat Sālim [*q.v.*]), which on the orders of the caliph ʿAbd al-Raḥmān III al-Nāṣir [*q.v.*] in 335/946 had been made into a heavily fortified base from which to launch *ṣawāʾif* against Christian positions in the upper and middle reaches of the Douro valley. The *thughūr* so constituted did not of course survive indefinitely: in time, frontiers inevitably changed as Islam retreated before advancing Christendom, and, as circumstances changed, the *ṣāʾifa* underwent changes of scale, form and style. This being so, attention here will be focused almost exclusively on a limited number of aspects drawn from data relating to *ṣawāʾif* against the Christian north during the Umayyad period (138-42/756-1031)—data which cannot of course be taken as valid for all Umayyad *ṣawāʾif* conducted by different leaders on different occasions over so long a span of time.

The conduct, scale, regularity and success of such *ṣawāʾif* depended on the central government's willingness, readiness and ability to launch them, all of which factors depended, in turn, on a ruler's strength of governance and purpose, internal peace and stability, the availability of reliable troops and loyal and able commanders, and so on. An early example of a ruler moved by religious zeal and bent on seizing opportunities open to him was Hishām I (172-80/788-96 [*q.v.*]), whose generals led *ṣawāʾif* in almost every year of his reign—several against Alava and Old Castile in the north, several to the Asturias in the North-West and one, reaping a particularly rich harvest of booty, against Gerona and Narbonne in the North-East. For his son al-Ḥakam I (180-206/796-822 [*q.v.*]), obliged for much of his long reign to quell insurrections from the Marches down to Cordova itself, *ṣawāʾif* were anything but the annual events they became under his son ʿAbd al-Raḥmān II (206-38/796-822 [*q.v.*]), who, despite some early internal upheavals, personally led or dispatched *ṣawāʾif* almost every year of his reign against the Asturio-Leonese kingdom. In operations against the Franks in what is now Catalonia he entrusted command in 212/828 to his Umayyad kinsman ʿUbayd Allāh b. ʿAbd Allāh al-Balansī ("of Valencia"), a man whose Arabic designation *ṣāḥib al-ṣawāʾif* is worth noting here if only because it seems *not*, as may be thought, to have derived from any special office or rank he held, but was, rather, an *ad hominem* style acquired through the long and distinguished services he rendered as an organiser and leader of *ṣawāʾif*.

From among the constants and many variables of the Umayyad *ṣawāʾif*—under which those of the ʿĀmirid *ḥādjib* [*q.v.*] al-Manṣūr (Almanzor) [*q.v.*, at vol. VI, 430 ff.] are to be subsumed—only one or two can be touched on here. Of constants, the most important was the need, imposed by Cordova's remoteness from the far north, to ensure the smooth progress of troops towards a distant base from which, once rested and marshalled, they would take the field. To delay till the last moment disclosure of the chosen route was one factor offering Cordova the best prospect of success for the outward journey. By far the most crucial factor, however, was its need to provision its men on the march. As it was normal to have the army live off the land in areas to be crossed, ascertainment of the state of crops and harvests was a precondition of the launch of a *ṣāʾifa*, for drought could lead to the cancellation of a *ṣāʾifa* and the frustration of plans such as even ʿAbd al-Raḥmān III [*q.v.*] had to suffer, for example, in 303/915. Years later Ibn Abī ʿĀmir (al-Manṣūr from 371/981) was to provide against any similar setback by creating, notably in Cordova and strategic forward positions, vast stockpiles of grain, which lasted over several lean years from 378/988.

The recruitment, composition, organisation, funding and equipment of troops for Umayyad *ṣawāʾif* are, like their precise aims and *modus operandi*, beyond the scope of this article. What should be said, however, is that the *ḥushūd* of our sources' expression *al-djunūd wa 'l-ḥushūd* were provincial recruits enlisted for a *ṣāʾifa* to swell the regular army. Instructions for their recruitment went out as early as February, and after mobilisation (*istinfār*) in the summer they would converge on the outskirts of Cordova. Around the same time, commanders in the Marches would be ordered to prepare their contingents to join the Cordovan forces on arrival. Whether or not the ruler was to lead a *ṣāʾifa* in person, he would normally oversee preparations, which could last up to 30-40 days. From his palace he would process, amid popular acclaim, with his guard and entourage to royal quarters within his troops' encampment on the great Faḥṣ al-Surādiḳ ("pavilion plain"), north of Cordova. One notable ceremony to follow much later was the solemn fastening of banners (*ʿaḳd al-alwiya*) to commanders' lances in Cordova's Great Mosque on the Friday before the troops departed. Upon their return the banners would be replaced on the walls of the mosque.

Whatever profit the Umayyads may have derived

from even the most successful of their *ṣawāʾif*, it was certainly not any lasting extension of the boundaries of al-Andalus. That such was not the basic aim of the *ṣāʾifa* (Lévi-Provençal, *Hist. Esp. Mus.*, iii, 103 ff.) may well be true. What seems no less true is that in al-Manṣūr's hands the *ṣāʾifa* became less of a routine response to Christian initiatives than an assault of unexpected and unprecedented ferocity as it was drawn into the ʿĀmirid's military policy, which, however rewarding and morale-boosting in the short term, was ultimately to prove wholly counter-productive for Islam in Spain (on which see Chalmeta, at vol. VI, 432).

Bibliography: E. Lévi-Provençal, *Hist. Esp. Mus.*, ii, index *svv.* *ṣāʾifa* (to which add p. 145), *ṣāḥib al-ṣawāʾif*; iii, 18, 41, 55-112 (for all aspects of military organisation, many relevant to the *ṣāʾifa*, but see esp. 85-90, 92 n. 3, 101-6), 291, 465. For the Umayyad period, Lévi-Provençal used all the sources available to him. Although these remain very much the same, some, most notably important parts of the *Muḳtabis* of Ibn Ḥayyān [*q.v.*], were not generally available either in the Arabic or in translation. The situation has since improved with the appearance of *Muḳtabis* texts edited by ʿA. ʿAlī al-Ḥadjdjī, Beirut 1965, M. ʿAlī Makkī, Cairo 1971, P. Chalmeta, F. Corriente, M. Ṣubḥ, Madrid-Rabat 1979, and translations by E. García Gómez, *Anales palatinos del califa...Al-Ḥakam II*, Madrid 1969 (corresponding to Ḥadjdjī text), and Mª J. Viguera and F. Corriente, *Crónica del califa ʿAbdarraḥman III*, Saragossa 1981 (corresponding to Chalmeta text), etc. An important text for Almanzor is al-ʿUdhrī, *Nuṣūṣ ʿan al-Andalus/Fragmentos geográfico-históricos de al-Masālik*, ed. ʿA. al-Ahwānī, Madrid 1965, 74-80, and important studies are: L. Seco de Lucena, *Acerca de las campañas militares de Almanzor*, in *MEAH*, xiv-xv (1965-6), 7-29 (cf. idem, *New light on the military campaigns of Almanzor*, in *IQ*, xiv [1970], 126-42); J.M. Ruíz Asensio, *Campañas de Almanzor contra el reino de León (981-86)*, in *An. Est. Med.*, v (1965), 31-64. No attempt is made here to handle material for the post-Umayyad periods. (J.D. Latham)

ṢĀʾIGH (a.), pl. *ṣāgha* and *ṣawwāghūn*, goldsmith, denotes a group of skilled craftsmen in Islamic society. In the early centuries of Islam, according to al-Djāḥiẓ and al-Khuzāʿī, the goldsmiths were mainly artisans of Jewish and Christian faith, but some Arab writers also recognised the existence of Muslim goldsmiths.

The earliest recorded goldsmiths known to Islamic history, according to Kattānī, belonged to the Jewish tribe of Banū Ḳaynuḳāʿ [*q.v.*] of Medina during the Prophet's time. Their skill was highly rated in society, yet the mediaeval Arabs thought that it was a demeaning skill which caused the loss of manliness (*murūwwa*). On the whole, public opinion was critical towards the goldsmith's profession, and they were allegedly censured by the Prophet Muḥammad in these harsh words: "The worst liars of mankind are the dyers (*ṣabbāghūn*) and the goldsmiths (*ṣawwāghūn*)" (al-Kattānī, *Tarātib*, ii, 91); in other words, he said, "The worst liars of my *umma* are the dyers and goldsmiths" (cf. al-Ibshīhī, *Mustaṭraf*, ii, 53). A similar attitude towards the *ṣāgha* was attributed to the caliph ʿUmar b. al-Khaṭṭāb, who doubted their reliability with customers (al-Kattānī, *Tarātib*, ii, 64). Aḥmad b. Ḥanbal and other scholars of the ʿAbbāsid period were said to have warned of evil moral consequences resulting frequent public visits to goldsmiths' shops (cf. al-Lubūdī, *Faḍl al-iktisāb*, fol. 58b). The *ḥisba* manuals are critical of their fraudulent alloying of gold with other cheaper metals like silver or copper, and their usurious transactions.

Among Arab bellelettrists, al-Djāḥiẓ cited an Arab woman's name as Salma bint al-Ṣāʾigh (cf. *Ḥayawān*, iv, 377) who belonged to the Syrian *Anbāṭ* (pl. of *Nabaṭ*, referring to the remnants of the Aramaic-speaking indigenous population of Syria and ʿIrāḳ during the early ʿAbbāsid period). Moreover, Ibn al-Athīr and al-Samʿānī noted the usage of *al-Ṣāʾigh* as a *nisba* among Muslims from the 2nd/8th to 4th/10th century. Some of these persons were cited among expert transmitters of *ḥadīth* in the mediaeval Islamic world, and at least one of them was a well-known Arab writer called Ibn al-Ṣāʾigh ("goldsmith's son"). Besides being reliable transmitters of religious knowledge (*ʿilm*), some goldsmiths had attained upward social mobility. The customary law of *kafāʾa* was leniently applied to the goldsmiths, who could marry outside their own social group into the wealthy and respectable groups of the bourgeoisie such as the cloth-merchants (*bazzāz*) and perfumers (*ʿaṭṭār*).

Early Islamic cities such as Fusṭāṭ, Baghdād, Cairo, Damascus, Tunis, and so on had separate goldsmiths' markets (*sūḳ al-ṣāgha*). Al-Ibshīhī, writing a rare tale about a goldsmith, illustrates the goldsmith's guild wherein the master-craftsman (*muʿallim*) employed and trained journeymen (*ṣāniʿ*, pl. *ṣunnāʿ*) in workshops and earned handsome wages. Literary sources provide evidence regarding the existence of goldsmith's guilds over the centuries in many Islamic cities of the Middle East until modern times.

ṢĀʾĪN ḲALʿA, a little town and district in

southern Ādharbaydjān, on the right bank of the Djaghātū, the modern town of Shāhīn Dizh. In the south the boundary runs a little over the river Sāruḳ, a tributary on the right bank of the Djaghātū. In the north it is bounded by the district of ʿAdjarī, in the east by the province of Khamse. The name is derived from the Mongol *sayin* "good".

The local Turkish Afshar tribe, of which a part had to emigrate to Urmiya to make room for the Čārdawrī (Čārdowlī) tribe of Lur origin (the district of Čardawr on the Saymara), were brought by Fatḥ ʿAlī Shāh from Shīrāz at the beginning of the 19th century. The chief of the Čārdowlī lived at Maḥmūddjiḳ and commanded about 5,000 men. In 1830 Ṣāʾīn Ḳalʿa was destroyed by a Kurdish invasion under Shaykh ʿUbayd Allāh. Ṣāʾīn Ḳalʿa, formerly occupied by a Persian garrison, guarded the entrance to Ādharbaydjān through the Djaghātū valley. The caves of Kereftū with a Greek inscription, described by Ker Porter (*Travels*, ii, 538-52; Ritter, ix, 816), as well as the site of Takht-i Sulaymān (the ancient Gazaka, al-Shīz of the Arabs; cf. Marquart, *Ērānšahr*, 108), are in the territory of the Afshars of Ṣāʾīn-Ḳalʿa. The lake of Čamli Göl (near the village of Bādarlī) with a floating island is likewise well known. A section of the Afshars belong to the Ahl-i Ḥaḳḳ sect [*q.v.*], the local chiefs of whom in Bent's time lived at Nazar-bābā and Gandjābād (cf. V. Minorsky, *Notes sur la secte des Ahl-i Ḥaḳḳ*, in *RMM*, xl-xli [1920], 19-97; *RMM* [1922], 53, 76).

The modern town of Shāhīn Dizh (long. 46° 35′ E., lat. 36° 43′ N., alt. 1,350 m/4,428 ft.) is the chef-lieu of a *bakhsh* of the same name in the province (*ustān*) of West Ādharbāydjān; in *ca.* 1950 it had a population of 3,170 (Razmārā, *Farhang-i djughrāfiyā-yi Īrān-zamīn*, iv, 295), which by 1991 had risen to 25,050 (Preliminary results of the 1991 census, Statistical Centre of Iran, Population Division).

Another fortress called Ṣāʾīn-Ḳalʿa on the river Abhar, to the east of Sulṭāniyya [*q.v.*] and mentioned by Ḥamd Allāh Mustawfī (see Le Strange, *Lands of the eastern Caliphate*, 222), should not be confused with this Ṣāʾīn Ḳalʿa.

Stahl, in *Petermann's Mitteilungen* (1905), 33 (with a map of the district and indications of its mineral wealth); A.V.W. Jackson, *Persia past and present*, New York 1906, 121 ff.

(V. MINORSKY*)

SAʿĪR (A.), one of the various words used in the Ḳurʾān for Hell Fire. *Saʿīr* seems to be a native Arabic formation (unlike Djahannam and possibly Ṣaḳar [*q.v.*]) with the meaning "[place of] fiercely kindled flame". It occurs 16 times in the Holy Book (IV, 11/10, 58/55, XXII, 4, etc.), most frequently in third Meccan period and Medinan sūras.

Bibliography: Nöldeke-Schwally, *G des Q*, i, 89; T. O'Shaughnessy, *The seven names for Hell in the Qurʾān*, in *BSOAS*, xxiv (1961), 455-7. (ED.)

AL-**SĀḲ** (A.), lit. "leg" or "thigh", used in various senses in Islamic mathematics and astronomy. Thus, for example, *sāḳ* means the foot of a compass, the perpendicular of a right-angled triangle with horizontal base, or the equal sides of an isosceles triangle. Another term for the foot of a compass is *ridjl*, and *ḍilʿ* is also used for any side of any triangle. (See further ʿILM AL-HANDASA, in Suppl.).

In astronomy [see NUDJŪM] *sāḳ* may refer to a star that is in a leg of a constellation figure representing a person or an animal, as in *sāḳ al-asad* or *sāḳā 'l-asad* (dual) for either or both of α Bootis and α Virginis, regarded in Arab tradition as the hind legs of Leo. The word *sāḳ* in the name of the star *sāḳ sākib al-māʾ*, the leg of the water-carrier, δ Aquarii, was corrupted by Europeans in the Middle Ages to Scheat. The same star with its name half-Persianised as *sāḳ-i sākib-i māʾ* is represented on the retes of numerous Indo-Persian astrolabes [see ASṬURLĀB].

Sāḳ al-djarāda, lit. "the locust's leg", is the name given to a variety of vertical sundial [see MIZWALA] in which the horizontal gnomon is moved along a groove at the top of the rectangular sundial according to the season (since the shadow-lengths at the hours depend on the solar longitude). An example from Syria, made for the Ayyūbid sultan Nūr al-Dīn in 554/1159, with markings serving the latitudes of Damascus and Aleppo on either side, survives virtually intact (the gnomon is missing). The name of the device derives, with some stretching of the imagination, from the form and shape of the main astronomical markings.

Delpont (eds.), *Syrie - Mémoire et civilisation*, Paris 1993, 436-7. (D.A. KING)

AL-**ṢAḲĀLIBA**, sing. Ṣaḳlabī, Ṣiḳlabī, the designation in mediaeval Islamic sources for the Slavs and other fair-haired, ruddy-complexioned peoples of Northern Europe (see A.Z. Velidi Togan, *Die Schwerter der Germanen*, 19-38).

1. The Ṣaḳāliba of Northern and Eastern Europe.

The actual name was a borrowing from Middle Greek Σλάβος, "Slav." This, in turn, is to be connected with the self-designation of the Slavs, *Slověne* (cf. the Rus' usage *Slověne, Slovyane, Sloven'skїy yazїk* "Slavs", "Slavic nation" in the *Povest' vremyannїkh let*, in *PSRL*, i, 5-6, 28, Mod. Russ. *Slavyane*, Ukr. *Slov'yanї*, Pol. *Słowianie*, Czech. *Slované*, Bulg. *Slavyani*, etc.). This latter form is reflected in the Σκλαβηνοί, Σκλαυηνοί/*Sclaveni* (sing. Σκλαβηνός: **Slavěn-in* < **Slověn-in*), the Byzantino-Latin rendering of this collective name of the Slavs. It also was used to denote the central-southern grouping of Slavic tribes by 6th-7th century Byzantine (e.g. Procopius and Theophylactus of Simocatta) and Latinophone authors (e.g. Jordanes).

Due to the large numbers of slaves that came to Western Europe from the Slavic lands, the ethnonym "Slav" came to denote "slave" (< M. Eng. *sclave*, cf. French *esclave*, Ital. *schiavo*, Germ. *Sklave*, Mod. Greek Σκλάβος) in a number of European languages (see comments of Menges, *Outline*, 11-12; Kupfer and Lewicki, *Źródła hebrajskie*, 29, n. 2). A reflection of this semantic development can be seen in the Hispano-Arabic use of this term to designate, at first, Slavic slaves brought to Spain (where their role was analogous to that of the Turkic *ghilmān* of the rival ʿAbbāsids) and subsequently all foreign slaves in Spanish Umayyad service [see 3. below].

Although there was some ambiguity in the Arabic usage of this term, its initial meaning was undoubtedly "Slav." Early on, however, it spread to neighbouring peoples as well. Thus the early 3rd/9th century polymath al-Khʷārazmī (*Ṣūrat al-arḍ*, ed. Mžik, 105)

speaks of the "country of Gharmāniyā, which is the land of the Ṣaḳāliba." Ibn Faḍlān, who journeyed to Volga Bulgharia in 309-10/921-2 (the subject population of which included, in addition to various Turkic groups, Finno-Ugrian and other northern peoples), termed the Bulghār ruler "King of the Ṣaḳāliba" (see Togan, *Ibn Faḍlān's Reisebericht*).

The Arab accounts derive the eponymous Ṣaḳlab from Mādhāy b. Yāfith (al-Masʿūdī, Ibrāhīm b. Yaʿḳūb) or ʿŪdjān b. Yāfith. Al-Ḳazwīnī (*Āthār*, 614), however, derives him from the descendants of Līṭ b. Kalīkhīm b. Yūnān b. Yāfith and presents him as the brother of Rūm, Arman and Firandj. According to the tale preserved in the anonymous *Mudjmal al-tawārīkh*, 103-4, Ṣaḳlab's father, whose mother died immediately after his birth, was raised on dog milk and developed a canine disposition. His son was called "Ṣaḳlab" (hence the popular etymology found in Gardīzī who derives this name from *Sag-lābī* < Pers. *sag* "dog"). Later, as each of Yāfith's children acquired a land of their own, Ṣaḳlab struggled with Rūs, Kimārī and Khazar for possession of a territory, but was defeated. He was thus obliged to make his home in the north. This homeland of the Ṣaḳāliba is described as very cold, with homes built underground and heated by steam, a theme found in a number of the detailed descriptions in the Islamic geographical literature dealing with the Ṣaḳāliba lands. Gardīzī, in his tale of Ḳïrghïz (Khirkhīz) origins, relates that the leader of the Khirkhīz "was from the mass of the Saḳlābs." Having killed a Byzantine envoy, he was forced to flee to the Khazars, Bashdjirts and Toḳuz Oghuz. There he was joined by other Ṣaḳāliba. Gardīzī concludes that this is why "the features and traits of the Saḳlābs are to be found among the Khirkhīz (such as) reddishness of hair and whiteness of skin" (tr. Martinez, 124-6, ed. Barthold, 28-9). This constitutes one of several indications of the presence of an ancient Europoid strain among the Ḳïrghïz. It also shows the close association, in the Islamic geographical literature, of a certain fair-haired, ruddy complexioned population type of Eurasia with the Slavs.

The later Perso-Islamic historical tradition, in a notice of dubious historicity, mentions a "pass of the Khazars and Ṣaḳāliba" in connection with the activities of the Sāsānid Djāmāsp, who briefly ruled Persia 496-8. These and other notices purporting to record their presence in the north Caucasian zone in the early decades of Islam (e.g. Balʿamī) are almost certainly anachronistic. Paradoxically, we are probably on surer ground with references to Slavs that had been transplanted to Asia Minor or were serving in Byzantine forces that might have had contact with the Arabs as early as the decades preceding the advent of Islam. The earliest evidence for Arabo-Slavic contacts is found in the Byzantine sources. The 10th century chronographer Theophanes, ed. de Boor, i, 348, notes that *s.a.* 6156/664-5, some 5,000 Σκλαυινοί living on "Roman" territory defected to the Umayyad commander ʿAbd al-Raḥmān b. Khālid ('ο'Αβδεραχμάν 'ο τοῦ Χαλέδου), going with him to Syria and settling in the village of Seleucobolus in the region of Apamea. During the caliphate of ʿAbd al-Malik ('Αβιμέλεχ), *s.a.* 6184/692-3, Νέβουλος, the commander of a force of 30,000 men that had been recruited from the Slavs settled in Asia Minor, was bribed by the Arabs and together with 20,000 of his men came over to the Arab side. The Byzantine Emperor Justinian II (685-95, 705-11) slaughtered the remaining Slavs at Leucate (Theophanes, i, 365-6).

The oldest reference in Arab writings, however, is found in the works of al-Akhṭal (d. 91/710 [*q.v.*]), a Christian poet of the Taghlib tribe who was one of the favourites of ʿAbd al-Malik. In one of his poems he makes a brief reference to the "throng of reddish Ṣaḳāliba" *djamʿat al-Ṣaḳāliba al-ṣuhb*, see text and discussion in Lewicki, *Źródła arabskie*, i, 6 ff., and also his *Świat*, 339). Mention is made of the Saḳāliba by Yazīd b. al-Muhallab, a one-time governor of Khurāsān and then rebel against caliphal authority [see MUHALLABIDS], in a speech given on the eve of his final and fatal encounter with the Umayyads. This took place in 102/720, and his remarks were preserved in a collection of notable addresses by Ibn ʿAbd Rabbihi (see Lewicki, *Un temoignage arabe*, 319-31). The Saḳāliba noted here were, in all likelihood, one or another of the diasporan Slavic groupings that were either serving in the Byzantine forces or living as transplanted colonists in Asia Minor. This notice is important in that it comes directly from a contemporary. Direct contact with the Slavic lands, however, took place only after the Arabs had secured Ḵhʷārazm in the early 8th century (see Lewicki, *Świat*, 326-7), and it became one of the principal entrepôts for commerce with eastern and northern Europe.

The later historian al-Yaʿḳūbī, *Taʾrīkh*, ii, 359, 360, mentions a "city of the Ṣaḳāliba" s.a. 96/714-5 and 98/716-7 which Maslama b. ʿAbd al-Malik [*q.v.*] conquered in 98/716-7 in his campaign against Constantinople. It is unclear whether this Slavic urban settlement is to be sought in Asia Minor or in the Balkans, although the former seems more likely. Several decades later, in a different theatre of operations, the Umayyad commander and future caliph Marwān b. Muḥammad, in 120/737 made a daring advance into Khazar territory, capturing the city of al-Bayḍāʾ (probably Sarkel on the Don). Proceeding further, as we learn from the account of Ibn Aʿtham al-Kūfī (viii, 71-2, see also Togan, *Reisebericht*, 295 ff.), he "attacked the Ṣaḳāliba and the various infidels who lived beyond them", taking prisoner some 20,000 families. Marwān continued his advance and made camp on the "River of the Slavs" (*nahr al-Ṣaḳāliba*). In this region, he succeeded in capturing the Khazar Ḳaghan and compelled him to embrace Islam. Al-Balādhurī, *Futūḥ*, 207-8, has a brief notice on this campaign, noting that the 20,000 captive Ṣaḳāliba who were settled in Khākhīṭ (Kakhet'i in Georgia) later revolted, and Marwān "attacked and killed them." The location of this *nahr al-Ṣaḳāliba* remains controversial. It has often been identified with the Volga (Togan, *Reisebericht*, 305). Another view (*ibid.*, 307), however, identifies these Ṣaḳāliba with the Burṭās, Suwār, Asgil and other Turkic and Finnic peoples of Volga Bulgharia. A passage in al-Masʿūdī's *Tanbīh*, 67, however, brings us southward to the Don. He remarks that "many settlements of the Ṣaḳāliba and other nations who penetrated deep into the north" are on a great river called *ṭnāys* (Tanais). The *Ḥudūd*, tr. Minorsky, 75, 216, reflects the confusion of the mediaeval Muslim historians and geographers regarding the rivers of the Ṣaḳāliba and Rūs lands, presenting us with a conflation of the information on the Don and Volga. It notes that the river of the Rūs "rises from the interior of the Ṣaḳlāb country ... skirts the confines" of the three Rūs urban centres and the Ḳïpčaḳ land and "empties itself into the river Ātil." With later authors the situation is not significantly clearer. Abū Ḥāmid al-Gharnāṭī (473-565/1080-1170 [*q.v.*]), a native of Muslim Spain who spent much of his adult life in the Volga region (from 525/1131 largely in Ṣāḳsīn/Sākhsīn), passed through the lands

of the Ṣaḳāliba (actually the Rūs region) on a journey that eventually brought him to Hungary *ca.* 1150. He reports that he left Bulghār by ship on the "river of the Ṣaḳāliba", by which he appears to have designated the Oka (ed. and tr. Dubler, 22/61, 196-9). His contemporary, al-Idrīsī (ed. Bombaci *et al.*, viii, 909-10), but without al-Gharnāṭī's first-hand knowledge, designates the Don as the *nahr rūsiyya.*

With regard to other riverine centres, al-Masʿūdī (*Tanbīh*, 67, 183) also mentions the *Danuba/*Danābī (Danube) and Malāwa (Morava) rivers on which Ṣaḳāliba settlements are to be found. Around the Malāwa, in particular, were the habitats of the *Nāmdjīn* (< Slav. *Nemčin* "German") and *Murāwāt* (Moravians, see below).

The same Marwān who led the successful 120/737 campaign, when he became caliph, placed Ṣaḳāliba colonies along the borders with Byzantium in Cilicia (at al-Khuṣūṣ), northern Syria (at Salmān, near Ḳūrus/Cyrrhus) and the upper Euphrates (Ḥiṣn Ziyād/Arm. Khartabirt, on the border zone). The second ʿAbbāsid caliph, al-Manṣūr, in 140/757-8 sent his son to raid the Ṣaḳāliba (al-Yaʿḳūbī, *Buldān*, 237). In that same year, according to al-Balādhurī, 166, the caliph rebuilt al-Maṣṣīṣa (Mopsuestia) and transplanted thither Ṣaḳāliba, Persians and Christian Nabataeans from al-Khuṣūṣ. Some of these Ṣaḳāliba may have been involved in the disturbances reported by al-Yaʿḳūbī (Lewicki, *Osadnictwo*, 488, and discussion in his *Źródła arabskie*, i, 265-6). Evidence for Slavo-Muslim co-operation against Byzantium can be seen in the notice found in Constantine Porphyrogenitus (*DAI*, 228/229) which tells of a raid on Patras in the Peoloponnesus *ca.* 805-7 by Slavs coming from that region who were assisted by "African Saracens." The antecedents of this alliance are obscure. Still more murky is the report in al-Yaʿḳūbī (*Taʾrīkh*, ii, 598-9), s.a. 239/853-5 or 240/854-5, regarding an unnamed "ruler (*ṣāḥib*)" of the Ṣaḳāliba, to whom the Georgian mountaineers, the Ṣanāriyya (Ts'anar), appealed (along with similar entreaties to the Byzantine Emperor and Khazar Ḳaghan) for aid against the caliphal forces led by the Turkic general Bugha the Elder [*q.v.*].

The Slavic polities that took shape in the Balkans were, of course, oriented, in peace and war, towards Constantinople. Although the Muslim sources largely ignore the ferocious Byzantino-Bulghar wars of the 8th-9th centuries, al-Ṭabarī (iii, 2152-3) knows of a "king of the Ṣaḳāliba" who, in 283/896-7, attacked the Imperial capital. This was the now Slavicised Bulgarian king Symeon (*reg.* 893-927), whose attempt on Constantinople had actually begun in 894 and came to an end in 897 (on Symeon and Byzantium, see Fine, *The early medieval Balkans*, 137-58). According to al-Ṭabarī, the Emperor defeated him only with the aid of Muslim troops which he recruited from the Muslims who were in his territory, but Byzantine sources make no mention of such assistance.

Well before this time, however, the Muslim world was already gaining more direct access to the lands of the Ṣaḳāliba and incorporating the knowledge acquired thereby into geographical schemes derived from the Graeco-Roman tradition. Thus the *Kitāb al-Zīdj* written *ca.* 156/772-3 by al-Fazārī, typical of the mathematical geography of this era (the pertinent fragment from which is preserved in al-Masʿūdī, *Murūdj*, ed. Pellat, ii, 377), placed the Ṣaḳāliba at the end of a quite realistic listing of peoples that included the Toghuzghuz, the "Turks of the Khāḳān", the Khazars, al-Lān (Alans) and Burdjān (Danubian-Balkan Bulghars), and presented them as occupying a region extending 3,500 *farsakhs* in length and 700 *farsakhs* in width. Al-Khwārazmī (105), however, equated the country of the Ṣaḳāliba with "Gharmāniyā" (the "Germania" of the Latin tradition), i.e. Central Europe. In keeping with this scheme, the country of "Sarmāṭiyya" (Sarmatia) was identified with the territories of the Burdjān and al-Lān (Alans). Ibn Khurradādhbih, 92, 155, with Ibn al-Faḳīh, 6-7, 83, following him, divides Europe (*Arūfā*) into "al-Andalus, al-Ṣaḳāliba, al-Rūm and Firanja." The Ṣaḳāliba are placed north of al-Andalus, alongside of the Burdjān and Abar (Avars). In another passage, Ibn Khurradādhbih, 119, notes the Khazar, Alans, Ṣaḳāliba and Abar in a listing reflecting the disposition of the larger, politically more important peoples extending from the Volga to Central Europe (Ibn Rusta, 98 has a similar listing).

The location of the Ṣaḳāliba lands

By the 3rd-4th/9th-10th centuries, the material deriving from first-hand sources, i.e. travellers, merchants (Jewish and Muslim), Muslims who had spent time in Byzantium and Eastern Europe (e.g. Muslim b. Abī Muslim al-Djarmī and the sources that came to comprise the "Caspian Codex", see Zakhoder, *Kaspiyskiy svod*) and had direct experience of the region, had substantially increased. As a consequence, the information available to the Muslim world, although not without serious lacunae (cf. the confusion noted above with regard to the "river of the Ṣaḳāliba"), became more expansive and richer in detail. Our 4th/10th century sources are unanimous that the Ṣaḳāliba occupied a heavily forested, "vast country" subject to ferocious frosts. The borders of this "country of the Ṣaḳāliba", however, are not precisely delineated. According to the *Ḥudūd*, tr. 158, to the east lay the Inner Bulghārs and some of the Rūs, to the south were some parts of the Gurz Sea (usually the Caspian but here designating (see 53) the Black Sea) and some parts of Rūm. To the west (actually north-west) and north were the "Uninhabited lands." The Sea of Azov (the Maeotis, *Māwṭs* in the *Ḥudūd*, 54) is noted as the "extreme limit of the Ṣaḳlābs towards the north." Al-Ḳazwīnī (*Āthār*, 614), writing in 674/1275-6, but largely using older data, places the Saḳlāb country in the west of the sixth and seventh climes, adjoining the Khazar realm and the mountains of Rūm.

The Slavic primary habitat and migrations

The imprecision of our sources with regard to Ṣaḳāliba borders is understandable. These lands, although very important for trade, were distant, dangerous and difficult of access. Moreover, from the 5th-9th centuries the Slavs had been undergoing a series of migrations out of their ancient habitat. Gothic, followed by Hunnic, pressures provided the catalyst for the breakup of Proto-Slavic "unity" and the migrations of elements of the Slavs southwards towards the Danube and across it to the Balkans and westward into Germanic and (earlier) Celtic lands. By 527, the Antes and Sclaveni were raiding the Byzantine Balkan holdings. This pressure increased with the advent of the Avars in the Western Eurasian steppes *ca.* 558. By the early 7th century, the Slavs were swarming over many parts of the Balkans, penetrating as far as Greece. Slavo-Avar pressure increased during the reign of Heraclius (610-41), who successfully defended Constantinople against a joint Avaro-Slav-Persian land and sea assault in 626. According to Constantine Porphyrogenitus (*DAI*, 146/147-148/149, 152/153), the Serbs and Croats took possession of the

lands that now bear their names during the reign of Heraclius.

Although our Muslim sources came into direct contact with the Slavs after the great migrations were completed, the various Slavic groupings, extending from the Elbe and Baltic to the Pontic zone and Balkans, were still in the process of defining themselves as political entities. The Islamic authors of the ʿAbbāsid era were aware of them, collectively, as a distinct ethnolinguistic and cultural grouping consisting of various branches. Some of these subgroupings, in certain of our accounts, were already emerging as more clearly defined polities with their own identifying characteristics. Others, unaccountably, remained a liminal presence. Nonetheless, we have a number of remarkable accounts of the Ṣaḳāliba, with an occasional wealth of detail. These accounts are associated with three historico-geographical traditions (to some degree interrelated) that are represented by Ibn Rusta and Gardīzī; al-Masʿūdī; and Ibrāhīm b. Yaʿḳūb.

The Ṣaḳāliba lands

The Ibn Rusta-Gardīzī tradition (Ibn Rusta, 143-5; Gardīzī, ed. Barthold, 38-9, tr. Martinez, 162-6, elements of which are also preserved in the *Ḥudūd*, 158-9, and Marwazī) is largely ethnographic and derives primarily from sources belonging to the 3rd/9th century. It begins by noting that the Ṣaḳāliba lands were only 10 days' travel from those of the Pečenegs [*q.v.*]. The Ṣaḳāliba country was located beyond the steppe in dense forests. According to al-Masʿūdī (*Murūdj*, i, 142) "their residences are in the north towards where it joins the west." Ibrāhīm b. Yaʿḳūb (ed. Kowalski, *Relacja*, 1, 56), writing in the 960s, however, has them stretching from the Syrian Sea (*Baḥr al-Shāmī*, i.e. Eastern Mediterranean) to the "Ocean" (the Baltic being meant here). Ibn al-Faḳīh, 295, in a reference, perhaps, to an Eastern Slavic grouping located near the north Caucasus, remarks that the Caucasus is connected to the land of the Ṣaḳāliba and "in it there is also a tribe of the Ṣaḳāliba".

Tribes, political organisation and urban centres

Ibrāhīm b. Yaʿḳūb (7) describes the Ṣaḳāliba, in general, as possessing formidable military might. Indeed, if not for their excessive divisions, "no nation could stand up to them in power."

We have a variety of notices on the titles and leaders of the Ṣaḳāliba. Ibn Khurradādhbih, 17, and al-Bīrūnī, *Āthār*, 102, mention that the "king of the Ṣaḳāliba" has the title **ḳnāz* (al-Bīrūnī has قبّار *ḳbbār* = قناز cf. Russ. *knyaz'* "prince", a title ultimately of Germanic origin). Al-Masʿūdī (*Murūdj*, ii, 142-5) has an important notice on the Ṣaḳāliba tribal polities known to him. He remarks that they have kings, are divided along tribal lines ("they [comprise] many tribes and a vast [number] of types") and often war among themselves. He makes reference to a tribe among them "in which the kingdom (*al-mulk*) was of old", implying the earlier existence of some all-encompassing Slavic political union. "Their king was called *Mādjak* and his tribe is called *Walīnāba*. The tribes of the Ṣaḳāliba followed this tribe in other times past...". He further comments that the *Walīnāba* were the "purest of lineage, ... the greatest of their tribes and the foremost among them... Then the authority between these tribes was disputed and their (political) organisation (*niẓām*) came to an end. Their tribes formed different groups. Each tribe placed a king over itself...". Ibrāhīm b. Yaʿḳūb (1-2), who gives the name/title of this king as *Mākhā*, largely repeats al-Masʿūdī's information, adding that in his day, the "tribes of the north have gained ascendency over some of them and inhabit" some of their lands (probably a reference to the growing power of the Germanic Holy Roman Emperors in the western Slavic territories).

Elsewhere, al-Masʿūdī, *Murūdj*, ii, 144, perhaps referring to the situation in his own day, mentions *ʾldyr* as the leading king of the Ṣaḳāliba, a ruler possessing many towns, cultivated fields, large armies and to whose territory Muslim merchants were wont to travel for trade. Beyond his lands lay those of the "king of al-Afragh" (Prague, see below). The identity of this figure is also unknown. Russian and Ukrainian historians (e.g. Hrushevs'kiy, i, 408) suggested that *ʾldyr* was al-Dirr = the Varangian Dir of the Rus' chronicles, who briefly held Kiev in the mid-9th century. Given the context, this seems unlikely. Lewicki (*Świat*, 356) reads this name as **Aldayr* and proposes him as a ruler of White Croatia. This is not impossible, but it lacks corroborating evidence.

The Ibn Rusta-Gardīzī tradition, reflected also in the brief notices in the *Ḥudūd*, 159, and *Mudjmal*, 421, reports that their chief, whom all obey, wears a crown. Their chief of chiefs is named **swyyt blk* and his deputy is called **swbndj* (**shwbandj*). The first name appears to be a rendering of *Svętoplok/Svĕtoplok (cf. Constantine Porphyrogenitus, *DAI*, 64/65, 176/177, 180/181, Σφενδοπλόκος), the king (*reg.* 870-94) of Moravia before it was overrun by the Hungarians.

The second name/title noted by our sources is viewed as an attempt to render a Slavic **zhupanets* < *zhupan* (an Old Slavic title of possible Avar or Turkic origin).

Ibrāhīm b. Yaʿḳūb (1) reports that in his day, the Ṣaḳāliba had four kings: an unnamed ruler of the Bulgarians (*Bulḳārīn*), *Bwyṣlāw* (*Boyeslav, probably Boleslav I, 935-67, the Bohemian ruler, see Kowalski, *Relacja*, 60), the "king of Frāgha (Prague), *Bwyma* (*Boyma = Bohemia) and *Krkwʾ* (Krakow, a reference to Boleslav I's control of White Croatia), *Mashḳa*, king of the North (a reference to Mieszko I of Poland) and *Nāḳwn* (Nakon) in the far west." Nakon was the ruler of the Obodriti/Obodriči, the most politically advanced grouping of the Polabian Slavs in the mid-10th century (see Leciejewicz, *Słowianie zachodni*, 157; Salivon, *Samosoznanie*, 131-40). Ibrāhīm, who journeyed to this land, has left us a detailed description of these kingdoms. Nakon's realm, in the west, was bordered by the Saxons (*Sakswn*) and the *Murmān* (Normans, probably Danes; see Kowalski, *Relacja*, 63); to the east were the Veleti/Vilci/Ljutiči; and in the south were the Lusatian Sorbs/White Serbs (see Salivon, *Samosoznanie*, 132). King Boyeslav/*Boleslav's realm extended from Prague to Krakow, requiring some three weeks' journey. Prague, our source notes, was constructed of stone and lime. This land, according to Ibrāhīm, who reports the prices for wheat, barley and fowl there, was deeply involved in commerce. Ṣaḳāliba, Rūs, Hungarians, Muslims and Jews came to trade, bringing out slaves, tin and furs. Ibrāhīm reckons among the remarkable characteristics of the people of Bohemia, given the stereotypical image of the Saḳāliba in the Islamic lands, the relative absence of blondness among them. Most, he reports, have dark brown hair.

The land of the king *Mashḳa* (Mieszko I) is described by Ibrāhīm 4-5) as the most extensive of the Saḳāliba domains, with fertile soil and an abundance of foodstuffs, meat and honey. The king supported his

army of 3,000 armoured men, 100 of whom are equal to 1,000 of others, from the taxes levied on the markets. The king also provided for the children, male and female, of his army, including dowry and bride-price payments. Mashḳa's neighbours are the Rūs in the east and the Baltic Pruss (*Brūs*) in the north. Our source then passes on to an account of the (now) Slavicised Bulgarians (*Bulḳārīn*), whose land he did not personally visit, but whose emissaries he met in Magdeburg (*Mādhīburgh*) at the court of Otto I. He reports that they had more than a rudimentary governmental apparatus and had men who were familiar with foreign languages.

Of the other tribes and their rulers, almost all of whom are to be found in the Central European Slavic lands, al-Masʿūdī (*Murūdj*, ii, 142-3) first mentions the **Usṭutrāna*. This name is also cited by Ibrāhīm b. Yaʿḳūb, 9, 120 ff.) who has the corrupted form *Ṣbrāba* (var. lect. *ʾṣṭbrāna, ʾṣṭrāna, ʾṣṭrāʾa, ʾṣṭbwāna*). These are the Stodorane of Brandenburg, the Heveldi of the German chroniclers (see Marquart, *Streifzüge*, 104). The king of these *Usṭutrāna* is recorded as *Baṣḳlabidj*. Next are the *Dūlāba* whose king "at the present time is called *Wāndj ṣlāf*." These are the Dudlebi/Dulebî, an Eastern Slavic tribal grouping, much oppressed, according to Slavic historical tradition, by the Avars (*PSRL*, i, 11-12) whose territory extended into Western and Southern Slavic regions. The name of their ruler *Wāndj ṣlāf* is undoubtedly Vęceslav (Wenceslas), whom Marquart, *Streifzüge*, 103, identifies with Wenceslas I of Bohemia (920-9), for which there is no evidence other than a similarity of names. Our sources place them alongside the *Nāmdjīn* (<Slav. *nemčin, nemets* "German", see above), whose king is called *Gharānd* and who are described as "the bravest of the tribes of the Ṣaḳāliba and the most chivalrous." These are the Germans of Conrad of Franconia (d. 919). Clearly, the use of the Slavic **Nemčin* probably points to a Slavic source for this ethnonym in the Muslim world (cf. also the Khazar Hebrew Correspondence; Ottoman Turkish [*q.v.*] *Nemče* "German, Austrian" is most probably a later, independent borrowing). Next to them is the unidentified tribe called *Mnābīn* (omitted in Ibrāhīm b. Yaʿḳūb) led by **Ratīmīr*. This grouping is followed by the *Sarbīn*, the Serbs, of whom al-Masʿūdī remarks that they are "awe-inspiring" (*muhīb*). Marquart, *Streifzüge*, 106-9, who conjectures that al-Masʿūdī's notice stemmed from the first third of the 9th century, identified them with the Lusatian Sorbs, the "White" or "unbaptised" Serbs noted by Constantine Porphyrogenitus (*DAI*, 152/153), as living beyond the Hungarians in a region called Βοΐκι, bordering also on the Franks and Great Croatia. Given the Central and Eastern European thrust of our source's information, which does not really touch on the South Slavs, this is probably correct.

Next are the *Murāwat*, the Morava or Moravians (most probably of the former Great Moravia, see Lewicki, *Znajomość*, 98-9). Gardīzī, tr. Martinez, 161, ed. Barthold, 38 (ms. *mrdāt* = *mrwāt*) places them 10 days' north of the "Nandur" (the Danubian Bulghars), beyond the "great mountain range" (the Carpathians). They are described as numerous (greater than the Byzantines) and wearing clothing resembling that of the Arabs (turban, shirt and waistcoat). They practise agriculture and viniculture due to the abundance of water which is not channelled into ditches or canals, but follows its own course over the ground. They consist of two distinct communities (regrettably not further defined). Most of their trade is with the West (ms. *ʿrb* for *ghrb*, thus Barthold, 59, translates this as "they carry on their trade predominantly with the Arabs"). There is a rather confusing version of this notice in the *Ḥudūd*, 160, in its section on the "*Mirvāt*." Here, their eastern neighbours are given as some of the Khazarian Pečenegs and portions of an unnamed mountain range. To their south are other Khazarian Pečenegs and the Gurz Sea (the Black Sea). In the west are some parts of the Gurz sea (?!) and the Inner Bulghārs. To the north are some Bulghārs and the *Wnndr* mountains. The *Ḥudūd* further comments that they are Christians who speak Arabic (*Tāzī*) and *Rūmī*. Their dress is like that of the Arabs and they live in tents and felt huts. All of these details, in particular their linguistic affiliations, seem highly improbable (see Minorsky's comments, 442). They are portrayed, in the *Ḥudūd*, as being "on friendly terms with the Turks" (the Hungarians, who conquered them and destroyed their state in the late 9th century) and the Byzantines. This would appear to date this notice to the mid-9th century. Their neighbours, in al-Masʿūdī's narrative, are the *Khurwātīn* (the White Croatians are meant here, see above), the *Ṣāṣīn* (perhaps to be emended, as Marquart, *Streifzüge*, 122, suggests, to **Ṣākhīn* "Čekhs") and the unidentified *Ḥshyābīn, Khashānīn* in Ibrāhīm b. Yaʿḳūb. Marquart, *Streifzüge*, 140-1, would see in them the Guduscani (**Djushshānīn*), a Slavic tribe noted together with the Obodriti and Timočane in Frankish sources, who sent embassies to the Frankish court in the early 9th century. The last tribe in Ibrāhīm's variant of al-Masʿūdī's listing is the *Brāndjābīn*, in whom Marquart, *Streifzüge*, 107, would see *Braničevin.

Beyond the domain of *ʾldyr* (see above), the foremost king of the Ṣaḳāliba, according to al-Masʿūdī, *Murūdj*, ii, 144, is the king of al-Afragh (Prague) who has "mines of gold, cities, vast, cultivated fields, many armies and great numbers (of people)." He conducts wars with the surrounding states of Rūm, the Franks (*al-Firandj*) and the Langobards (*lbzkrd*, recte *lnwkbrd* for *lnkwbrd*) with "alternating success (*sidjāl*). Beyond him is the "king of the Turks" (Hungarians), whose people are "the most handsome in appearance of the Ṣaḳāliba, the greatest in number and the most ferocious."

Near the eastern border of the Ṣaḳāliba is the town *Wāntīt (Ibn Rusta, 143, Gardīzī, ed. Barthold, 38, tr. Martinez, 162; *Ḥudūd*, 159: Wābnīt, cf. the *Wnntīt* of the Khazar Hebrew correspondence (Kokovtsov, 31, 88-9 n. 4)), some of whose inhabitants, according to the *Ḥudūd*, "resemble the Rūs." It has long been suggested that *Wāntīt* rendered **Vętič(i)*, the name of an Eastern Slavic tribe, the Vyatiči.

Although some elements of the accounts of the Muslim historians and geographers touch on the Eastern Slavic groupings, most of our information on the latter is inextricably tied to the Rūs theme [see RŪS]. Abū Ḥāmid (ed. Dubler, 25-6/64, tr. Bol'shakov, 37), however, makes no distinction, for in his day, the Rūs, whatever their origins, were fully Slavicised. He reports that he went to a city of the Ṣaḳāliba called *Ghūr Karmān* (Dubler: Ghūr Kūmān, cf. also Bol'shakov, who attempts to interpret "Kuyav" = Kiev from this form). "In it are thousands of Maghribians, with the appearance of Turks. They speak Turkic and shoot arrows like the Turks. They are known in this country as the *Badjna*" (= Pečeneg). In this connection we might recall that Rashīd al-Dīn (ed. Karīmī, i, 482) refers to Kiev by its Turkic name *Men Kermen*. *Kermen* is a Ḳïpčaḳ Turkic word meaning "fort, city." It was borrowed into 14th century Russian as well. Rashīd al-Dīn fur-

ther notes the presence there of the *ḳawm-i kulāh-i siyāhān*, the *Černii Kloboutsi* (Mod. Russ. *Černie Klobuki* "[people] of the black cowls") of the Rus' sources. These were Turkic tribesmen who had taken service with the Rus' princes of Kiev. One of the constituent elements of the Černii Kloboutsi were remnants of the Pečeneg tribal union. The confusion of these Turks with "Maghribians" probably stems from some element of their dress. Some of them seem to have been Muslims, for Abū Ḥāmid, who was departing for Hungary (*Bāshghird, Unḳūriyya*), left behind some of his students to care for their needs. *Ghūr Karmān*, then, would appear to be a Turkic name for Kiev; see Pritsak, *Eine altaische Bezeichnung*, 1-13. In Hungary, Abū Ḥāmid also encountered Muslim "Maghribians", in all likelihood, Pečenegs (Hung. *Besenyő*) who were in the service of the Hungarian kings (see comments of Bol'shakov, 75).

The slave trade

The Ṣaḳāliba lands and peoples were intimately associated, as we have noted, with the slave trade, so much so that their name became synonymous with it. Slaving raids aimed at the Ṣaḳāliba were largely carried out by the Hungarians and the Rūs. Ibn Rusta, 142, has a particularly full notice. He reports that the "Madjghariyya" rule over their Ṣaḳāliba neighbours. "They require of them raw materials (*mu'an ghalīẓa*) (as tribute)" and treat them like prisoners of war. They raid them regularly and take their captives to "Kardj" (Kerč) in the Crimea. This, presumably, was their point of entry into the Byzantine world. The Rūs engaged in similar slaving raids, taking their captives to Khazaria and Volga Bulgharia, where they were sold. Some Ṣaḳāliba, according to Gardīzī (tr. Martinez, 166, 167, 169, ed. Barthold, 39), voluntarily worked for the Rūs as bond servants in order to be "free of [further obligations of] service." This same source, however, notes that the Ṣaḳāliba themselves have "many captured slaves." Al-Iṣṭakhrī, 305, reports that most of the Ṣaḳlabī, Khazar and Turkic slaves came to Khwārazm, along with the furs, etc. of the northern forests. Ibn Ḥawḳal, ed. Kramers, ii, 339, 340, 392, presents Khwārazm as not merely a passive recipient of this bounty. The Khwārazmians themselves engaged in slaving expeditions to Bulghār and the northern lands. In addition to Khwārazm and the Sāmānid orbit, Muslim Spain via the Maghrib, according to Ibn Ḥawḳal (i, 97, 110; see also Lewicki, *Świat*, 365), was one of the entry points of Ṣaḳāliba slaves into the Islamic world. Another market was Ādharbaydjān in Trancaucasia, whither Ṣaḳlābī, Greek, Armenian, Pečeneg and Khazar slaves were also brought (*Ḥudūd*, 142).

Religion

In his account of Khazaria, al-Mas'ūdī, *Murūdj*, i, 213-14, portrays the Ṣaḳāliba and Rūs as the principal pagans of the country. In contrast to the Muslims, Christians and Jews, who each have two judges for their respective communities, the pagans were accorded only one "who renders judgment according to pagan practice (*bi-ḥukm al-djāhiliyya*), the judgment of reason." The tradition represented by Ibn Rusta, 144, Gardīzī, tr. Martinez, 164, ed. Barthold, 38, and the *Ḥudūd*, 158, states that they are all fire-worshippers. Clearly, this notice stems from material that had been gathered before elements of the Slavs were converted to Christianity in the mid-late 9th century. Worship of the hearth fire and of the sun among the pagan Slavs, bespeaking strong ancient Iranian influences, is well-established in the scholarly literature.

Ibn Rusta, 127, is aware, however, that Christianity had already been adopted by Balkan Slavs during the reign of the Byzantine emperor Basil I (867-87). In reality, Christianity had already begun to make headway among the Balkan Slavic peoples before the era of Basil I. Events came to a head in the latter years of the reign of Basil's predecessor, Michael III (842-67). In the course of an extraordinary concatenation of diplomatic and military initiatives undertaken by the Franks, Great Moravia, the Balkan (Turkic) Bulgharian realm and Byzantium, the Bulghar ruler, Boris, converted to Orthodox Christianity in 864 (on the Cyrillo-Methodian mission, which forms the backdrop to these events, see F. Dvornik, *Byzantine missions among the Slavs*, and Vlasto, *The entry of the Slavs*, 155 ff.). The Slavic subjects of the Bulghars were already moving towards Christianity. The conversion, at first resisted by some elements of the Turkic Bulghar aristocracy, ultimately contributed to their complete Slavicisation. The Slavs to which Ibn Rusta referred are generally believed to be elements of the southern Serbian tribes converted in 877 (Marquart, *Streifzüge*, 239-42). Vlasto, 208, has concluded that the bulk of the Serbs were Christian from about 870. Fine, *The early medieval Balkans*, 139-40, however, views them as still essentially pagan at this time. The comment by Ibn al-Faḳīh, 77, that the "Ṣaḳāliba have crosses" is, in all likelihood, a reference to the Balkan Slavs (Lewicki, *Źródła arabskie*, ii/1, 56). Similarly, the report in *Ḥudūd*, 157, regarding "Christianised Ṣaḳāliba" in a "province of Rūm" who pay taxes to the emperor points further to the South Slav area. Al-Mas'ūdī, *Tanbīh*, 181-2, perhaps alluding to the struggle between Rome and Constantinople in the 9th century for the confessional loyalty of the newly-emerging Slavic Christian communities, notes that "the majority of the Ṣaḳāliba, the Burghar and other nations which are devoted to Christianity obey the ruler of "Rūmiyya." This must refer to the Byzantine emperor rather than the Pope of Rome.

Furs among the Ṣaḳāliba

According to Abū Ḥāmid (ed. Dubler, 22-3/61-2, tr. Bol'shakov, 35), the "River of the Ṣaḳāliba" has in it an animal with a black pelt that looks like a small cat. It is called a "water sable" and its hides are exported to Bulghār and Sakhsīn [see SAKSĪN]. They conduct their business affairs using fur-less, old squirrels pelts (as currency). If the head and claws are intact, 17 of these are worth one silver dirham. They tie them up in a bundle and call it a *djuḳn*. Furs, as we know from indigenous sources, served as currency in Rus', indeed a small unit of currency was the *kuna* (cf. Mod. Russ. *kunitsa* "marten"). Dubler (348) saw *djuḳn* as a possible garbling of *kuna*. Bol'shakov (73-4) preferred a reconstruction of the Arabic form as **djrfn* for Old Russ. *grivna*, a unit of currency larger than the *kuna*. Abū Ḥāmid then goes on to describe the use of these furs, with the ruler's seal on them, as currency.

Later references

There are some, anachronistic, references to the Saḳāliba in the later Muslim sources, which repeat information stemming from the 9th-10th centuries. Most of these, however, no longer deal with them as a specific ethno-linguistic unit, but rather as distinct countries, cf. al-Idrīsī's extensive treatment of "Bu'āmiyya" (Bohemia), "Buluniyya" (Poland) and "Rūsiyya (see Lewicki, *Polska*). Thus al-Dimashḳī (261-2) largely cites the information of al-Mas'ūdī, al-Bakrī (who preserved Ibrāhīm b. Ya'ḳūb's account for us), al-Idrīsī and the historian Ibn al-Athīr (tale of the Rūs conversion). An interesting mix of old and

more recent data is found in Abu 'l-Fidā's *Taḳwīm al-buldān*. For example, he reports the more current hydronyms: *Ṭunā* (Danube), *ʾzw* (Turk. Özü = the Dnepr), *Tān* (Don) (ed. Reinaud, 63-4). Following Ibn Saʿīd, he makes note of the city of *Lūyāniyya* which belonged to the greatest of the Ṣaḳāliba kings (206). It is described as one of the most important ports on the Baltic. Near it, towards the east, is the (city of ?) *Ṣāṣīn* (perhaps *Ṣādjīn*) (Lewicki, *Świat*, 328, suggests that the two Baltic Slavic centres noted here are Wolyń Pomorski and Szczecin). In the Balkans, he mentions the mountains of Croatia (Djabal *Khurwāsiyā) and Slavonia (*Ishkafūniyya*) (202). The latter is placed (211) on the shore of the "Sea of Venice" (the Adriatic). By the Mongol era, however, many of the themes of the classical Islamic geographers were repeated uncritically and occasionally incorrectly. Thus al-Ḳazwīnī, *Āthār*, 616-17, sees in Mashḳa (Mieszko, see above) the name of a "broad city in the country of the Ṣaḳāliba at the coast of the sea" as well as the name of its ruler. Moreover, his customs are contrasted with those of the "other Turks", blurring thus the Ṣaḳāliba, the Turks and others of the Northern peoples.

(P.B. Golden)

2. In the central lands of the caliphate.

The white slaves in the armies of the ʿAbbāsids, when the caliphate underwent its military transformation during the 3rd/9th century [see djaysh and ghulām. 1], were predominantly Turks and Rūm, the latter probably in majority Greeks and Armenians. But by the opening of the 4th/10th century, a certain number of Ṣaḳāliba, here to be interpreted as Slavs from Central and Eastern Europe and possibly as some of the Ugrian peoples of Eastern Russia [see burṭās], appear within the ʿAbbāsid caliphate, though only as a subordinate element of the slave troops there, given the easy availability to the ʿAbbāsids of Turks from Central Asia and the South Russian steppes.

It is with the Fāṭimids that we really find a significant Slav military element. Ṣaḳlabī commanders are known in the army of the Aghlabids of Tunisia, but the early Fāṭimids had a prominent commander and admiral, Ṣābir, a freedman of the governor of Sicily Ibn Ḳurhub, and Ṣābir's Slav seamen and troops har-

ried the coasts of southern Italy as far as Salerno and Naples. The geographer and traveller Ibn Ḥawḳal (378/988) noted that the most populous quarter in Palermo was the *ḥārat al-Ṣaḳāliba* (ed. Kramers, 119, tr. Kramers and Wiet, 118). But it was under the caliph al-Ḳāʾim (322-34/943-46 [*q.v.*]) that the Slav element in the Fāṭimid forces really increased, especially after the revolt of Abū Yazīd [*q.v.*] and his Berber K͟hārid͟jite supporters showed the need for reliable professional troops. Hence several Ṣaḳlabī commanders, with typical slave names like Maysūr, Marām and Bus͟hrā, begin to be mentioned in the historical texts. Earlier authorities, such as Amari and his reviser Nallino, interpreted the consonant ductus الصقلي/الصقلبي of the sources as *al-Ṣiḳillī* "the Sicilian", but I. Hrbek has pointed out that it is unlikely that native Sicilians (for whom the plural form is normally *al-Ṣiḳilliyyūn*), enjoying protected *d͟himmī* status, would be enslaved.

The real origin of these Ṣaḳāliba must have been the Slav peoples of Central Europe and the Balkans, then in considerable turmoil from the warfare of the Byzantines and local Croat, Serb and Bulghar rulers and from expansionist pressures against the Slavs from the Germanic *Ostmark*. Prague was a centre of the slave trade, and St. Adalbert relinquished the bishopric of Prague in A.D. 987 because he could not ransom all the Christian slaves which Jewish merchants brought thither. Captives of war were shipped as slaves, almost certainly by the Venetians, through the ports of Dalmatia [*q.v.* in Suppl.], with the Muslim potentates as their purchasers, and, despite Papal and Imperial anathemas, this traffic continued well into the 5th/11th century; in 1076 Pope Gregory VII made King Zvonimir swear as part of his coronation oath not to allow the slave trade in Croatia and Dalmatia.

Within the Fāṭimid caliphate, the Slavs continued to play a conspicuous role in the reign of al-Muʿizz (341-65/953-75 [*q.v.*]), and al-Maḳrīzī states that the caliph learnt the languages of his servants and retainers, sc. Berber, Rūmiyya (according to Hrbek, probably the Sicilian dialect of Italian), Sūdāniyya and Ṣaḳlabiyya. Two of his prominent commanders, the eunuch Ḳayṣar and Muẓaffar, were Slavs, but the most celebrated of all was the conqueror of Egypt for the caliph, D͟jawhar [see D͟JAWHAR AL-ṢIḲILLĪ], whose ambiguous *nisba* is probably to be interpreted as al-Ṣaḳlabī, as is possibly that of the eunuch commander D͟jawd͟har [*q.v.*]. D͟jawhar's career, together with those of his son al-Ḥasan and, probably, of the eunuch Bard͟jawān [*q.v.*] in the reign of al-Ḥākim (386-411/996-1021 [*q.v.*]), mark the apogee of Slav influence in the Fāṭimid state. During the course of the 5th/11th century, Slavs became less prominent in the army as the share of the Turks increased and as conditions in the Balkans became more peaceable, with the formation of stronger nation states there. They nevertheless continued to be the favoured bearers of the ceremonial parasol or *miẓalla* [*q.v.*] (this office coming fourth in the administrative-military hierarchy after the vizier, the head chamberlain or *ṣāḥib al-bāb*, and the commander-in-chief or *isfahsālār*), and they left a mark on the topography of Fāṭimid Cairo, according to al-Maḳrīzī, *K͟hiṭaṭ*, Cairo 1324/1906, iii, 68, in the shape of the *darb al-Ṣaḳāliba* in the Zuwayla quarter of the city.

3. In the Muslim West.

As noted in section 1 above, the Arabic geographers of the 3rd-4th/9th-10th centuries gave the name *Ṣaḳāliba* to the peoples of the centre and north-east of Europe occupying territories which stretched from north of the Byzantine empire to the lands of the K͟hazars and Bulg͟hārs in the east to those of the Franks and Lombards in the west, corresponding, it appears, to the lands of the Slavs.

Since Umayyad times, slaves of such origin in the Islamic world had reached appreciable numbers, used as domestic slaves and as soldiers, in particular in caliphal service (see above, section 2). It seems that in the west, these Ṣaḳāliba came mainly from the commerce which had developed in the 8th and 9th centuries between the *Dār al-Islām* and the lands of the Carolingian West. Western sources, and to a small extent, Arabic ones, attest the fact that these slaves, the product of war and, probably also, of raids mounted from Christian Germany into the Slav lands, were forwarded to Spain, and probably also the Mag͟hrib, by merchants from marginal ethno-cultural groups acting as intermediaries between the Christian and Islamic worlds: "Greeks" of Italy (Neapolitans, Amalfitans and, very likely also, Venetians), and above all, the Jews of Spain and Septimania.

It appears also that, very soon, the Ṣaḳāliba sold in Spain had previously, on reaching Muslim territory, undergone castration, evidently to increase their value on a market where the demand for eunuchs was strong, given the need for male staff for the running of harems. These facts doubtless explain why the term Ṣaḳāliba soon acquired the specialised meaning of "a white eunuch", in opposition to the *ʿabīd*, black slaves. In the 4th/10th century, this trade was very important and seems to have been the main cause for the rise of the great port of Almeria, from which these slaves were re-exported to other Muslim lands of the Mediterranean basin. Thus the castration was done in al-Andalus, in connection with an important Jewish group attested in the town of Lucena. Those Ṣaḳāliba brought to K͟hwārazm or K͟hurāsān from the eastern part of the Slav world do not appear to have been the object of the same treatment, but little is known about this question apart from what is mentioned exiguously in the geographers.

In an important article, David Ayalon has considered afresh the question of the true origin of these Ṣaḳāliba, which most authors, following Dozy, considered as stemming from wars and raids of the Muslims of al-Andalus against the southern fringes of the Christian West (northern Spain, southern France, the coasts and islands of the Tyrrhenian Sea) rather than from the actual Slav lands. According to Ayalon, the text of Ibn Ḥawḳal adduced by Dozy, Lévy-Provençal, Ashtor, etc., has been wrongly interpreted. He holds that the Arabic geographers of the 3rd-4th/9th-10th centuries made a clear distinction between the Galicians, Franks and Lombards on one hand, and the Ṣaḳāliba or Slavs on the other. Hence it could be said that, given the fact that many of the Ṣaḳāliba were supposed to come from the Carolingian empire and not from the Slav lands, the military importance of slaves of Christian origin in the mediaeval Islamic world has been exaggerated. Ayalon's thesis is that, in the main centres of Muslim power, and even in al-Andalus, for long, pagan soldiers with white skins from the *Dār al-Ḥarb* were preferred to Christians from Europe, who appear in this role relatively late.

This reconsideration, and the interpretation of Ibn Ḥawḳal's text, should be approached with prudence. Ayalon virtually leaves out the Western documentation, in Arabic and Latin, which should be carefully re-examined before reaching the conclusion which he proposes. In principle, and from the ethnogeographical viewpoint, Ibn Ḥawḳal may not be confusing the Ṣaḳāliba with the Franks and other peoples of the West. But in the same passage he says that the people of al-Andalus "attack the Slav lands in the directions of Galicia, the Frankish lands, Lombardy and Calabria and take prisoners there", which is hardly comprehensible unless one admits that the human product of Saracen piracy on the Western European coasts was considered as belonging to the general group of Ṣaḳāliba. This point mignt be verifiable in certain particular cases, such as that of the "Slav" ruler of the Denia *ṭāʾifa* in the 5th/11th century, Mud̲j̲āhid, whose origin was, there is reason to think, Italian.

In the East, some Ṣaḳāliba—it is difficult to know whether these were eunuchs or not—were used as soldiers by the Umayyads of Damascus, perhaps in imitation of the Byzantines, who had corps of Slav troops. The ʿAbbāsids favoured the use of Turks, and the Slavs played only a minimal role in Bag̲h̲dād. But in al-Andalus, the Cordovan Umayyads seem to have prolonged, in this sphere as in others, the Damascus tradition. Servants of Ṣaḳlabī origin are attested in the 3rd/9th century under the amīrate, but it was under the caliphate that their increase in numbers became spectacular. At the end of ʿAbd al-Raḥmān III's reign (350/961), there are said to have been almost 14,000 Ṣaḳāliba at Cordova.

These persons, who had come as children into the service of the state, received a good "technical" and intellectual education, and were used as domestic attendants, court officials, soldiers and administrators, reaching the highest levels in all these spheres. Already under the *amīr* ʿAbd Allāh, at the end of the 9th and opening of the 10th centuries, the most influential of the viziers was Badr al-Ṣaḳlabī. Under al-Ḥakam II, the influence of high Ṣaḳlābī officers rose still further. At his death in 365/976, two of them, Fāʾiḳ al-Niẓāmī and D̲j̲awd̲h̲ar, director of the *ṭirāz* and court jewelry manufacture, and chief falconer, respectively, but also commanders of the Ṣaḳlabī guard, who had both enjoyed the trust of the dead ruler, wished to set aside his son and official heir, His̲h̲ām, who was not yet twelve years old, and enthrone in his place al-Mug̲h̲īra, one of al-Ḥakam II's brothers. But their plans were frustrated by the ministers al-Muṣḥafī and Ibn Abī ʿĀmir, the future al-Mansūr, the first of Berber and the second of Arab origin, who took advantage of the disquiet amongst ruling circles concerning the increased power of the Ṣaḳāliba.

In His̲h̲ām's reign, power was speedily appropriated by al-Manṣūr, who in his turn relied on numerous Ṣaḳlabī elements faithful to him, as did likewise his two sons after him. During the crisis which followed the "Cordovan revolution" of 399/1009 and the fall of the ʿĀmirids, and until the demise of the caliphate in 422/1031, several chiefs from the ʿĀmirid Ṣaḳāliba played a major role in the politico-military manoeuvrings which accompanied tye breakdown of the Umayyad central administration. The main ones here were Wāḍiḥ, commander of the Medinaceli march, and head of the "Ṣaḳlabī-Andalusian" party which, with the caliph al-Mahdī, disputed control of Cordova with the Berbers of the caliphal army and their concurrent caliph al-Mustaʿīn until his death in 402/101. Two other chiefs, K̲h̲ayrān and Mud̲j̲āhid, then played a comparable role, but based respectively on Almeria and Denia, where they had built up practically autonomous powers which were transformed into *ṭāʾifa*s once the central government disappeared completely.

Two other "Slav" *ṭāʾifas* took shape at the same time on the eastern coast of al-Andalus, those of Tortosa and Valencia, without one knowing properly how the Ṣaḳlabī elements managed to achieve the upper hand in this region. The most brilliant of these rulers was incontrovertibly Mud̲j̲āhid of Denia (403-36/1012-45), famed for his ambitious, but unfortunate, enterprise against Sardinia [see SARDĀNIYA] and, above all, by his maecenate which made Denia for a while one of the cultural capitals of the Mediterranean West, especially in regard to lexicography and the Ḳurʾānic readings. It was at his court or that of his son ʿAlī (436-68/1045-75) that the *Risāla* of Ibn Garcia [see IBN G̲H̲ARSIYA] was written, the only important Andalusian work belonging to the anti-Arab—although perfectly Arabised culturally—movement of the S̲h̲uʿūbiyya [*q.v.*]. The Slav *ṭāʾifa* of Denia is the one which lasted longest, the others having disappeared towards the middle of the 5th/11th century (the supply of Slavs hardly continued, it would appear, after the end of the caliphate).

The Ṣaḳāliba phenomenon in al-Andalus must be considered in company with the acquisition of power by Turkish elements in the ʿAbbāsid caliphate or by other military elements of servile origin in various parts of the Muslim world during the history of *mamlūk*s in Egypt and blacks in 11th/17th-century Morocco. In the though-provoking works on this problem of Patricia Crone and Daniel Pipes, neither have fully taken into account the Ṣaḳāliba of Spain and, more generally, of the Muslim West, although these would have merited consideration. Elements of this origin played a role, probably less important and under the political control of the régimes they served, in Ifrīḳiya from the Ag̲h̲labid period to the Zīrid one, above all in the Fāṭimid caliphate there and then in Cairo (see above, section 2). Al-Bakrī mentions contingents of Ṣaḳāliba in the little state of Nakūr [*q.v.*] in the 4th/10th century, but it is true that this principality lived in the shadow of al-Andalus. A quarter of Palermo is mentioned by Ibn Ḥawḳal as the *ḥārat al-Ṣaḳāliba*, and during the Arabo-Norman period, the kings of Sicily had in their service Muslim eunuchs who can probably be considered as Ṣaḳāliba.

(P. GUICHARD and MOHAMED MEOUAK)

SAḲAR (A.), one of the terms employed in the Ḳurʾān (LIV, 48; LXXIV, 26-7, 42) to denote Hell or, more precisely, according to certain authorities, one of the gates of Hell (see e.g. al-Ṭabarī, on LIV, 48) or else one of the "stages" (*daraka, ṭabaḳa*, see al-Ṭabarī and al-Rāzī on LXXIV, 26). There is uncertainty amongst the lexicographers as to whether the word was of foreign origin (like *d̲j̲ahannam*) or whether it was derived from the Arabic root *s-ḳ-r/ṣ-ḳ-r*, meaning the extreme heat of the sun (see *LʿA*, s.r. *ṣ-ḳ-r*; one should note that Jeffery, for his part, does not mention it in his *Foreign vocabulary of the Qurʾān*). See also SAʿĪR.

Bibliography: See also T. O'Shaughnessy, *The seven names of Hell in the Qurʾān*, in *BSOAS*, xxiv (1961), 462-3. (D. GIMARET)

SAKARYA (Ottoman orthography Saḳārya or Ṣaḳārya, modern Turkish Sakarya), a river in Turkey. It rises near Bayāt in the northeast of Āfyūn Ḳara Ḥiṣār. In its eastward course it enters the *wilāyet* or *il* of Ankara, through which it runs to a point above Čakmaḳ after receiving on its left bank the Sayyid G̲h̲āzī Ṣū and several other tributaries on the same side. It then turns northwards describing a curve round Siwri Ḥiṣār. Here it receives on the right bank the Engürü Sūyu from Ankara and near this confluence the Porsuk on the opposite bank. A little to the south of this point is the bridge of the Eski-s̲h̲ehir-Ankara railway. Farther on, towards the north, the Sakarya receives on its right bank the Kirmir Ṣū, and then taking a sudden turn, it runs westwards to Lefke, traversing the former *wilāyets* of Kütahya and K̲h̲udāwendigār. At Lefke the Sakarya is joined on the left by the Gök Ṣū from Bursa. After Lefke it turns sharply to the north, entering the district of Izmid near Meked̲j̲e, having now run 400 km/250 miles. The most flourishing part of its course now begins, and there are fine crops of cotton, wheat, vegetables, besides vineyards and the rearing of silkworms. It now runs in a north-easterly direction through the districts of Geiwe, Ada Pazārī and Ḳandīra, to enter the Black Sea near Ind̲j̲irli. The stretch of its course in the district of Izmid is 112 km/70 miles; near Ada Pazārī it receives the waters of the Mudirni Ṣū from Ḳastamūni on the right bank and of the Čark̲h̲ Ṣū from lake Ṣaband̲j̲a [*q.v.*]; on the left, 2 km/1¼ miles north of Geiwe is a bridge of six arches built by Sultan Bāyezīd I and at Lefke, Ewliyā Čelebi (ii, 11) also mentions a fine bridge of wood. The railway crosses the river four times between Izmid and Biled̲j̲ik.

The Sakarya is the ancient Sangarius (see Pauly-Wissowa, Ser. 2, i, col. 2269, and J. Tischler, *Kleinasiatische Hydronymie*, Wiesbaden 1977, 129, where the name, including Hittite parallels, is discussed). It has changed its course since the Byzantine period, as is shown by the great bridge built by Justinian over it in 561, which is now 3 km/2 miles from Ada Pazārī. This bridge is now called *Bes̲h̲ Köprü* (in classical times Pentegephyra or Pontogephyra; see Ramsay, *The historical geography of Asia Minor*, London 1890, 214, 215), but at the present day the river no longer runs below its arches.

The Sakarya is not navigable; its lower course is only used for transporting to the Black Sea the wood from the thick forests of the neighbourhood. In prehistoric times, the river ran westwards into the Sea of Marmara; the lake of Ṣaband̲j̲a [*q.v.*] and the Gulf of Izmid mark the track of its ancient course. In 909/1503 Sultan Selīm I conceived the idea of re-establishing communication between the Sakarya, the lake (the level of which is above that of the river) and the gulf in order to bring more easily to his capital the wood required for the building of his fleet. Being convinced of the feasibility of the project by the report of experts, he gave orders for its execution, but the opponents of the scheme were able to frustrate it by the argument of the *ris̲h̲wet* (Ḥād̲j̲d̲j̲ī K̲h̲alīfa, *D̲j̲ihān-numā*, Constantinople 1145, 660; see further, ṢABAND̲J̲A).

For a period, in the reign of ʿOt̲h̲mān I [*q.v.*], the Sakarya formed the frontier of his territory on the west and south, and for his conquests he had to cross the river (e.g. for the capture of Aḳ Ḥiṣār in 1308; see ʿĀs̲h̲ïḳ-pas̲h̲a-zāde, *Taʾrīk̲h̲*, Istanbul 1332/1914, 12, 24), After then, the Sakarya did not play an important part in Ottoman history until the famous battle on the Sakarya from 24 August to 10 September 1921, when the Greek army was defeated in a last great effort to reach Ankara. By the counter-offensive of 10 September, the Greeks were thrown back to the west of the Sakarya and forced to take up the line Eski s̲h̲ehir-Afyūn Ḳara Ḥiṣār. In August 1922, the Turkish army was victorious for a second time near the Sakarya; this was the beginning of the Turkish offensive which ended in the complete reconquest of Anatolia and the hurling of the Greek armies into the sea at Izmir (see S.J. and E.K. Shaw, *History of the Ottoman empire and modern Turkey*, Cambridge 1976-7, ii, 360-3).

Sakarya is now the name of an *il* or province of modern Turkey, with its chef-lieu at Adapazarı [see ADA PĀZĀRĪ].

(J.H. KRAMERS*)

AL-SAK̲H̲ĀWĪ, S̲h̲ams al-Dīn Abu 'l-K̲h̲ayr Muḥammad b. ʿAbd al-Raḥmān al-S̲h̲āfiʿī, Egyptian *Ḥadīt̲h̲* scholar and prosopographer (b. Rabīʿ I 830/January 1427, d. S̲h̲aʿbān 902/April 1497).

He belonged to a prominent family of *ʿulamāʾ* who had settled in a quarter of the old Fāṭimid district of Cairo after migrating from the central Delta town of Sak̲h̲ā two generations previously. Al-Sak̲h̲āwī excelled in his formal education, his performance typical for a student who planned to teach the Islamic sciences. Introduced to advanced studies in Prophetic traditions by the famous *s̲h̲ayk̲h̲* Ibn Ḥad̲j̲ar al-ʿAsḳalānī [*q.v.*], al-Sak̲h̲āwī soon acquired renown for his own mastery of *Ḥadīt̲h̲*-related disciplines. Revering Ibn Ḥad̲j̲ar as a paragon of erudition and piety, al-Sak̲h̲āwī

dedicated his career to augmenting his mentor's accomplishments. But in fact, al-Sakhāwī's aptitudes inclined him toward the production of works remarkable more for their encyclopaedic scope than for their originality of method. Al-Sakhāwī's most noteworthy achievement was his massive biographical dictionary of 9th/15th-century notables, *al-Ḍawʾ al-lāmiʿ fī aʿyān al-ḳarn al-tāsiʿ* (ed. Ḥusām al-Dīn al-Ḳudsī, 12 vols., Cairo 1353-5/1934-6). While the range and diversity of individuals included (the final volume dwells exclusively on women) render the *Ḍawʾ* one of the foremost primary sources for research on the *ʿulamāʾ* of the central Islamic lands in pre-modern times, the organisation of data in its myriad entries highlights those qualities most esteemed by the scholastic élite when they evaluated their own peers.

Al-Sakhāwī held several appointments as *Shaykh al-Ḥadīth* in distinguished religio-academic institutions of Cairo. He also travelled to the Syrian districts of the Mamlūk empire, witnessing recitations of *Ḥadīths* by candidates for *idjāza* certificates and debating controversial texts with colleagues on numerous occasions in the provincial capitals. Al-Sakhāwī made his first pilgrimage in 870/July-August 1466 and returned to the Ḥidjāz on the Ḥadjdj twice again, spending subsequent years in scholarly residence there. He relished his sojourns in the holy cities as a signal opportunity to interact with scholars from the eastern Muslim world. In Cairo, he had provoked the ire of several rivals, notably the other eminent polymath of his age, al-Suyūṭī [*q.v.*], for his outspoken criticism of their compositions. Al-Sakhāwī decried the state of contemporary studies in Prophetic traditions, convinced they were declining in accuracy for three reasons: mediocre training in appropriate methods of transmission, limited knowledge of history and its applications to related disciplines, and parochial deviation from orthodox curricular norms. He summarised these views in a treatise on historical methods, *al-Iʿlān bi 'l-tawbīkh li-man dhamma ahl al-taʾrīkh* (publ. Damascus 1349/1930-1, tr. F. Rosenthal as *The open denunciation of the adverse critics of the historians*, in *A history of Muslim historiography*, ²Leiden 1968, 263-529). Although significant in its own right as an inventory of technical definitions and applications of scholastic terminology, the *Iʿlān* is perhaps al-Sakhāwī's outstanding theoretical achievement because its author insightfully portrayed the historian's craft and objectives, learned and religious, as they evolved from the classical period of Islam to his own day.

Although justifiably respected as a prominent figure of late mediaeval scholasticism, al-Sakhāwī disguised a propensity for personal vindictiveness against his adversaries and those of his associates under the guise of a pious wish to evaluate his contemporaries' moral probity in order to assess the validity of their opinions, both for interpretation of the *Sharīʿa* and the giving of historical details. While often captivating, al-Sakhāwī's caustic opinions of his colleagues and derogatory remarks about their shortcomings must be weighed with caution. By contrast, his factual information is reliable due to its centrality in his encyclopaedic approach and to his keen awareness that opponents would expose any errors or distortions he committed in return for his denunciation of them and their works.

In his final years, al-Sakhāwī returned to the Ḥidjāz where he devoted his remaining energies to the completion or refinement of several texts and the training of students in *Ḥadīth* transmissions. He died in Medina.

Bibliography: Inventory of works: Brockelmann, II², 43-4, S II, 31-3, of which no. 3, *Dhayl duwal al-Islām* by al-Ṣafadī, is noteworthy for its details on events in the Ḥidjāz. See also al-Sakhāwī's autobiographical entry in his *Ḍawʾ*, viii, 2-32, and his treatment by Ibn al-ʿImād in *Shadharāt al-dhahab fī akhbār man dhahab*, Cairo 1340/1931-2, viii, 15-17. Popper, *Sakhāwī's criticism of Ibn Taghrī Birdī*, in *Studi orientalistici in onore di Giorgio Levi della Vida*, Rome 1956, ii, 371-89.

(C.F. Petry)

ṢAKHR, Banū, an Arab tribe in what is now Jordan.

The Mamlūk encyclopaedists Ibn Faḍl Allāh al-ʿUmarī (d. 723/1341) and al-Ḳalḳashandī (d. 821/1418) mention this Djudhāmī-Ḳaḥṭānī tribe as living in the eastern plateau of the Mamlūk province of al-Karak [*q.v.*]. The tribe comprised the following six clans: al-Daʿdjiyyūn, Banū Shadjāʿ, al-Ḍabiyyūn, al-ʿAtwiyyūn, Banū Wahrān, and Banū Hūbir.

The Ottoman *tapu defters* mention about 12 groups (*djemāʿāt*). Each *djemāʿa* is listed under its own *shaykh*, with the total number of tribesmen about 643 households plus 36 bachelors. The Ottoman state levied *ʿādat* from them and the tribe of Karīm, which amounted to 38,000 *akčes*. Records from the 17th and 18th centuries provide no more information, while 19th-century and early 20th-century sources report on the tribe in detail, especially in the accounts of European travellers such as Musil. The clan names of the earliest records do not match those in the later ones.

In modern-day oral tradition, the Banū Ṣakhr are in origin an 18th-century tribe that came to Transjordan from the Ḥidjāz in the early 19th century. They first settled in southern Jordan and then moved north; thus they claim that their territory extended from the Ḥawrān in the north to the south of modern Jordan. Part of the tribe settled in the northern villages of the *sandjak* of ʿAdjlūn while others, the Ṣukhūr al-Ghūr (the Jordan Valley Ṣukhūr), settled in the fertile northern regions of the Jordan Valley.

The Banū Ṣakhr tribe played a significant role in the Transjordanian steppe (*bādiya*) because the Pilgrimage route between Damascus and the Ḥidjāz passed through their territory. The Ottoman state paid them a subsidy or *al-ṣurra* annually, but during periods of Ottoman weakness, or when they suspended payment of the annual allocations, the tribesmen would violate their commitments and loot the Pilgrimage caravan as it passed through their territory. One of many such cases was in 1753, when Shaykh Ḳaʿdān al-Fāyiz looted the caravan, amongst whose members was the sister of the Ottoman sultan.

The tribe also levied their own taxes as *khāwa* from the neighbouring villages, particularly those in the *sandjak* of ʿAdjlūn. More often they simply raided the villagers' fields. Arabic press accounts provide plenty of information on looting and attacks against the villages of the *sandjak* of ʿAdjlūn, particularly Ramthā,

in the late 19th and early 20th centuries. They also rented out their camels as transport animals for the pilgrimage caravan, merchants and travellers. With the construction of the Ḥidjāz Railway [*q.v.*] in 1906, their role diminished and they shifted away from camel herding to raising sheep and goats.

After the Ottoman *Tanẓīmāt* reforms, the Banū Ṣakhr began to settle near abandoned sites with wells or reservoirs constructed by the Romans and later mantained and repaired by the Mamlūks and Ottomans. To encourage this process, the Ottomans treated some of the tribal *shaykhs* with dignity and gave them honorific titles. This put the *shaykhs* in a privileged position to register the lands within their territory under their own names.

The relations between the Banū Ṣakhr and the other tribes, such as the Ḥuwayiṭāt, the Banū ʿAtiyya, and the Sardiyya, were almost hostile and they often raided each other. But these tribes, especially the Banū Ṣakhr and Sardiyya, formed an alliance, fostered by intermarriage, known as *ʿArab al-Shimāl* ("Bedouin of the North") to face the invading ʿAnaza tribe and its clients. As in other tribes, there were continuous struggles for leadership among the prominent members of the tribe. This was very evident in the paramount house of al-Fāyiz.

With the establishment of the modern state of Jordan, law and order gradually prevailed. The late King ʿAbd Allāh adopted a new pacification policy and took steps to assimilate as many members of this tribe and other tribes as possible into the armed forces, especially in the Desert Patrol Forces. The Banū Ṣakhr now have their own elective constituency and since the establishment of the first legislative house in Jordan in 1928 they have had their own representation. They are now almost totally integrated into the fabric of the state. With the spread of education, a growing portion of this tribe is opting for agriculture and business and deserting their old way of life, so that nomadism among them has almost come to an end.

(Mohammad al-Bakhit)

SĀĶĪ (A.), cup-bearer, the person charged with pouring wine, to be distinguished from the chief butler or sommelier (*sharābī* or *ṣāḥib al-sharāb*). The chief butler, an important official of the ʿAbbāsid court and the great houses of the highest classes (M.M. Ahsan, *Social life under the ʿAbbāsids*, London 1979, 156), is not unreminiscent of the *sār ha-mashkīm* of the Pharaohs' court (Gen. xl, 1) and the Sāsānid *maybadh* (A. Christensen, *L'Iran sous les Sassanides*², Copenhagen 1944, 21-3, 389).

1. In Arabic usage.

During the *Djāhiliyya*, *sāḳī* had a double connotation: on one hand, it denoted the generous man who gave water to thirsty persons when water was scarce, and as such, deserved high praise (al-Aʿshā, 273 ll. 5-6, poet Aʿshā Tamīm; Muḥammad b. Ḥabīb, *al-Munammaḳ*, 279; al-Khansāʾ, *Dīwān*, ed. Cheikho, 136 l. 12); on the other hand, it meant the person who gave out wine. The first sense was rapidly eclipsed, and only the second one remained, the subject of this article. *Sāḳī* meaning cup-bearer seems to have been in current usage in pre-Islamic and Umayyad poetry (*al-Aṣmaʿiyyāt*, ed. Ahlwardt, 8 l. 8; Salāma b. Djandal, *Dīwān*, ed. Cheikho, 14 l. 2; *Ḥamāsa*, 400 l. 11). Synonyms or quasi-synonyms are attested: *mudīr* (noun of agent from *adāra* "to circulate", Ibn al-Muʿtazz, *K. Fuṣūl al-tamāthīl*, 133, poet Muslim b. al-Walīd; Ibn Sanāʾ al-Mulk, *Dīwān*, Ḥaydarābād 1377/1958, 319); *khādim*, from the later Umayyad period (al-Walīd b. Yazīd, *Dīwān*, Beirut 1967, 29; al-Shābushtī, *Diyārāt*, 60, 70); and the paraphrase *dhū zudjādjāt* (the one who holds the glasses, al-Aʿshā, 45 v. 41). Essentially, the *Djāhilī* poets attached to the court of al-Ḥīra [*q.v.*], such as al-Aʿshā, ʿAdī b. Zayd, and at Djilliḳ, Ḥassān b. Thābit, had variations on this theme for many decades. Al-Aʿshā describes the *sāḳī* dressed in a *sirbāl* or tunic which he hitched up in order to be able to move more freely, and he protected his mouth by a piece of linen cloth (*fidām*), following the usage of Zoroastrian priests, which served as a filter for tasting the drink and also so that he could know the precise taste; the adjective *mufaddam* is used to denote such a *sāḳī*. Also, he had two pearls hanging from his ears (*nuṭaf, luʾluʾ, tūma, mutawwam*), and he smeared his hands with red *farsīd* (al-Aʿshā, 45 v. 41, 52 v. 21, 178 vv. 34-5, 200 vv. 6-7, 214 v. 24). In pre-Islamic times, at al-Ḥīra, drinking was done in the Persian fashion, as the terms employed for such proceedings, including those concerning the *sāḳī*, readily attest.

We are poorly informed about the social origins of these servants, but it is very likely that, outside the Syrian and ʿIrāḳī centres, they came with the *tudjdjār* or peripatetic wine-suppliers. However, references to female *sāḳiyas* indicate that this service was reserved

for captives in war or in raids, hence it was a degrading task (Djarīr and al-Farazdaķ, Naķā'iḍ, Leiden 1905-12, 1068).

In fact, the cup-bearer had to work hard, since he had various tasks to fulfil during the time which the drinking-session lasted. He filled cups and presented them to the participants, decanted the wine after broaching (*bazala*) the jars (*dinān*), mixed the wine with water (*ķatal*), filtered it and even aged it (*ṣahbā'u ʿattaķahā li-sharb*in *sāķī*, al-Azharī, *Tahdhīb al-lugha*, i, 6 l. 4, poet Salāma b. Djandal; ʿUmar b. Abi 'l-Rabīʿa, *Dīwān*, Leipzig 1902, 47 l.10; *Simṭ al-la'ālī*, i, 554 l. 6, ii, 888 l. 9; al-Akhṭal, *Dīwān*, Beirut 1891, 3 l. 6, 321 l. 8; *LʿA*, vii, 7 l. 13). Under the ʿAbbāsids, the evolution of taverns meant for the cup-bearer an increased amount of work; the *khammāra* or *ḥānūt* could extend over two or even three storeys, entailing new procedures. A miniature of Sulṭān Muḥammad, illustrating a poem of Ḥāfiẓ, allows us to follow the *sāķī*'s work: on the ground floor, a young, beardless cup-bearer takes up a full jar, and attaches it to a cord drawn by a colleague in order to serve the drinkers; on the second storey, another *sāķī* empties a *dann* and pours the drink into a goblet (S.C. Welch, *Wonders of the age. Masterpieces of early Safavid painting*, Cambridge, Mass. 1979, no. 44, 128-9). Very often, even during the Djāhiliyya, a single server was not enough; this explains the need for two servers (*al-sāķiyān*i) for one *madjlis* or session (al-Ḥuṭay'a, *Dīwān*, in *ZDMG*, xlvii, 78 l. 17; al-Azharī, ii, 259; Dhu 'l-Rumma, *Dīwān*, Cambridge 1919, 609, v. 45). On the other hand, girls were not good for this work. The *sāķiya* is rarely found in the older period, but more frequently under the ʿAbbāsids (ʿAmr b. Ķamī'a, *Dīwān*, 29 l. 1; *Djamharat nasab Ķuraysh*, i, 233; al-Aʿshā, 36 l. 1, evokes a young serving girl called al-Rabāb; for the ʿAbbāsids, see *Aghānī*[3], xiii, 78, Ḥammād ʿAdjrad; Ibn al-Muʿtazz, *Ṭabaķāt al-shuʿarā'*, Cairo 1968, 79, 85-6, poet Abu 'l-Shīṣ; al-Sarī al-Raffā', *Dīwān*, 712, vv. 6-13). Finally, the anonymous poet cited by al-Djāḥiẓ affirms that the ideal *sāķiya* should be a young girl between puberty and being nubile (*Rasā'il*, Cairo, ii, 96). The sexual connotations need to be taken into account here, especially with the appearance of *ghulāmiyyāt* at the time of al-Amīn, who distributed the wine to the topers in the most private *madjālis*; their use is said to have been thought up by Umm Djaʿfar to distract the caliph's pronounced taste for catamites (al-Masʿūdī, *Murūdj*, Beirut 1974, v, 213-14 = §§ 3451-2). However, one should note in this connection that ʿAdī b. Zayd al-ʿIbādī, describing sessions amongst the Lakhmids (*Dīwān*, Baghdād 1385/1965, 78-9 vv. 13-17), and Ḥassān, mentioning another one amongst the Ghassānids (*Dīwān*, London 1971, 91), evoke the *ķaynas* [*q.v.*] as fulfilling the function of cup-bearer. This second author states that this was only for a short period of time. They could, thus, be used in such milieux, and there were no obstacles to their undertaking this task.

The theme preserves a remarkable stability up to the beginning of the ʿAbbāsid period. Authors are content to describe the dress and deportment of the cup-bearer and to recount the various obligations which he had to fulfil. Libertines like Muṭīʿ b. Iyās and Ḥammād ʿAdjrad, and inveterate topers like Abu 'l-Hindī, display a rather surprising conservatism with regard to the *sāķī*; everyone is happy to repeat al-Aʿshā and other *Djāhilī* poets. The extensive changes introduced into the world of wine with regard to the places of drinking, the distributor of the drinks and the social surroundings of the drinkers, are hardly mentioned. It is only with Wāliba b. al-Ḥubāb, the master of Abū Nuwās, that the essential step forward was made; he asked sexual favours of his *sāķī* (*Aghānī*, Cairo 1390/1970, xviii, 100). Henceforward, the correspondence between the Ganymede and the cup-bearer is perfect. This personage of Greek mythology served as the cup-bearer, and, according to some, as the sexual companion of Zeus. Under the Romans, Ganymede assumed the role of cup-bearer and mignon (Pauly-Wissowa, i/13, 739, section *Hellenistisch-römische Zeit*). Moreover, in mediaeval Latin poetry the one who hands round the wine bestows his favours also on the drinkers.

Nevertheless, it is with Abū Nuwās [*q.v.*] that this personage assumes firm shape and becomes one of the main protagonists in Bacchic poetry. The effeminate character of the *sāķī* takes shape and, indeed, assumes its definitive form. This involves a young boy, graceful and coquettish like a girl. His swaying bearing reveals his well-endowed hindquarters; he smears his eyes with collyrium, perfumes his hair and adorns his forehead and temples with a kiss-curl in the form of scorpions or of an elongated letter *nūn*. His voice and pronunciation are identical with those of women. He is clearly submissive and ready to consent to the advances of the topers. He is at one and the same time a cup-bearer, a mignon and a singer with an agreable voice. The poets have no compunction in adopting here the most frank modes of expression, especially as these mignons-servers were Christian *dhimmīs* wearing the distinguishing girdle or *zunnār* (J. Bencheikh, *Poésies bachiques d'Abū Nuwās, thèmes et personnages*, in *BEO*, xviii [1963-4], 62-3). Finally, this same poet transformed the *sāķī* into a symbol of love in the manner of city-dwellers. By his intervention, he was able to give full rein to his hostility towards the Bedouins. In his *khamriyyāt*, he contrasts the happiness arising from possession of a cup-bearer and the perpetual unsatisfied yearning of the lover of Hind, Asmā' and Zaynab (A. Arazi, *Abū Nuwās, fut-il shuʿūbite?*, in *Arabica*, xxvi [1979], 14-15). From the 3rd/9th century onwards, this theme becomes a conventional one. The poets have no other way of treating this protagonist of Bacchic poetry in his double role of cup-bearer and mignon dispensing carnal favours. He becomes a stereotype; the same motifs, encounters, and even metaphors, recur amongst the poets over the centuries. Furthermore, he comes into relief, from this time onwards, in *adab* literature; the various anthologies devote chapters to him which go over the same material (see *Bibl.*).

The neighbouring Jewish and Persian cultures adopted the personage and the relevant motifs. The term, in its Arab form, is found in each one equally (H. Brody and J. Schirmann, *Secular poems*, Jerusalem 1974, dedicatee of poem, p. 24; Masʿūd-i Saʿd-i Salmān, *Dīwān*, ed. Yāsimī, 639). Hebrew poetry, with Samuel ha-Nagid (993-1056) (*Divan*, Jerusalem 1966, 88, 284, 286, 290, 294), Saloman ibn Gabirol (1020-57) (*Secular poems*, Jerusalem 1974, 24, 82) and Moshe ibn Ezra (1055-1135), imitate in every point the Arabic one (see Schirmann, *La poésie hébraïque en Espagne et en Provence*, Jerusalem-Tel Aviv 1959, 373, 391; idem, *The ephebe in medieval Hebrew poetry*, in *Sefarad*, xv [1955], 55-68; Y. Ratzabi, *The drinking songs of Samuel ha-Nagid*, in *Annual of Bar-Ilan Univ. in Judaica and the Humanities*, Ramat-Gan 1972, 423-74).

(A. Arazi)

2. In Persian usage.

The *sāḳī* appears in New Persian literature as early as the 3rd/9th century in the poetry of Abū Shakūr of Balkh (G. Lazard, *Les premiers poètes persans*, 2 vols., Paris 1964, i, 80, ii, 95). Niẓām al-Mulk (*Siyāsat-nāma*, ed. H. Darke, Tehran 1340/1962, 132-3) describes how Turkish slaves were trained during the Sāmānid period, though no longer in his own times. In the sixth year of an eight-year cycle in which the slave was trained for both military and domestic service, he could be made a cup bearer. The *sāḳīs* were considered part of the private staff of a ruler and they would stand near or around the throne (*ibid.*, 55). In the Ghaznavid court they could also act as food tasters (Abu 'l-Faḍl Bayhaḳī, *Tārīkh*, ed. ʿA.A. Fayyāḍ, Mashhad 1350/1971, 527-9). At the court of Maḥmūd of Ghazna, the *sāḳīs* were as close to the ruler as were the *nadīms* (*ibid.*, 4). Physical beauty was important in the choice of individuals to be wine servers. Bayhaḳī (329-30, 527-9) describes festive occasions when the *sāḳīs*, whom he calls *māhrūyān* "moon-faced", would appear splendidly attired and attract the amorous glances of courtiers. These characteristics of the *sāḳī*, sc. being a Turk, military training, exceptional beauty, and closeness to the ruler, help explain the image of the *sāḳī* as it developed in poetry after the 5th/11th century.

As the influence of mystical thought became more widespread in Persia, the *sāḳī* developed into a "type" and became an important character among the *dramatis personae* of Persian lyric poetry. He is generally identified with the object of love and the same epithets are applied to him as to the earthly beloved. The two genres in which the *sāḳī* appears most prominently are the *ghazal* and the *sāḳī-nāma*. The mystical imagery of wine-drinking was well developed by the 8th/14th century, and two examples will be mentioned that show something of the nature of the *sāḳī* in this context. Khʷādjū Kirmānī (679-753 or 762/1281-1352 or 61), an older contemporary of Ḥāfiẓ, has a *ghazal* (*Dīwān*, ed. A. Suhaylī Khʷānsārī, Tehran 1336/1957, 331-2, no. 325) addressed to the *sāḳī* in which the wine server is intoxicatingly beautiful (with the conventional attributes of physical beauty), an idol, the Khiḍr of the age, the physician for the pain of separation, the ever-shining sun, and the never-waning moon that lights the sun. He serves the water of eternal life and the wine of union.

The *sāḳī-nāma* developed from a two-verse apostrophe beginning *biyā sāḳī* "Come, Sāḳī", the first known example being from a *mathnawī* in the *mutaḳārib* metre by Fakhr al-Dīn Gurgānī (*fl. ca.* 442/1050). Niẓāmī used it throughout his *Sharaf-nāma*, as did his imitators in their romances of Alexander, and this apostrophe came to be called a *sāḳī-nāma*. Ḥāfiẓ wrote a *mathnawī* in *mutaḳārib* beginning *biyā sāḳī*..., and on this model there gradually developed a separate genre in the same metre and form wherein the speaker calls to the *sāḳī* for wine and complains of the instability of the world, the fickleness of destiny, and the inconstancy of his beloved. A recent example of the genre by Gh. Raʿdī Ādharakhshī is entitled *Biraw sāḳī*... "Go, Sāḳī" (*Āyanda*, v [1358/1979], 1-4).

3. Representations in Islamic art.

The fluctuating prominence of the *sāḳī* (m.) and the *sāḳiya* (f.) as a pictorial theme reflects phases of artistic development as well as variations in customs, etiquette and social status. *Sāḳīs* are portrayed in a variety of circumstances, from attendants at a court to servants in a tavern or as participants in drinking parties in which distinctions between the server and the served are often moot. During the 2nd/8th to 6th/12th centuries rulers and princely figures, although often portrayed cup in hand, are only rarely shown in the company of a *sāḳī*; the rulers' rigid frontal posture gives such images a formulaic quality (Mirjam Gelfer-Jørgenson, *The Islamic paintings in Cefalù Cathedral, Sicily*, in *Hafnia* [1978], 131-41).

Despite their rarity, early Islamic depictions of the *sāḳī* have historical importance. Both Sāsānid court protocol and themes drawn from Dionysiac imagery are reflected in early Islamic representations. The scene of wine-drinking depicted on a silver platter, attributed to 2nd/8th-century Persia, and now in the Hermitage Museum, St. Petersburg, shows various facets of the *sāḳī*'s role. The focal point of its composition is a princely figure, surrounded by attendants, reclining on a couch while holding a wine bowl in one hand and a flower stalk in the other hand. The foreground is occupied by a much smaller figure who appears to be a *sāḳī*. He stands with crossed hands resting on his chest and his mouth is covered by a protective mask similar to that worn by Zoroastrian priests, probably to avoid polluting the cup with his breath or saliva, a custom mentioned by the pre-Islamic poet al-Aʿshā (see above, section 1; J.K. Choksy, *Purity and pollution in Zoroastrianism*, Austin 1989, 84-6, fig. 12). The tools of his trade appear to the right—a ewer and a tripod supporting a sieve through which wine is being filtered into a two-handled jug. Judging by his small size, this *sāḳī* was a relatively humble servant. A larger attendant stands behind the reclining drinker while two seated musicians face the latter (V.G. Lukonin, *Iskusstvo drevnego Irana*, Moscow 1977, 169).

A fragmentary wall painting discovered in the ruins of an ʿAbbāsid palace at Sāmarrā [*q.v.*] depicts two *sāḳiyas*, with a flask in one hand and a bowl in the other. Each pours wine into the other's bowl, which hints at other ceremonial aspects of winedrinking (E. Herzfeld, *Die Malereien von Samarra*, Berlin 1927, 9-13,

pls. I-III; Janine Sourdel-Thomine, B. Spuler *et alii, Die Kunst des Islam*, Berlin 1973, 223, pl. XXIII). Their dancing posture and interlocked arms suggest that they were mixing wine to a musical accompaniment. R. Ettinghausen has linked this painting with a Sāsānid adaptation of Dionysiac themes, such as the scantily clad women who dance or play musical instruments depicted on Sasanian silver vessels (*Dionysiac motifs*, in *From Byzantium to Sasanian Iran and the Islamic world*, Leiden 1972, 4-5, 9). The ᶜAbbāsid poet Abu 'l-ᶜAbbās al-Nās͟hī describes a wine bowl adorned with bending and coquettish women, and Abū Nuwās mentions a *sāķiya* who performs a pagan ritual as she mixes wine and water (I.Yu Kračkovskiy, *Sasanidskaya čas͟ha v stik͟hak͟h Abū Nuvāsa*, in *Izbrannye sočineniya*, Moscow 1956, 340; idem, *Abū Nuvās o Sasanidskoy čas͟he*, in *ibid.*, 389-91).

Both *sāķīs* and *sāķiyas* appear in depictions of Islamic princes or rulers in various media. Four female attendants, including two musicians and a *sāķiya*, are shown in attendance around the seated ruler who is depicted on a silver platter, which has been attributed to early 3rd/9th-century Marw, now in the Hermitage Museum. The *sāķiya* standing to the ruler's left holds a ewer in one hand and a piece of fruit in the other (B. Marschak, *Silberschätze des Orients*, Leipzig 1986, 76-7, figs. 30, 32). More commonly shown, however, are *sāķīs*. One is depicted in a vignette from the ceiling of the Capella Palatina in Palermo, built in 1140, where he holds both a cup and a flask (R. Ettinghausen, *Arab painting*, Geneva 1962, 44-5). The Hermitage owns a silver vessel, attributed to K͟hurāsān *ca.* 90/1000, which depicts a seated prince flanked by two youths in Turkish attire; one holds a flower, the other a ewer and cup (Marschak, *op. cit.*, 77-8, fig. 33).

Literary references suggest that by the 4th/10th century a Turkish youth was considered the ideal *sāķī*. When the vizier al-Muhallabī was offered a drink of water at the palace of the caliph al-Muṭīᶜ (334-63/946-74 [*q.v.*]), he was allowed to keep not only the service, a golden tray and a crystal jug covered with a piece of silk-brocade, but also the server, "a Turkish *g͟hulām* with an unblemished visage and beautiful clothes" (Hilāl al-Ṣābī, *Rusūm dār al-k͟hilāfa*, ed. M. ᶜAwwād, Bag͟hdād 1383/1964, 69). The mechanical *sāķī* described by al-D͟jazarī [*q.v.* in Suppl.] in his book on mechanical devices is characterised as a "ten-year old slave" who wears a short tunic and cap. He holds a glass cup in his right hand and a fish in his left. At prescribed intervals wine flows through the fish into the glass. The glass can be removed and the wine drunk. After the glass is returned to the *sāķī*'s hand the process is repeated. A youthful *sāķī* holding a ewer and cup also stands by the ruler's side in a mechanical boat filled with drinking figures which can be floated on a basin during festivities (*The Book of knowledge of ingenious mechanical devices*, tr. D.R. Hill, Dordrecht 1974, 107, 118, pls. XIV, XVII).

During the rule of slave dynasties such as the Atabegs in Syria or the Mamlūks of Egypt and Syria, youthful slaves chosen as an *amīr*'s or sultan's personal servants, including his *sāķī*, acquired an increased importance and often rose to high rank in later life. *Sāķīs* are depicted along with weapon-bearers clustered around seated rulers in paintings and on inlaid metalwork produced in ᶜIrāķ and Syria during the 6th/12th to 8th/14th centuries (Estelle Whelan, *The Khāṣṣakīyah and the origins of Mamluk emblems*, in *Content and context of visual arts in the Islamic world*, ed. Priscilla Soucek, University Park 1988, 220-4). A *sāķī* standing with a cup in his right hand and a flask in his left is shown among other courtiers on the Mamlūk basin inlaid by Muhammad Ibn al-Zayn now in the Louvre and often referred to as the "Baptistère de St. Louis" (Esin Atil, *Renaissance of Islam: art of the Mamluks*, Washington, D.C. 1981, 21-2). Among the Mamlūks, in particular, the *sāķī*'s goblet was transformed from a token of servitude to an indicator that its bearer belonged to a privileged élite. Schematic drawings of a footed goblet appear on objects or structures belonging to *sāķīs* or former *sāķīs*. It was used as such by Sultan Kitbug͟hā both before and after his accession to the throne (Whelan, *op. cit.*, 230, 234; L.A. Mayer, *Saracenic heraldry*, Oxford 1933, 5, 10-11 and *passim*).

The world of the *sāķī* was not restricted to the courts of rulers or their *amīrs*, for they were also employed in public taverns. The range of tasks they performed there is vividly illustrated in a painting from a manuscript of al-Ḥarīrī's *Maķāmāt* dated to 634/1237. It shows the entire cycle of wine production and consumption in a two-storey tavern. On the lower level, grape juice flows out of a basin in which a youth tramples grapes, and another youth strains the juice through a cloth-covered vessel supported on a tripod. Two youths pass a wine jug from the first to second floor. Nearby, two men seated at a table drink wine from cups (Paris, B.N., ms. ar. 5847 fol. 33a; D. and Janine Sourdel, *La civilisation de l'Islam classique*, Paris 1968, 432, fig. 169). This condensed depiction may suggest that the beverage being consumed was only slightly fermented (J. Sadan, *Vin - fait de civilisation*, in *Studies in memory of Gaston Wiet*, ed. Miriam Rosen-Ayalon, Jerusalem 1977, 132-3).

The most significant transformations of the *sāķī*'s visual role, however, occurred in post-Mongol Persia. The Mongols and their successors, particularly the Tīmūrids, were dynasties whose appetite for alcoholic beverages often reached epic proportions, and painters frequently depict both the serving and drinking of intoxicants in court settings. Under the Mongols, a form of official court portraiture existed in which a ruler and his consort were portrayed on a throne surrounded by their attendants, officials and relatives. Typically, the ruler and his consort appear to be drinking wine from shallow cups. One or more *sāķīs* kneel before their throne holding a golden tray ready to replenish their cups from flasks standing on a nearby table (Filiz Çağman and Zeren Tanındı, *The Topkapı Saray Museum: the albums and illustrated manuscripts*, tr. J.M. Rogers, Boston 1986, 69, pls. 43, 44).

During the 8th/14th and 9th/15th centuries, features of these Mongol paintings—the table loaded with flasks, the kneeling *sāķī*, and drinkers in a more naturalistic pose—are echoed in many subsequent depictions, even those produced for anonymous patrons which illustrate literary texts such as the *Shāhnāma* of Firdawsī or the *K͟hamsas* of Niẓāmī and K͟husraw Dihlawī (*ibid.*, 89, pl. 56; T.W. Lentz and G.D. Lowry, *Timur and the princely vision*, Los Angeles 1989, cat. no. 21, p. 66, 110-11). Tīmūr's grandson Bāysung͟hur b. S͟hāh Ruk͟h is even shown with a wine cup in hand and attended by *sāķīs*, one of whom kneels, while on horseback at a hunt (*ibid.*, 132, fig. 132).

The most detailed presentation of the *sāķī*'s role in Tīmūrid court life comes in the frontispiece of a *Bustān* of Saᶜdī, now in Cairo, made for Sultan Ḥusayn Bāyķarā and dated to 893/1488. This double-page painting executed by Bihzād shows a drinking party in progress. Even though several participants have already succumbed to the effects of alcohol, five *sāķīs* on the right page prepare another round of drinks.

Two decant wine from an unglazed jug into flasks while another pair pours an unidentified liquid from a smaller silver flask through a funnel into a gold one. The fifth *sāķī*, holding a spouted ewer, stands waiting, perhaps to mix water with the wine. Below them, a servant carrying a twohandled jug rushes toward the royal party. On the far left of the left-hand page, two more *sāķīs* stand with tray and flask ready to fill any empty cups. This painting also hints at the court production of alcoholic beverages. In the upper right, above the five *sāķīs*, is a building containing a large earthenware vessel which may be a wine-cellar. In front of this structure, two Indians sit near a distilling apparatus, possibly producing distilled spirits (*ibid.*, cat. no. 146, 260-61, 286).

A true fusion between the *sāķī*'s practical and literary roles comes only in Ṣafawid paintings, which combine the relaxed and informal mood of the Tīmūrid drinking party with literary allusions. The best examples of this juxtaposition of the mundane and the mystical illustrate the poetry of Ḥāfiẓ. Two such paintings belong to a *dīwān* of Ḥāfiẓ made for Sām Mīrzā, the younger brother of Shāh Ṭahmāsp I; one depicts a prince and his courtiers celebrating the end of Ramaḍān, the other shows a drinking party in a tavern attended by both dervishes and angels. In the festival scene it is the shāh, not the *sāķī*, whom Ḥāfiẓ compares to the moon, and his appearance becomes a signal for the serving of wine to celebrate the end of Ramaḍān. As a *sāķī* hands the prince a golden winecup, a veritable parade of attendants carrying golden flasks on silver trays prepare to serve his guests, and two of them distribute bottles among the celebrants. Another painting from this manuscript explores the metaphor of intoxication as path to salvation and divine union. Even the "angel of mercy" shown on the building's roof offers other angels a cup of wine. In the building and its surroundings, several *sāķīs* ply their trade. One reaches deep into a large jar to fill the flask of a celebrant who brandishes a book in one hand as if trying to exchange it for wine, while others hold wine cups or wine jugs. The link between intoxication and poetic inspiration is alluded to by a white-bearded man, who tries to read in an inebriated state (S.C. Welch, *Persian painting*, New York 1976, 66-9, pls. 17, 18; Priscilla Soucek, *Sultan Muhammad Tabrizi: painter at the Safavid court*, in *Persian masters: five centuries of painting*, ed. Sheila Canby, Bombay 1990, 58-61).

Few paintings rival these in the subtlety and complexity of their interplay of visual and verbal conventions, but it is in the later 10th/16th and 11th/17th centuries that the *sāķī or sāķiya* emerges as an independent artistic theme in drawings or paintings designed to be mounted in albums. These *sāķīs* or *sāķiyas* stand in coquettish poses or project a langorous and often androgynous sensuality, attributes of the cup-bearer long stressed in the literary tradition (A. Welch, *Shah ʿAbbas and the arts of Isfahan*, New York 1973, 32, 65, 72, 82, nos. 11, 50; I. Stchoukine, *Les peintures des manuscrits de Shah ʿAbbas Ier*, Paris 1954, 189, 193, pls. XXV-XXVI, XXX-XXXIII, LXXV, LXXVII-LXXIX; Marie Lukens Swietochowski and Sussan Babaie, *Persian drawings in the Metropolitan Museum of Art*, New York 1989, nos. 58-9, 74-7, nos. 24, 32-3). Remnants of similar paintings have been uncovered on the walls of Ṣafawid palaces such as the Čihil Sutūn and ʿĀlī Ķapu and particularly in their private inner chambers (Babaie, *Safavid palaces at Isfahan: continuity and change (1590-1666)*, Ph.D. diss. New York University 1993, unpubl., 171-4, 183, 188-9, figs. 160-2, 169-72, 175-7).

The pairing of youthful *sāķīs* with bearded men was evidently considered particularly appropriate to the poetry of Ḥāfiẓ. Two mid-11th/17th-century Ḥāfiẓ manuscripts, one in Dublin, Chester Beatty, ms. P. 299, the other in Istanbul, Topkapı Sarayı, H. 1010, are virtual albums (A.J. Arberry, B.W. Robinson *et alii*, *The Chester Beatty Library: a catalogue of the Persian manuscripts and miniatures*, Dublin 1962, 68; F.E. Karatay, *Farsça yazmalar kataloğu*, Istanbul 1962, 221, no. 645). The Dublin manuscript has 450 tinted drawings on 500 folios, and the Istanbul one 555 on 578 folios. Most of them juxtapose a youthful *sāķī* and an older man.

Depictions of the *sāķī* and *sāķiya* in Islamic art have strong parallels with the descriptions of these figures in the literary tradition. Despite their initial role as servants, some came to embody an ideal of beauty which inspired poets and painters alike. This evolution, apparent in literature as early as in the 4th-5th/9th-10th centuries, became prominent in painting only later, especially under the Ṣafawids.

AL-**SAĶĪFA**, Saķīfat Banī Sāʿida. The word *saķīfa* (*LʿA*, s.v.), an approximate synonym of *ṣuffa* (*LʿA*, s.v.: *bahw, mawḍiʿ muẓallal*), denotes in Arabic a covered communal place appropriate for conversation and discussion. While the word *ṣuffa* seems rather to be applied to the space covered with palm foliage which constituted the primitive mosque (see masdjid. 1, 2), *saķīfa* appears to denote any type of forum or public courtyard, covered in accordance with the same traditional procedures.

In historical texts, the term is applied virtually exclusively to the prolonged and acerbic negotiations which preceded the nomination of Abū Bakr as successor to the Prophet Muḥammad in the leadership of the nascent community. These took place at Medina in the summer of 11/632, on the territory of the Banū Sāʿida, a Khazradjī clan of the Anṣār [*q.v.*]. The expression *saķīfat Banī Sāʿida*, usually shortened to *al-saķīfa* or *yawm al-saķīfa* in the texts, is furthermore invariably applied to this specific historical episode.

The texture of the narrative, which figures in practically all accounts of the beginnings of the community, presented in the earliest times not as a continuous narration but in the form of *ḥadīth*, as a result of which it has become an article of faith in Sunni Islam, generally comprises the following elements:

(1) Respective merits of Abū Bakr and of ʿUmar. The Prophet had always shown a certain preference for his two original Companions, but possibly with a bias in favour of ʿUmar. The influence of ʿĀʾisha [*q.v.*], who openly admired the latter, is perhaps not irrelevant in this context. The Prophet's explicit appointment of Abū Bakr to lead the Prayer in his place, which is often evoked, remains inconclusive in that it does not relate formally to the political leadership of the community. Always present in this narrative, ʿUmar was furthermore to play the role of elder statesman to Abū Bakr, himself a somewhat colourless personality, until his own accession to the caliphate.

(2) Account of the *saķīfa* proper, with the following significant features.

The resistance of the Anṣār to the appointment of a Muhādjir [see al-muhādjirūn] is first shown by the reluctance of one of their chieftains, named Bashīr b. Saʿd b. Thaʿlaba [*q.v.*], who nevertheless was soon to pledge allegiance. But he was replaced by another, the rather more formidable Saʿd b. ʿUbāda [*q.v.*], who remained defiant until his death. The adherence of the Anṣār was ultimately obtained—by force where cer-

tain elements among them were concerned. The Banū Umayya, for their part, would yield only to the decisive injunctions of ʿUmar. The same applied to other individuals and groups whose adherence Abū Bakr and ʿUmar, supported by Abū ʿUbayda b. al-Djarrāḥ [*q.v.*], successively obtained. The list of these groups, and the chronology of their adherence, suggest the more or less deliberate appropriation of an undoubtedly authentic historical basis. Thus it is possible to observe successively the adherence of ʿUthmān and of the Banū Umayya, of Saʿd and ʿAbd al-Raḥmān b. ʿAwf, of the Banū Zuhra, of al-Zubayr b. al-ʿAwwām, and finally of ʿAlī [*q.vv.*].

In the account of Ibn Saʿd (d. 230/845), which is one of the most ancient known, the figures of ʿAlī, of Fāṭima, and subordinately, of al-ʿAbbās, are totally absent. They feature strongly, however, in that of al-Ṭabarī (d. 310/923), where ʿAlī is highlighted in his role of an opponent, supported by a faction of the Anṣār. Following on this, a special chapter is very often devoted to the oppositional attitude of ʿAlī and of his entourage, where all the evidence suggests that Fāṭima plays the central role. Being advised of the lukewarm opinions of the Anṣār, she is said then to have persuaded her husband to undertake a campaign of inducement aimed at them. Some weeks after the death of the Prophet she rather conveniently died, while ʿAlī remained apparently the last opponent. He was to come round in his turn, bringing with him the "Banū Hāshim". Al-ʿAbbās, who sometimes appears as an adviser of ʿAlī on behalf of the *ahl al-bayt* [*q.v.*], and who maintained strong reservations regarding Abū Bakr and ʿUmar, withdrew from the game, no doubt with an eye to the future.

A final chapter comprises the "*khuṭba* of Abū Bakr", a fragment of pious anthology of no great importance retained in the same terms by historians as well as by authors of *adab*.

The account of the *saḳīfa* is followed by that of the *ridda* [*q.v.* in Suppl.] and of the incomparable support which Abū Bakr received from ʿUmar in these circumstances.

The evolution of the form of the account, worthy of the ancient theatre, is very revealing. ʿAbbāsid propaganda, after the wavering of the Muʿtazilī era, was obliged to give prominence to the personalities of the first two caliphs, whose posterity never represented a political danger, in contradistinction to that of their two successors who, in various guises, remained the symbols of two oppositional dynastic tendencies.

It is no less important to show how the Umayyads, initially outsiders, were among the first to return to the fold, without a blow being struck. It is known that the tendency which become dominant from the 3rd/9th century onward is aimed at the rehabilitation of the "Umayyad century", with the object of forming a common front in opposition to the activities of the Shīʿīs.

The account of the oppositional intrigues of Fāṭima, perhaps superimposed, shows incontrovertibly the permanent distrust by Sunnism in regard to ʿAlid dynastic aspirations, claiming descent from the Prophet's daughter. But it is skilfully tempered by the account of the attitude of ʿAlī, who submitted without a murmur after the demise of his troublesome wife, earning his accession to the caliphate and the respect of future generations.

SAKĪNA (A.), a term of the Ḳurʾān and of Islamic religion. The root *sh-k-n* (Akkadian, Hebrew, Aramaic) or *s-k-n* (Arabic) means basically "to go down, rest, be quiescent, inhabit", and the corresponding Later Hebrew form to Arabic *sakīna* is *shᵉkhīnā* and the Jewish Palestinian Aramaic one *shᵉkhīnā*, Syriac *shᵉkīntā*. Cf. Hebr. *ham-mishkan, mishkan Yhwh*, Syr. *mashkan zabhnā/zabhnō*, Ar. *ḳubbat al-zamān* (al-Ḳardāḥī, *Lubāb*, Beirut 1887, ii, 546-7), referring to Moses' tent sanctuary, Exod. xxv. 22). The Hebrew usage is generally considered (though not by the native Arabic scholars) as the source of Ar. *sakīna*. Derived from the idea of "dwelling within s.th. or s.o." is Ar. *maskūn* "possessed by a spirit, demon, Iblīs", cf. Syr. *sheknō*, pl. *shekné*, " the demon within a person". Not in fact connected with this Arabic term, but deriving from a different root in Akkadian, via Hebrew and Aramaic, is Ar. *miskīn*, "destitute, poor, wretched"; for this, see MISKĪN.

The Ḳurʾān has a large number of words derived from the root *s-k-n*. Apart from the basic meanings of "habitation, residence, hearth, shelter for the night, place where spouses meet", there are also "to subdue (the winds)" (XLII, 33), "to cause the water to settle on the earth (XXIII, 18), "to halt the shadow" (XXV, 45), etc. What interests us here is the allegorical sense assumed by the term *sakīna* in six verses of the Ḳurʾān, beginning with II, 248, where it refers to Biblical history. The Israelites, refusing to acknowledge the authority of Saul, God's Chosen One, to reign over them (cf. I Sam. x, 26 ff.), hear their prophet (*nabiyyuhum* = Samuel) say, "The sign of his kingship will be that the Ark (*tābūt*, which had been carried off by the Philistines, I Sam. v, 1 ff.) will come to you. [In this Ark] there is a *sakīna* from your Lord and a relic (*baḳiyya*, the heritage of the prophets, sc. Moses' staff and Aaron's yellow turban, according to Ibn Sīdah, in *LʿA*, ed. Beirut, ii, 174-5) of what was left by the family of Moses and the family of Aaron, and it (sc. the Ark) will be carried by the angels".

According to Exod. xl, 34-5, in the Ark there was "the glory (*kābōd*) of Yahweh. Now, according to G. Vajda, the term *shᵉkhīnā*, absent from the Bible, assumed "in some way a consequential meaning to the Biblical word *kābōd*. It implies something of God, without being taken, in the majority of its attestations, as being identical with God. His translation of "presence" is a step towards abstraction, its spiritualisation, if one wishes to express it thus, without bringing us much knowledge of the object signified (cf. the review of Goldberg [see *Bibl.*], in *REJ*, cxxviii [1969, publ. 1970], 280-2). In essence, Goldberg's opinion, 455, is that, in Vajda's formulation, the term *shᵉkhīnā* was expressly created to denote the act of inhabitation, and then the divinity which "inhabits". Originally, and above all, the term thus denoted the divinity present in the sanctuary; it was accordingly first of all limited to the type of *shᵉkhīnā* involving a presence and only understood secondarily in the sense of manifestations of the divinity (*ibid.*, 281).

This "presence" of God was equally displayed outside the Ark by a cloud which enveloped it. Its presence marked a halt in the march and its disappearance the resumption of the march (Exod. xl, 36-8).

It is this presence of God which the term *sakīna* ex-

presses in the other Ḳurʾānic citations, a presence shown in the divine aid vouchsafed to the Prophet and the believers in battle, giving them the victory. Hence at the encounter of al-Ḥudaybiya [*q.v.*] in the year 6/628, on the way to Mecca, "God was satisfied with the believers when they were swearing allegiance to you under the tree, and He knew what was in their hearts, and He sent down upon them the *sakīna* and He recompensed them with a victory near at hand" (xlviii, 18). At the time of the conquest of Mecca, "It is He who sent down the *sakīna* in the hearts of the believers, in order that they might add faith to their (existing) faith" (xlviii, 4). Confronting the unbelievers whose hearts were still animated by the fierceness of the *Dj̲āhiliyya*, "God sent down His *sakīna* upon His messenger and upon the believers, and caused them to cleave to the word of piety" (xlviii, 26). Already, fleeing from Mecca in the company of Abū Bakr, "God sent down His *sakīna* upon him (sc. in the Cave) and supported him with hosts whom you did not see" (ix, 40).

We are thus in a context of warfare, as were the Israelites in the time of Saul who asked God to give them a leader capable of leading them to victory (cf. Ḳurʾān, II, 246).

This divine aid, bestowed on the Prophet at Badr (III, 123 ff.), is vouchsafed by an innumerable, invisible army, which appears in the shape of a "transparent, waterless cloud" (or in the form of a mythical bird), called by Tradition *ṣarad, ṣurad* or *ṣurrad*. Mud̲j̲āhid [*q.v.*] relates that "the *sakīna*, the *ṣarad* and Gabriel came with Abraham from the north (*al-S̲h̲ām*)" (cf. his *Tafsīr*, ed. ʿAbd al-Raḥmān al-Ṭāhir b. Muḥammad al-Sūratī, Dōḥa, Ḳaṭar 1396/1976, 114). Al-Azraḳī, *Ak̲h̲bār Makka*, 27 ff., cf. also *LʿA*, *loc. cit.*, likewise relates that it was with Abraham (cf. Goldberg, 300 ff.) that the *sakīna* came to Mecca. It had a head like that of a she-cat and two wings (on the *sakīna* as a supernatural force in animal form, see Goldziher, *Abhandlungen zur arabischen Philologie*, Leiden 1896-9, i, 198, and Scholem [see *Bibl.*], 53), and it came down "like a cloud (*g̲h̲amāma*) or a mist (*ḍabāba*), having in its centre something like a head which could talk" (27). Later on (30), "Ibrāhīm came from Armenia on Burāḳ [*q.v.*] with the *sakīna*, which had a face which could talk; it whistled like a light breeze". When Abraham wished to build the Kaʿba, the *sakīna* unfolded itself like a snake on the first foundations and told him, "Build on top of me", "and so he built; hence every Bedouin in flight and every powerful person inevitably circumambulates the sanctuary under the *sakīna*'s protection" (31).

All these traditions connect the *sakīna* with the sanctuary, as it is in Ḳurʾān, II, 248, and link it with the Prophet's battles, with the idea of his being victorious, as in the other citations involving God's aid in the form of an invisible army. In a study on the *Ḥanīf*s, in *REJ*, cxxx (1971), 165-82, J.-Cl. Vadet brought forward an argument giving credence to this view of things. He explains the Ḳurʾānic hapax *ribbiyūn*, in III, 146, by the Biblical hapax *mĕ-ribh̲ʿbh̲ōt ḳōdesh̲* (mostly amended to *mrībh̲ath̲ ḳādesh̲*) (Deut. xxxiii, 2, cf. v. 17, *rebʿbōth̲* "hosts" of Ephraim), to be translated as "the saintly hosts". Moses, "the man of God, blessed the Children of Israel before he died, saying Yahweh has come down from Sinai; He raised himself up for those of Seʿīr; He shone forth from the mountain of Pharan; and He came forth from the saintly hosts". Envisaging his approaching end, Muḥammad asks his devotees what they would do after his death, "Would you go back to your errors?", and he continues, "How many a prophet has there been who has fought at the head (or: accompanied by) numerous armies (*ribbiyyūn kat̲h̲īrun*), and they did not become discouraged because of what befell them in the way of God, nor grew weak nor became quiescent (*istakānū*)? God loves those who endure" (III, 146).

Placed in a context like that of Deut. xxxiii, 2, sc. Moses' farewell speech to his community, this verse takes on a quite different meaning. It is thus a case of innumerable, invisible armies by means of which God sustains His prophets in the accomplishment of their missions, i.e. of the *sakīna* being identified with the Ark and signifying its Presence, and of *ribbiyyūn/ṣarad* denoting the numberless army of angels, the saintly hosts, who appear in the form of a cloud. *Sakīna* and *ṣarad* represent two of the many forms of theophany.

Beyond this prophetic context just noted, the *sakīna* assumes in Ḥadīt̲h̲ (see *Concordance*, ii, 494-5), as in rabbinical tradition (see Goldberg), a spiritual and moral signification. It "enveloped" the Prophet (*g̲h̲as̲h̲iyat-hu*) at the moment of revelation (*waḥy*), came down (*nazalat*) on the Kurʾān ("We have brought down the Kurʾān in a discontinuous form (*faṣlan*) and the *sakīna* in a continuous one (*ṣabran*)"), hovered above the Prophet when he left ʿArafa and above the believers, and spoke with the tongue (*lisān*) of ʿUmar (b. al-K̲h̲aṭṭāb). It is identified with a collection of moral attitudes and virtues—gravity, bearing, modesty, dignity, calmness, patience, magnanimity, clemency and everything which characterises a pious person. In Islamic mysticism, it becomes an "interior illumination" (*nūr fi 'l-ḳalb*), after the manner of gnosis and the Kabbala, which make it into a "light emanating from the primaeval light" (*Urlicht*) which is none other than God Himself (cf. Scholem, 78 ff.).

Bibliography: See especially, for the term in its Rabbinical context, A.M. Goldberg, *Untersuchungen über die Vorstellung von der Schekhinah in der frühen rabbinischen Literatur*, Studia Judaica, V, Berlin 1969, in which, with a little patience, one can find the origin of the Ḳurʾānic and Ḥadīt̲h̲ conception from the collection there of Islamic data. See also Goldziher, *La notion de la Sakīna chez les Mahométans*, in *RHR*, xxviii (1893), 1-13, and idem, *Abhandlungen*, i, 177-212. On the evolution of the notion of the *s̲h̲ʿk̲h̲īnā*, see G. Scholem, *Zur Entwicklungsgeschichte der kabbalistischen Konzeption der Schechinah*, in *Eranos-Jahrbücher*, xxi (1953), 45-107.

(T. Fahd)

ṢAḲİZ (the Ottoman Turkish name for Chios, the Greek name of this island and of its capital; *ṣaḳīz* means "gum mastic", a testimony to the product for which Chios was famous), an island in the eastern Aegean alongside the Turkish coast, from which only 8 km/5 miles separate it at the narrowest point of the strait of Chios (*Ṣaḳīz bog̲h̲azī*); the large peninsula of Karaburun on the mainland, jutting north, separates the island's northern half from the gulf and port of Smyrna [see izmir in Suppl.].

With an area of 841 km^2, it is the fifth largest island of the Aegean after Crete [see iḳrītis̲h̲], Euboea [see eğriboz], Lesbos [see midilli], and Rhodes [see rodos]. Administratively, Chios forms one of Greece's 52 *nomoi*; its *nomos* also includes two other important features: the islands of Psara and Antipsara some 20 km/12 miles to the west, and the Oinousses islets (Koyun adaları in Turkish, Spalmadori in Italian; the last-named form is customarily used in western scholarly literature) between it and the Karaburun peninsula. The capital and main port city is situated on the island's eastern coast near the strait's narrowest point opposite the Turkish harbour of Çeşme [see česhme].

The importance of Chios, which it owed to several factors, rose to a peak between the 14th and 16th centuries but continued until the early 19th. The factors were its crossroads position on maritime and continental trading routes, the uniqueness of the much-prized gun mastic produced nowhere else (lentisk shrubs grow in other parts of the Mediterranean too, but only the soil of southern Chios gives to the gum which their bark exudes the desired quality), and the acumen of the Genoese (masters of the island between 1304 and 1566), who used the port, in tandem with Galata, as the hub of their commercial empire; in fact, most of these aspects continued even after the Ottoman conquest of 1566 or re-emerged in other forms (such as the enterprising spirit of its Greek population). The island's role in the Middle Ages must be linked with that of the two Phokaias from where the Genoese exported alum, and with the port of Çeşme from where goods other than alum brought from or through Anatolia were ferried to Chios for long-distance shipment. The last-named aspect continued well into the Ottoman period until it was definitively eclipsed by the dramatic rise of Smyrna in the 17th century.

No known evidence suggests that Chios would have attracted much attention of the Arabs in the early centuries of Islam, but its proximity to the mainland exposed this Byzantine possession to Muslim raids once the Turks penetrated Anatolia by the end of the 11th century. The maritime principality (1089-92) of the Sald̲j̲ūḳ prince Čaka or Čakan, with Smyrna as its base, included Chios. Repetition of a similar conquest by the principality of Aydîn [see AYDÎN-OG̲H̲LU], especially by its dynamic prince Umur Beg [see UMUR PAS̲H̲A] in the first half of the 14th century, was staved off by combinations of multinational and multiconfessional alliances, rivalries and military and naval campaigns, and even a Crusade. By itself, Byzantium appeared unable to defend Chios and the nearby coastal places against the Turks, and had to accept help from such naval powers as the Venetians, Catalans, Hospitallers of Rhodes, Genoese, or more general leagues of western Christendom, ceaselessly urged on by the Popes. The high price, both spiritual and economic, of western help and presence sometimes made such Byzantine emperors or contenders for the throne as Andronicus III (1329-41) or John Cantacuzenus prefer a Turkish alliance. Chios came by 1304 under the control of the Genoese family of Zaccaria; meanwhile, they or their other countrymen also laid hands on the two Phokaias (Old and New, Eski Foça and Yeni Foça in Turkish) near the northern entrance to the Gulf of Smyrna. Although their hold on Chios was interrupted by Andronicus, who with the help of Umur Beg reclaimed Byzantine control of some of these places (this help, however, could receive a different interpretation in the Turks' eyes: the Ottoman historian Eflākī mentions a raid on the island by Umur, who carried off much mastic as booty and subjected the island to the *k̲h̲arād̲j̲* [*q.v.*], thus incorporating Chios into the *Dār al-Islām*; see İnalcık, in *Bibl.*).

The Crusade of 1344, which captured Smyrna from the Turks, set in motion a chain of events that indirectly led to a Genoese reconquest of Chios (1346). This time it was not a family but a company of shareholders who acquired control of the island and kept it until the Ottoman conquest of 1566. This company was known as the Maona of Chios, and secondarily, from 1362 when its definitive charter was established, as the Giustinianis; "Maona" is believed to be a term of Arabic origin (*maʿūna* "help, solidarity", hence commercial company; see *Bibl.* and MAʿŪNA). The Giustinianis were a family whose house in Genoa was acquired by the company as its headquarters there. A *podestà* sent by the government of Genoa was the titular governor of Chios (as were the two *podestàs* of Old and New Phokaia respectively), but otherwise, the company was virtually autonomous on the island. Initially, a vague kind of suzerainty was also conceded to the Byzantine emperor, and an annual sum was sent to him; gradually, however, the tribute paid to the Turks became more significant. At first given to those of Aydîn (by the Byzantine governor in Andronicus's time), eventually this sum became an important annual tribute sent to the Ottoman sultan, and kept increasing until it reached 14,000 ducats in Süleymān II's [*q.v.*] time (still bearable, if the reported revenue of 30,000 ducats did not falter). It was the Maona's inability to carry out this obligation during the last three years of their rule that by 1566 contributed to the Ottoman decision to seize the island.

Genoese rule in Chios was remarkable for its long duration in the face of Ottoman expansion, for the economic role the island played as a source of gum mastic, as a transit port in international shipping, and for the co-existence of a Greek Orthodox population with a ruling Latin Catholic élite. Luck (a grain blockade and then a devastating raid by Bāyezīd I [*q.v.*] with 60 ships, in or soon after 1397, might have been followed by conquest if Tīmūr [*q.v.*] had not eliminated the dynamic sultan). Diplomacy, economic strength and care not to provoke the Ottomans, rather than military or naval strength, ensured its long survival, in contrast to Hospitaller Rhodes, for example. This contrast, however, also showed the arrangement's ultimate fragility when we compare the Ottoman conquest of Rhodes (1522) with that of Chios. Frustrated by the failure to conquer Malta (1565), Süleymān sent the imperial fleet under the *ḳapudān pas̲h̲a* Piyāle Pas̲h̲a [*q.v.*], the conqueror of D̲j̲arba [*q.v.*] in 1560) in the spring of 1566 on a campaign whose goal, contrary to Europe's fears, was not a renewed attempt against Malta but against Chios: the conquest consisted of an arrest of the Maona's governing body whose twelve members had come with presents on board the commander's ship, and an unopposed occupation of the island.

Some of the contradictions and special features that marked the history of mediaeval Chios continued during its Ottoman period. Until the tragedy of 1822, the island enjoyed a unique status that made it stand out as a prosperous and happy place where all the three main communities—Orthodox Greek, Catholic Latin, and Muslim Ottoman—lived in relative harmony. Like other large islands and conquered provinces, Chios became a *sand̲j̲aḳ* [*q.v.*] (in this case, part of the *eyālet* [*q.v.*] of *D̲j̲azāʾir-i Baḥr-i Safīd* [*q.v.*]), governed by an administrative body of the standard type and secured by a garrison of at most 2,000 troops quartered chiefly in the capital's citadel; aside from these representatives of the Porte, there were almost no other Turks on the island, and the population had virtual autonomy in its internal affairs. Some of the mostly Genoese, Catholic élite stayed on after the conquest, and they did not lose all their privileges forthwith. These last survived even the 1599 attempt by the Florentines to conquer the island, but the Venetian conquest and brief possession in 1694-5 did deal them a serious blow which, however, further strengthened the position of the Orthodox majority governed by an enlightened oligarchy: the Catholic élite, accused of collaborating with the invader, definitively lost their

privileges to the Greeks. The Venetian attack, undertaken during the Ottoman-Hapsburg war of 1683-99, provoked a naval response from the Turks, whose ultimate victory revealed the successful modernisation of the imperial fleet under the able leadership of Mezemorta Hüseyin Pas̲h̲a [see ḤUSAYN PAS̲H̲A, MEZZOMORTO]. For the reasons stated above, Turkish victory ushered in what may have been the happiest period in the history of Chios and which lasted until 1822. The island continued to export gum mastic (partly to Istanbul, where the ladies of the Harem were among the principal consumers), but it also participated in the dramatic surge of Ottoman Greek maritime trade and merchant marine during the 18th century. Enterprising families developed business ties with Europe, and participated in the intellectual and scientific rise of the West, some of which they in turn propagated in Ottoman society where they frequently enjoyed the status of high officials and the sultan's physicians. Alexander Mavrocordato (1637-1719), who had studied medicine in Padua, wrote a Latin treatise on the circulation of the blood, and became prominent as the chief dragoman of the Porte during the negotiations that led to the Treaty of Karlowitz in 1699 [see ḲARLOFČA].

The waters off Chios were visited by the Russians in the summer of 1770, an operation undertaken in the framework of the Russo-Turkish war of 1768-74. A clash between the Russian fleet under Admiral A.G. Orlov and the Ottoman one under Ḥusām ul-Dīn Pas̲h̲a ended in a draw, but it was highlighted by the exploits of the *ḳapudān-i humāyūn* Ḥasan Beg (later Pas̲h̲a; see D̲J̲EZĀʾIRLI G̲H̲ĀZĪ ḤASAN PAS̲H̲A) against the ship of Admiral G.A. Spiridov. The Turks withdrew to Çeşme, which by then served as a naval base; the result was the notorious destruction of the entire Ottoman fleet by fire ships with which the Russians managed to attack the crowded harbour in the night of 7 July. The subsequent attempt to seize the port of Chios was repulsed by the Turkish garrison, or was given up due to reports of the plague on the island. While the triumph at Çeşme earned Orlov the honorific title "Česmenskiy" conferred on him by Catherine II, Ḥasan Beg's heroism was noticed by Istanbul, which aptly entrusted to him the defence of the Dardanelles and the rescue of Lemnos from the Russians and eventually raised him to the post of *ḳapudān pas̲h̲a*.

The peace and prosperity of Chios abruptly ended in 1822, when revolutionary Greeks from other places, especially from the island of Samos [see SISAM], landed on Chios and incited some of its inhabitants to second the uprising which was agitating the mainland. The besieged Turkish garrison in the capital's citadel held out until the imperial fleet brought relief. The subsequent repression carried out on the orders of the governor, Waḥīd Pas̲h̲a, against the objections of the fleet's commander, the *ḳapudān pas̲h̲a* Naṣūḥ-zāde ʿAlī Pas̲h̲a, crippled the island (which lost over one-half of its population—estimated at some 80,000 souls—in the slaughter and deportation to the slave market in Smyrna), and may have indirectly spurred Europe to increase its support for Greece's independence. Like most conflicts involving Chios, this one too had a markedly naval dimension, and although the Ottoman fleet prevailed, the Greek side scored a well-remembered triumph when on 18 June Konstantin Kanaris sank the Turkish flagship in the harbour of Chios; while the *ḳapudān pas̲h̲a* with most hands perished, the Greek native of Psara thus launched his own career that would propel him to the pinnacle of Greek politics. Both Mezemorta Ḥüseyin Pas̲h̲a and Naṣūḥ-zāde ʿAlī Pas̲h̲a are buried in Chios.

Nevertheless, Chios displayed remarkable resilience even after this tragedy, and benefited once more from the benign Ottoman rule which by 1832 allowed the Greek population to re-establish much of its internal autonomy; this was underscored by the respect which the sultan ʿAbd al-Med̲j̲īd I [*q.v.*] showed the island's ruling elite during his 1856 visit. On the formal level, the Chiotes' self-rule ended in 1283/1866 as a result of the restructuring of the Ottoman empire, which replaced the *eyālet* structure with that of the much more uniform *wilāyat* [*q.v.*] system; the administrative centre of the new *wilāyat* of *D̲j̲azāʾir-i Baḥr-i Safīd*, usually in Rhodes, sometimes moved to Chios. The governor of the island (called *mutesarrif* in this period) was from 1887 until his death in 1888 the Ottoman writer and reformist Nāmiḳ Kemāl [see KEMĀL, MEḤMED NĀMİḲ]. The recovery of Chios, well under way during this final stage of Ottoman rule, was dealt a serious blow by a devastating earthquake in 1881.

Ottoman rule in Chios ended in the same manner as in Lesbos but slightly later (December 1912/January 1913), and Greek sovereignty was ratified by the same two treaties (London 1913 and Lausanne 1923).

(S. SOUCEK)

SAḲḲĀʾ (A.), lit. water-carrier, was a term denoting manual workers who carried water in a leather-bottle (*ḳirba*) or jar (*kūz*) on their shoulders or on a mule (and even on a camel in rare circumstances) in pre-modern towns and large villages as well as pilgrimage centres throughout the Middle East and North Africa. A leather bottle during the early Islamic period reportedly cost a modest sum of about 3 dirhams. The necessity for supplying drinking water to the thirsty and the poor members of the community was regarded, according to a tradition (*ḥadīth*), as a work of excellent charity (*ṣadaḳa*). On the other hand, refusal to supply water to a thirsty person is an act of great sin (al-Dhahabī, *Kabāʾir*, 362). It was therefore recommended to wealthy Muslims to build water-fountains (*sabīl* [*q.v.*]) and dig wells for charitable purposes. The habit of selling water from a well (*biʾr*) to the people of Medina, after the Hidjra of the Prophet Muḥammad, led the companion ʿUthmān b. ʿAffān to buy the well-known Biʾr Rūma for supplying water free of cost to many inhabitants of the oasis town. An engraving on a public fountain in Cairo proclaims the tradition that the offering of drinking water is an action of spiritual merit.

The virtue of carrying water extolled in an Islamic tradition inspired many pious Muslims to accept this profession. Such were the notable instances of the Arab poet Abū Tammām (d. 232/846), the Persian poet Shaykh Saʿdī (d. 682/1283) and the mystic Ibrāhīm b. Adham, who were water-carriers for various lengths of time in their life. The historian al-Dhahabī illustrates a typical water-carrier in the career of Muḥammad b. ʿAlī b. Muḥammad al-Muḳriʾ Abū ʿAbd Allāh Ibn al-Saḳḳāʾ (d. 572/1176) who regularly earned a livelihood as a water-carrier supplying water manually to the houses of the public. Ibn al-Saḳḳāʾ was also a recounter of Islamic traditions. Many Arab historians and writers of the ʿAbbāsid epoch quote Dhu 'l-Nūn al-Miṣrī's (d. 245/859) frequent reference to a case of the virtue (*murūʾa*) in the life of a well-dressed Baghdādī itinerant water-carrier (*saḳḳāʾ*) who refused to accept payment of a dīnār as the price of a drink of fresh water from a foreigner.

In spite of their good reputation, however, the water-carriers, according to al-Djāḥiẓ, could never become wealthy and prosperous during the heyday of the ʿAbbāsid caliphate; their poor economic condition was comparable to that of the brick-layers, potters, ploughmen and groups of other minor craftsmen and workers. The carriers of the essential commodity of water enjoyed probably the highest prestige among pre-industrial workers in Islamic society. Ibn Sīrīn (d. 110/729) affirmed the favourable status of the water-carrier in his interpretation of dreams. Also, the writers of the *ḥisba* manuals insisted on cleanliness and the hygienic condition of the jars, cups and leather bottles of the water-carriers in the interest of public health. The encyclopaedic Arab biographer al-Ṣafadī (d. 764/1362) noted that *al-Saḳḳāʾ* was an established *nisba* among his contemporaries, who included some teachers of *ḥadīth* and learned men.

(M.A.J. BEG)

SAKKĀKĪ, one of the early poets in Čaghatay Turkish ("early" meaning, before Mīr ʿAlī Shīr Nawāʾī's [*q.v.*] time). He lived around 802/1400, presumably in Samarḳand, but certainly all his lifetime in Transoxania. As we can infer from the dedications of his *ḳaṣīdas*, his patrons included Khalīl Sulṭān (ruler in Samarḳand 807-12/1405-9), Ulugh Beg (812-53/1409-49) and Arslan Khʷādja Tarkhan. Almost all the information about his person is gained from remarks made about him by Nawāʾī in his *Madjālis an-nafāʾis* and in the *Muḥākamat al-lughatayn*. Although he was popular in Samarḳand during his lifetime, Nawāʾī is relatively depreciative of Sakkākī's talent, a judgement apparently shared by others; apart from one *bayt* quoted by Nawāʾī, the only known reference to his work by another poet is the quotation of one *bayt* in the collective manuscript in which Sakkākī's *dīwān* is preserved. The following statement by Nawāʾī is well-known: he says that he heard people in Samarḳand claim that "all good poems by Luṭfī belong to him (Sakkākī); he (Luṭfī) has stolen them and has attached his name to them." Nawāʾī goes on to comment that "this is the kind of silly boast which is widespread in Transoxania". (The statement is usually wrongly interpreted the other way round by Turkish scholars as meaning that Sakkākī was rumoured to have done the stealing.) Indeed, Nawāʾī may just betray a shade of southern chauvinism here, quite apart from the fact that a certain amount of local pride on the part of the Transoxanians may be expected for a time in which the focus of literary activity only just has been shifting southwards to Harāt. In any case, it is clear that the work of Sakkākī is directly

interrelated with Luṭfī's poetry (Eckmann 1959) and that of others (Hofman 1969).

Both the language and poetics of Sakkākī highlight the arbitary nature of his classification as a "Čaghatay" poet; at least in the early stage, this designation at one and the same time refers to a person being a Persian-style court poet and to the political context (i.e. he worked at a Tīmūrid court). But his language has preserved some typical Khwārazmian Turkish traits, e.g. the rendering of *δ as z ~ y (e.g. *azaḳ* ~ *ayaḳ* "foot"); this tendency is probably enhanced by the fact that he was from Transoxania and may thus prove helpful in solving the problem of the relationship of his poetry with other contemporary poets (most notably: Luṭfī). The rules of *ʿarūḍ* metrics applied by Sakkākī also definitely reflect the late Khwārazmian Turkish stage. It is the same as is found in Khwārazmī's *Maḥabbat-nāma*: etymologically long vowels are still frequently metrically long, whereas a first stage of Persification of the metre is noticeable in the regular occurrence of *imāla* (only in Arabo-Persian loan words). Characteristic is the variable rendering of the words *birlä* ~ *bilä* "with" and *ermäs* ~ *emäs* to fit the exigences of the metre. The extended *radīf* is a feature also found in e.g. Luṭfī's poetry. The preponderance of the genres of the *ghazal* and the *ḳaṣīda* are to be expected with a court poet; they carry with them a larger range of metres and new Persian style imagery of the kind which is usually associated with Sakkākī's near-contemporary Ḥāfiẓ [*q.v.*]. However, considering the general context in which the poetry of Ḥāfiẓ arose, one should be careful when attributing similarities in any contemporary poet to Ḥāfiẓ's style to direct influence. Another commonplace statement about Sakkākī introducing elements of traditional oral poetry in his verses must also be viewed with caution: occasional sequences of alliteration are already encountered in Rabghūzī's [*q.v.*] *Ḳiṣaṣ al-anbiyāʾ* (710/1310). And after all, relatively simple language and inclusion of folksy elements are a common characteristic of *ghazal* writing (both Persian and Turkish) of his age.

These philological, linguistic and literary problems still await thorough treatment; even a critical edition of Sakkākī's poems is lacking. The only version of Sakkākī's *dīwān* extant is contained in 31 folia of a British Library manuscript, Or. 2079, and even that is incomplete. It contains one *munādjāt*, one *naʿt*, 12 *ḳaṣīdas* (plus one defective one) and 57 *ghazals* (*ghazals* with end rhymes from *bāʾ* to *nūn* are lacking). Three more *ghazals* (parallel in Uyghur and Arabic script) were found in a manuscript of the Ayasofya Library, Istanbul, 4757. One *bayt* is quoted by Nawāʾī, and one *bayt* by Yaḳīnī (ms. B.L. Or. 2079, fol. 319b).

(H. Boeschoten)

AL-**SAKKĀKĪ**, Abū Yaʿḳūb Yūsuf b. Abī Bakr b. Muḥammad al-Khwārazmī Sirādj al-Dīn, influential rhetorician writing in Arabic. He was born in Khwārazm on 3 Djumādā I, 555/11 May 1160 according to most sources, or in the year 554, according to his contemporary Yāḳūt (*Irshād*, ed. Rifāʿī, xx, 59). He died toward the end of Radjab 626/mid-June 1229 in Ḳaryat al-Kindī near Almāligh in Farghāna. In spite of his fame already during his lifetime, the circumstances of his life are shrouded in obscurity—a fact most likely attributable to the upheavals of the Mongol conquest. Very brief notices on him appear in the Ḥanafī biographical dictionaries (Ibn Ḳuṭlūbughā, *Tādj al-tarādjim*, Baghdād 1962, 81-2; Ibn Abi 'l-Wafāʾ al-Ḳurashī, *al-Djawāhir al-muḍiyya*, Ḥaydarābād 1332, ii, 225-6; and ʿAbd al-Ḥayy al-Laknawī, *al-Fawāʾid al-bahiyya*, ed. B.A. al-Naʿsānī, Cairo 1324/1906, s.n.) as well as in al-Suyūṭī's dictionary of language scholars (*Bughyat al-wuʿāt*, ed. M.A. Ibrāhīm, Cairo 1384/1964-5, ii, 364), while some legendary anecdotal accounts have been transmitted in the Eastern tradition (prominently in al-Khwānsārī, *Rawḍāt al-djannāt*, ed. M.ʿA. al-Rawḍātī, n.p. 1367, 745-6). The edifying story that al-Khwānsārī recounts on the authority of the *Zīnat al-madjālis* of Madjd al-Dīn Muḥammad al-Ḥusaynī al-Madjdī (a contemporary of Bahāʾ al-Dīn al-ʿĀmilī, who died in 1030/1621), the gist of which is that al-Sakkākī started out as an accomplished craftsman (a smith) and began the career of a scholar rather late at the age of thirty, is very likely a transposition of a similar *curriculum vitae* told about the Shāfiʿī scholar al-Ḳaffāl ("the Locksmith") al-Marwazī (Ibn Khallikān, ed. I. ʿAbbās, Beirut n.d., iii, 46; al-Subkī, *Ṭabaḳāt al-Shāfiʿiyya*, Cairo n.d., iii, 199). Al-Khwānsārī hints at this possibility (*Rawḍāt*, 745, ll. 33-4), and the fact that, in the story, the teacher of al-Sakkākī is portrayed as a Shāfiʿī corroborates the borrowing. Nevertheless, a certain similarity in their life curves may have prompted the transposition of the story. However, whether al-Sakkākī himself or, more likely, one of his forebears was a die-cutter (*sakkāk*) or whether his *nisba* is derived from an otherwise unattested place-name Sakkāka is a moot point in the sources. Other stories depict al-Sakkākī as an expert in magic and occult sciences (al-Khwānsārī, *Rawḍāt*, 746; al-Laknawī, *Fawāʾid*, 301); as al-Nasawī's biography of the Khwārazmshāh Djalāl al-Dīn Mingburnu (*r.* 617-28/1220-31) shows, al-Sakkākī's fame in this field was already well established during his lifetime (*Sīra*, ed. O. Houdas, Paris 1891, 150-1; tr. idem, Paris 1895, 249-50; ed. Ḥ.A. Ḥamdī, Cairo 1953, 253-4). He seems to have made the transition from the Khwārazmshāhs to the Mongols quite successfully, since one of the stories that feature al-Sakkākī's magical powers put him in the entourage of Čaghatay Khān [*q.v.*] at Almāligh. However, calumnies on the part of the latter's vizier Ḳuṭb al-Dīn Ḥabash ʿAmīd resulted in al-Sakkākī's incarceration, and he is said to have died after three years in jail.

The Ḥanafī biographical dictionaries mention a few of his teachers in law, among whom Sadīd b. Muḥammad al-Khayyāṭī deserves mention, because in the chain of scholarship he was the link between al-Sakkākī and al-Zamakhsharī (d. 538/1144 [*q.v.*]). Like the latter, al-Sakkākī was a Muʿtazilī. As for the linguistic disciplines, he himself refers with great veneration to his teacher al-Ḥātimī who, however, cannot be otherwise identified (for references to quotations, see Simon, *Sprachbetrachtung*, 77-8, n. 38). The only known disciple of al-Sakkākī is Mukhtār b. Muḥammad al-Zāhidī (d. 658/1260) who is said to have studied *kalām* with him; Mukhtār is the author of

the *fiḳh* work *Ḳunyat al-munya* which has acquired a certain fame for being one of the few sources for the old Kh^wārazmian language, containing, as it does, phrases in that language that have some legal import (see KH^WĀRAZM, at vol. IV, 1062). It is not unlikely that al-Sakkākī was quadrilingual in Kh^wārazmian, Kh^wārazm Turkic, Persian and Arabic.

In spite of a number of lost or doubtful works that have been ascribed to him, al-Sakkākī is really a man of one book, the *Miftāḥ al-ʿulūm*. This "Key to the Sciences" is not, as imprecise formulations in secondary sources can lead one to believe, a work of rhetoric. Rather, the author intended to cover all linguistic disciplines, with the exception of *lugha* "lexicon, lexicography". The work is divided into three major parts dedicated respectively to *ʿilm al-ṣarf* "morphology", *ʿilm al-naḥw* "syntax", and *ʿilm al-maʿānī wa 'l-bayān* "stylistics and theory of imagery". The first part contains at its beginning also a brief section on phonetics (*makhāridj al-ḥurūf*) and a discussion of root formation and semantic derivation (*ishtiḳāḳ*), while the third part has the following supplements: (1) a brief section on rhetorical figures (*wudjūh ... li-ḳaṣd taḥsīn al-kalām*); (2) a *takmila* on *ḥadd* "definition", and (3) one on *istidlāl* "argumentation"; and (4) and (5) a *tatimma* on poetry dealing with *ʿilm al-ʿarūḍ* "metrics" and *ʿilm al-ḳāfiya* "rhyme theory". Finally, in the *khātima* the author wards off attacks on the linguistic correctness of the Ḳurʾān. A complete count of all the topics, whether dealt with in the main parts or in appendices, results in the number of "twelve Arab sciences (i.e. language sciences)" that later authors have detected in al-Sakkākī's work (see e.g. al-Kh^wānsārī, 745, l. 32). It is clear that the author wanted to cover all aspects of language, from the sounds to various shapes and styles of meaningful language.

Historically, the most important part of the work was its third chapter, on stylistics and imagery. It was the root from which most of the later *madrasa* literature on *ʿilm al-balāgha* "rhetoric" sprang (this term is not yet technically used in al-Sakkākī, as might appear from the art. BALĀGHA). Al-Sakkākī's main sources here were, for the "science of *maʿānī*" (i.e., *maʿānī al-naḥw* "semantics of syntactical relations"), the *Dalāʾil al-iʿdjāz* of ʿAbd al-Ḳāhir al-Djurdjānī (see AL-DJURDJĀNĪ in Suppl.) and, for the "science of *bayān*" (i.e., lit. "elucidating discourse" = "indirect presentation by way of images"), the same author's *Asrār al-balāgha*. In addition, he is influenced by Fakhr al-Dīn al-Rāzī's (d. 606/1209 [*q.v.*]) *Nihāyat al-īdjāz fī dirāyat al-iʿdjāz*. The latter is a precursor of al-Sakkākī in the sense that he, too, tried to harness the fertile but groping thought of al-Djurdjānī into a strict and logical system, though the outcome differs considerably from al-Sakkākī's.

The third chapter of the *Miftāḥ* was influential for Badr al-Dīn Ibn Mālik (d. 686/1287) in his *al-Miṣbāḥ fī 'l-maʿānī wa 'l-bayān*, although the extent of his dependence needs further study (see Sellheim, *Materialien*, i, 299 ff.). Historically more important by far are the two works of al-Khaṭīb al-Ḳazwīnī (d. 739/1338), the *Talkhīṣ al-Miftāḥ* and, less so, its expanded version, *al-Īḍāḥ*. Al-Ḳazwīnī was not averse to criticising al-Sakkākī on certain points and making a number of adjustments that prove his independent mind. Both Ibn Mālik and al-Ḳazwīnī raise al-Sakkākī's appendix on the rhetorical figures to the status of a separate discipline, the *ʿilm al-badīʿ*. Thus the "science of eloquence" (*ʿilm al-balāgha*) with its three branches of *maʿānī, bayān* and *badīʿ* takes its final shape and, as presented in the *Talkhīṣ al-Miftāḥ* of al-Ḳazwīnī, henceforth dominates scholastic rhetoric.

Bibliography: Editions. *Miftāḥ al-ʿulūm*, Cairo 1317 (with al-Suyūṭī, *Itmām al-dirāya li-ḳurrāʾ al-Nuḳāya*, on the margin; this combination was apparently repr. twice, Cairo 1318, 1348); Cairo 1356/1937; ed. Nuʿaym Zarzūr, Beirut 1403/1983. The old eds. offer a reasonable text; the Beirut ed. is well laid out, but rather faulty and defective. A critical ed. is a desideratum. For mss. see Brockelmann, I, 294; S I, 515; and Maṭlūb, *al-Sakkākī*, 61-3. Tr. of ch. on *ʿilm al-maʿānī* by U.G. Simon, *Mittelalterliche arabische Sprachbetrachtung zwischen Grammatik und Rhetorik—*ʿilm al-maʿānī *bei as-Sakkākī*, Heidelberg 1993.

(W.P. HEINRICHS)

SAḲḲĀRA, a village in the Egyptian province of al-Djīza, on the western bank of the Nile, near the mountain ridge that separates the fertile lands of the Nile Valley from the desert, approximately 20 km to the south of Cairo. In the 9th/15th century this locality seems to have been better known under the name of Arḍ al-Sidra (cf. Ibn al-Djīʿān, *Tuḥfa*, 139, l. 18; S. de Sacy, *Relation de l'Égypte par Abd Allatif, médecin arabe de Bagdad*, Paris 1810, 671; cf. also Ramzī, *al-Ḳāmūs al-djughrāfī li 'l-bilād al-miṣriyya*, ii/3, 45; Halm, *Ägypten nach den mamlukischen Lehensregistern*, i, 209), because it belonged to Būṣīr = (A)Bū Ṣīr al-Sidr, the neighbouring village to the north that was equally well known for its Pharaonic remains (see e.g. Ibn Mammātī, *Ḳawānīn al-dawāwīn*, 117: Bū Ṣīr Radjab = Bū Ṣīr al-Sidr). In the year 777/1376 (the date to which our source, Ibn al-Djīʿān's 15th-century cadastral survey, here refers), this village had an arable area of 240 *faddāns* and was in the hands of the sons of the governor Arghūn Shāh (d. 731/1331; cf. Ibn Taghrībirdī, *al-Manhal al-ṣāfī*, ii, 306-8, no. 367); ʿUmar b. Arghūn Shāh in particular was a key figure in Mamluk politics in the sixties of the 8th/14th century (al-Maḳrīzī, *Sulūk*, iii, 63, l. 2).

Originally, the name Saḳḳāra (one also finds Ṣaḳḳāra) seems to have referred to another village (in the Ṭammūh/Ṭamwayh district further north) with a tax yield of 10,000 army dīnārs and a cultivated territory of 790 *faddāns*. It formed, like most of the taxable settlements in al-Djīziyya province in Mamlūk times, part of the Royal domains, *al-dīwān al-sulṭānī* (cf. Ibn Mammātī, *Ḳawānīn al-dawāwīn*, 150; Ibn al-Duḳmāḳ, *al-Intiṣār*, iv, 132 [not 133, as in *EI*[1]]; Ibn al-Djīʿān, *Tuḥfa*, 144, l. 25; de Sacy, 675). When this settlement was eventually given up, evidently well prior to the end of the Mamlūk sultanate, its name was transferred to "modern" Saḳḳāra.

Saḳḳāra is famous for the huge cemeteries of Pharaonic times (see the charts and tables in the article "Saqqara, Nekropolen", in *Lexikon der Ägyptologie*, v, 387-428, esp. 398-400, 401-2, 415) located on the slope of the Gebel and the adjacent elevated terrain, always in visual connection with Memphis (Manf

[*q.v.*]), the capital of the Egyptian Old Kingdom, to which this city of the dead belonged. The modern Arabic name of the village is derived from Sokar/Socharis, "the coffined one", i.e. the King of the Dead, whose cave is supposed to have been in the vicinity. The famous necropolis of Saḳḳāra which developed, during the first three dynasties of the Old Kingdom, from north to south along the mountain range and then westward into the desert, contains royal tombs (pyramids, mastabas) of the three first dynasties (including the famous step pyramid (*al-haram al-mudarradj*) of King Djoser of the Third Dynasty), private tombs especially from the Fourth to Sixth Dynasties, free-standing chapels from the first intermediate period and the Middle Kingdom, and, last but not least, the burial sites from the Saitic era, when Memphis re-emerged, after the Assyrian yoke had been shaken off, as a major centre of the country. In this late period, the pristine Egyptian cults were consciously resuscitated, both on religious and economic grounds. New cemeteries were opened in Saḳḳāra—as it were, on sacred ground—for all strata of the population. And it was during this final period of Egyptian independence (21st Dynasty onwards) that the famous burial catacombs and mortuary-cult temples for the Sacred Animals of Memphis, notably the Serapaeum for the Apis Bulls, were erected within the Saḳḳāra necropolis. To the mediaeval Muslims the mummified animals that were found here were particularly fascinating (not the least because they were so reprehensible on dogmatic grounds) (cf. e.g. al-Maḳrīzī's report on the dead "hoopoe", *hudhud* = ibis, *Das Pyramidenkapitel in al-Maḳrīzī's "Ḫiṭaṭ"*, ed. and tr. E. Graefe, Leipzig 1911, Arabic text 21, l. 4, German tr. 67).

Saḳḳāra's importance for Egyptology was further enhanced by the discovery, in 1824, of the first two papyri, contained in sealed pottery, in a tomb (or well) in the funerary precinct.

The Arabic toponym that, during the Islamic Middle Ages, seems to have customarily denoted the necropolis of Saḳḳāra with its awe-inspiring and vast Pharaonic architectural vestiges, was, however, not Saḳḳāra, but rather, by way of metonymy, "Dayr (A)Bū Hirmīs", the monastery of Apa Jeremias (should one rather read: Dayr Hirimyas?, cf. Maspéro-Wiet, *Matériaux*, 95-6). In his list of the 54 villages surrounding the great pyramids of Djīza, Abū Djaʿfar al-Idrīsī (d. 649/1251) omits Saḳḳāra, yet names, as no. 14 and no. 16, both Bū Hirmīs and Shubrā Bū Hirmīs (*Anwār ʿulwiyy al-adjrām fi 'l-kashf ʿan asrār al-ahrām*, 50, ll. 7 and 8; we also find Bū Ṣīr Bū Radjab and Bū Ṣīr al-ahrām, 50, ll. 8 and 9). Apa Jeremias' monastery (whose remains were rediscovered only at the beginning of the 20th century and where excavations continue to be carried out) stood within the precinct of the Saḳḳāra necropolis. The historian and traditionist Ḳāḍī Muḥammad b. Salāma al-Ḳuḍāʿī (d. in Fusṭāṭ in 454/1062), reporting from the well-known Egyptian authority Yaḥyā b. ʿUthmān b. Ṣāliḥ (d. 282/895), relates the story of a denizen of the Upper Egyptian Koptos/Ḳifṭ and how a corpse was discovered in this monastery when a grave was dug. On the chest of the dead man, a papyrus scroll from the aegis of the Roman emperor Diocletian was found, written in "oldest Coptic" script, which informed of the otherwise inaccessible antediluvian Egyptian history (cf. Abū Djaʿfar al-Idrīsī, *Anwār*, 100, l. 3-102, l. 4; al-Maḳrīzī, *Khiṭaṭ*, in *Pyramidenkapitel*, 21, ll. 13 ff., German tr. 67 ff., cites the same report, probably on al-Idrīsī's authority).

The region of Apa Jeremias, i.e. Saḳḳāra, was correctly identified as the heartland of the most ancient history of Egypt. The Sharīf Tādj al-Sharaf Muḥammad al-Ḥusaynī al-Ḥalabī al-ʿUbaydalī (d. 666/1267), an avid student of Pharaonic architecture in his time, placed the cradle of the oldest Egyptian people in this very region (*nawāḥī Bū Ṣīr wa-Bū Hirmīs*, cf. *Anwār*, 107, l. 12), and, incidentally, even considered as conceivable a pre-Adamite (not just antediluvian) date for their impressive activities. From the testimony of stones found in St. Jeremias' monastery that bore hieroglyphic inscriptions not—or not only—on the visible front side, but also inside, where they were connected with neighbouring slabs, he inferred the existence of different historical layers in the history and architecture of Old Egypt.

The step pyramid in the immediate neighbourhood of Apa Jeremias' monastery is portrayed as the tomb of the legendary Egyptian knight (*fāris ahl Miṣr*) Ḳaryās, who had the valour and strength of one thousand fighters, whereas the huge pyramid to the north of the monastery, also built in steps, is said to have become the resting place of Ḳaryās' sovereign (cf. *Anwār*, 118, ll. 8 ff.; al-Maḳrīzī, *Pyramidenkapitel*, 27, ll. 3 ff., German tr. 72). Also, Yāḳūt speaks, in his geographical repertory (s.v. *Dayr Hirmis*), of the pyramid by the monastery of Apa Jeremias. Other authors, such as Abū Ṣāliḥ al-Armanī (*Churches and monasteries*, fol. 65a), only summarily refer to the "flourishing and populous" monasteries in the al-Djīziyya province.

Like all the spectacular Pharaonic sites, the mastabas of Saḳḳāra have also been identified with localities of the Muslim *ḳiṣaṣ al-anbiyāʾ* [*q.v.*]. Whereas the great pyramids of Djīza were seen, by some authors, as Joseph's granary, his prison (*sidjn Yūsuf*) tended to be localised in Saḳḳāra (see e.g. al-Ḳalḳashandī, *Ṣubḥ al-aʿshā*, iii, 317, l. 11; see also the reference given by J. Walker in the *EI*[1] art.).

Bibliography: A lengthy bibl. of mediaeval Islamic Pharaonica is to be found in U. Haarmann, *Das Pyramidenbuch des Abū Ǧaʿfar al-Idrīsī*, Beirut 1991, Arabic 272-83. On the apocryphal tradition associated with Old Egypt in mediaeval Islam, see now also U. Sezgin, *al-Masʿūdī, Ibrāhīm b. Waṣīfšāh und das* Kitāb al-ʿAǧāʾib. *Aigyptiaca in arabischen Texten des 10. Jahrhunderts n.Chr.*, in *ZGAIW*, viii (1993), 1-70. (U. Haarmann)

SAḲḲIZ, a small town of Persian Kurdistan, now the chef-lieu of a *shahrastān* or county in the province of Kurdistan (lat. 36° 14′ N., long. 46° 15′ E.). It lies on the western side of the upper Djaghatū Čay valley some 77 km/50 miles to the southeast of Mahābād [*q.v.*] and on the road southwards to Sanandadj and Kirmānshāh [*q.vv.*].

The Kurdish population are from the Mukrī tribe, Shāfiʿī Sunnīs and with the Naḳshbandī Ṣūfī order influential amongst them. In the early 20th century, the local khān was a relative of the *wālīs* of Ardalān and Sanandadj. In *ca.* 1950 Saḳḳiz town had a population of 9,900, but by 1991 this had risen to 99,048 (*Preliminary results of the 1991 census*, Statistical Centre of Iran, Population Division). Until recently, it had a small community of Neo-Aramaic-speaking Jews, but these have now probably all emigrated to Israel.

(C.E. Bosworth)

SAḲSĪN, the name of one or more cities in Western Eurasia.

The location of this city (or cities) is still unclear. It is unrecorded in the classical Islamic geographies. Maḥmūd al-Kāshgharī (tr. R. Dankoff and J. Kelly

Cambridge, Mass. 1982-5, i, 330), who finished writing his *Dīwān lughat al-Turk* in *ca.* 469/1077, notes it as "a city near Bulghār. It is Suwār." The latter was a tribal name (*Saviri*/*Σαβίροι* of the Latin and Byzantine sources) of one of the constituent elements of the Volga Bulghārs. In this regard, Togan (*Ibn Faḍlān's Reisebericht*, 203-4, cites the theologian Sulaymān b. Dāwūd with the *nisba* al-Suwārī or al-Saksīnī. It seems unlikely that this is the Volga Bulgharian city of Suwār, which was within the Bulghār core lands. Rather, it probably points to the presence of a substantial Suwār population in Saksīn which is confirmed by Abū Ḥāmid al-Gharnāṭī (see below). Mustawfī (*Nuzhat al-ḳulūb*, 259, 252; Togan, *op. cit.*, 204), pairs Saksīn and Bulghār as "two small cities of the sixth clime", much land belongs to them and they export furs. He places them at 32° = 750 farsakhs distant from Mecca (10/10) and remarks (21/23) that the eastern frontier of Iran, which begins in Sindh, runs to the frontier of Saksīn and Bulghār. The Islamic historians of the Mongol era invariably pair Saksīn and Bulghār. Thus Djūzdjānī, ed. Lees, 446, 451, tr. Raverty, ii, 1283, 1292, notes that Berke Khān was born at the time that his father, Tūshī (Djoči) was invading the territory of Saksīn, Bulghār and Saklāb. Similarly, Djuwaynī, ed. Ḳazwīnī, i, 31, 150, 205, iii, 15, tr. Boyle, i, 42, 190, 249, ii, 557, and Rashīd al-Dīn, *Djāmiʿ al-tawārīkh*, ed. Karīmī, i, 455, tr. Boyle, *Successors*, 33, place Saksīn and Bulghār in apparent close propinquity to one another and to the Ḳïpčaḳ country (see also Waṣṣāf and Aḥmad Ghaffārī (d. 975/1567-8) in Tiesenhausen, *Sbornik*, 82, 84, 86, 211/270). Indeed, Djuwaynī places the *ordu* of Batu in the "Bulghār and Saksīn country." Al-Bakuwī (ed. Buniyatov, fol. 69b/p. 107), a geographer of the early 9th/15th century, says that by his day Saksīn had been inundated and had vanished without a trace, but he appears to place the later Saray Berke at or near Saksīn. A broad over-view of the relationship of Saksīn to the other cities of the Mongol era is seen in al-ʿUmarī, ed. and tr. Lech, Arabic text, 85/142, who outlines the borders of the Khānate of Ḳïpčaḳ (= the Ulus of Djoči) as: "the Amu Daryā, Khwārazm, Sighnāḳ, Sawrān, Barkand, Djand, Sarāy, Mādjar, Azāḳ, Aḳča Karmān, Kaffa, Sudāḳ, Saksīn, Ukak and Bulghār," placing Saksīn, it would appear, in the southern section of the Volga lands, east of the Crimean centre of Sudāḳ. This city also figures in an interesting listing of the lands and peoples given to Djoči as his appanage: Khwārazm, the Dasht-i Khazar, Bulghār, Saksīn, the Alans, the Ās, the Rūs, Mikes (?) and the Bashkird (see Mustawfī, *Tārīkh-i guzīda*, in Tiesenhausen, *Sbornik*, ii, 91/Pers. text 219, see a similar listing in the anonymous *Shadjarat al-Atrāk*, in *ibid.*, ii, 204/Pers. text 264).

According to the rendering of Ibn Saʿīd found in Abu 'l-Fidā, *Taḳwīm al-buldān*, ed. Reinaud and de Slane, Paris 1840, 204-5, it was a famous city, in which in his day a son of Berke resided. It was located in the north of the *Krmāniyya* (probably *Kūmāniyya*, i.e. Cumania) lands on the river *Ṭanābrus*. The latter hydronym normally renders the Dniepr, but in this instance most certainly designates some more easterly river. The text of Ibn Saʿīd, ed. ʿArabī, 203-4, sets it within the context of a discussion of the lands of the Ponto-Caspian region, following a discussion of Maṭarkhā (Ταμάταρχα of the Byzantine sources, Tmutorokan' of the Rus'). Abu 'l-Fidā goes on to place it at the 67° E. long, and 53° N. lat. and to the west of the city of *Swh* (ms. also *mwh*). To its east, according to Ibn Saʿīd, 204, was the city of *Ḳrāght*. Abu 'l-Fidā, subsequently in his narrative, citing the *Kitāb al-Aṭwāl*, notes the city *Sḳsn*, spelled without *yāʾ*, which is placed at 162° 30′ E. long. and 40° 50′ N. lat., although he suspected that this might be another city. According to Yāḳūt, *Muʿdjam*, iv, 670, the fortress of Manḳishlāgh is between Khwārazm and Saksīn and the lands of the Rūs near the sea of Ṭabaristān (Caspian Sea). Al-Yazdādī, in Ibn Isfandiyār (tr. Browne, 33-4, ed. ʿAbbās Iḳbāl, Tehran 1320/1941, 80-1) says that in his time Āmul was the market for the wares of Saksīn and Bulghār. Merchants from ʿIrāḳ, Syria, Khurāsān and India came to Āmul to purchase goods there. The merchants of Ṭabaristān went to Bulghār and Saksīn which is "located on the shore of the sea opposite Āmul." This would appear to place this Saksīn in the lower Volga. Our source further adds that the voyage by boat from Āmul to Saksīn took three months, but the return journey was only one week because the former was upstream and the latter down (Pelliot, *Notes sur l'histoire de la Horde d'Or*, 170, views "Āmul" as a possible error for "Ātil" occasionally confused in the sources).

Modern scholars have placed Saksīn on the Yayïḳ/Ural rivers (Dorn, *Caspia*, 116) or with greater probability on the Volga, see Marquart, in *Osttürkische Dialektstudien*, 56, Barthold, *Očerk istorii turkmen. naroda*, in his *Sočineniya*, ii/1, 588. In other works e.g. *Mesto prikaspiyskikh oblastey v istorii musul'manskogo mira*, in *ibid.*, ii/1, 690, Barthold also opted for the Ural River. Pelliot, *Notes sur la Horde d'Or*, 168, 170-2, however, was willing to accept either one. Moreover, he suggested that there were two Saksīns, confused in sources such as al-Ḳazwīnī, one the old Khazar city, the other dominated by Oghuz tribes (and a Bulghār official, see below). Following Ibn Saʿīd, he concluded that Saksīn, during the time of Berke (d. 1266) must have been the principal city of the Djočids. Polyak, *Novïe arabskie*, 46, suggested that Saksīn denoted the pre-Mongol era city, the khān's headquarters which later became Saray Berke as well as the whole region around it. He locates this on the Akhtuba, an eastern tributary of the Volga. Minorsky, *Ḥudūd*, 453, was prepared to see in Saksīn the earlier Khazar city of Sarïghshïn on the lower Volga. Dunlop, *History*, 248, was similarly inclined. Artamonov, *Ist. Khazar*, 445 (following yet another suggestion of Barthold, *Kavkaz, Turkestan, Volga*, in *Sočineniya*, ii/1, 794, and Westberg, *K analizu*, 37 ff.), viewed it as the revived Itil, the old Khazar capital in the Volga delta. The Mongol era information, in any event, appears to point in the direction of the lower Volga region.

Our most thorough account comes from Abū Ḥāmid al-Gharnāṭī (473-565/1080-1170 [*q.v.*]), a Spanish Muslim who spent a good part of his adult life in the Volga region (from 525/1131 onwards largely in Ṣaḳṣīn). In his account (ed. Dubler, 5-9, Russ. tr. Bol'shakov, 27-30, considerable elements of which are repeated by al-Ḳazwīnī, *Āthār*, Beirut 1389/1969, 599), he places the city at some 40 days travel from Bulghār in the "country of the Khazars", which would again point to the lower Volga region. His reference to the Khazars and to Muslim communities from that people in the city, may be more consistent with the geographical nomenclature that he has adopted than with the ethnic realities, although it is certainly possible that Muslims of Khazar origin were still resident in the region. More concretely, he writes that there were 40 Oghuz tribes in the city, each led by its own *amīr*. Saksīn, however, appeared to be under Volga Bulghar overlordship for an *amīr* representing that powerful mercantile state resided in the centre of the city. The Bulghars also lived around a large Friday mosque. There was another Friday

mosque for the Suwārs, who were "also numerous." The private residences seem to have largely been the tents of the nomads or log cabins made of pine wood. In this respect, Saḳsīn was much like the old Khazar capital and the Volga Bulghar cities. Similarly, the city was filled with foreign merchants, some, like our source, coming from the western regions of the Islamic world. In Abū Ḥāmid's account, the city has a strong Muslim character. Each of its various groups had its own judges, jurisconsults and preachers. With the exception of the Maghribīs of the Mālikī *madhhab* or other foreigners who followed the Shāfiʿī school, the natives of the city were Ḥanafīs.

In addition to the ferocious cold of the region, Abū Ḥāmid, in discussing the local peculiarities that might be of interest, mentions the enormous size and weight of certain types of fish caught in "the river" that are unique to that region. One such fish could only be carried by a powerful camel. Another type of fish is described as boneless, and it "is like the tail of a lamb roasted with chicken meat. It is even better than the meat of a plump lamb." Lamp oil can be extracted from this fish as well as isinglass. Its meat could also be cured and became "the best of all the dried meats in the world." The currency there is made of lead, of which eight Baghdād *mann* = 1 dīnār. Sheep cost ½ *dānaḳ* each, rams ¼ *tassūdj*; there is also much fruit.

Of Saḳsīn's actual history, we know little. Djūzdjānī, tr. Raverty, i, 234, says the early ruler of the Khwārazmshāh state, Ḳuṭb al-Dunyā wa 'l-Dīn Aybak (= Ḳuṭb al-Dīn Muḥammad? *regn.* 490-521/1097-1121) "guarded the frontiers of Khwārazm Shāh from the infidels of Saḳsīn, Bulghār and Ḳifčaḳ." Such "infidels" would almost certainly have been the Ḳîpčaḳ-Ḳanglî tribes [*q.vv.*] of the region. More concrete, but still infrequent references appear in the sources relating the events of the Mongol invasions. Ibn al-Athīr (ed. Beirut, xii, 388), notes that in late 620/1224, following their defeat at the hands of the Volga Bulghārs, the Tatars "came to Saḳsīn on the return route to their king Djankīz Khān and the land of the Ḳîpčaḳ was free of them." There are other scattered references to Saḳsīn in the accounts of the conquest of the lands of the Ḳîpčaḳ, Volga Bulghāria and Rūs (cf. also *Taʾrīkh-i Guzīda*, ed. Browne, 572; Yāḳūt, *Muʿdjam*, i, 255). After the conquest of Khwārazm, the Mongols, probably later in 1221 or 1222, invaded Saḳsīn, Volga Bulghāria and the "Slav" lands (Djūzdjānī). Another campaign was launched against them in 1229 (Djuwaynī, i, 150, tr. Boyle, i, 190). The Russian Chronicles (*PSRL*, i, 453) report that the "Saksini" and Cumans fled from the lowlands to the Volga Bulghārs. But, the Tatars defeated the Bulghār guards near the Ural river. Latin sources (Carpini, ed. Menestò, 290-1, and the *Tatar relation*, 100/101) indicate that the "Saxi" (for *Saxini? Benedict the Pole, who took part in this mission, remarks that the "Saxi", whom he took to be Goths, like their immediate neighbours, the "Alani" and "Gazari" were Christians, see Wyngaert, *Sinica Franciscana*, i, 137) in one of their cities resisted until the Tatars dug an underground passage into their city. In any event, by 1236 the whole region had been subjugated by the Mongols. William of Rubruck (tr. P. Jackson, London 1990, 257) mentions the city of "Summerkent", a city of the Saḳsīn region or a dependency of it, located on an island in the Volga, which resisted for some 8 more years before succumbing to the Tatars (on Mongol military operations here, see Allsen, *Prelude,* 12-16). Saḳsīn as a city survived the devastation of the Mongol conquest to enjoy a brief period of prominence, in association with the Mongol ruling line. Thus al-Dhahabī (in Tiesenhausen, *Sbornik*, i, 202/205) mentions it, sometime in the 640s/1240s, as the city from which Berke Khān went to Bukhārā to visit Shaykh Sayf al-Dīn al-Bākharzī [*q.v.*] who played a role in his conversion to Islam. As we have already noted, it was subsequently the residence of one of Berke's offspring.

(V.F. Büchner-[P.B. Golden])

SĀL-NĀME (t.), a term of Ottoman Turkish administration:

1. Official yearbooks issued by the Ottoman central government, by provincial authorities and a number of civil (ministries) and military (army, fleet) institutions, appearing between 1263/1847 and the end of the Empire (1918).

They unite characteristics of European handbooks (*Almanach de Gotha*, French *Annuaires Officiels*), a synoptic calendar and traditional Ottoman historical and bureaucratic materials (condensed history of the dynasty, itineraries, *defter*/registers such as budgets). The *sāl-nāmes* are reliable instruments with almost all details on state officials (at the supervisory level), administrative organisation, toponomy, communications, laws and regulations, although one should refer to the *Taḳwīm-i Weḳāʾiʿ* for up-to-date information. The Imperial *sāl-nāmes* give summary population data; the provincial editions often provided information on male and female population down to the *ḳaḍā* level, data on migration, numbers of household, births and deaths in urban areas, population by *millet*, and city and even village size, though the depth and quality of information varied according to geographic area (J. McCarthy, *Muslims and minorities. The population of Ottoman Anatolia and the end of the Empire*, New York 1983).

The first imperial *sāl-nāmes* were modest, lithographically-produced booklets, but their size and quality improved gradually (for the content of the first state year book, compare *Sâlnâme. Le premier annuaire de l'Empire ottoman ou tableau de l'état politique civil, militaire, judiciaire et administratif de la Turquie depuis l'introduction des réformes opérées dans ce pays par les sultans Mahmoud II et Abdul-Medjid, actuellement regnant; traduit du Turc et accompagné des notes explicatives par T[homas] X[avier] Bianchi*, Paris 1848 = *JA*, Sér. 4, x [1847], xi [1848]). After 1888, the Personal Records Administration (*Sid̲j̲ill-i Aḥwāl-i Meʾmūrīn Idāresi*) was responsible for the governmental almanacs. In the provinces, the first almanacs appeared in Sarajevo (*Sāl-nāme-yi Wilāyet-i Bosna*, 1283/1866), Aleppo (Ḥaleb), Konya, Sūriye, and the Danube province (Ṭuna). Like the official provincial newspapers, they were the responsibility of the *mektūbd̲j̲u-yi wilāyet*. Some provincial year-books appeared with Arabic, Greek and "Bosnian" translations. Many included illustrations and tables. They were an instrument to demonstrate progress made by the government and to encourage competition between administrators.

2. Semi-official and non-governmental annuals. Some of these were annual reports of welfare organisations (e.g. *ʿOt̲h̲mānlï Hilāl-i Aḥmer D̲j̲emʿiyyeti*, 1329/1331; *D̲j̲emʿiyyet-i tedrīsiyye-i İslāmiyye*, 1332/1913). Ebu 'l-Ḍiyāʾ (Ebūżżiyā) Tewfiḳ [*q.v.*] was the publisher of the most successful almanacs for a vast reading public. The first appeared under the name *Sāl-nāme-yi Ḥadīḳa* (1873). Later, it was published under different names such as *Sāl-nāme-yi Ebu 'l-Ḍiyāʾ* (the first edition was destroyed in the printing press by order of the sultan) and *Newsāl-i Maʿrifet*.

3. Republican Turkey published a series of *Türkiye D̲j̲umhūriyeti Dewlet Sāl-nāmesi* (first 3 vols. 1925-6 to 1927-8 in Arabic script; 1928-9 under the title *Türkiye Cumhuriyeti Devlet Yıllığı*). There were several attempts to revitalise the provincial almanacs under the name of *İl yıllıkları* (1967 and 1973).

McCarthy and J.D. Hyde, *Ottoman imperial and provincial Salnames*, in *IJMES* (1978); C.V. Findley, *Ottoman civil officialdom. A social history*, Princeton 1989. Many official and private *sāl-nāmes* are available in microfiche (Ottoman Microform Project. The University of Chicago/Middle East Documentation Center).

(K. Kreiser)

SALĀ, dialectically Sla, current French and English form Salé, a town of Morocco on the Atlantic coast at the mouth of the Būragrag (older Asmir), situated on a flat, sandy stretch of land. Pre-18th century sources often mix up S̲h̲alla, Salé and Rabat. *Selā would mean "crag, cliff" in Punic (though not in fact attested in extant Punic texts) but a Phoenician past for the town is based only on hypothesis.

Ibn Ḥawḳal, tr. Kramers-Wiet, 78, mentions a town and some *ribāṭs* on the river of Salā, whilst al-Bakrī states that ʿĪsā, the son of Idrīs II, was the ruler of the town. But this could also refer to S̲h̲alla rather than Salé proper. The town was probably founded by the Banū ʿAs̲h̲ara during the 5th/11th century. At first the Banū ʿAs̲h̲ara were at S̲h̲alla, but left it for the right bank of the river where they built palaces and held a court which rivalled those of the Spanish Taifas (M. Bencherifa, *Usrat Banī ʿAs̲h̲ara*, in *al-Baḥt̲h̲ al-ʿIlmī* [Rabat 1967], 177-219). Under the Almoravids, the Banū ʿAs̲h̲ara retained their prestige in the town, whose agricultural and commercial prosperity is described by al-Idrīsī. Salé's resistance to the Almohads provoked the destruction of its ramparts and the elimination of the Banū ʿAs̲h̲ara, whose palace ʿAbd al-Muʾmin requisitioned. The town became a royal encampment, although if the army stopped in the region on its way to al-Andalus, it was, rather, from the Mediterranean ports that it embarked.

The re-foundation of Rabat [see ribāṭ al-fatḥ] does not seem to have harmed Salé, whose role continued to be important; the caliphs often stayed there and undertook important building works: the provision of water (*sūr al-aḳwās* or wall of the arches), and construction or restoration of the Great Mosque, Masd̲j̲id al-Ṭāliʿa, which has always occupied the same place. The Marīnid conquest was marked by the seizure and sack of the town by the Castilians in 658/1260; goods were pillaged and burnt and a substantial part of the population massacred. Amongst the inhabitants carried off as slaves was the *ḳāḍī*, who was a descendant of the Banū ʿAs̲h̲ara. The Marīnid Abū Yūsuf (656-85/1258-86) came to the help of the town and took part in rebuilding those walls which had not been rebuilt by the Almohads

(Ibn ʿIdhārī, *Bayān*, section on the Almohads, Rabat 1985, 418-25; A. Huici Miranda, *La toma de Salé por la escuada de Alfons X*, in *Hespéris* [1952]).

Between the 5th/11th and 8th/14th centuries Salé enjoyed real prosperity. The agricultural richness of the region, and commercial and artisanal activity, are attested in the sources, and despite the mediocre standard of the port (al-Idrīsī, *Maghrib*, 85), commercial traffic was important. Oil was imported from Seville, and corn, bees'- wax, hides, wool and indigo were exported (F.B. Peglotti, *La pratica della mercatura*, Cambridge, Mass. 1936). Ibn al-Khaṭīb, who spent three years there (760-3/1359-61) states that it was the "capital for cotton and linen" (*Miʿyār al-ikhtiyār*, Rabat 1977, 74). Fishing was especially flourishing. To the Almohad foundations, the Marīnids added a series of monuments, including two *madrasas*, a *māristān* and the Zāwiyat al-Nussāk. The arsenal, arranged within the interior of the walls, has not held out against the encroaching sands (H. Terrasse, *Les portes de l'arsenal de Salé*, in *Hespéris* [1922], 111). In the course of the 8th/14th century, Ibn ʿĀshir [*q.v.*], one of the two patron saints of the city, attracted thither an important group of Ṣūfīs, including Ibn ʿAbbād of Runda (M. al-Ḥaḍramī, *al-Salsal al-ʿadhb*, Salé 1988).

After the Iberian attacks on the Moroccan coasts, Salé remained one of the few ports which were not occupied and which the Saʿdians tried to utilise; the presence of an important Genoese colony attests commercial activity there. If the expelled Moriscos took refuge there, the so-called "corsairs of Salé" were in reality installed in the double city of Rabat (R. Coindreau, *Les corsaires de Salé*, Paris 1948). The town was an important stake in the struggle for power between the *zāwiya* of al-Dilā [*q.v.* in Suppl.] and the famous marabout al-ʿAyyāshī, murdered in 1051/1641 by the Khloṭs [see KHULṬ] (M. Ḥādjdjī, *al-Zāwiya al-Dilāʾiyya*, Rabat 1964). Rabat and Salé called in al-Khaḍir Ghaylān to expel the Dilāʾīs; the town suffered the effects of the general anarchy, and its history was very eventful. But the arrival in power of the ʿAlawīs [*q.v.*] was favourable for it. The system of defences was reinforced by a series of keeps and a girdle of walls, mosques were built, as well as a *madrasa*, al-Madrasa al-ʿAdjība; the Great Mosque was enlarged and provided with a new minaret. However, from the 18th century onwards, Salé's activities as a port began to decline; the harbour silted up and was unable to admit boats above a certain tonnage. The prohibition of corsair activity by the sultan Sīdī Muḥammad b. ʿAbd Allāh and the founding of the town of al-Sawīra (Mogador), which attracted European commerce, dealt a severe blow to its maritime role. Salé was, moreover, several times bombarded by the French (in 1844 and 1851).

Internal trade remained active and intellectual life relatively important up to the opening of the present century. The artisans of Salé, organised into guilds, were busy with leatherwork and pottery, and produced carpets, mats and embroidery. The immediately surrounding region provided the necessary cotton and linen; fishing for shad, which went back to mediaeval times, furnished substantial revenues for the habours. The town notables, interested in agriculture, invested in the Gharb [*q.v.*]. The opening up of the Moroccan market to European manufactures led to the collapse of these artisan activities, with the textile workers, tanners and sandalmakers particularly affected.

The establishment of the Protectorate had a threefold effect. The town became detached from its hinterland; its artisanal production collapsed; and it became a satellite town of the new capital, Rabat. Salé received a substantial influx of rural immigrants; its population leapt from 17,000 in 1918 to *ca.* 600,000 in 1992. The market-garden zone, which had been covered with orchards and *sāniyas*, was gobbled up by uncontrolled construction development.

Present-day industry makes use of an important manpower element (mainly female) for textiles; Salé continues to produce carpets, mats, embroidery and pottery, and supplies the countryside. Despite its aspect as a dormitory town and its numerous bidonvilles, the *médina* retains its traditional character and celebrates the Mawlid [*q.v.*] by an important ceremony which goes back to Saʿdian times (V. Loubignac, *La procession des cierges à Salé*, in *Hespéris* [1946], 5-30).

(HALIMA FERHAT)

SALADIN [see ṢALĀḤ AL-DĪN].

SALAF, a term of Islamic law and financial practice. As a noun doing duty for the verbal noun of *aslafa*, it is accorded a long entry in Lane (1403, col. 3), from which it can be seen that it is a word with a range of meanings relating to financial transactions of which the basic feature is a prepayment or a loan. A point that is not made in this entry, but which Lane would have done well to make for the benefit of the general, as opposed to the specialist, user of his lexicon is the essentially legal nature of the material utilised by his authorities for the various explanations of the word.

In works of classical jurisprudence *salaf* occurs in two main senses. Of these, one, when reduced to bare essentials, denotes a purchaser's prepayment for goods due for delivery by the recipient of such payment at the end of a specified period. In this sense, the term is held to be synonymous with *salam* [*q.v.*], the main aspects of which are dealt with under that head. The second of the two senses referred to is that attaching also to the term *ḳarḍ* or "loan", of a type recognised by the *Sharīʿa* as lawful and involving "the loan of fungible commodities, that is, goods which may be estimated and replaced according to weight, measure, and number" (Udovitch, 106; see *Bibl.* below). In this kind of loan "the borrower undertakes to return the equivalent or likes of that which he has received, but without any premium on the property, which would, of course, be construed as interest. The most likely object of a *ḳarḍ* loan would be currency or some other standard means of exchange" (*ibid.*, 106-7). Known also as *ḳarḍ ḥasan*, this type of loan must not only attract no interest, i.e. not be a *salaf bi-ziyāda*:

Salā. Court of the Marīnid *medersa*.

it must also be such as to allow no advantage (*manfa*ʿ*a*) to accrue to the lender from his loan—though what constitutes "advantage" in what circumstances is, in fact, not a matter on which there is a consensus of juristic opinion (Saleh, 41 ff., 99; see *Bibl.* below).

For the sake of completeness and, more importantly, to dispel any confusion or misunderstanding that may arise in readers' minds, it should be noted that the *kard* is but one of two types of loan recognised by the *Sharī*ʿ*a*. The other is the ʿ*āriya* (or ʿ*āriyya*, the alternative preferred by Udovitch) "a loan for use which transfers the usufruct of property gratis to the borrower" (Udovitch, 106). Here the borrower's free use of the object of the loan, of which the lender retains ownership, lasts until and unless the contract is rescinded at will by either of the two parties to the agreement. To this type of loan the term *salaf* is, in Islamic law, technically inapplicable.

Bibliography: Lane, *loc. cit.* above (best consulted in conjunction with the present article and SALAM); A.L. Udovitch, *Partnership and profit in medieval Islam*, Princeton 1970; N.A. Saleh, *Unlawful gain and legitimate profit in Islamic law*, Cambridge 1986 (see esp. 35-48, 99-100). For primary sources, see the bibliographies contained in each of the last-named works. Particularly useful in certain respects for Mālikī law is O. Pesle, *La vente dans la doctrine malékite*, Rabat 1940 (see esp. 11 ff., 181, 197, 209), but the work suffers from the lack of a bibliography. To no small extent D. Santillana's monumental *Istituzioni di diritto musulmano malichita con riguardo anche al sistema sciafiita*, 2 vols., Rome 1925-38, will compensate readers for this deficiency.

(J.D. LATHAM)

AL-**SALAF** WA 'L-**KHALAF** (A.), lit. "the predecessors and the successors", names given to the first three generations and to the following generations of the Muslim community respectively.

It was the *Sunna* [*q.v.*] rather than the Kurʾān which instituted one of the most characteristic traits of the Islamic vision of history by imposing the idea a priori that this history was said to have begun with a golden age, which was said to have been inevitably followed by a period of relaxation of standards, deviation and finally of division. A saying of the Prophet—of which there exist various versions transmitted by different authorities—is accordingly very frequently cited in Islamic literature of all periods and in all sorts of disciplines mixed together: "The best of you are those of my own epoch (*karnī*), then those who follow on, then those who follow them..." (the version of al-Bukhārī, from ʿImrān b. Ḥusayn, in *Ṣaḥīḥ, k. al-shahādāt, bāb lā yashhadu* ʿ*alā shahāda*...; for other versions, see *Concordance*, v, 372).

The word *karn* "epoch, age" figuring in this *hadīth*, being most commonly, though not invariably, taken as a synonym of ʿ*aṣr* (cf. Fakhr al-Dīn al-Rāzī, *Mafātīḥ al-ghayb*, Beirut 1411/1990, xii, 131), it is the three first "generations"—those of the Companions or *ṣaḥāba* [*q.v.*], of the Successors or *tābi*ʿ*ūn* [*q.v.*] and those of the Successors of the Successors or *atbā*ʿ *al-tābi*ʿ*īn*—which are distinguished from the rest of the Islamic community, and it is in them that the community is to recognise the "Pious Predecessors" (*al-salaf al-ṣāliḥ*), its norms and its models. According to Ibn Taymiyya [*q.v.*] (see his *Madjmū*ʿ *al-fatāwā*, Rabat 1401/1981, x, 357), this privileged period of the community ended around 132/750 (hence it ran until the end of the Umayyad caliphate), but al-Rāzī, who refused to give precise dates, mentioned that certain authorities counted a *karn* as comprising 60, 70 or even 80 lunar years.

In this way, each of the qualities given prominence by Islamic ethics is personified in one or other of the *salaf* ʿAlī typifies courage and bravery, ʿAbd Allāh b. al-ʿAbbās learning, etc.). Moreover, each particular intellectual discipline, and each particular trend of that discipline, whether appealing to the letter or the spirit, was to search for a precursor amongst the *salaf*, a person reputed to be its initiator hence embodying thereby the role of guarantor of the legitimacy of the discipline in question.

In practice, the precedence of the *salaf* is only fully displayed in regard to the generation of the Prophet's Companions. On one hand, for the majority of scholars, their quality of being reliable transmitters (*thika*) of the Prophet's *Sunna* was incontestable and so did not require the testing and verification procedure (*ta*ʿ*dīl*), traditionally required at the outset of all transmitters (see e.g. al-Djuwaynī, *al-Burhān fī uṣūl al-fikh*, Cairo 1400/1980, i, 625-32). On the other hand, only a minority of scholars were to go so far as to uphold the view that "the word of just one Companion" (*kawl al-wāhid min al-ṣaḥāba*) constituted, after the manner of the Prophet's Sunna, a proof (*hudjdja*) which could establish a legal prescription binding the Community in general: this leads back to a consideration of the Companions' sayings as one of the sources quite separate from *fikh* (see e.g. Ibn Kayyim al-Djawziyya, *I*ʿ*lām al-muwakki*ʿ*īn*, Beirut 1991, iv, 90-117).

In a more general fashion, if the conception that the past model for the community is situated at some point beyond the present time is an invariable element within the Islamic conscience, its interpretation has nevertheless varied and has taken shape as two attitudes which are really antithetical to each other. The first may be described as a "confident reliance on the past", a genuine traditionalism which tends to neutralise the evolutionary effects linked with the tension created by the gap between an ideal past and a present always on this side of the ideal past. The second attitude, that of the *salafiyya* [*q.v.*], ancient and modern, on the contrary continually endeavours to update the changes—conceived as necessary alterations in relation to deviations and innovations, *bid*ʿ*as*—believed to be necessary in view of the restoration in all respects of the ideal past (more or less freely defined in relation to the demands of each particular period) of the *salaf*.

Bibliography: Given in the article. Remarkably enough, there does not exist any special monograph on the theme of *al-salaf wa 'l-khalaf* as such. Cf., however, R. Gramlich, *Vom islamischen Glauben an die "gute alte Zeit"*, in idem (ed.), *Islamwissenschaftliche Abhandlungen Fritz Meier zum 60. Geburtstag*, Wiesbaden 1974, 110-17.

(E. CHAUMONT)

SALAFIYYA, a neo-orthodox brand of Islamic reformism, originating in the late 19th century and centred on Egypt, aiming to regenerate Islam by a return to the tradition represented by the "pious forefathers" (*al-salaf al-ṣāliḥ*, hence its name) of the Primitive Faith. For definition, background, origins, doctrines and general aspects see IṢLĀḤ; MUḤAMMAD ʿABDUH; RASHID RIḌĀ.

1. In North Africa.

(a) Tunisia. Tunisia was the first Maghrib country to receive a reformist (though not purely *salafī*) message from the East. Muḥammad ʿAbduh visited Tunis (December-January 1885) with a view to establish there a branch of *al-*ʿ*Urwa al-Wuthkā* secret society. He was received with some reserve by the older Zaytūna Shaykhs of the Mālikī school, but

found support among the junior Mālikī ʿulamāʾ and the Ḥanafīs. ʿAbduh's second visit to Tunis (September 1903) did not improve his relations with the Zaytūna conservatives, although he appeared with the prestige of Chief Muftī of Egypt. Facts that did not endear him to them included his insistence on the need to acquire secular knowledge beside the religious sciences and his condemnation of Ṣūfī quietism, fatalism and *tawakkul* [*q.v.*]; his "Transvaal *Fatwā*" (which permitted Muslims in a Christian country to wear a European hat and eat meat slaughtered by a *kitābī*); his clash with the Zaytūnī *ʿālim* Ṣāliḥ al-Sharīf, who accused him of Wahhābism (because of his sympathy with the Wahhābī drive against saint-worship); the appearance of the foremost Salafī journal *al-Manār* [*q.v.*], which a group of ultras, following ʿAbduh's visit, petitioned the Prime Minister to ban from entry to Tunisia; the uproar created in maraboutic circles by two young Salafīs, outspoken critics of saint worship, Muḥ. Shākir and ʿAbd al-ʿAzīz al-Thaʿālibī [*q.v.*]. The former, influenced by *al-Manār*, publicly condemned maraboutism as a form of paganism, for which he was dismissed from his teaching post in Sfax (1902). The latter, a Zaytūna student, had launched upon his return from a two-year stay in Egypt and the East, a violent campaign against the marabouts and pleaded for a rationalist interpretation of the Ḳurʾān. He was summoned before a *sharīʿa* court on a charge of blasphemy, but thanks to French intervention, got away with a light prison sentence (1904) (according to one version). The solid support lent to the attacked marabouts by the Mālikī *ʿulamāʾ* showed that the traditional accommodation between the two main components of the religious institution was still a reality and deterred other Salafī sympathisers among the *ʿulamāʾ*.

After ʿAbduh's death (1905), the contacts between the Zaytūna and the Cairene Salafiyya continued under his successor, Rashīd Riḍā, the latter's conservative bent being more to the liking of the former. Yet while they agreed on several issues such as opposition to the French Protectorate and the need of reform of the Zaytūna, they differed on points of Ḳurʾānic exegesis and on major political issues: the Young Turks (Riḍā was against them, the Tunisians in favour), the Arab Congress in Paris, the Great War and the Arab Revolt (the Tunisians sided with the Ottomans, Riḍā with the Arabs). Meanwhile, the Young Tunisian Party was founded (1907), based on an alliance of secular modernists and Salafī reformists and headed by ʿAlī Bāsh Ḥānba and al-Thaʿālibī, respectively. Their involvement in the Zaytūna student strike (1911) and the tram boycott (1912) resulted in a ban of their party and the expulsion of its leaders. In 1920, a similar alliance of secular and liberal nationalists with ʿAbduhists and Salafīs produced the Liberal Constitutional Party ("Destour") led by al-Thaʿālibī, whose anonymously printed publication *La Tunisie martyre* (1920), a nationalist manifesto and indictment sheet of French policy, formed the basis of its programme. After his departure for the East (1923) the Party stagnated until it was joined (since 1927) by a group of graduates of French universities, led by Dr. Materia and H. Bourguiba. The divergent tendencies of the oldtimers and newcomers inevitably led to a split (1934), after which the latter, henceforward known as the "Neo-Destour", spearheaded the nationalist struggle, while the former, dubbed by their opponents "Old Destour", persisted in an intransigent but ineffectual stance. In 1937, al-Thaʿālibī, back in Tunis from his long self-imposed exile, attempted to reunite the two parties under his leadership, but was defeated by Bourguiba and withdrew from politics.

Salafism, however, made itself felt in other domains: (a) the Free Schools; (b) the Arabic periodical press, most of which was permeated in the 1930s by a puritanical, "Wahhābī" spirit, extolling classical Arabic and its cultural heritage, emphasising Tunisia's ties with the Arab East, castigating social ills and vices (esp. alcoholism and prostitution), satirising imitation of Europe and feminism, condemning naturalisation and Christian missionary activities; (c) associations such as the Khaldūniyya [*q.v.*], Young Men's Muslim Association (YMMA) and the very popular but shortlived Society for the Preservation and Teaching of the Ḳurʾān (for adults). Yet the Tunisian Salafīs, unlike their Algerian counterparts, did not succeed in creating a durable organisation with a recognised leadership and action programme. They showed the people a middle road between the mediaeval synthesis and westernisation, but had no answer for Tunisia's social and economic problems, nor a practical means to recover its independence. Small wonder then that the Salafiyya did not find its place in independent Tunisia and kept silent, especially after the sweeping secularisation programme carried through legislature by the will of Bourguiba. Whether the current fundamentalist (or "Islamist") movement (MTI), which traces its roots back to the Ḳurʾānic Preservation Society (formed at the Zaytūna in 1970, cf. S. Waltz, *Islamist appeal in Tunisia*, in *MEJ*, xl [1986], 652), should be regarded as an avatar of the Salafiyya has not yet been definitely established.

(b) Algeria. Of all the Maghrib countries, it was Algeria where Salafī reformism found its fullest and most effective expression and response. Perhaps the main reasons of its success, apart from the quality of its leadership were that it was here that the danger to Algerian national identity, personality and "soul", to Islamic religion, ethics and way of life, and to classical Arabic language and culture was felt to be the greatest. This threefold threat was implicit in Algeria's colonial situation—her ambiguous status of being legally part of France but in fact a colony of massive European settlement which uprooted and

proletarianised its native peasantry, forcing large numbers to emigrate to France, transforming its economy and creating a thin layer of gallicised *évolués* who were taught "nos ancêtres les Gaulois" and aspired to complete political and cultural (but not religious) identification with France.

The emergence of the Salafiyya in Algeria is usually seen as a consequence of ʿAbduh's visit to Algiers (and Constantine), August-September 1903. According to R. Bencheneb, the persons who met him represented three trends of the Algerian élite: the conservatives, the modernists and those of French civil status.

Prominent among the first-named were three professors of official *madrasas*, ʿAbd al-Ḳādir al-Madjdjāwī, who taught Arabic and Islamic Law at Algiers, was active in the Algerian *nahḍa* and wrote against social ills, superstitions and old customs; ʿAbd al-Ḥalīm b. Smāya, noted advocate of "Islamic nationalism" (*ḳawmiyya islāmiyya*), in close touch with Cairo and Istanbul, host of ʿAbduh's visit in Algiers and campaigner in 1911 against conscription into the French army; and Muḥ. Saʿīd b. Aḥmad al-Zawāwī, surnamed "Ibnu Zekri", a *zāwiya*-bred Kabyle scholar and *imām* of a mosque, who published in 1904 a pamphlet insisting on the need of *zāwiya* reform in Kabylia and denouncing customary laws that disadvantaged the Kabyle woman. To the same trend belonged two Constantine *ʿālims*, Ḥamdān al-Wanīsī, teacher and mentor of Ibn Bādīs [*q.v.*], and Mawlūd b. Mawhūb al-Ḥāfiẓī, real leader of the conservatives, long-time *Muftī* of Constantine, partisan of progress and reform, open to modern science and European ideas. For Merad (1967, 126), his reformism consisted in improvement of the moral and intellectual condition of Algerian Muslims without judging them for their beliefs, whether maraboutic or other. The French-assimilated modernists dismissed the conservatives as "old turbans", arrogant bourgeois, great feudals, selfish, lazy and corrupt, whose attachment to tradition impeded progress and merger.

ʿAbduh's visit, though brief, made a strong and lasting impression. He appeared as an educator and missionary of faith, hope and effort, he showed the Algerian intelligentsia what it was looking for: the possibility of reconciling religion and progress, tradition and renewal, while safeguarding their national identity. Whether he also conveyed a political message has been both suggested (Merad, 1964) and denied (Bencheneb 1981, 131). It took, however, a decade for the fruits of ʿAbduh's visit to become visible. In 1913 there appeared at Algiers two Arabic weeklies, *al-Fārūḳ* and *Dhu 'l-Faḳār*, both of expressly ʿAbduhist inspiration and non-political. Their aim was twofold: to publicise ʿAbduh's teachings and to criticise the religious situation in Algeria, chiefly the Ṣūfī orders and marabouts, popular superstitions and vices. A special target was the economic rôle of the local Jews. Both were suspended by 1915, but *al-Fārūḳ* reappeared in 1921.

A decade later, the diffuse Salafī trends begin to take shape again with the publication of *al-Muntaḳid* (July 1925), suspended and replaced shortly after by *al-Shihāb* (December 1925, first weekly, then monthly). Thanks to the extraordinary personality of its founder and editor, the Constantine *ʿālim* ʿAbd al-Ḥamīd Ibn Bādīs [*q.v.*, and see IṢLĀḤ], as well as the qualities of his collaborators, it became in the 1930s the most prestigious tribune of the Maghribī Salafiyya (it was dubbed "the *Manār* of the Maghrib"), until its cessation by the end of 1939.

The team assembled by Ibn Bādīs comprised a number of persons, most of whom shared a common "homeground"—the Province of Constantine—a period of study at the Zaytūna and (some of them) a stay of up to 10 years in the East, but they differed greatly in background, skills and temperament (see on these persons, Merad, 1967, 79-118). Six years later, this team became the nucleus of the Association of Algerian Muslim *ʿulamāʾ* (*Djamʿiyyat al-ʿulamāʾ al-muslimīn al-djazāʾiriyyīn* = AUMA) (1931). Its aims, as stated in the statutes, were to be purely religious, moral and cultural; all political discussion or interference in any political question were strictly forbidden. There ensued a struggle for dominance between the Salafīs and marabouts in which the former prevailed, but the latter, led by Ḥāfiẓī, set up a rival anti-reformist organisation which they called *Djamʿiyyat ʿulamāʾ al-sunna al-djazāʾiriyyīn* = AUSA (1932), the addition of the word *sunna* implying that their adversaries had become tainted by heresy in co-opting to their committee a representative of the Ibāḍiyya [*q.v.*], Ibrāhīm Bayyūd. There followed a year of bitter polemics between the two camps, which exposed the intrinsic weakness of the marabouts, their intellectual poverty, their moral decay and inability to evolve and meet the challenge of the times. They were on the whole unable, in spite of their numbers, well-knit framework, widespread ramifications, monastic discipline and economic strength, to devise effective long-range counter-measures to withstand the Salafī onslaught, and had to depend on the initiative, support and guidance of the French Administration, which did not enhance their prestige.

A secondary target of the Salafī reformists was the class of official ministers of the cult, or Muslim "clergy". In 1934-5 they numbered 385 (22 *muftīs*, 159 *imāms* and 204 others. Merad, 1967, 418). Since political dependability (i.e. loyalty and docility) were often given precedence over professional aptitude and moral integrity, the religious civil service as a whole lost in the course of time most of its credit in the public eye. Both sides, however, refrained as a rule from direct attacks on each other. The two major charges which the official "clergy" proffered against the Salafiyya were separatism (from France) and Wahhābism.

Apart from the upper hand gained by the Reformists over the marabouts, a number of events facilitated or marked the progress of the former during the 1930s: (a) Muslim resentment over the triumphant centennial celebrations of the French conquest of Algiers (1930); (b) the initially benevolent attitude of the anti-maraboutic director of Native Affairs, Jean Mirante, towards the Reformists. (c) the AUMA-Administration crisis of 1933-4 following the ban on unlicensed (i.e. Reformist) preaching in the official mosques and on Reformist teaching in a number of free schools, further widened popular support for the Reformists; (d) the paradoxical alliance of the Reformists with the assimilationist Fédération des Élus, led by Dr. Bendjelloul and Farḥāt ʿAbbās, for electoral purposes; (e) the bloody anti-Jewish riots of Constantine (3-5 August 1934); the fact that these riots occurred in the very centre of Salafī reformism and home town of Ibn Bādīs, cast a strong suspicion on the latter but redounded to his advantage thanks to his rôle as a restorer of intercommunal peace; (f) the first Reformist congress, held at Algiers in September 1935, enabled the AUMA to take stock and appear as a political and national force in Algerian public; (g) the central rôle played by the Reformists in the preparation and conduct of the Islamic Congress of Algiers (June 1936), convened with a view to adopt

and present to the Popular Front Government the combined demands of the three main participants: *Élus*, Reformists and Communists (Marabouts and official ministers of the cult were not invited; a dissident participant was Aḥmad Meṣṣālī Ḥādjdj, leader of the Paris-based proletarian and separatist North African Star (since 1937 renamed Algerian People's Party = PPA), was not invited, but he attended nevertheless). The demands of the Reformists included: preservation of the Muslim personal status, reorganisation of the judicial systems, separation of Religion and State (i.e. independence of the Muslim cult), restitution of all religious buildings and control of *waḳf* revenues, and abolition of all discrimination regarding the Arabic language.

The congress delegation was well received in Paris, but a telegram disavowing it, sent by the Mālikī vice-Grand Muftī of Algiers, Maḥmūd Ben Dālī (dubbed Kaḥḥūl) and others to the Premier Léon Blum, had serious consequences: on 2 August the Muftī was murdered and the assassin pointed to the Reformist leader ʿUḳbī as the man who had hired him, although ʿUḳbī was finally exonerated in 1939.

ʿUḳbī's defenders after his arrest, who included also some Jewish civic leaders, presented the matter as a new Dreyfus affair, staged by the Administration in order to discredit the Reformists. From this joint effort to clear ʿUḳbī's name was born the "Union des Croyants Monothéistes", whose principal members on the Muslim side were Ibn Bādīs and ʿUḳbī. The exertions of this group are believed to account to some extent for the correct attitude observed by the Algerian Muslims towards the Jews during the Vichy régime, though incitements against the Jews were not lacking (see M. Ansky, *Les Juifs d'Algérie*, etc., Paris 1950, 81).

On the other hand, the ʿUḳbī affair sowed discord and confusion in the Muslim camp itself. A major event, that was seen by many as a turning-point in Franco-Algerian relations, was the failure of the so-called Projet Blum-Viollette, a bill of law that would have granted certain categories of *évolués* (*ca.* 21,000 persons) the political rights of a French citizen without loss of their Muslim personal status. Owing to opposition of the *colons* and their lobby in Paris, the bill never came up for discussion in the Chamber of Deputies.

A year later (July 1938) the *Élus* split, when each of their two leaders, Bendjelloul and F. ʿAbbās, tried to create a camp of his own. Lastly, the AUMA itself suffered breakaways. At its annual convention (September 1938), ʿUḳbī strongly criticised Ibn Bādīs' group for excessive involvement in politics and lack of support for France. A year later he founded a group and a paper of his own, *al-Iṣlāḥ al-islāmī*, forsook politics for free education and religious and moral reform, appealed to the Algerians to stand by France in her hour of need, and put a damper on his anti-maraboutic zeal.

ʿUḳbī's secession, more than anything else, underlined the AUMA's (chiefly, Ibn Bādīs' and Ibrāhīmī's) animosity against France. It became evident, already in 1936, in Ibn Bādīs' famous rejoinder to F. ʿAbbās, affirming that "... this nation is not France, cannot be France and does not want to be France" (*Shihāb*, April 1936). The crucial factor came after the outbreak of World War II, when the AUMA abstained from declaring its loyalty to France. During the War, the AUMA, classed as hostile to France, was practically dormant. In February 1945 it formed with the *Élus* and the PPA a nationalist front, headed by ʿAbbās. Their campaigns against French dominance are believed to have had a share in creating the atmosphere that made possible the uprising in the Constantinois on V-Day (8 May 1945), in which a hundred Europeans and thousands of Algerians lost their lives. The deep rift opened between the French and the Algerians by this event was never bridged. The new hopes raised by the *Statut organique*, granted to Algeria by the law of 20 September 1947, were soon dashed. Its centrepiece, an elected Algerian Assembly, was to apply, *inter alia*, the principles of independence of the religious institution and of the equal status of the Arabic language, demanded by the AUMA from its inception. After 1950, with the opening of political crises in Tunisia and Morocco, it became increasingly clear that Algeria, too, was heading for a confrontation.

During the War of Liberation (1954-62), Islam played an important rôle as a diffuse but effective mobiliser of the masses, quite apart from the AUMA which, though morally supportive, was rather slow in joining hands with the FLN (manifesto of January 1956). According to A. Nadir (1975), this cautious stance was due to the aversion of the *ʿulamāʾ* from violence and to their bourgeois origin and culture. It also enabled the AUMA to keep its reserves intact. The FLN, on the other hand, could not dispense with the AUMA, owing to their ideological indigence and the inability of secularism and socialism to attract the masses. They made A.T. Madanī, historian and Secretary-General of the AUMA, the spokesman of the Provisional Algerian Government (GPRA, 1958) and entrusted him later (September 1962) with the Ministry of *Waḳfs* and Culture.

While Salafī reformism ceased to exist as a party in independent Algeria, it informed government policy in the religious field. By contrast, maraboutism, its old *bête noire*, is lying low. Government and the Reformists barely tolerate saint worship, but combat the religious charlatans and exorcists. It could thus be said, as late as 1977, that the regime "completely controlled the religious field" (B. Etienne, *L'Algérie, cultures et révolution*, Paris 1977, 118-43). Fifteen years later, this statement seems no longer true. The influence of the Islamic revolution in Iran and elsewhere, the ever-deepening economic and social crisis in Algeria, with a one-party army-controlled régime unable to cope with it effectively, and a belated attempt at democratisation made by President Ben-Djedīd—all these factors combined (coming on top of nearly seventy years of exposure to Salafī reformism) may explain the landslide victory of the fundamentalist Islamic Front of Salvation (FIS) and its allies in the first round of the general elections (January 1992). The refusal of the army to accept the verdict of the polls, and its resolve to use force instead of accommodation, have created a sanguinary confrontation whose outcome still lies in the future.

Apart from the record of Salafī reformism in politics, it achieved quite remarkable results in its proper spheres of activity, sc. religion, culture and ethics, which provided the spiritual foundation of Algerian nationalism. By 1958 the AUMA had an estimated 10,000 active members, and 100,000 (?) sympathisers, divided in 126 sections, 34 *cercles* and 70 *communautés cultuelles*. It enjoyed wide support in the representative bodies of Algeria down to village *djamāʿas* and even more in the Association of North African Muslim Students (AEMNA), had made converts among the graduates of official *madrasas* and French schools, even among *muḳaddams* of certain *zāwiyas*, had penetrated the Awrās massif, stronghold of maraboutism, the Summām valley and the Saharan fringes (Laghouat, Sūf). The principal means of

Salafī-Reformist indoctrination were the free school, the mosque and the press. The number of free schools grew steadily since 1925, especially in the province of Constantine, the "home-ground" of Ibn Bādīs and his team. For the year 1934-5 Merad (1967: 338) gives the figure of 70 schools, each consisting of one or two classes, totalling a hundred classes with 30,000 pupils of both sexes. According to a later estimate, there were by 1958 181 schools with 40,000 pupils, of which 123 were Reformist Ḳurʾānic schools and 58 free *madrasas* dispensing a primary education to 11,000 pupils. Classes were held 272 days annually (as against 157 days in French schools). In addition there was the Ben-Bādīs Institute (secondary school level, opened in 1947) with 700 students. Most schools served also as local branches of the AUMA and clubs for Reformist youth. In their curricula the emphasis was heavily on classical Arabic (spoken Arabic and Berber were banned), Ḳurʾān with relevant commentary, some *ḥadīth*, some *fiḳh*, history of the Arabs (chiefly the period of the Prophet and the *Rāshidūn* caliphs) and of Algeria, with a view to foster national pride and an aspiration to renew their pristine glories. Important items were Algerian patriotic songs and the formula-creed: Islam is my religion, Arabic is my langage, Algeria is my fatherland (*waṭanī*).

Next to teaching, the Salafī *ʿulamāʾ* tried to infuse new life into the preacher's art, which had become a purely mechanical affair, divorced from reality and the needs of the people. Three of them stand out as orators: Ibn Bādīs, Ibrāhīmī and ʿUḳbī, who greatly differed in style, but they all captivated their audiences by their excellent command of classical Arabic, their missionary zeal and the novelty of their message.

As to the press, the Algerian Arabic papers, like their Middle Eastern *confrères* [see DJARĪDA], suffered from a number of handicaps and shortcomings: they were published by amateurs, their financial resources were precarious, their technical equipment rudimentary, their readership restricted owing to high illiteracy, their very existence in constant danger of suspension. Few had a lifespan of more than 10 years. They were the veteran conservative *Nadjāḥ*, the Salafī *Shihāb*, *Iṣlāḥ* and *Baṣāʾir*, the ʿAlīwī *Balāgh* and the neo-Ibāḍī *Wādī-Mīzāb*. Despite the above drawbacks, the Salafī organs could attain their goal, as theirs was a press of opinion, not of information. Apart from Islam, Arabic and Algerian national identity, two themes were of major concern to them: (1) Salafī ethics, or "moral rearmament"; and (2) the "struggle for the past" or their vision of history.

The re-evaluation of Islamic ethics by the Algerian reformists, like that of the eastern Salafīs, stemmed from a poignant realisation of the contrast between the present state of subjection to an infidel power and Arab might and glory in the days of the *Salaf*. The call was therefore for a revival of those vital moral forces that had led the Arabs to greatness but had lain dormant for centuries under the influence of Ṣūfī ethics, with its emphasis on contempt of the *dunyā*, unconcern with the morrow and future, fatalism, quietism and passive acceptance of things as they were. In order for a change to occur, the Muslim must return to a pure, strictly unitarian belief in God and trust in destiny, the fruit of a scrupulous observance of ritual, which in turn foster vitality, energy, willpower, self-reliance, activity, work, movement and speed (value of time), resolve, effort, perseverance and constancy, ambition, quest of fame, hope—all of which become key-words in the Reformist lexicon.

In the domain of social ethics, the Reformist efforts did not extend beyond the fostering of qualities making for social cohesion and the combatting of certain vices, such as prostitution, alcoholism and gambling—made doubly hateful because of the Ḳurʾānic ban and the influence of the Europeans on their spreading. They also campaigned against customs proscribed by Wahhābī-Salafī puritanism, such as ruinous spending on weddings and other celebrations, noisy funerals and popular *bidʿas* relating to saint-worship. Social reform in the modern acceptation was none of their concern. They preferred to leave it to the politicians and labour leaders when they did not actually oppose it, as they did in all major questions relating to women's liberation, such as the veil, polygamy, divorce and inheritance (as did Rashīd Riḍā). This cautious stance may be explained by the strong conservatism of Maghribī society, the bourgeois background of Ibn Bādīs, the conviction that social justice was provided by the Ḳurʾān and the *Sharīʿa*, the desire to safeguard the traditional structure of the Algerian family as the last bulwark of Islam against the disruptive influences of the West and last, but perhaps not least, dependence for financial support on the well-to-do classes (as suggested by Merad, 1967, 304).

Reformist history writing (Mīlī, Madanī, Fāsī; see Shinar, 1971) was guided by several basic assumptions: there have existed a polarity and a dichotomy between East and West since the dawn of history; the East is superior to the West in spiritual values, ethics and original culture; the ways of the West, spearheaded by Rome and the Latin heirs of her imperial traditions, are domination, oppression and exploitation; the Maghrib is part of the Semitic East by origins, spirit and culture; the Berbers, already Semiticised by the Phoenicians, merged with the Arabs into one nation through Islam and the Arabic language, stood up to every conqueror and proved their capacity to establish one of the greatest states in the world; Algeria had and still has her own national identity and history, despite Western efforts to dilute and obliterate them. Her history is illustrated by the following figures and dynasties: Jugurtha the Numidian, Rome's greatest foe (see M.-Ch. Sahli, *Le message de Yougourtha*, Algiers 1947); ʿUḳba b. Nāfiʿ, Arab conqueror of the Maghrib for Islam, buried in Algerian soil; the Rustamid [*q.v.*] imāmate of Tāhart (despite its being heretical Khāridjite); ʿAbd al-Muʾmin the Algerian [*q.v.*], the real founder of the Almohad caliphate; and the ʿAbd al-Wādid [*q.v.*] dynasty of Tilimsān (Tlemcen). Even the Banū Hilāl [*q.v.*], whose invasion of the Maghrib had been described since Ibn Khaldūn as the greatest catastrophe to befall the region in the Middle Ages, is seen by the Reformists as a blessing in disguise, because it permanently fixed its Arab character. The latest hero has been ʿAbd al-Ḳādir b. Muḥyī al-Dīn [*q.v.*], champion of Algerian resistance to the French.

(c) Morocco. Like the Tunisian Salafiyya, its Moroccan counterpart cannot compare with that of Algeria as regards scope, duration and political significance. Nor did it create a centralised organisation, collective leadership and a common action programme. It was the first manifestation of an awakened national-Islamic consciousness, a transitional phase between armed Berber resistance against the French and Spanish occupiers and the emergence of a political movement, the Young Moroccan Party, which was stimulated by the Rīf War and triggered by the notorious Berber Dahir (1930). It absorbed the Salafī ideology and its agents, but went far beyond it. Yet, though brief, Salafism proved remarkably effective, winning support and sympathy in high quarters including sultans, *mak̲h̲zen*, *ʿulamāʾ* of the Ḳarawiyyīn and the high bourgeoisie, but was seen by the French as a potential threat to their protectorate. Unlike the Algerian reformists, the Salafīs of Morocco did not have to create a separate national history and identity; existence of the latter was a historic fact, so they could dedicate themselves to the other major goals of Salafī reformism: the eradication of saint worship, especially the pilgrimages to saints' tombs with their attendant *bidʿas*, including the anthropolatrous and "naturistic" beliefs and practices of the lower Ṣūfī orders, and the reform of the traditional educational system in ʿAbduh's spirit. In addition, they campaigned against extravagant and ruinous wedding celebrations. A theme that came last to the fore, but then with dramatic effect, was France's Berber policy. In their drive against maraboutism, the Salafīs were preceded by two Wahhābī-inspired sultans, Sīdī Muḥammad b. ʿAbd Allāh and his son Mawlāy Sulaymān [see ʿALAWĪS]. The latter's anti-maraboutic "pastoral letter" (1811) involved him in a military struggle with the maraboutic establishment that nearly swept away the dynasty (1822). His immediate successors adopted a more cautious policy, but in May 1909 Mawlāy ʿAbd al-Ḥafīẓ, a strong Salafī sympathiser (he wrote a refutation of Tid̲j̲ānī claims) put to death, and closed the *zāwiyas* of, the Idrīsī *s̲h̲arīf* Muḥammad al-Kabīr b. ʿAbd al-Wahhāb al-Kattānī, chief of the Kattāniyya order and leader of the clerical opposition to the French. Al-Kattānī was suspected of plotting to overthrow the reigning dynasty and restore the Idrīsid one (E. Michaux-Bellaire, in *RMM*, v [1908], 393-423, and Laroui 1980, 405). The next sultan, Mawlāy Yūsuf, continued the same line. In 1924 the Council of *ʿUlamāʾ*, at his behest, decided to burn all writings of the Tid̲j̲ānī writer Muḥammad al-Nad̲h̲īfī. In 1933, his son and successor Sīdī Muḥammad b. Yūsuf banned all manifestations of the ʿĪsāwa order, and in 1946 he prohibited the founding of new orders or opening of new *zāwiyas* without prior permission.

Even Muḥammad b. ʿAbd al-Karīm, leader of the Rīf War (1921-6) espoused the Salafī ideology and tried to spread it in the Rīf [*q.v.*] in order to bolster Rīfī morale and counteract the defeatist propaganda of some Ṣūfī orders, burning, as a reprisal, two of their *zāwiyas* (Shinar 1965, 169 ff.). This attitude of the orders was branded as treason by the Young Moroccans and deepened their enmity towards the entire Ṣūfī establishment. After the Rīf War, their chief maraboutic target became the new head of the Kattāniyya, al-Ḥād̲j̲d̲j̲ ʿAbd al-Ḥayy al-Kattānī. First signs of an anti-maraboutic trend among Moroccan intellectuals appear in the second half of the 19th century: the historian Aḥmad b. K̲h̲ālid al-Nāṣirī al-Salāwī (d. 1897 [*q.v.*]), who declared himself an enemy of pilgrimages to saints' tombs (*mawsims*) (E. Lévi-Provençal, *Hist. des Chorfa*, Paris 1922, 368), and ʿAbd Allāh b. Idrīs al-Sanūsī, *ʿālim* of the Ḳarawiyyīn and member of the Royal Council under Mawlāy Ḥasan (1873-1894), who brought back some Salafī ideas from his travels in the East and tried to propagate them in Morocco, but with little success.

Far more effective was the action led by Abū S̲h̲uʿayb b. ʿAbd al-Raḥmān al-Dukkālī, dubbed "the Moroccan ʿAbduh" (1878-1937). He studied at the Azhar around 1900, became Vizier of Justice, taught ʿAbduh's doctrine at the Ḳarawiyyīn and in Rabāṭ, left again for the East after 1912, expounded ʿAbduh's teachings at Mecca and befriended Ras̲h̲īd Riḍā and his *Manār* group, as well as the "Father of Pan-Arabism", the Druze *amīr* S̲h̲akīb Arslān. After the First World War, he returned to Morocco and toured the country with a group of followers, preaching, felling sacred trees and smashing sacred stones. His eloquence and charisma earned him a wide following. Among his disciples the most militant were (a) Muḥammad G̲h̲āzī, a native of Miknās (Meknès) who

clashed with ʿAbd al-Ḥayy al-Kattānī (see above) in 1920, was expelled from the Ḳarawiyyīn in 1923 and founded a "free school" in 1926. He was noted as a nationalist poet and *faḳīh*; and (b) ʿAllāl al-Fāsī (1907-74 [*q.v.* in Suppl.]), *ʿālim*, of the Ḳarawiyyīn, fervent patriot, poet and teacher, became the foremost nationalist leader from 1929 onwards, thus embodying in his person the transition from Salafiyya to nationalism. The philosopher M.ʿA. Lahbabi (*Du clos à l'ouvert*, Casablanca 1961, 65) calls him the "theorist of the Salafiyya", by virtue of his book, *Self-criticism* (*al-Naḳd al-dhātī*, Cairo 1952).

Similar groups to those of Rabat and Fās were formed at Marrākush, Tiṭṭāwīn and Ṭandja. In the two latter towns, Salafī activity centred around Muḥammad Dāwūd, historian of Tiṭṭāwīn, and the Bennūna family, whose head, al-Ḥādjdj ʿAbd al-Salām, ex-Vizier of Justice, was dubbed "Father of Moroccan nationalism".

Finally, there must be mentioned the Islamic activist Muḥammad Makkī al-Nāṣirī, scion of a noted Rabāṭī family (b. 1904). He studied in Cairo, returned to Morocco in 1927, was expelled in 1930 following his campaign against the Berber Dahir and presented an indictment sheet against France's Berber policy to the pan-Islamic congress of Jerusalem (December 1931). In 1937 he founded and led the Moroccan Unity Party (PUM). For his early reformist thinking we have his pamphlet, entitled *Iẓhār al-ḥaḳīḳa wa-iblāgh al-khalīḳa*, which called for a reform of Muslim society by a return to true Ṣufism based on practical ethics (see L. Massignon, in *REI*, i [1927], 33).

The other major field of Salafī activity was the reform of the educational system, more especially the establishment of "free schools" (*madāris ḥurra*), also called "renovated Ḳurʾānic schools". The Salafīs were neither the first nor the only ones to create them. J. Damis distinguishes four categories among the "founding fathers" and patronage committees: merchants, Salafīs, *ʿulamāʾ/fuḳahāʾ* and members of some Ṣūfī orders. They shared an awareness of the backwardness of the traditional Ḳurʾānic school (*msīd*), the example of reformed schools in the East (Egypt and Syria), a cultural nationalism and a moral reservation with regards to the public school with its emphasis on French and modern subjects and its secular atmosphere, at the expense of Arabic, Ḳurʾān and Islam. Yet they were influenced by the public school in matters of organisation, management, methodology and equipment. The first free schools opened in 1919 in Rabāṭ, Fās and Tiṭṭāwīn. By the late 1940s there were 121 free schools with 14 annexes and 26,800 students. The teaching staff came mostly from the Ḳarawiyyīn and the pupils from the urban middle class. Their curricula varied. Thus the Bū-Hlāl school (Rabāṭ 1918) claimed to offer courses in modern sciences, history, geography, French and gymnastics, while the Marrākush school (1952) taught mainly Ḳurʾān, Arabic grammar, some *fiḳh*, arithmetic and French. The overall effect of the free school in Morocco was that it served as a reactor against French culture, a vehicle of modern Arabic culture, a precursor and (later) auxiliary of Moroccan nationalism, and a promoter of, and (later) brake on, social mobility and mutation.

The importance of the Salafiyya in Morocco has been variously assessed. E. Dermenghem, a keen and sympathetic observer of Maghribī Islam, marvelled in 1933 at the speed with which the Salafiyya had succeeded in drastically reducing the influence of the marabouts (al-Fāsī, 1948, 155). ʿA. Laroui, the Moroccan cultural historian, holds that from 1912 to 1925, Salafism had become the common ideology of the sultan, the central *makhzen*, the Fāsī *ʿulamāʾ* and the bourgeoisie, had rendered exclusive the sultan's religious authority, had inspired Bin ʿAbd al-Karīm's reform drive against local Berber custom (yet failed to win the support of the marabouts), with its methodology serving all schools of thought and all interest groups (Laroui 1980, 428-9). The Moroccan philosopher M.A. Lahbabi (al-Ḥabābī), on the other hand, finds that despite all its efforts and successes, the results of Salafī action were disappointing, owing to the upheavals engendered by the industrialisation of the modern Moroccan cities (*Du clos à l'ouvert*, Casablanca 1961, 65).

(P. SHINAR)

2. In Egypt and Syria.

The early history of the Salafiyya in both Egypt and Syria (in the sense of *Bilād al-Shām*, Greater Syria) is closely connected. Muḥammad ʿAbduh's [*q.v.*] stay in Beirut (1882-8, with lengthy interruptions) gave him the opportunity to make some of the *ʿulamāʾ*, civil servants and intellectuals there familiar with his own and with al-Afghānī's [*q.v.*] ideas about the necessity and the contents of a reform of Islam [see IṢLĀḤ, and also Delanoue, in *Bibl.*].

Some years later, a considerable number of Syrian adherents and spokesmen of the Salafiyya, among them Ṭāhir al-Djazāʾirī and Djamāl al-Dīn al-Ḳāsimī (see below), travelled to Egypt. Some of them stayed there for a considerable length of time, some even taking up domicile in Egypt permanently and influencing, by their activities as publicists and in other ways, the discussion of Islamic reform, even far beyond Syria and Egypt.

Notwithstanding this mutual influence between Syrian and Egyptian Salafīs, manifesting itself, among other things, by lively correspondence, reciprocal visits, lecture tours, letters to the editor and book reviews, encounters at Pan-Islamic congresses [see MUʾTAMAR] etc., the Salafiyya attained in each

region a certain degree of distinct and independent development. This was the case e.g. regarding some differences in emphasis within the intended reform concerning the perception of certain phases of Islamic history, and also with regard to the historical role of the *madhāhib*. With individual authors, these differences might reach from nuances to clear divergences. But the basic positions of the Salafiyya in Egypt and in Syria are to a large extent the same [see IṢLĀḤ, esp. C. *The principal doctrinal positions*].

(a) Egypt. The origin and early development of the Salafiyya in this country is above all connected with the names of al-Afghānī, ʿAbduh, al-Kawākibī and Rashīd Riḍā [*q.vv.*]. With *al-Manār* [*q.v.*], the last mentioned created in Cairo in 1898 the most influential organ of the Salafiyya. From 1926 onwards, *al-Manār* was joined by *al-Fatḥ* (Cairo), a periodical of similar tendency which, after the death of Rashīd Riḍā and the cessation of *al-Manār* in 1935, was considered until 1948 the most important (though not the only) journalistic forum of the Salafiyya in Egypt (see al-Djundī, *Taʾrīkh*, ii). Its editor and main author, Muḥibb al-Dīn al-Khaṭīb [*q.v.* in Suppl.], had founded, together with his Syrian compatriot ʿAbd al-Fattāḥ Ḳaṭlān (d. 1931), the *Maṭbaʿa Salafiyya* (including a bookshop), a printing press whose production reflects all the essential desiderata of the movement (see *Fihrist al-Maktaba al-Salafiyya*, ed. Ḳuṣayy Muḥibb al-Dīn al-Khaṭīb, Cairo 1399/1978-9).

In the years 1927-8 the development of the Salafiyya in Egypt entered a new phase. In this context, one may speak of the rise of a Neo-Salafiyya (Schulze, 90 ff., see Index, 499). With the *Djamʿiyyat al-shubbān al-muslimīn* and the Muslim Brotherhood [see AL-IKHWĀN AL-MUSLIMŪN] there now came into being for the first time organisations that wanted to bring the goals of the Salafiyya down from the level of an intellectual discourse to be spread among the masses of the people by way of the *daʿwa* [*q.v.*].

Characteristic for these and many other organisations of a later date, some of them radical and militant, are their relatively strict internal structure—often reminiscent of the tradition of the *ṭuruḳ* [see ṬARĪḲA]—, the authority of an *imām* or a *murshid* [*q.vv.*], and the emphasis on preserving a distance from the religious establishment and (even more so) from the government. In some cases the creation of secretly operating armed groups can be added to the list. The latter in particular consider themselves as a kind of avant-garde of the true *umma*; they justify their actions (including assaults against politicians and other presumed or real opponents) as *djihād* [*q.v.*; see also MUDJĀHID. 3. In modern Arab usage]. However, it is not only these, but also—and rightly so—other 'moderate' Islamic movements, intellectual circles and individual authors in Egypt that claim the spiritual heritage of the Salafiyya.

Central topics in the Salafiyya literature in Egypt were the necessity of a reform of Islam on the one hand and resistance to secularisation on the other. In the light of these two problems, the authors of the Salafiyya treated a number of specific questions, such as western imperialism, the role of the Christian missions and of Orientalism [see MUSTASHRIḲŪN], Zionism and Freemasonry [see FAR-MĀSŪNIYYA in Suppl.], foreign educational institutions and the westernisation of Egyptian culture, state universities, the Azhar [*q.v.*] and the necessity of its reform, the role played by the Ṣūfī orders (in the eyes of the Salafiyya a negative one), the question of the caliphate [see KHALĪFA] and the danger of importing the ideas of Kemālism [see ATATÜRK].

Some authors made it their aim to attack incessantly certain writers whom they considered as particularly dangerous representatives of secularisation and westernisation. A favourite target of their criticism was Ṭāhā Ḥusayn [*q.v.*] and his role as a man of letters, literary critic, historian of early Islam and cultural policy-maker (see e.g. Muṣṭafā Ṣādiḳ al-Rāfiʿī, *Taḥta rāyat al-Ḳurʾān*, [1]Cairo 1926, [7]1974; Anwar al-Djundī, *Ṭāhā Ḥusayn, ḥayātuhu wa-fikruhu fī mīzān al-islām*, [2]Cairo 1977). In the discussion about the authenticity of *ḥadīth* literature, which had flared up because of the influx of orientalist writings, the authors of the Salafiyya also took sides fervently (see G.H.A. Juynboll, *The authenticity of the Tradition literature. Discussions in modern Egypt*, Leiden 1969).

In principle, the Salafiyya in Egypt was and has remained oriented towards Pan-Islamism [*q.v.*]. On the other hand, some of its authors showed already in the 1920s, and even more so during the following two decades, a tendency towards blending Islam and Arab nationalism [see ḲAWMIYYA. i]. Muḥibb al-Dīn al-Khaṭīb and others increasingly emphasised in their writings the close relation between *ʿurūba* and Islam and the particular role of the Arabs in Islamic history. They described the Arab fatherland as a bastion of Islam and the Arab nation as an instrument of its political salvation in the present time. Thus Pan-Arab unity [see PAN-ARABISM] is the prerequisite for the union of all Muslims and therefore the immediate goal. Many authors of the Salafiyya ascribed to Egypt the leading role for achieving Arab unity, and therefore fought strongly against an Egyptian nationalism which limited itself to the valley of the Nile. Unintentionally, they encouraged in the 1930s and 1940s the rise of an essentially secular Arab nationalism, whose spokesmen up to Djamāl ʿAbd al-Nāṣir [*q.v.* in Suppl.] made selective use of certain arguments of the Egyptian Salafiyya (see Gershoni in *Bibl.*).

During the first two years after the "Free Officers" had seized power in 1952, the Salafiyya in Egypt had relatively favourable possibilities to develop. However, already at that time internal differences of opinion about specific questions became visible, for instance in the appraisal of hereditary monarchy and its role in the history of Islam (Ende, 99-103). After the Muslim Brotherhood had been banned in 1954, the public influence of the Salafiyya declined and many of its followers left the country (mainly to Saudi Arabia and Kuwayt). However, individual Salafīs such as Shaykh Muḥammad al-Ghazālī and Maḥmūd Muḥammad Shākir occasionally found the opportunity to express themselves in books or journals (e.g. in *al-Risāla*), for instance, in connection with the repeated campaigns of the government against the Marxist Left. Many writings of earlier or contemporary Salafiyya authors also appeared to be appropriate for providing a religious-legal justification for "Arab socialism" which was propagated by the State [see ISHTIRĀKIYYA]. For this reason, a description of Islamic socialism by the leader of the Syrian Muslim Brotherhood, Muṣṭafā al-Sibāʿī (d. 1964) could also be published in Cairo (*Ishtirākiyyat al-islām*, [1]Damascus 1959, [2]Damascus and Cairo 1960, [3]Cairo n.d., in the series *Ikhtarnā laka*; see for this, Sami A. Hanna and G.H. Gardner, *Arab socialism*, Leiden 1969, esp. 149-71).

However, the limits of a political activity in the sense of the (Neo-)Salafiyya, apart from the "Arab Socialist Union", were very narrowly prescribed. The government reacted very harshly indeed at alleged or real conspiracies, as was clearly shown by the execution of Sayyid Ḳuṭb [*q.v.*] in 1966.

After the war of June 1967, and even more so after the death of Djamāl ʿAbd al-Nāṣir in 1970, the ideas of the Salafiyya or of the Neo-Salafiyya (see above) saw a new boost in connection with the revival of ancient militant organisations and the emergence of new ones (see the studies by Carré, Jansen and Kepel, mentioned in the *Bibl.*).

(b) Syria. The origins of the Salafiyya in Syria are connected with the names of Ṭāhir al-Djazāʾirī and Djamāl al-Dīn al-Ḳāsimī in the first place. The circle of friends and disciples which formed around al-Djazāʾirī directly or indirectly influenced almost all the Sunni Muslim intellectuals who after the First World War became prominent in Syria. Having sought the support of the Ottoman Turkish reformers and, from 1908 onwards, of the Young Turks in particular, most of the Syrian Salafīs, already from 1909-10 onwards turned to Arab nationalism (see Commins, 124 ff.). Many of them played a role in the Arab clubs and movements of the time (including the secret organisations), and some of them, like ʿAbd al-Ḥamīd al-Zahrāwī (executed in 1916), are counted among the martyrs of the national movement against Ottoman Turkish domination (Adham al-Djundī, *Shuhadāʾ al-ḥarb al-ʿālamiyya al-kubrā*, Damascus 1960; E. Tauber, *The emergence of the Arab movements*, and idem, *The Arab movements in World War I*, both London 1993).

Ṭāhir al-Djazāʾirī, born in Damascus in 1852, was the son of a religious scholar who had emigrated from Algiers to Syria in 1846-7. Under him and under the Ḥanafī scholar Shaykh ʿAbd al-Ghanī al-Maydānī (d. 1881), Ṭāhir acquired a solid education in the religious sciences, but—already early on—he also developed an interest in the modern natural sciences. Supported by Midḥat Pasha [*q.v.*], he was, from 1877 onwards, engaged in building up a modern educational system in Syria (between 1879-83 as general supervisor for the elementary schools). From 1880 onwards, the above-mentioned circle of friends and disciples (*ḥalḳa*) began to form around him. Between 1907-19 Shaykh Ṭāhir lived in exile in Egypt. He died in Damascus in January 1920. Among his achievements are counted, among other things, the foundation (or new arrangement) of the Ẓāhiriyya library in Damascus and of the Khālidiyya library in Jerusalem.

Shaykh Ṭāhir's publications consist mainly of textbooks for the state schools. They reflect his religious-reformist ideas only indirectly. He preferred to expound and discuss his thoughts in his *ḥalḳa*. Djamāl al-Dīn al-Ḳāsimī (1866-1914), with whom Ṭāhir was in close contact, especially in the years 1906-7, proceeded differently. In most of his works (several of them have been published only posthumously) we meet al-Ḳāsimī as a resolute reformer (see the list of his writings, with commentary, in Ẓāfir al-Ḳāsimī, 632-88). His repeated criticism of *taḳlīd* and of the rigid adherence to the four Sunnī schools of law (*al-taʿaṣṣub li 'l-madhāhib*) laid him open to the accusation that he wished to found his own *madhhab*. The discussion he triggered on the advantages or dangers of *lā-madhhabiyya* is going on in Syria until the present day (Wild, *Muslim und Madhhab*; cf. Muḥammad Saʿīd Ramaḍān al-Būṭī, *al-Salafiyya, marḥala zamaniyya mubāraka, lā madhhab islāmī*, Damascus 1988).

From its beginning, the Syrian Salafiyya has never formed an ideologically homogeneous bloc. Rather, one recognises in individual representatives of the movement quite different positions about particular questions. However, their criticism of many forms of *taṣawwuf*, as well as of many popular religious customs and notions, inspired by Ibn Taymiyya [*q.v.*] and his school, is more or less uniform. Examples are ʿAbd al-Ḥamīd al-Zahrāwī's *al-Fiḳh wa 'l-taṣawwuf* (Cairo 1901) and al-Ḳāsimī's *Iṣlāḥ al-masādjid min al-bidaʿ wa 'l-ʿawāʾid* (Cairo 1923, ²Beirut 1970). Likewise in the tradition of Ibn Taymiyya and the neo-Ḥanbalī school and in agreement with the sympathies of the Salafiyya for the Wahhābiyya is the generally critical appraisal of the Shīʿa and its role in Islamic history, though not all Syrian Salafīs are uniformly severe in their judgment (Laoust, *Essai*, index, 729; Ende, 59-75; Commins, 84-5). In the same context belongs the endeavour of some early Salafiyya authors in Syria and their disciples to glorify the empire of the Umayyads of Damascus as a truly *Arab* one, and to defend it against accusations by many historians and other authors of the past (Ende, esp. 64-75, 91 ff.). It was above all Muḥammad Kurd ʿAlī [see KURD ʿALĪ] who distinguished himself in this respect and who made it possible that this and other positions of the Salafiyya could be represented in the publications of the Arab Academy of Damascus, founded and directed by him for many years [see MADJMAʿ ʿILMĪ. 2a. *Syria*] (Hermann, esp. 207 ff.).

The "Arabisation of Islam", which can be observed later in the Egyptian Salafiyya (see above), is in part characterised by arguments which, already before the First World War, were discussed by members of the Syrian Salafiyya and have been propagated in Egypt by such authors as Muḥibb al-Dīn al-Khaṭīb, a disciple of Ṭāhir al-Djazāʾirī.

As in Egypt, the ideas of the Salafiyya have been taken up and converted into political action by radical Muslim organisations also in Syria. This holds true in the first place for the Muslim Brotherhood which in the middle of the 1940s emerged from the fusion of several Islamic societies. The leaders of the Brotherhood, above all Muṣṭafā al-Sibāʿī, Maʿrūf al-Dawālībī and Muḥammad al-Mubārak, found over several years the opportunity to make their ideas public in journals such as *al-Muslimūn* and *al-Tamaddun al-islāmī*. Having been banned for the first time in 1952, the Muslim Brotherhood and similar organisations of the militant Neo-Salafiyya of Syria have been suppressed in various degrees and at times persecuted with great harshness. Many of their members went into exile to such countries as Jordan and Saudi Arabia (see Reissner, Carré-Michaud and Abdallah).

ṢALĀḤ ʿABD AL-ṢABŪR (1931-81), leading Egyptian poet, critic, playwright, translator and journalist. He was born in al-Zaḳāzīḳ in the Delta; in his early youth he learnt the Ḳurʾān by heart and read the classical poets and the modern romantics such as Ibrāhīm Nādjī and Maḥmūd Ḥasan Ismāʿīl. Later on, during the 1940s he joined the Ikhwān al-Muslimūn [*q.v.*], but soon became disenchanted with their ideology and became interested in secular social realism, a view which he expressed in his *al-Nās fī bilādī* ("The people in my country").

Ṣalāḥ graduated from Cairo University in 1951 and worked at the Ministry of Education, but left it for journalism. He was an editor at the *Rūz al-Yūsuf* weekly journal and assistant literary editor of the Literary Supplement of *al-Ahrām*. He published in various leading Arabic newspapers, and also served in government positions, being director of *al-Hayʾa al-Miṣriyya al-ʿĀmma li 'l-Kitāb* until his premature death.

Ṣalāḥ acquired a great enthusiasm for Western literature. He read Shakespeare's plays and the romantic poets, followed by T.S. Eliot and Yeats, these last two poets making the deepest influence on his poetry, and versified dramas and criticism. He was one of the first Egyptian poets who adopted *vers irregulier* (1951), which the ʿIrāḳī poets termed "free verse", a method of versification which is based upon an irregular number of feet (*tafʿīl*) and an irregular rhyme scheme.

In Ṣalāḥ's poetry, sadness and melancholy prevail. His first anthology, *al-Nās fī bilādī*, bears clear influences of social realism, using simple diction similar to ordinary speech, as well as the poetic technique and ideas of T.S. Eliot. He depicted popular daily life and the emptiness, hard life and poverty of the ordinary urban and country Egyptians. Moreover, he was among the few Arab poets who were able to present Arabic poetry with a successful example of a poem written in blank verse (*shiʿr mursal*) entitled *Abī* ("My father") (*al-Nās*, 55-8). This is because he was aware of the importance of using enjambement (*tatmīm*) between the verses, a poetic technique which was considered a fault (*ʿayb*) in classical poetry. However, there are also clear influences in the motives and images, and even in wording, from Eliot's *The waste land, The hollow men, Ash Wednesday*, and *The love song of J. Alfred Prufrock*, upon Ṣalāḥ's poetry, which was published in several other anthologies.

In drama, Ṣalāḥ was among the leading Arab writers of plays in blank verse. He was acquainted with dramatic literature through reading the plays of Tawfīḳ al-Ḥakīm and ʿAlī Aḥmad Bākathīr in Arabic, and of Shakespeare, Oscar Wilde and Bernard Shaw and Greek drama in English, though he did not see any play performed on stage till he came to Cairo at the age of twenty.

His dramas deal with the tyranny and oppression exercised by the authorities and the responsibility of art and literature towards social institutions. His characters are engaged tragic heroes or cowardly conspirators who betray their values and join forces with the authorities. However, being a talented poet, his poetic style and images save him from direct and prosaic expression. His first drama, *Maʾsāt al-Ḥallādj* ("The tragedy of al-Ḥallādj") (1964), bears the influence of Greek tragedy. The play deals with the engagement of the intellectual in a historical frame, putting forward the view that al-Ḥallādj [*q.v.*] was crucified in consequence of what were considered revolutionary action, blasphemous ideas and utterances, as in the cases of Socrates and Jesus. There are clear influences from Eliot's *Murder in the Cathedral* upon this play, especially in the motives of martyrdom, justice, and the struggle between the state and the religious authorities.

The second play by Ṣalāḥ ʿAbd al-Ṣabūr is *Musāfir layl* ("Traveller at night") (1969), in which he depicted the role of social and political institutions in destroying the individual. In his third play, *al-Amīra tantaẓir* ("The Princess is waiting") (1969), he dealt with the idolising of leaders; while in his fourth play, *Laylā wa 'l-madjnūn* ("Layla and the madman") (1970), he was concerned with poverty, the oppression of women and the spiritual emptiness and impotency of intellectuals in Egypt before the revolution of 1952, which encouraged political corruption. In his mythological play *Baʿda an yamūt al-malik* ("After the death of the King") (Beirut-Cairo 1973), he considered the political conditions in Egypt in the seventies, calling for a revival of life through death.

In his youth, Ṣalāḥ was influenced by the poets of the Mahdjar [*q.v.*]. In his spiritual autobiography *Ḥayātī fi 'l-shiʿr* ("My life in poetry") he revealed his theory of poetics which was developed under the influence of Plato, Aristotle and Nietzsche, giving them his own interpretation; thus he claimed that Aristotle's catharsis takes place at the time of the creative process and that it does not only purify the soul from fear and pity but also from the emotion of revenge.

Ṣalāḥ ʿAbd al-Ṣabūr wrote, beside his four translations of books by Ibsen, Eliot and Lorca, several collections of articles in which he discussed his ideas and theories on literature, politics, society and arts, as well as European and American theatre and literature, all presented in a clear and elegant style, in such collections as *Aṣwāt al-ʿaṣr* ("The voices of the age") (1961) (on European and American literature and theatre); *Mādhā yabḳā minhum li 'l-tārīkh* ("Which memory will they leave after their death?") (1962) (studies on the achievements of Ṭāhā Ḥusayn, al-ʿAḳḳād, Tawfīḳ al-Ḥakīm and al-Māzinī); and several others.

(S. MOREH)

ṢALĀḤ AL-DĪN, AL-MALIK AL-NĀṢIR ABU 'L-MUẒAFFAR YŪSUF B. AYYŪB (SALADIN), the founder of the dynasty of the Ayyūbids [*q.v.*], and the champion of the *djihād* against the Crusaders (born 532/1138, died 589/1193).

Ṣalāḥ al-Dīn, or Saladin as he is normally known in Europe, was a Kurd, whose family originated from Dvīn in Armenia. His father Ayyūb and his uncle Shīrkūh [*q.v.*] found service in the Saldjūḳ state, and Saladin was born at Takrīt on the Tigris above Baghdād while Ayyūb was acting as governor there. The family transferred its services to Zangī [*q.v.*] and then to his son and successor in Aleppo, and later also ruler of Damascus, Nūr al-Dīn Maḥmūd [*q.v.*]. In Saladin's early manhood (the precise date is doubtful), he followed his elder brother Tūrānshāh in the post of prefect (*shiḥna*) at Damascus. Shīrkūh persuaded Nūr al-Dīn to sanction a series of interventionary expeditions to Egypt, where the Fāṭimid caliphate was threatened by the forces of the kingdom of Jerusalem. On three occasions Zangid armies entered Egypt, in 559/1164, 562/1167 and 564/1169, the last occasion resulting in Shīrkūh's taking power as Fāṭimid vizier. During these expeditions Saladin, though generally unwilling to go, played a significant role, particularly in defending Alexandria besieged during the second campaign.

Shīrkūh soon died (22 Djumādā II 564/23 March 1169) and within a short while, by a combination of pressure and largesse, Saladin emerged to follow him as commander of the Syrian force and as vizier appointed by the palace. It is with this appointment that, in the style of Fāṭimid viziers, he adopted the title al-Malik al-Nāṣir. It is said that Saladin won supporters by being generous "as though they were his kin", a revealing phrase. Extravagant generosity was to remain an instrument of his policy, though not one that passed without criticism from his hard-pressed administrators, such as al-Ḳāḍī al-Fāḍil [*q.v.*]. Some early sources suggest that before this juncture in his life Saladin was lax in his religious observance and lacking in moral seriousness, but that, with his new responsibilities, he professed "repentence" (*tawba*) and developed a sense of purpose. This has all the hallmarks of a stock theme.

The next few years were spent securing his position in Egypt against the residual forces of the Fāṭimid caliphate (e.g. by crushing the Sudanese regiments in 564/1168), and against external attacks on Egypt (by defeating the joint Crusader-Byzantine attempt on Damietta in 565/1169). Nūr al-Dīn's demands for more active military support and for substantial financial contributions towards his plans of reconquest from the Franks were not answered by Saladin. The contradictions inherent in Saladin's position were clear. Whether or not he was loath to suppress the Fāṭimid caliphate because his position as Fāṭimid vizier gave him independent authority, that step, demanded by Nūr al-Dīn, was finally taken in 567/1171 with little or no public disturbance, and Egypt became officially Sunnī and returned to ᶜAbbāsid allegiance. The title *Muḥyī dawlat amīr al-mu'minīn* ("Reviver of the empire of the Commander of the Faithful") was to be frequently employed in Saladin's inscriptions.

Nūr al-Dīn without doubt remained discontented with the situation. He sent Ibn al-Kaysarānī in 569/1174 to audit the finances of Egypt, which, if one believes Ibn Abī Ṭayy, almost led to an open breach, and Nūr al-Dīn was perhaps contemplating a military expedition to impose his authority directly, when in Shawwāl/May of that same year he died. The nature of any difference between Saladin and Nūr al-Dīn is difficult to gauge, granted the partiality and *ex post facto* nature of our sources.

Nūr al-Dīn's successor, Ismāᶜīl, was young and inexperienced. Damascus and Aleppo fell to opposing cliques, willing to make concessions to the Franks to win their support or divert their attacks, and the branch of the Zangid house that ruled at Mawṣil showed expansionist ambitions. At this juncture Saladin took the important step that marked out the rest of his life. He responded to the invitation of the *amīr* Ibn al-Muḳaddam and took over Damascus (Rabīᶜ II 570/October 1174). He presented himself as the true moral heir of Nūr al-Dīn and the most fit and disinterested protector of his successor, Ismāᶜīl. Pro-Zangid sources attacked him as an adventurer and usurper, a self-seeking upstart Kurd who would thrust aside the descendants of his former master. The question of motives, possibly irrelevant in the last resort, cannot be satisfactorily answered. Ambition and a consciousness of personal worth and fitness for a task are not incompatible with a high moral purpose.

If the Franks were ever to be expelled, it was necessary to unite large Muslim forces. As at least one Shāfiᶜī *faḳīh* recognised soon after the establishment of the Crusader states, the union of the forces of Egypt, Syria and the Djazīra was likely to be needed (E. Sivan, *Genèse de la contre-croisade, un traité damasquin du début du xii^e siècle*, in *JA*, ccliv [1966], 213). To create such a union necessarily involved whoever sought to do that in a policy of expansion, as it had involved Nūr al-Dīn. The problem for Saladin, which had also existed for Nūr al-Dīn, was that in order to pursue such a union he had to wage war on Muslims to compel their submission if they rejected the call to perform their duty in the *djihād*, and he had either to conclude agreements with the Franks to secure himself on that front during his campaigning absences in the Djazīra or risk their damaging raids, in both cases leaving himself open to criticisms of neglecting the *djihād*.

With Damascus gained, Ḥims, Ḥamāt and Baᶜlabakk came quickly under Saladin's control, but in Radjab 570/January 1175 he withdrew from a short siege of Aleppo when faced by combined Zangid counter-moves. Having first offered to give up all but Damascus and to accept the nominal suzerainty of

Ismāʿīl, Saladin gained a victory over the Zangid forces at the Horns of Ḥamāt in Ramaḍān 570/April 1175, after which a peace was made, and Saladin also received a diploma from the caliph, granting him delegated authority over Egypt and Syria, except for Aleppo and its dependencies. In S͟hawwāl 571/April 1176 the combined Zangid armies, having taken the offensive despite the treaty of the previous year, were defeated for the second time at Tall al-Sulṭān, near Aleppo, but Saladin was still unable to force the city's surrender. Saladin's gains, including some north of Aleppo, were confirmed by a new treaty in Muḥarram 572/July 1176. However, the ruling junta around al-Ṣāliḥ Ismāʿīl in Aleppo, and the other Zangid princes, remained impervious to Saladin's propaganda and suspicious of his aims.

During these campaigns Saladin suffered two attacks by Ras͟hīd al-Dīn Sinān's [*q.v.*] Ismāʿīlī Assassins, prompted by his Aleppan enemies, but subsequently, after some show of force in Assassin territory, he seems to have established a *modus vivendi* with them (see B. Lewis, *Saladin and the Assassins*, in *BSOAS*, xv [1953], 239-45).

His campaigning against the Franks was limited at this time and included the overconfident raid into Palestine that ended in defeat between Ascalon and Ramla at the unidentified "Mons Gisardi" in D̲jumādā 573/November 1177. This lesson was taken to heart, but it was an inauspicious beginning to any plan of making good his claim to be Nūr al-Dīn's successor in the prosecution of the *d̲jihād*. Better success followed in Muḥarram 575/June 1179 with the defeat of King Baldwin at Mard̲j ʿUyūn and the destruction of Bayt al-Aḥzān or Jacob's Castle in Rabīʿ I/August of that year.

During the next five or six years, Saladin was mostly involved in Mesopotamian affairs, which were of great complexity and are too complicated to be treated exhaustively here. On several occasions Saladin was able to make gains on being invited to intervene in disputes or after appeals for assistance. In 576/1180 the Artuḳid ruler of Ḥisn Kayfā, Nūr al-Dīn Muḥammad b. Ḳara Arslan, appealed to him for help in a dispute with Ḳilid̲j Arslan [*q.v.*], the Rūm Sald̲jūḳid, whose advance against Raʿbān had been checked the year before by Saladin's nephew, Taḳī 'l-Dīn ʿUmar. Saladin also intervened in Zangid politics after the death of Sayf al-Dīn G̲hāzī, the ruler of Mawṣil, in Ṣafar 576/June 1180, and refused to acknowledge the succession of his brother, ʿIzz al-Dīn, arguing that he was acting with the authority granted him by the caliph. In Aleppo al-Ṣāliḥ Ismāʿīl died during Rad̲jab 577/December 1181. Saladin was anxious that Aleppo and Mawṣil should not be combined in hostile hands. In Muḥarram 578/May 1182 he marched from Cairo, never to return again. His main preoccupation was Aleppo, which in the meantime ʿIzz al-Dīn had exchanged for Sind̲jār [*q.v.*] with his brother, ʿImād al-Dīn G̲hāzī. After some operations against the Franks, including a major but inconclusive battle near Baysān and an opportunistic assault on Beirut, Saladin arrived at Aleppo in Muḥarram 579/September 1182. He embarked on negotiations rather than active military measures. However, he was then invited by sympathisers, chiefly Gökburi of Ḥarrān, to cross the Euphrates, where he accepted the alliance, or received the surrender, of Begteginid, Artuḳid and Zangid possessions, Sarūd̲j, Edessa, Raḳḳa, al-K̲hābūr, and Nisibis. Mawṣil itself was then besieged, perhaps more in the hope of exerting pressure on ʿIzz al-Dīn in the continuing diplomatic and propaganda war than of reducing the city. Withdrawing from Mawṣil, Saladin captured Sind̲jār from ʿIzz al-Dīn before going into winter quarters at Ḥarrān.

In the following spring, Reynald de Chatillon launched his disturbing but ultimately unsuccessful naval raid into the Red Sea. The countering of this threat to the Ḥid̲jāz gave Saladin further propaganda opportunities. Beyond the Euphrates he resolutely confronted a force gathered from Mawṣil and its northern neighbours, K̲hilāt, Bitlīs and Mārdīn, which disbanded ineffectually. This was followed by Saladin's capture with caliphal sanction of the powerful fortress of ʿĀmid (Dhu 'l-Ḥid̲jd̲ja 578/April 1183), which he gave, as promised, to his vassal Nūr al-Dīn Muḥammad. This constituted a great moral and propaganda coup. As a result of this the other Artuḳid cities of Mayyafāriḳīn and Mārdīn submitted to Saladin.

Aleppo, more isolated then ever, was once more put under pressure, and in Ṣafar 579/June 1183 ʿImād al-Dīn, rather against the will of his *amīrs* and the populace, agreed to surrender the city and receive back Sind̲jār along with other towns in addition. He also agreed to provide troops for Saladin's campaigns.

Having achieved this important goal, Saladin led large forces, gathered as a result of the recent extensions of his authority, into the territory of the kingdom of Jerusalem during the remainder of 579/1183, but provoked no decisive field engagement. There was also an unsuccessful attack on al-Karak [*q.v.*], followed by a second attack in D̲jumādā I-II 580/August-September 1184. Apart from the wish to punish Reynald, the lord of Transjordan, for his raids, the capture of al-Karak would mean an improvement in communications between Egypt and Damascus.

Saladin found another opportunity to move against Mawṣil when Zayn al-Dīn Yūsuf of Irbil called upon him for help against ʿIzz al-Dīn and the latter's new ally, Ḳizil Arslān, the Atabeg of Ād̲harbayd̲jān. Saladin arrived before Mawṣil in Rabīʿ II 581/July 1185 to besiege it for the second time. This same summer, some of the northern princes, S̲hāh Arman b. Sukmān of K̲hilāt and Nūr al-Dīn Muḥammad, the lord of ʿĀmid, died, and attempts to make a satisfactory settlement of their affairs deflected his efforts for a while. After returning to Mawṣil, negotiations were set afoot, but Saladin himself fell ill and withdrew his forces in Ramaḍān 581/December 1185. However, exhaustion and a lack of effective allies led Mawṣil to sue for a lasting peace. An embassy, in which the future biographer Bahāʾ al-Dīn Ibn S̲haddād [*q.v.*], took part, came to Saladin at Ḥarrān in Dhu 'l-Ḥid̲jd̲ja 581/February 1186 and reached satisfactory conclusions, accepting the crucial obligation to provide troops for the *d̲jihād*, and so Saladin's overlordship was finally recognised.

After a year of recuperation and internal reorganisation, the long-awaited campaign was launched at the beginning of 583/spring 1187. Saladin's allies were summoned from all quarters, and the full forces of the Crusader states (except for Antioch with which a truce had been made) were brought to battle at the Horns of Ḥaṭṭīn, on the heights to the west of Tiberias, on Saturday, 24 Rabīʿ II 583/4 July 1187. It ended in an annihilating defeat for the Crusaders. Demoralised and with reduced garrisons, many towns and strongplaces surrendered or fell quickly. Acre surrendered on 1 D̲jumādā I/9 July and Saladin sent out his forces in various directions. By the middle of D̲jumādā II/early September, all the coast from Gaza to D̲jubayl was in Saladin's hands, apart from Tyre. At this point Saladin moved to Jerusalem, the sym-

bolic goal of the *d̲j̲ihād*. The city surrendered, after nearly two weeks of siege and some spirited resistance, on 27 Rad̲j̲ab/2 October and Saladin solemnly installed in the Aḳṣā Mosque the *minbar* that Nūr al-Dīn had prepared for this moment.

Saladin has been criticised for his failure to give high priority to the capture of Tyre. This and the other ports would clearly be crucial for any eventual rescue expedition from Europe, but Saladin was not to know that Conrad de Montferrat would arrive just when he did to stiffen its defence. It was also strategically important to reduce the *points d'appui* represented by the inland castles, and the terms that Saladin offered, backed by the confidence that people had in his word, accelerated the surrender of many places. Although Saladin has been described as only a moderately good strategist and tactician, there is also a more positive judgement on his strategy at this stage in his operations, understood in the light of its possible relationship with the theoretical work of al-Ḥarawī, *al-Tad̲h̲kirat al-ḥarawiyya fi 'l-ḥiyal al-ḥarbiyya* (see W.J. Hamblin, *Saladin and Muslim military theory*, in *The Horns of Hattin*, ed. B.Z. Kedar, Jerusalem 1992, 228-38). Many refugees from the interior assembled in Tyre. A siege of the city that began in Ramaḍān 583/November 1187 proved fruitless, and the majority of the Muslim armies disbanded in Dhu 'l-Ḳaʿda 583/January 1188.

When campaigning began again during 584/1188, Saladin made further conquests in northern Syria, taking Ṭarṭūs, D̲j̲abala, Lād̲h̲aḳiyya, Saḥyūn and Balāṭunus but not attempting Tripoli. He also took the outlying fortresses of the principality of Antioch, but then made a truce without any attack on Antioch itself. In S̲h̲awwāl 584/December 1188, having moved south *via* Damascus, Saladin forced the surrender of Ṣafad [*q.v.*], and Kawkab (Belvoir) fell in Dhu 'l-Ḳaʿda 584/January 1189. Further south, al-Karak finally succumbed to al-ʿĀdil's [*q.v.*] siege, and S̲h̲awbak [*q.v.*] followed several months later.

The regular arrival of the forces of the Third Crusade led to their investment of Acre and the besieging of the besiegers for a period of almost two years. Saladin looked far and wide for assistance, fostering relations with the Byzantines (see C.M. Brand, *The Byzantines and Saladin, 1185-1192: opponents of the Third Crusade*, in *Speculum*, xxxvii [1962], 167-81) and courting (unsuccessfully) the Almohads of North Africa for naval help (see M. Gaudefroy-Demombynes, *Une lettre de Saladin au Calife almohade*, in *Mélanges René Basset*, Paris 1925, ii, 279-304). Acre fell to the Franks in D̲j̲umādā II 587/July 1191. For a little more than a year after this military operations on the Palestine plain, led by Richard I of England, continued indecisively, and a Frankish attempt to march inland against Jerusalem had to be abandoned. Long and involved negotiations ended in S̲h̲aʿbān 588/September 1192 with the agreement to a general peace for three years and eight months and a recognition of Frankish coastal gains from Acre to Jaffa.

Saladin made various visits of inspection and organisation in the reconquered lands, again put off a proposed journey to the Ḥid̲j̲āz to perform the *Ḥad̲j̲d̲j̲*, and returned to Damascus, where he fell ill. After about two weeks of steady decline, movingly described by his confidant, Bahāʾ al-Dīn Ibn S̲h̲addād, he died on Wednesday, 27 Ṣafar 589/3 March 1193. He was buried initially within the Damascus citadel, but during Muḥarram 592/December 1195 his body was transferred to a newly-built tomb (*turba*) north of the Umayyad Mosque (Abū S̲h̲āma, *al-D̲h̲ayl ʿalā 'l-Rawḍatayn*, ed. al-Kawt̲h̲arī, Damascus 1947, 8, and Ibn K̲h̲allikān, ed. ʿAbbās, vii, 206).

Saladin's death occurred only a few months after the peace had been made. Bahāʾ al-Dīn Ibn S̲h̲addād claimed that Saladin had earlier contemplated the rejection of any peace proposals and wished to carry on the fight until every last Frank had been driven out of the Levant. The fact that the peace had been signed and a period of respite guaranteed was subsequently seen as a blessing, as his death while hostilities were still continuing would have produced a situation full of danger.

The cohesion of Saladin's empire was tested to the full by the events of the Third Crusade. The hardships and expense of this long campaigning, the reverses and the slow decline in morale, meant that some northern allies, also faced by their own local problems and rivalries, failed to send their troops. Saladin's nephew, Taḳī 'l-Dīn, also withdrew to follow his own ambitions at Mayyāfāriḳīn and added to that region's complications. However, the point has been fairly made by Gibb that many of Saladin's vassals, including the Zangids of Mawṣil and Sind̲j̲ār, although initially constrained to accept his suzerainty, continued to rally to his standard with their contingents throughout this period. Had they refused, it would have been difficult indeed to spare troops to force them. This suggests that by this stage Saladin's cause had to some extent been accepted as the cause of Islam and of the *d̲j̲ihād*.

Saladin's desire to win the wider acceptance and cooperation of ruling and religious circles are themes that informed his propaganda addressed to Bag̲h̲dād and elsewhere. The ways in which the ideals of the *d̲j̲ihād* were fostered and the message spread through society under Saladin have been studied exhaustively by E. Sivan (*L'Islam et la Croisade. Idéologie et propagande dans les réactions musulmanes aux Croisades*, Paris 1968, ch. 4). Saladin's public statements maintained that the ultimate aims of *d̲j̲ihād*, the duty of Muslim princes to participate, and also the delegated authority he had been given by the caliph, justified his compulsion of those unwilling to join the common cause. How much weight the pronouncements of the caliph and his granting of supporting diplomas had in the battle for mens' minds and allegiance over against considerations of temporal interest it is difficult to say. Saladin clearly thought it worth while to keep up a barrage of letters to Bag̲h̲dād seeking formal delegation of ever-widening authority and sanction for his politics and military moves. It is doubtful, however, whether the rhetoric in letters written by such persons as al-Ḳāḍī al-Fāḍil really amounted to the expression on Saladin's part of a desire to restore the caliphate as the active centre of a renewed Islamic political entity, as Gibb has suggested. Even he has admitted that "propaganda points may be difficult to disentangle from religious zeal." Indeed, it seems that the nearer the frontiers of Saladin's empire came to Bag̲h̲dād, the more troubled were his relations with the caliphate which itself was attempting to expand its temporal influence and areas of control. Symptomatic was the brawl over precedence between ʿIrāḳī and Syrian pilgrims during the *Ḥad̲j̲d̲j̲* of 583/February 1188, which ended in the death of Saladin's long-time supporter, the *amīr* Ibn al-Muḳaddam.

Saladin spent most of his life in Syria, and Damascus was always his preferred place of residence. Egypt and her resources supplied the means for his expansionist policy and his victories. For long periods he entrusted its government to his brother al-ʿĀdil, and to his chief civilian administrator, al-Ḳāḍī al-Fāḍil. There are signs that the economic strain of the constant campaigning affected Egypt and Syria too, and that social unrest was growing. Serious financial

problems arose, partly because of the exhaustion of the Upper Egyptian gold-mines but mainly from the demanding military expenditure. This led to the debasement of the dīnār, the end of the stability which the Fāṭimid currency had known (A. Ehrenkreutz, *The crisis of the* dīnār *in the Egypt of Saladin*, in *JAOS*, lxxvi [1956], 178-84). It is interesting to note that the addition of Yemen to the empire, which had been conquered for the Ayyūbids by Saladin's brother Tūrān-s̲h̲āh, and later ruled by another brother, Ṭug̲h̲takīn, clearly created hopes that it would be a source of treasure, and that Saladin's complaints, when that was not satisfactorily forthcoming, mirror Nūr al-Dīn's earlier complaints about the insufficient aid he had received from Egypt.

Saladin's lands were administered by a decentralised bureaucracy, the details of which will probably always remain obscure. As for Egypt itself, we possess a work on the land tax, in an imperfect version, revised about 581/1185 (see ʿAlī b. ʿUt̲h̲mān al-Mak̲h̲zūmī, *Kitāb al-minhād̲j̲ fī ʿilm al-k̲h̲arād̲j̲*, ed. Cl. Cahen and Y. Ragheb, Cairo 1983, and also Cahen, *Mak̲h̲zūmiyyāt. Études sur l'histoire économique et financière de l'Égypte médiévale,* Leiden 1977), and there is also extant a wider examination of the bureaucracy by Ibn Mammātī (d. 606/1209) entitled *Kitāb Ḳawānīn al-dawāwīn* (ed. A.S. Atiya, Cairo 1943). At various times during his life he delegated the control of parts of his empire to the growing number of family members and to trusted officers of the army, relying on family and personal loyalties and on a balance of interests to preserve the whole. The last arrangement he made for the division of power in his empire did not, however, endure long after his death. Saladin may or may not have been personally indifferent to wealth and possessions. In general, however, he recognised and forwarded the interests of his family and was eager to protect their dynastic future, although at times the wishes and ambitions of members of his family, especially his brothers Tūrān-s̲h̲āh and Ṭug̲h̲takīn, caused him difficulties. He was nevertheless capable of arguing against claims of hereditary expectations on the occasions when the Zangids advanced them. Ultimately, the dominant role passed to a collateral branch of the Ayyūbid family, to his brother al-ʿĀdil and his descendants, and for most of the dynasty's history Saladin's direct descendants ruled only in Aleppo.

Fundamentally his position depended on the army, the core of which was his personal guard, the *ḥalḳa* [*q.v.*]. Apart from the dominant contribution of Egypt, each urban centre in greater Syria and the D̲j̲azīra maintained an *ʿaskar* commensurate with its resources. The whole army, which was paid by *iḳṭāʿ* [*q.v.*] or by monthly salary (*d̲j̲āmakiyya*) was still largely free-born, although the sultan, princes and *amīrs* had their personal *mamlūk* contingents (see H.A.R. Gibb, *The armies of Saladin*, in S.J. Shaw and W.R. Polk (eds.), *Studies on the civilization of Islam*, Boston 1962, 74-90). Because of the domination of the Mediterranean by the Italian states both for trade and for the movement of troops, Saladin made attempts to revive Fāṭimid naval power, and his ships made some useful contributions to his operations, but ultimately lost control of the sea during the Third Crusade (see Ehrenkreutz, *The place of Saladin in the naval history of the Mediterranean Sea in the Middle Ages*, in *JAOS*, lxxv [1955], 100-16).

Unlike his mentor, Nūr al-Dīn, who was a Ḥanafī, Saladin adhered to the S̲h̲āfiʿī *mad̲h̲hab*, in which he was followed by practically all the members of his dynasty. In his theology he was of the As̲h̲ʿarī persuasion. In the reported wording of the *waḳfiyya* for the *k̲h̲ānḳāh* which he founded in Cairo (see al-Maḳrīzī, *K̲h̲iṭaṭ*, ii, 415-16), the residual beneficiaries of the *waḳf* income are "poor S̲h̲āfiʿī or Mālikī *fuḳahāʾ*, who are of the As̲h̲ʿarī creed." In the construction inscription for the *madrasa* which he founded at the tomb of al-S̲h̲āfiʿī, in which unusually Saladin's name and titles have no mention but only the initiative of the *s̲h̲ayk̲h̲* al-K̲h̲abūs̲h̲ānī is stressed, the As̲h̲ʿarī anti-Ḥas̲h̲wiyya nature of the foundation is made explicit. In many respects, in the public image at least, his régime followed that of Nūr al-Dīn in striving to suppress non-Islamic elements in society and administration and in promoting S̲h̲arīʿa norms. There is little evidence of specifically anti-Ismāʿīlī activity. Once the Fāṭimid court and the ruling establishment had been scattered and the ineffectual attempts at counter-coups dealt with, the underlying Sunnī nature of Egyptian society could assert itself. As for intellectual pursuits, he studied *Ḥadīt̲h̲* and was fond of poetry, ʿUsāma b. Munḳid̲h̲ being an especial favourite.

As regards his building activity, he was responsible for much military work throughout his lands. The grand design to enclose Cairo and Fusṭāṭ with a defensive wall was begun on his behalf by Bahāʾ al-Dīn Ḳarāḳūsh [*q.v.*] but never completed. The citadel at Cairo was also conceived by Saladin and started in 572/1176-7, but finished after his reign and subjected to many later changes. Adjacent to the Imām al-S̲h̲āfiʿī's tomb he constructed a *madrasa* for the S̲h̲āfiʿīs (see above) and near the mosque of ʿAmr b. al-ʿĀṣ a *madrasa* for the Mālikīs, which came to be known as al-Ḳumḥiyya. The latter was begun in Muḥarram 566/September 1170. In Cairo proper he converted the former residence (*dār*) of the Fāṭimid vizier al-Maʾmūn into a *madrasa* for the Ḥanafīs (*waḳfiyya* dated S̲h̲aʿbān 572/March 1177) and built a *k̲h̲ānḳāh* (*waḳfiyya* dated 569/1173-4). These were the earliest examples of such institutions to be founded in Egypt. He also converted part of the Fāṭimid palace into a hospital (*bīmāristān*) during 577/1182. After the reconquest, Jerusalem received much of his attention, in the restoration of the Dome of the Rock and the Aḳṣā Mosque to make them fit for Muslim worship, and also in the conversion of the Latin Patriarch's residence into a Ṣūfī *k̲h̲ānḳah* (endowed in 585/1189), the conversion of the church of St Anne into the Ṣalāḥiyya, a *madrasa* for the S̲h̲āfiʿīs (also endowed in 585/1189), and in the provision of a hospital (begun 588/1192).

Saladin's personality is somewhat hidden behind the image-making of his admirers. One thing beyond doubt is that he could inspire devotion in his followers. His generosity, fidelity and compassion are vividly portrayed, but he could also be ruthless. He was impatient of details of administration. The generally pro-Zangid Ibn al-At̲h̲īr [*q.v.*], who frequently skews his historical account to Saladin's disadvantage, in his final summary of Saladin's life and career nevertheless gives a more positive assessment, when he writes, "He was a man of religious knowledge and culture, a *Ḥadīt̲h̲* scholar. In short he was a man of rare qualities in his time, much given to generosity and fine deeds, a mighty warrior of the *d̲j̲ihād* against the infidels." The contemporary historian William of Tyre, whose record of events ends at 1183, portrays him as a generous, energetic and ambitious ruler, whose policies present a real threat to the Crusader states. In due course, in mediaeval European literature the historical Saladin was lost sight of and he became a mythic figure of chivalry. A romanticised view of him continued into

19th-century literature, most notably in Sir Walter Scott's historical novel, *Ivanhoe*.

(D.S. Richards)

ṢALĀLA, the name of the administrative capital of the Southern Region (Ẓafār [*q.v.*], Dhofar, also Djanūbiyya) of the Sultanate of Oman [see ʿUMĀN) and of the plain in which the town is situated. The town stands on the shore of the Indian Ocean and is 850 km/528 miles as the crow flies south-west of the capital of the Sultanate, Muscat [see MASḲAṬ] and about 120 km/75 miles from the present border with the Republic of Yemen. The town is the seat of the Minister of State and the Wālī of Dhofar.

The town is a modern one which has developed from a small market town only in the post-1970 period. There is a plentiful supply of water from both wells and streams, and the town is the centre of a rich agricultural area which produces grain, papayas, bananas, sugarcane, fruit and vegetables. There are no dates in the area and the thousands of palms produce coconuts. Much of the produce is produced in Ṣalāla itself, and there is a green band of agricultural lands and gardens which stretches through the centre of the rectangular town and which can be seen clearly from the air when flying over the town. In the north and south of the town lie built-up areas, with the extremely prominent royal palace and its complex, called al-Ḥuṣn, in the south on the sea shore.

In the extreme east of the town lie the ruins of al-Balīd (a modern Djibbāli rather than an Arabic name). These undoubtedly mark the important mediaeval settlement of Ẓafār. The port of mediaeval Ẓafār and of modern Ṣalāla was and remains Raysūt, with its perfect natural harbour some 15 km/9 miles across the bay to the south-west.

Bibliography: There is little information on the town, but three books produced by the Ministry of Information of the Sultanate of Oman are useful: *Sultanate of Oman throughout 20 years, the promise and the fulfillment*, and *Oman, the modern state*, both without a date, and *Salṭanat ʿUmān wa-masīrat al-khayr, al-Minṭaḳa al-djanūbiyya*, Ẓafar 1986; D. Hawley, *Oman and its renaissance*, London 1977; Liesl Graz, *The Omanis, sentinels of the Gulf*, London and New York 1982, 121-4.

(G.R. Smith)

SALAM (A.), a term of Islamic law. It is used to designate a particular contract classifiable as a contract of sale (*bayʿ* [*q.v.*]) and synonymous, in appropriate contexts, with the term *salaf*, nobably in ʿIrāḳī works of classical jurisprudence. Regarded as a category of transaction in its own right, *salam* has as its fundamental principle prepayment by a purchaser (*al-musallim*) for an object of sale (*al-musallam fīhi*, i.e.

merchandise constituting the subject-matter of the contract) to be delivered to him by the vendor (*al-musallam ilayhi*) on a date at the end of a specified period. In such a transaction, the consideration (i.e. the price, be it in cash or in kind) agreed upon at the contracting parties' meeting (*madjlis al-ʿaḳd*) for delivery of the merchandise is termed *raʾs al-māl*. Inasmuch as the latter was, as it still is, the normal Arabic term for "capital" in the financial sense of the word, it is not difficult to infer from it the essentially economic purpose that the *salam* was intended to serve, namely that of affording small traders the wherewithal to supply customers' needs and thereby enabling such traders to perform the same sort of basic function as that performed in modern developed economies by wholesalers in their business of supplying the needs of retailers and artisans.

Among features characteristic of a *salam* contract the most striking for those acquainted with the *Sharīʿa* are the unavailability of the subject-matter of the contract at the meeting of the parties, on the one hand, and the vendor's lack of possession of or title to it, on the other. What makes them so striking is that they seem to mark a fundamental departure from the *Sharīʿa*'s strict principles governing commercial transactions and expressly designed to exclude from the latter any possibility not only of *ribā* [*q.v.*] (i.e. unlawful gain or interest, in whatever form, on a capital loan or investment), but also—and very much more importantly in the context of *salam*—of *gharar* ("chance", i.e. risk, uncertainty, speculation). Be that as it may, the early mediaeval jurists, once conscious of the need to recognise the validity of a practice that was in effect an economic necessity meeting the legitimate needs of the public, deemed it both appropriate and expedient to accommodate *salam* within the ideal framework of the *Sharīʿa* law and found themselves able to invoke in support of it, *inter alia*, the authority of a Tradition attributed to the Prophet himself.

To incorporate the principle of *salam* in Islamic law was one thing; to implement it was another. On certain basic matters (e.g. that the price and object of a *salam* sale cannot both be currencies; that the objects of sale should be fungible (*mithlī*, i.e. replaceable by others answering to the same definition), weighable (*mawzūn, waznī*) or measurable (*makīl, kaylī*), etc.) the main Sunnī schools of law were broadly in agreement, but on many points of detail important differences of opinion took shape and prevailed in the doctrine of particular schools. And so it is that we find, for example, that in Ḥanafī law living animals are not held to be proper objects of a *salam* sale, whereas in Mālikī law the contrary is the case. Again, in Ḥanafī law the object of a *salam* sale must be in existence at the time of the contract and from the time the latter is concluded until the time it is delivered, while in Mālikī law the requirement is only that the object be available at the time when delivery falls due. Exceptional and peculiar to Shāfiʿī law is the surprising doctrine that *salam* can be an immediate transaction and not necessarily one providing for future delivery of the object of sale. Similarly exceptional and hardly less surprising is the Mālikī doctrine that the price for the object of sale need not be paid at the *madjlis al-ʿaḳd*, but may, by mutual understanding, be postponed for up to three days or, in certain circumstances, for even longer than that. And so on.

Since by its very nature a *salam* transaction denies the purchaser what is known as "option after inspection" (*khiyār al-ruʾya*) of the object of sale, a description of the latter is the only possible means of avoiding ignorance (*jahl*) of it and of safeguarding the *salam* contract against the intrusion of a material element of risk or uncertainty (*gharar*). According to Ibn Ḳudāma (541-620/1147-1223 [*q.v.*]), the well-known luminary of the Ḥanbalī school, knowledge of the subject-matter—designated *ʿilm* in his terminology—is essential to the validity of a *salam* contract and should be imparted by a description stating the genus and species of whatever is in question and declaring the condition of the latter, be it good or bad. According to the same jurist, both Abū Ḥanīfa and Mālik required the description to supply only such detail as was, in their view, sufficient to enable one to identify the object of sale, while Ibn Ḥanbal and al-Shāfiʿī required the detail to extend to such matters as colour, country of origin and other characteristics influencing price and use.

For obvious reasons, it is beyond the scope of this article to identify all the respects, or even all the most important respects, in which the doctrines of the four Sunnī schools of law coincide or diverge on the rules governing *salam* transactions. From what has been said hitherto it will be quite clear that important particulars of *salam* sale are matters on which the different schools do not always speak with one voice. Accordingly, in one's utilisation of sources identification of the schools to which data relate is a *sine qua non*.

Bibliography: N.A. Saleh, *Unlawful gain and legitimate profit in Islamic law*, Cambridge 1986 (esp. 71 ff.), a work in which the doctrine of the Ibāḍī school of law, peculiar to ʿUmān, is treated in addition to the doctrines of the four orthodox schools; A.L. Udovitch, *Partnership and profit in medieval Islam*, Princeton 1970, 72, 79; J.A. Wakin, *The function of documents in Islamic law*, Albany 1972, 193-200 (*Bāb al-salam* [in Arabic], Introd., 41-2). Particularly useful in some respects for Mālikī law is O. Pesle, *La vente dans la doctrine malékite*, Rabat 1940 (see esp. 175-96), which may be consulted along with D. Santillana, *Istituzioni di diritto musulmano malichita con riguardo anche al sistema sciafiita*, 2 vols., Rome 1925-38. For primary sources see the bibliographies of Saleh, Udovitch, Wakin and Santillana (Pesle, though citing his sources, offers no bibliography). (J.D. LATHAM)

SALĀM (A.), verbal noun from *salima*, "to be safe, uninjured", used as substantive in the meaning of "safety, salvation", thence "peace" (in the sense of "quietness"), thence "salutation, greeting" (cf. Fr. *salut*); on the statements of the older Arab lexicographers, see *LʿA*[1], xv, 181-3, passim.

The word is of frequent occurrence in the Ḳurʾān, especially in the sūras which are attributed to the second and third Meccan periods. The oldest passage that contains *salām* is XCVII, 5, where it is said of the *Laylat al-Ḳadr*, "It is salvation until the coming of the dawn". *Salām* is also to be taken in this meaning in L, 34; XV, 46; XXI, 69; XI, 48. *Salām* means salvation in this world as well as in the next. In the latter meaning we find it used in the expression *Dār al-Salām* "the abode of salvation" for Paradise (X, 26; VI, 127). In the Medinan verse, V, 16, which is addressed to the *Ahl al-Kitāb*, we find the expression *subul al-salām*, the paths of salvation (cf. Isa. LIX, 8, *dārāk shālōm*).

But *salām* is most frequently used in the Ḳurʾān as a form of salutation. Thus in LVI, 91 (first Meccan period), the people of the right hand are greeted by their companions in bliss with *salām laka* "Peace be upon thee" (according to al-Bayḍāwī; for other explanations see *LʿA*[1], xv, 184, 8 ff.; and ALLĀH), *salām* (XXXVI, 58; XIV, 23; X, 10; XXXIII, 44) or *salām ʿalaikum* (XVI, 32; XXXIX, 73; XIII, 24) is the

greeting which is given the blessed in Paradise or on entering Paradise (cf. also XXV, 75); *salām*ᵃⁿ *salām*ᵃⁿ in LVI, 26 (other reading *salām*ᵘⁿ *salām*ᵘⁿ; cf. XIX, 62) is presumably also intended as an auspicious exclamation (other interpretations in al-Bayḍāwī). Those on the Aʿrāf [*q.v.*] call to the dwellers in Paradise *salām ʿalaykum* (VII, 46). *Salām* is also the greeting of the guests of Ibrāhīm and his reply (LI, 25; XI, 69; cf. XV, 52). Ibrāhīm takes leave with *salām ʿalaika* (XIX, 48) from his father, who threatens him. In XX, 47, Mūsā in his address to Firʿawn is made to use the expression *al-salām ʿalā man ittabaʿa 'l-hudā* "peace be upon him who follows the right guidance". According to the first explanation in al-Bayḍāwī, *al-salām* here means the greeting of the angels and guardians of Paradise; but as these words are not at the beginning of the speech, an other interpretation prefers to consider it as an affirmative sentence and to take *salām* as "security from God's wrath and punishment" (cf. al-Bayḍāwī on the passage and *LʿA*¹, xv, 183, 7-8). *Salām ʿalaykum* "peace be upon you" is found in VI, 54, at the beginning of the message which the Prophet has to deliver to the believers and in XXVII, 59, a *salām* is uttered over God's chosen servants. As a benediction, *salām* is also used repeatedly in XXXVII, where at the end of the mention of each prophet a *salām* is uttered over him (verses 79, 109, 120, 130, 181; cf. also XIX, 15, 33). *Salām* may be used in an ironical sense in XLIII, 89, at parting from the unbelievers and *salām ʿalaykum* in XXVIII, 55 (other interpretations in al-Bayḍāwī). This might perhaps hold of *salām*ᵃⁿ, XXV, 63, also, with which the servants of the Merciful reply to the ignorant (*dj̲āhilūn*), but the commentators take it in the sense of *tasallum*ᵃⁿ or *barāʾat*ᵃⁿ. In LIX, 23 (Medinan) *al-salām* occurs as one of the names of God, which al-Bayḍāwī interprets as *maṣdar* used as *ṣifa* in the meaning of "the Faultless" (for other explanation, see *LʿA*¹, xv, 182, 7 ff., 20 ff.). *Al-salām* in the expressions *dār al-salām* and *subul al-salām* is therefore also interpreted as a name of God (cf. al-Bayḍāwī on VI, 127; X, 25; V, 16; *LʿA*¹, xv, 182, 2-3, and the notice at the end of this article). The word has even been taken to mean God in the formula *al-salām ʿalaykum* (Fak̲h̲r al-Dīn al-Rāzī, *Mafātiḥ al-g̲h̲ayb*, on VI, 54, Cairo 1278, III, 54, 21-2; *LʿA*¹, xv, 182, 8-9). It is improbable that the greeting is intended in *alḳā 'l-salāma* in IV, 94; another reading is *al-salama*, as in the similar expression in IV, 90-1; XVI, 28, 87.

The denominative verb *sallama* is first found in the Medinan sūras, namely, XXXIII, 56, where it is recommended to utter *ṣalāt* [*q.v.*] and *salām* over the Prophet, and in XXIV, 27, 61 (see below).

At quite an early period, the view became established that the *salām* greeting was an Islamic institution. This is, however, only correct in so far as the Ḳurʾān recommends the use of this greeting in a late Meccan passage and in two Medinan passages: in VI, 54, it is commanded to the Prophet: "If those come to you who believe in Our signs say: "Peace be upon you" (*salām*ᵘⁿ *ʿalaykum*). Your Lord hath laid down a law of mercy for himself"; and in XXIV, 27: "O ye believers, enter not into dwellings which are not your own before ye have asked leave and said *salām* (*wa-tusallimū*) on its inhabitants", etc.; similarly, XXIV, 61: "If ye enter dwellings, say *salām* upon one another (*fasallimū*)", etc. (cf. a similar prescription Matt. x, 12, Luke x, 5); iv, 86, where the more general expression for greeting (*ḥayyā*) is used, is also referred to the *salām* salutation. But Goldziher has pointed out (*ZDMG*, xlvi, 22-3) and quoted passages from poets in support of the view that *salām* was already in use as a greeting before Islam. The corresponding Hebrew and Aramaic expressions *s̲h̲ālōm lᵉkā*, *s̲h̲ᵉlām lāk̲ (lᵉk̲ōn)*, *s̲h̲elāmā ʿalāk̲*, which go back to Old Testament usage (cf. Judges xix, 20, 2 Sam. xviii, 28, Dan. x, 19, 1 Chron. xii, 19), were also in use as greetings among the Jews and Christians (cf. Dalman, *Gramm. d. jüd.-palästin. Aramäisch*², Leipzig 1905, 244); according to *Talmūd Yᵉrus̲h̲almī*, *S̲h̲ᵉbīʿīt*, IV, 35b, *S̲h̲ālōm ʿalēk̲ām* was Israel's greeting. See also Pᵉs̲h̲ītta Matt. x, 12, xxvi, 49, Luke x, 5, xxiv, 36, John xx, 19, 21, 26, and Payne Smith, *Thes. Syriacus*, cols. 4189-90). A very great number of Nabataean inscriptions further show the use of *s̲h̲-l-m* to express good wishes in Northwestern Arabia and the Sinai Peninsula (*CIS*, ii, *Inscriptiones aramaeae*, i, no. 288 ff., twice repeated in nos. 244, 339, thrice repeated in no. 302) and the Arabic *s-l-m* frequently occurs in the Ṣafaitic inscriptions as a benedictive term. Cf. E. Littmann, *Zur Entzifferung der Ṣafā-Inschriften*, Leipzig 1901, 47, 52-3, 55, 56, 57, 59, 61, 64, 66, 67, 70; *Semitic inscriptions*, New York-London 1905, Safaïtic inscrs., nos. 5, 8, 12, 15, 69, 128, 134.

If the line *salāmaka rabbanā fī kulli fadj̲rⁱⁿ* quoted in *LʿA*¹, xv, 183, 5 from below, were genuine and really by Umayya b. Abi 'l-Ṣalt [*q.v.*], one might perhaps conclude from it that there was a benedictory use of the *salām* formula in the morning service in certain monotheistic circles of North Arabia. Presumably the usage, influenced by Christian and Jewish views, had given the word a special significance in the region of Aramaic culture. Lidzbarski's suggestion (in *ZS*, i, 85 ff.) that *salām* reproduces the idea expressed by σωτηρία need not be discussed here, but his explanation of *Islām* as the infinitive of a denominative verb *aslama* formed from *salām*-σωτηρία ("to enter into the state .... of *salām*"), cannot be reconciled with such expressions frequent in the Ḳurʾān as *aslama wadj̲hahu li 'llāh*, *aslama li-Rabb al-ʿālamīn*, etc.

Muḥammad must have placed a high religious value on the *salām* formula, as he considered it the greeting given by the angels to the blessed and used it as an auspicious salutation on the prophets who had preceded him. A *salām*, like that in the *tas̲h̲ahhud* (see below) or like the salutation of peace which closes the *ṣalāt* and has its parallel in the Jewish *tᵉphillā* (cf. E. Mittwoch, *Zur Entstehungsgeschichte des islam. Gebets u. Kultus*, in *AbhPrAkW*, phil.-hist. Kl. [1913], no. 2, p. 18), may have been from the first an essential feature of the ritual of divine service. According to a tradition (al-Buk̲h̲ārī, *al-Istiʾd̲h̲ān*, *bāb* 3, *al-Ad̲h̲ān*, *bāb* 148, 150), originally they uttered the *salām* at the close of the *ṣalāt* on God, on Dj̲ibrīl, Mīk̲h̲āʾīl and other angels. With the remark that God is himself the *salām* (cf. Ḳurʾān, LIX, 23), the Prophet disapproved of this and laid down what should be said in the *tas̲h̲ahhud*; the *salām* utterance belongs to it in the form given below. On varying traditions regarding the *tas̲h̲ahhud*, see al-S̲h̲āfiʿī, *K. al-Umm*, Cairo 1321, i, 103 ff.; cf. also Goldziher, *Über die Eulogien*, etc. in *ZDMG*, l, 102.

In the ritual of the *ṣalāt* as legally prescribed, the benediction on God and the *salām* on the Prophet, on the worshipper and those present and on God's pious servants, precede the confession of faith in the *tas̲h̲ahhud* (*al-salāmu ʿalayka, ayyuhā 'l-nabiyyu, wa-raḥmatu 'llāhi wa-barakātuhu; al-salāmu ʿalaynā wa-ʿalā ʿibādi 'llāhi 'l-ṣāliḥīna*). Among the compulsory ceremonies of the *ṣalāt*, there is also at the end of it the *taslīmat al-ūlā*, the fuller form of which consists in the worshipper in a sitting position turning his head to right and left and saying each time *al-salāmu ʿalaykum wa-raḥmatu 'llāh*. See al-Bād̲j̲ūrī, *Ḥās̲h̲iya ʿalā s̲h̲arḥ Ibn*

Ḳāsim al-Ghazzī ʿalā matn Abī Shudjāʿ, Cairo 1321, i, 168, 170.

The preference of the Ḳurʾān for the *salām* formula and its liturgical use may have contributed considerably to the fact that it soon became considered an exclusively Muslim greeting (*taḥiyyat al-islām*). As already mentioned above, the Ḳurʾān prescribes the *salām* on the Prophet to follow the *taṣliya*. Tradition reports that the latter endeavoured to introduce it. When ʿUmayr b. Wahb was brought before him and gave him the pagan greeting (*anʿimū ṣabāḥ*[an]), the Prophet said: "God has given us a better greeting than thine, namely *al-salām*, the greeting of the dwellers in Paradise (Ibn Hishām, 472, below, ff.; al-Ṭabarī, i, 1353, 10-11). Those around him are also said to have been eager to introduce this greeting. Al-Wāḳidī relates that ʿUrwa b. Masʿūd, who immediately after his conversion wanted to convert his own townsmen in Ṭāʾif to Islam, called the attention of Thaḳīf, who saluted in the heathen fashion, to the greeting of the dwellers in Paradise, *al-salām* (Ibn Saʿd, *al-Ṭabaḳāt*, v, 369; Sprenger, *Das Leben .... des Mohammad*, iii, 482; Goldziher, *Muh. Stud.*, i, 264). According to Ibn Isḥāḳ, al-Mughīra b. Shuʿba instructed the deputation to Muḥammad from Thaḳīf how they were to salute the Prophet, but they would only use the greeting of the Djāhiliyya (Ibn Hishām, 916, 5 ff.; al-Ṭabarī, i, 1290, 9 ff.; Sprenger, *op. cit.*, iii, 485; Goldziher, *loc. cit.*). The Jews are said to have distorted this greeting with respect to Muḥammad to *al-sām ʿalayka* "death to you", whereupon the Prophet answered *wa-ʿalaykum* "and to you" (al-Bukhārī, *al-Istiʾdhān, bāb* 22; *al-Adab, bāb* 38; *LʿA*[1], xv, 206). According to Ibn Saʿd (iv/1, 163, 15), Abū Dharr was the first to greet the Prophet with the Muslim greeting. In the same author (iv/1, 82, 2) we find *salām ʿalaykum* at the beginning of a letter from Muʿāwiya to Abū Mūsā al-Ashʿarī.

The expressions which could be used were *salām* or *salām ʿalaykum* (*-ka*) or *al-salām ʿalaykum*. Umm Ayman is said to have used simply (*al-*)*salām* to the Prophet (Ibn Saʿd, viii, 163, 7-8, 9-10). In the Ḳurʾān, the use of *salām ʿalaykum* preponderates. Fakhr al-Dīn al-Rāzī endeavours to explain that the indefinite form is preferable and expresses the conception of perfect greeting (ii, 500, 35 ff., iii, 512, 11 ff.). Following him, al-Shāfiʿī is said to have preferred *salām*[un] *ʿalayka* in the *tashahhud* (iii, 512, 35); but the Shāfiʿī school also allows the definite form here (al-Bādjūrī, i, 168; *LʿA*[1], xv, 182, 12-13). The formula *al-salām ʿalaykum* was, however, much used as a greeting. This undetermined form is expressly prescribed in the *taslīma* (Fakhr al-Dīn al-Rāzī, ii, 501, 5; al-Bādjūrī, I, 170; *LʿA*[1], xv, 182, 13 ff.). As a return greeting, *wa-ʿalaykum al-salām* became usual (for further details on this inversion see Fakhr al-Dīn al-Rāzī, ii, 500, 29 ff., iii, 512, 21 ff.). According to Ibn Saʿd (iv/1, 115, 19-20), ʿAbd Allāh b. ʿUmar replied with *salām ʿalaykum*.

According to some traditions, Muḥammad had described the expression *ʿalayka ʾl-salām* as the salutation to the dead and insisted on being greeted with *al-salām ʿalayka* (al-Ṭabarī, iii, 2395; Madjd al-Dīn Ibn al-Athīr, *al-Nihāya fī gharīb al-ḥadīth wa ʾl-athar*, Cairo 1311, ii, 176 below). The first-named form of the greeting is actually found in elegiac verses (*op. cit.*, ii, 177; *LʿA*[1], xv, 182). But there are also traditions in which the Prophet greets the dead in the cemetery with an expression beginning with *(al-)salām* (al-Ṭabarī, iii, 2402, 10 ff.; Madjd al-Dīn Ibn al-Athīr and *LʿA*[1], *locc. cit.*). ʿAbd Allāh b. ʿUmar also on returning from a journey is said to have saluted the graves of the Prophet, of Abū Bakr and of his father with *al-salām ʿalayka* (Ibn Saʿd, iv/1, 115, 5 ff.).

The *salām* formula was very early extended by the addition of the words *wa-raḥmatu ʾllāhi* or *wa-raḥmatu ʾllāhi wa-barakātuhu*. The first extension became used in the *taslīma* and the second in the *tashahhud* (see above). Applicating the Ḳurʾānic commandment (IV, 86, "when ye are saluted with a salutation, salute the person with a better than his or at least return it") it is recommended (*sunna*) in the return greeting to add the wish of blessing and benediction or occasionally, when replying to a simple *salām*, only the former (cf. al-Bukhārī, *al-Istiʾdhān, bābs* 16, 18, 19). If anyone is saluted with the threefold formula, he must reply with the same (Fakhr al-Dīn al-Rāzī on sūra IV, 86, *op. cit.*, ii, 502, 14 ff.). According to Lane (*Manners and customs*[3], i, 229, note), the threefold formula was very common as a return greeting in Egypt; cf. also Nallino, *L'Arabo parlato in Egitto*[2], Milan 1913, 121. In Mecca, it is comparatively rarely used; the reply usual there is *weʿalēkum es-salām war-raḥma* (*we-raḥmatu ʾllāh* or *wal-ikrām*); cf. Snouck Hurgronje, *Mekkanische Sprichwörter u. Redensarten*, The Hague 1886, 118. Landberg (*Études sur les dialectes de l'Arabie méridionale*, ii, 788, note) thought that the longer form recalls the priest's blessing in Num. vi, 24-6. The application of *ʿalaykum* to a single person is explained by saying that the plural suffix includes the two accompanying angels or the spirits attached to him (i.e. the person; Fakhr al-Dīn al-Rāzī, ii, 501, 19 ff., cf. iii, 513, 17 ff.).

At the conclusion of a letter, the expression *wa ʾl-salāmu* (*ʿalayka, -kum*) is often used e.g. Ibn Saʿd, i/2, 27, 17, 27, 28, 2, 5, 23, 29, 13, 21. Al-Ḥarīrī (*Durrat al-ghawwās*, ed. Thorbecke, 108, 9 ff.) disapproves of the use here of the indefinite form (*salām*[un]), which, according to the more correct use, should only be used at the beginning. *Wa ʾl-salām* has occasionally the meaning of "and that is the end of it" (cf. Snouck Hurgronje, *op. cit.*, 92).

In keeping with Ḳurʾān, XX, 47, it became usual to use the form *al-salām*[u] *ʿalā man ittabaʿa ʾl-hudā* to non-Muslims when necessary (cf. Fakhr al-Dīn al-Rāzī, ii, 501, 26 ff., iv, 706, 19-20). It is found, for example, in letters ascribed to Muḥammad (al-Bukhārī, *al-Istiʾdhān, bāb* 24; Ibn Saʿd, i/2, 28, 10-11; cf. line 6 there at the beginning of the letter, *salām*[un] *ʿalā man āmana*). Papyri of the year 91/710 bear early testimony to its use (*Papyri Schott-Reinhardt*, i, ed. C.H. Becker, Heidelberg 1906, i, 29, ii, 40-1, iii, 87-8, x, 11, xi, 7, xviii, 9). A letter from Muḥammad to the Jews of Maḳnā concludes, however, with *wa ʾl-salām* (Ibn Saʿd, i/2, 28, 23); similarly a letter to the Christians in Ayla (*ibid.*, 29, 12-13). In *Ḥadīth*, also, a tendency is noticeable not to deny the *salām* greeting, at least as a reply, to unbelievers and the *Ahl al-Kitāb* (cf. al-Ṭabarī, *Tafsīr*[2], v, 111-12; Fakhr al-Dīn al-Rāzī, *loc. cit.*).

Salām means also a *ṣalawāt* litany, which is pronounced from the minarets every Friday about half an hour before the beginning of the midday service before the *adhān*. This part of the liturgy is repeated inside the mosque before the beginning of the regular ceremonies by several people with good voices standing on a *dikka* (Goldziher, *Über die Eulogien*, etc., in *ZDMG*, l, 103-4; cf. Lane, *op. cit.*, i, 117). The same name is given to the benedictions on the Prophet which are sung during the month of Ramaḍān about half an hour after midnight from the minarets (*ibid.*, ii, 264).

The auspicious formula *ʿalayhi ʾl-salām*, which, according to the strictly orthodox opinion, like the *taṣliya*, should only follow the names of Prophets, but

was more freely used in the earlier literature (cf. also al-Bukhārī, *al-Isti'dhān, bāb* 43: *Fāṭima ʿalayka 'l-salām*), was used by Shīʿa without limitation of ʿAlī and his descendants also (Goldziher, in *ZDMG*, 1, 121 ff.; Fakhr al-Dīn al-Rāzī, iii, 511 ff.).

The Sunnīs of India make a magical use of the so-called seven *salāms* which refer to sūra XXXVI, 58; XXXVII, 79, 109, 120, 130; XXXIX, 73; XCVII, 5. In the morning of the festival of Akhir-i Čahār-shamba [see ṢAFAR], they write the seven *salāms* or have them written with saffron water, ink or rosewater on the leaf of a mango tree or a sacred fig tree, or of a plantain. They then wash off the writing in water and drink it in the hope that they may enjoy peace and happiness (Djaʿfar Sharīf-Herklots. *Islam in India or the Qānūn-i Islām*, new ed. W. Crooke, London 1921, 186-7).

On coins, *salām* (sometimes abbreviated to *s*) means "of full weight, complete" (cf. J.G. Stickel, *Das grossherz. Orient. Münzcabinet zu Jena (Handb. d. Morgenl. Münzkunde)*, Leipzig 1845, i, 43-4; O. Codrington, *A manual of Musulman numismatics*, London 1904, 10).

[Employed as a name of God, *al-Salām* is understood by the commentators as a *maṣdar* used metaphorically in the sense of *dhu 'l-salām, salām* being in this context an equivalent of *salāma* "the state of being preserved from ...". Whence there arise, fundamentally, two interpretations. God is *al-Salām* (1) inasmuch as He is preserved from all imperfection and infirmity (*dhu 'l-salāmatⁱ min kull nakṣⁱⁿ wa-āfa*), and (2) inasmuch as created beings are preserved from all injustice on His part (*salima 'l-khalḳ min ẓulmihi*). Contrary to the commentary given by L. Gardet (in AL-ASMĀ' AL-ḤUSNĀ), the idea of "peace" is in no degree, here, taken into consideration. See D. Gimaret, *Les noms divins en Islam*, Paris 1988, 204-5].

Ringgren, *Islam, 'aslama and muslim*, Horae Soederblomianae ii, Uppsala 1949.

(C. VAN ARENDONK-[D. GIMARET])

SALAMA B. DĪNĀR, Abū Ḥāzim al-Makhzūmī, called al-Aʿradj "the Lame" (d. *ca.* 140/757), traditionist and judge in Medina, regarded as a proto-Ṣūfī mystic; he was of Persian origin. Various aphorisms (*ḥikam*) and elegant sayings of his are preserved in citations, and also his answers to questions put to him by the Umayyad caliph Sulaymān b. ʿAbd al-Malik [*q.v.*]; also, a collection of his *masā'il* [see AL-MASĀ'IL WA 'L-ADJWIBA] is extant in manuscript.

Bibliography: Ziriklī, *Aʿlām*, iii, 171-2; Sezgin, *GAS*, i, 634-5; R. Eisener, *Zwischen Faktum und Fiktion. Eine Studie zum Umayyadenkalifen Sulaimān b. ʿAbdalmalik und seinem Bild in den Quellen*, Wiesbaden 1987, 195-205.

(C.E. BOSWORTH)

SALĀMA B. DJANDAL, a poet of pre-Islamic times, was a member of the clan al-Ḥārith, which belonged to the large division of Saʿd b. Zayd Manāt of the tribe Tamīm. Ibn Sallām al-Djumaḥī places him in the 7th class of poets (*Ṭabaḳāt al-shuʿarā'*, ed. Hell, Leiden 1916, 36). He is reckoned among the excellent poets of the *Djāhiliyya* [*q.v.*] of whom only a few poems are preserved (*al-muḳillūn*). According to two events mentioned in his verses, he must have flourished during the second half of the 6th century of our era. The *Naḳā'iḍ* of Djarīr and al-Farazdaḳ [*q.vv.*] give two poems of Salāma, not included in his *dīwān*, where he celebrates the victory of Djadūd, a battle, in which the clan of Minḳar, a division of Zayd Manāt, defeated the Banū Shaybān of the tribe Bakr b. Wā'il. It must have taken place about the middle of the 6th century. In his longest poem (*Dīwān*, no. 3, v. 38), also included in the *Aṣmaʿiyyāt* (no. 42, v. 38), he refers to the end of the king al-Nuʿmān III [*q.v.*] of Ḥīra, who was trampled to death by elephants at the order of the Persian ruler Khusraw Parwīz in 602, which provides a *terminus post quem* for Salāma's death. There is no evidence that he lived to the time of Islam, and none of his descendants appear to be named in the biographies of early Muslims.

Another reference in his *dīwān* has caused some confusion among scholars. There is a monothematic poem of four lines (no. 7) addressed to Ṣaʿṣaʿa b. Maḥmūd of the clan of Marthad, who had taken the poet's brother Aḥmar (sometimes mispelled Aḥmad) prisoner and released him without ransom on account of Salāma's intercession (cf. also al-Djāḥiẓ, *al-Bayān wa 'l-tabyīn*, ed. ʿA.S. Hārūn, Cairo 1367/1948-50, iii, 318). A different report has it that al-Aḥmar had been taken prisoner in a raid led by ʿAmr b. Kulthūm [*q.v.*] (*Dīwān ʿAmr*, introduction to poem no. 2, ed. F. Krenkow, in *Mashriḳ*, xx [1922], 591-611, cf. 592, and also Ibn Ḳutayba, *Shiʿr*, 147; *Aghānī*¹, ix, 183). Whether the two reports are mixed up, or whether Aḥmar b. Djandal had been taken prisoner on two different occasions, cannot be established. If the latter is true, we have corroborating evidence for the life span of Salāma, since it makes him a contemporary of ʿAmr b. Kulthūm.

Salāma's *dīwān* has come down to us in the recensions of al-Aṣmaʿī [*q.v.*] and of Abū ʿAmr al-Shaybānī, the representatives of the Baṣran and the Kūfan schools respectively. The two recensions were united by Muḥammad b. al-Ḥasan al-Aḥwal (d. after 259/873), who pointed out occasional differences between the Baṣran and the Kūfan tradition. The text is preserved in four manuscripts. They form the basis of Fakhr al-Dīn Ḳabāwa's edition (Aleppo 1387/1968), which supersedes the earlier editions of Cl. Huart (*JA*, 10ᵉ série, xv [1919], 71-105, with French translation) and L. Cheikho (Beirut 1920). The *dīwān* contains 8 poems, 136 verses in all. In addition, the editor collected 27 poems and fragments from other sources, amounting to 80 verses.

Salāma is reputed to have excelled in the description of horses (cf. Ibn Ḳutayba, *loc. cit.*), and, indeed, his most famous ode, included in the *Mufaḍḍaliyyāt* [*q.v.*] (no. XXII), contains a magnificent passage about the tribe's horses for battle (no. 1, vv. 5-15), in place of the conventional camel theme. The poem begins with a complaint of old age (vv. 1-3) and ends with tribal *fakhr*. There are two other polythematic odes in the *dīwān*, a tripartite form (no. 2) and a bipartite poem (no. 3), both ending with a combination of *fakhr* and *hidjā'* [*q.v.*], which is also the prevailing topic of Salāma's monothematic poems. His verses appear ancient in wording and imagery, and give the impression of authenticity. He refers to swords of Buṣrā and al-Madā'in, which are seldom mentioned in verses of later times, as swords were no longer obtained from there. That he mentions writing or even inkstands and parchment (no. 3, v. 2) is not at all strange as these things were more widely known than is generally admitted. The occurrence of the term *Allāh* (no. 1, v. 12) should not be taken as a sign of later interpolation, and Salāma's reference to *al-Raḥmān* (no. 3, v. 36) is hardly sufficient to prove that he was a Christian, as was assumed by L. Cheikho.

Bibliography: In addition to references in the article, see *The Mufaḍḍaliyyāt*, ed. C.J. Lyall, i, Arabic

text, Oxford 1921 (no. XXII), ii, Translation and notes, *ibid.* 1918, iii, Indexes to the Arabic text, comp. by A.A. Bevan, London 1924 (GMS, N.S. III); *al-Aṣmaʿiyyāt*, ed. ʿA.S. Hārūn and A.M. Shākir, Cairo 1964 (no. 42); *The Naḳāʾiḍ of Djarīr and al-Farazdaḳ*, ed. A.A. Bevan, i-iii, Leiden 1905-12, i, 144 ff. See also Blachère, *HLA*, ii, 257; Sezgin, *GAS*, ii, 192. Verses of Salāma are cited in most books dealing with ancient Arabic poetry, e.g. in the *Lisān al-ʿArab* 40 times.

(F. Krenkow-[Renate Jacobi])

SALĀMA MŪSĀ, Egyptian journalist, encyclopaedist, socialist, political campaigner, enthusiastic moderniser and "westerniser". Born *ca.* 1887 to a well-to-do Coptic family near Zagazig, he died on 5 August 1958. He attended both Christian and Muslim *kuttābs*, a school of the Coptic Charitable Society, and then the "national" school. From there he went to the Tawfīḳiyya (where he taught briefly in 1919), and the Khedivial College in Cairo. As a youngster he read avidly the Arab dailies and reviews, that spread the new ideas from Europe and made accessible European literature; to *al-Muḳtaṭaf* he owed his scientific leanings and his simple, telegraphic style of writing that made his ideas accessible to a broad audience.

In 1907 he went to Paris. In Europe he was to develop his ideas about the emancipation of women; his book *al-Marʾa laysat luʿbat al-radjul* (Beirut 1956) voices his opinions on this subject. He went to London in 1908, joining Lincoln's Inn where he studied law, and following courses in Egyptology, geology, biology, and economics. There he became acquainted with the works of many of the authors (Darwin, Spencer, Shaw, H.G. Wells, Elliot Smith, Dostoyevsky, Tolstoy, Gorki, Sartre, Goethe, Nietzsche, Marx, Freud, Gandhi, etc.), who influenced him profoundly, discussed in *Hāʾulāʾi ʿallamūnī* (Cairo 1953). In Paris *L'Humanité* had introduced him to socialist ideas; in London he was to join the Fabian Society, where he met Shaw. From Shaw he derived many of his humanistic socialist ideas; he analyses his life and works in *Bernard Shaw* (Cairo 1957).

Throughout most of his life he wrote for the Egyptian press; his book *al-Ṣaḥāfa ... ḥirfa wa-risāla* (Cairo 1963) is on the profession of journalism. Returning to Egypt from Europe, he received his training on *al-Liwāʾ* newspaper. He was to collaborate on *al-Djāmiʿa, al-Muḳtaṭaf, al-Maḥrūsa, al-Akhbār, al-Balāgh, Djarīdat Miṣr, Madjallat al-Ḥadīth, al-Nidāʾ, al-Wafd al-Miṣrī, Akhbār al-Yawm, al-Djīl, al-Indhār* and many other journals. In 1914 he founded in Cairo the first Egyptian weekly, *al-Mustaḳbal*, dedicated to science and literature. From 1923 to 1929 he helped edit *al-Hilāl*. He wrote for its press: *Ashhar al-khuṭab wa-mashāhīr al-khuṭabāʾ* (Cairo 1924) an anthology of the most important European and Arab authors; *Ashhar ḳiṣaṣ al-ḥubb al-taʾrīkhiyya* (1925) love stories from history and from Arabic literature; *Aḥlām al-falāsifa* (1926) on the utopian ideas of philosophers from Plato onwards; *Ḥurriyyat al-fikr wa-abṭāluhā fī 'l-taʾrīkh* (1927) examining the struggle to maintain freedom of expression; *al-ʿAḳl al-bāṭin wa-maknūnāt al-nafs* (1927) a study on the theories of Freud and Jung, and *Taʾrīkh al-funūn wa-ashhar al-ṣuwar* (1927) partially dedicated to the development of art in Egypt. In 1929 he founded the monthly *al-Madjalla al-Djadīda* and the weekly *al-Miṣrī*; both were suppressed, but *al-Madjalla al-Djadīda* later reappeared. From 1940 to 1942 he collaborated on *al-Shuʾūn al-Idjtimāʿiyya*, the magazine of the Ministry for Social Affairs.

A pioneer in the creation of the Arab socialist movement, in 1920 he helped form the short-lived Egyptian Socialist Party. He was to acknowledge late in life that the ideas of Marx had had the most profound influence on him. He had published *al-Ishtirākiyya* (Cairo 1913), a short treatise on socialism (tr. in G. Haupt and M. Reberioux, *La Deuxième Internationale et l'Orient*, Paris 1967, 423-38, and in S.A. Hanna and G.H. Gardner, *Arab socialism*, Leiden 1969, 275-88). His *al-Dunyā baʿd thalāthīn ʿām* (1930) is on the prospects for socialism in Egypt. A collection of articles, *Mashāʿil al-ṭarīḳ li 'l-shabāb* (Cairo 1959) attempts to guide the young on the revolutionary road. His *Muḳaddimat al-subirmān* (Cairo 1910) on socialism, evolution, and eugenics, advocates the application of selective reproduction and sterilisation to produce a Superman. The second edition, *al-Yawm wa 'l-ghad* (Cairo 1927) discusses the ideas of Darwin, Nietzsche, and Shaw, and the emancipation of women. *Ḍabṭ al-tanāsul wa-manʿ al-ḥaml* (Cairo 1930), written with Dr Kāmil Labīb, returns to the necessity of improving the species and tackles birth control.

On his return to Egypt, he had publicised the theory of evolution; he discusses Darwin's *On the origin of the species* in his most popular work *Naẓariyyat al-taṭawwur wa-aṣl al-insān* (Cairo 1925), developed in *al-Insān ḳimmat al-taṭawwur* (Cairo 1961). He was to question the "commonly accepted mysteries" and turn to a belief in the "social value of religion." His book *Nushūʾ fikrat Allāh* (Cairo 1912) is a summary of the ideas of Grant Allen on *The evolution of the idea of God.*

Under the influence of Gandhi, he founded the league *al-Miṣrī li 'l-Miṣrī*, encouraging Egyptians to buy local products and to boycott foreign goods, arguing his case in *Djuyūbunā wa-djuyūb al-adjānib* (Cairo 1930). His *Ghāndī wa 'l-ḥaraka al-hindiyya* (Cairo 1934) describes the struggle of Gandhi against British imperialism. Mūsā's two principal foes in his writings were to be the British imperialists and Egyptian reactionaries; he was to wage a life-long battle in defence of democracy in Egypt. He was arrested and imprisoned on several occasions for alleged propaganda for a republican form of government and for writing on socialism and communism. Finding abhorrent the conduct of the palace and its supporters, he was amongst those intellectuals who welcomed the revolution of 1952. His *Ḥurriyyat al-ʿaḳl fī Miṣr* (Cairo 1945) deals with the lack of freedom of Egyptian intellectuals, and *Kitāb al-Thawrāt* (Beirut 1954) examines the French and Bolshevik Revolutions, and the two Egyptian revolutions of 1919 and 1952.

Altogether he wrote about 40 books, many of his writings first appearing in the periodical press. Amongst his collections of articles are *Mukhtārāt Salāma Mūsā* (Cairo 1926); *Fī 'l-ḥayāt wa 'l-adab* (Cairo 1930); *Ṭarīḳ al-madjd* (Cairo 1949); *Aḥādīth ilā 'l-shabāb* (Cairo 1957) and *Maḳālāt mamnūʿa* (Beirut 1959) a collection of censored and banned articles. In his *al-Balāgha al-ʿaṣriyya wa 'l-lugha al-ʿarabiyya* (Cairo 1945) he criticises traditional Arabic eloquence for being unable to reflect the ideas of his age; at one stage, he had advocated replacing the Arabic script by the Latin, since he felt that the Arabic characters obstructed scientific progress. On literature, his *al-Adab li 'l-shaʿb* (Cairo 1956) applies social realism to contemporary Egyptian and classical Arabic literature; whilst *al-Tadjdīd fī 'l-adab al-indjilīzī al-ḥadīth* (Cairo 1934) examines the development of modern English literary trends. He published several collections of stories: *Ḳiṣaṣ mukhtalifa* (Cairo 1930) a selection of stories, particularly from Russian literature; *Min adjl al-salām, ḳiṣaṣ sūfyātiyya* (Cairo 1956 with ʿAbd al-Munʿim Ṣubḥī); *Ruddū ilayya ḥayātī, madjmūʿa*

ḳiṣaṣiyya (Cairo 1960); *Intiṣārāt insān* (Cairo 1960) and *Iftaḥū lahā 'l-bāb* (Cairo 1962). In *al-Djarīma wa 'l-ʿiḳāb* (Cairo 1912) he translated part of Dostoyevsky's *Crime and punishment.*

His writings on psychology were published in *al-Sīkūlūdjiyya fī ḥayātinā al-yawmiyya* (Cairo 1936); *al-Shakhṣiyya al-nādjiḥa* (Cairo 1942); *ʿAḳlī wa-ʿaḳluka* (Cairo 1947); *Muḥāwalāt sīkūlūdjiyya* (Cairo 1952) and *Dirāsāt sīkūlūdjiyya* (Beirut 1956). Amongst his varied studies, his book *Miṣr, Aṣl al-Ḥaḍāra* (Cairo 1934) is an analysis of Elliot Smith's ideas on pharaonic civilisation; *Fann al-ḥayāt* (Cairo 1929) is a description of love as a formative element in family and society; *Ḥayātuna baʿd al-khamsīn* (Cairo 1944) deals with life's problems after the age of 50; *al-Nahḍa al-Urubbiyya* (Cairo 1935) examines the renaissance in the west and its influence on Arab civilisation, whilst the unpublished *Muʿdjam al-afkār* is an analysis of movements of thought. *Al-Tathḳīf al-dhātī aw kayf nurabbī anfusanā* (Cairo 1946) is on his personal acculturation experience. His autobiography, *Tarbiyat Salāma Mūsā* (Cairo 1947, revised 1958), has been described by Jacques Berque as "one of the most moving books in modern Arabic literature" (a tr. was edited by L.O. Schuman, *The education of Salāma Mūsā*, Leiden 1961).

(P.C. Sadgrove)

SALĀMĀN and **ABSĀL**, two characters who figure prominently in a series of pre-modern philosophical and mystical allegories written in Arabic and Persian. The characters are first mentioned by Ibn Sīnā [*q.v.*], in the ninth chapter of his *Kitāb al-Ishārāt wa 'l-tanbīhāt*, where he discusses the "Stages of the Gnostics" (*maḳāmāt al-ʿārifīn*). Here he states that:

> Gnostics have stages and degrees by which they are favoured over others while in their earthly life. It is as if their bodies were garments that they had removed and striped away (to move) toward the Realm of Sanctity (*ʿālam al-ḳuds*). They have things hidden within and manifest without that are denied by whomever would deny them but are deemed momentous by whomever has come to known them.
>
> We will tell you about these things. And when your ear has been struck by what it hears, and what you will hear has been narrated to you, it will be a story of Salāmān and Absāl.
>
> Know that Salāmān is a similitude coined for you and that Absāl is a similitude coined for your degree in gnosis (*ʿirfān*), if you be one of its folk. So decipher the symbolism (*al-ramz*), if you are able (iv, 48-51).

Ibn Sīnā also mentions the name of Absāl in his "Treatise on Destiny" (*Risāla fi 'l-ḳadar*) (Mehren, *Traités mystiques*, fasc. iii/5-6), but the story is not in the list of his compositions provided by Abū ʿUbayd al-Djūzdjānī [*q.v.*], the philosopher's companion, student, and biographer (despite al-Ṭūsī's assertion that it is), nor does it appear in any of the other traditional bibliographies of Ibn Sīnā's works (such as those of Ibn al-Ḳifṭī, Ibn Abī Uṣaybiʿa, or Ibn Khallikān [*q.vv.*]. No manuscript of the narrative has so far appeared.

In his commentary on *al-Ishārāt wa 'l-tanbīhāt*, Fakhr al-Dīn al-Rāzī [*q.v.*] suggests etymologies for the two names and states that there existed a story "among the Arabs" about the two characters, but he acknowledges that this version appears to have little connection with Ibn Sīnā's intent.

Our only source for the possible contents of the story is Naṣīr al-Dīn al-Ṭūsī's [*q.v.*] commentary on *al-Ishārāt wa 'l-tanbīhāt* (iv, 49-57). Al-Ṭūsī first recapitulates al-Rāzī's remarks. Then he summarises the contents of two versions of the story that he came across in the twenty years after he finished his commentary (for translations and full discussions of both versions, see Corbin, *Avicenna*, 204-41; cf. Heath, *Allegory*, 94-6. The allegorical decoding provided in the summaries below is al-Tūsī's).

The first version, which al-Ṭūsī believes "one of the common philosophers devised to fit the Shaykh's [i.e. Ibn Sīnā's] discussion", was purportedly of Greek origin and translated into Arabic by Ḥunayn b. Isḥāḳ [*q.v.*] (iv, 52). In this narrative, Salāmān is a young prince (the rational soul) whom his father (the active intellect) has engendered without recourse to a woman (matter) through the ingenuity of his minister (divine emanation). Salāmān is nursed by a young and beautiful woman, Absāl (the corporeal faculties), with whom he falls desperately in love. When his father, the king, disapproves of this attachment, Salāmān flees with Absāl to the lands of the far west (the material realm). Through his father's patient guidance, he is eventually freed of his ties to Absāl and assumes his rightful place on the throne. (A text of this version is included in *Tisʿ rasāʾil*, 112-19.)

Al-Ṭūsī ascribes the second version to Ibn Sīnā, and justifiably so since it contains a scene referred to by the philosopher in his "Treatise on Destiny" (mentioned above). In this rendition, Salāmān is a king (the rational soul) and Absāl is his younger brother (the theoretical faculty of the rational soul advanced to the level of the acquired intellect) who aids his older sibling while resisting the sexual advances of the latter's wife (the bodily faculties). After conquering the East and the West, Absāl is poisoned by his brother's wife. Learning this, Salāmān executes his wife and retires to solitary meditation of God.

The next major use of the characters apears in the *Treatise of Ḥayy b. Yaḳẓān*, written by the Andalusian philosopher Ibn Ṭufayl [*q.v.*]. Ibn Ṭufayl states in his introduction that he composed the narrative to clarify what Ibn Sīnā meant by the phrase "Oriental Philosophy" (*al-ḥikma al-mashriḳiyya*), and he refers to passages from the final chapters of *al-Ishārāt wa 'l-tanbīhāt*. Nevertheless, Ibn Ṭufayl's use of the characters is original, and his *Ḥayy b. Yaḳẓān* is a significant philosophical composition in its own right.

In this narrative, Salāmān and Absāl appear toward the end of the story, after the main character,

Ḥayy b. Yaḳẓān [*q.v.*], has perfected himself and achieved a state of union with the Divine. Absāl, who represents the inner dimension of religious spirituality, appears on Ḥayy's island seeking a place to engage in solitary spiritual contemplation. When the two meet, Absāl learns of Ḥayy's spiritual attainments and becomes his disciple. When Ḥayy discovers from Absāl of the existence of revealed religion among the latter's people, he decides to visit their island to inform them of the inner truths that their revelation contains. On the island, the two encounter Absāl's friend, Salāmān, who represents upright and sincere adherence to the external tenets and rituals of religion. Ḥayy finds that he cannot convey his spiritual and intellectual truths because the islanders are spiritually and mentally incapable of receiving them. So he and Absāl return to their island to pursue their pursuit of truth away from society.

The last major version of a story using the characters of Salāmān and Absāl occurs in a narrative of the same name by the Persian poet, Djāmī [*q.v.*], that is included as one of seven *mathnawīs* in the poet's *Haft awrang*. Djāmī's version (translated into English by the 19th-century poet Edward Fitzgerald) follows fairly closely the plot line of the Greek story summarised above (see Arberry, *Fitzgerald's Salaman and Absal*, which supplies two versions by Fitzgerald as well as a literal English translation of Djāmī's Persian text). Djāmī explains the allegorical symbols of his story at its conclusion.

SALAMANCA [see SHALAMANKA].

SALAMIYYA, a town in central Syria in the district of Orontes (Nahr al-ʿĀṣī), about 25 miles south-east of Ḥamāt and 35 miles north-east of Ḥimṣ (for the town's exact situation, see Kiepert's map in M. von Oppenheim, *Vom Mittelmeer zum Persischen Golf*, Berlin 1899, i. 124 ff., and ii, 401; *National Geographic Atlas of the World*, 5th ed., Washington D.C. 1981, 178-9). Salamiyya lies in a fertile plain 1,500 feet above sea level, south of the Djabal al-Aʿlā and on the margin of the Syrian steppe. The older and more correct pronunciation of this town's name was Salamya (al-Iṣṭakhrī, 61; Ibn al-Faḳīh, 110), but the form Salamiyya is also found very early (al-Muḳaddasī, 190; Ibn Khurradādhbih, 76, 98) and is now the form almost universally in use (cf. also Yāḳūt, *Muʿdjam*, iii, 123; Littmann, *Semitic inscriptions*, 169 ff.). The *nisba* from the name is Salamī. The town seems to be the ancient Salamias or Salaminias, which flourished in the Christian period, but the references of the classical authors to this place are uncertain. Yāḳūt, *loc. cit.*, gives a popular etymology. The town, he says, was originally called *Salam-miʾa*, after the hundred surviving inhabitants of the destroyed town of al-Muʾtafika; the survivors then settled in Salamiyya and rebuilt it.

The situation of the town was important as an outpost of Syria, where main routes from the steppe (Palmyra) and ʿIrāḳ joined; but it was never of any great military importance. Salamiyya was conquered by the Arabs in the year 15/636, and became one of the towns of the *Djund* of Ḥimṣ; it was only after 906/1500 in the Mamlūk period that it was placed in the district of Ḥamāt for administrative purposes.

During the 2nd/8th century, soon after the victory of the ʿAbbāsids, the ʿAbbāsid Ṣāliḥ b. ʿAlī b. ʿAbd Allāh b. al-ʿAbbās, and later some of his descendants, settled down in Salamiyya. In 141/758, Ṣāliḥ b. ʿAlī had been appointed as the governor of southern and central Syria, and he paid some attention to reconstructing Salamiyya. The town is said to have been most indebted to Ṣāliḥ's son ʿAbd Allāh, who rebuilt it and developed the irrigation system of the locality and its environs (al-Yaʿḳūbī, *Buldān*, 324). This ʿAbd Allāh was held in high esteem by his cousins, the first two ʿAbbāsid caliphs. On his way to Jerusalem in 163/779-80, the caliph al-Mahdī stayed with ʿAbd Allāh in Salamiyya and admired his house (al-Ṭabarī, iii, 500, tr. H. Kennedy, *The History of al-Ṭabarī*, xxix, *Al-Manṣūr and al-Mahdī*, Albany 1990, 215). In this same year, ʿAbd Allāh, who had meanwhile married al-Mahdī's sister, was appointed as the governor of al-Djazīra. There are more scattered references to the fact that many ʿAbbāsid Hāshimids lived in Salamiyya from early ʿAbbāsid times (see, for instance, al-Nīsābūrī, *Istitār al-imām*, 115 ff., 123-5, tr. Ivanow in his *Ismaili tradition*, 160 ff., 171-3; Ibn Ḥazm, *Djamharat al-ansāb al-ʿArab*, ed. ʿAbd al-Salām M. Hārūn, Cairo 1391/1971, 20; Idrīs ʿImād al-Dīn, *ʿUyūn al-akhbār*, iv, 365, 402).

Almost nothing has survived in Salamiyya from this early ʿAbbāsid period. There is the foundation inscription of a mosque on a stone (not *in situ*) at the entrance to the citadel. It is probable that this inscription is dated 150/767-8 and it belonged to a mosque founded by those ʿAbbāsids, which may have been destroyed later (about 290/903) by the Ḳarmaṭīs who invaded the town. Still another inscription stemming from an ʿAbbāsid has been found in the citadel; according to Littmann's plausible suggestion, it belongs with two other inscriptions to the period from 280/893-4 (or, for another view, see Hartmann, *Die arabischen Inschriften*, 55).

The fact that Salamiyya was the centre of an important branch of the Hāshimids and the isolated position of the town perhaps account for its important role in the early history of the Ismāʿīlī movement as the secret headquarters of the pre-Fāṭimid Ismāʿīlī *daʿwa*. According to the later Ismāʿīlīs, the early Ismāʿīlī *daʿwa* was organised and led by a number of hidden *imāms* (*al-aʾimma al-mastūrīn*), who were descendants of the Shīʿī *imām* Djaʿfar al-Ṣādiḳ. It was ʿAbd Allāh, a great-grandson of al-Ṣādiḳ and one of these hidden *imāms*, who, after living in different localities in Khūzistān and ʿIrāḳ, fled to Syria and eventually settled down in Salamiyya at an unknown date around the beginning of the 3rd/9th century. At the time, Salamiyya was held by the ʿAbbāsid Muḥammad b. ʿAbd Allāh b. Ṣāliḥ, who had transformed the

town into a flourishing commercial centre. The ᶜAlid ᶜAbd Allāh, the Ismāᶜīlī leader who then posed as an ordinary Hāshimid and a merchant, was granted permission by the ᶜAbbāsid lord of the town to settle there; later, he built a sumptuous palace for himself in Salamiyya which evidently continued to be used by his descendants and successors as the central leaders of the Ismāᶜīlī *daᶜwa* (see al-Nīsābūrī, 116 ff., tr. Ivanow, 161 ff.; Idrīs ᶜImād al-Dīn, iv, 357-66). Salamiyya served as the headquarters of the Ismāᶜīlī movement until the year 289/902; it was from there that *dāᶜīs* were originally dispatched for propagating the Ismāᶜīlī teachings and initiating the *daᶜwa* in different regions. These activities were greatly intensified around the middle of the 3rd/9th century.

ᶜUbayd Allāh (ᶜAbd Allāh), the last of these hidden *imāms* and the future Fāṭimid caliph al-Mahdī, was born in Salamiyya in 259 or 260/873-4. In 286/899, not long after his accession to the central leadership of the movement, ᶜUbayd Allāh introduced some important changes into the doctrines propagated by the early Ismāᶜīlī *daᶜwa*. However, the new instructions issued from Salamiyya were not endorsed by certain regional *dāᶜīs*, notably Ḥamdān Ḳarmaṭ and his chief assistant ᶜAbdān, who led the *daᶜwa* in ᶜIrāḳ and adjacent areas. ᶜAbdān was dispatched on a fact-finding mission to Salamiyya. Having become convinced of ᶜUbayd Allāh's reform, Ḥamdān and ᶜAbdān broke away from the central leadership; the dissident view found supporters also in Baḥrayn and some eastern Ismāᶜīlī communities. The Ismāᶜīlī movement was now split into two rival factions, the dissident Ḳarmaṭīs and the loyal Fāṭimid Ismāᶜīlīs (see W. Madelung, *Das Imamat in der frühen ismailitischen Lehre*, in *Isl.*, xxxvii [1961], 65-86; F. Daftary, *A major schism in the early Ismāᶜīlī movement*, in *SI*, lxxvii [1993], 123-39). The *dāᶜī* Zikrawayh b. Mihrawayh, who had initially remained loyal to ᶜUbayd Allāh, soon manifested his own rebellious intentions and led the Ḳarmaṭī revolts of ᶜIrāḳ and Syria during 289-94/902-7 (H. Halm, *Die Söhne Zikrawaihs und das erste fatimidische Kalifat 290/903*, in *Die Welt des Orients*, x [1979], 30-53). ᶜUbayd Allāh had already left Salamiyya a year before the rebellious Ḳarmaṭīs, led by Zikrawayh's sons, entered it in 290/903. The Ḳarmaṭīs massacred the inhabitants of Salamiyya, also destroying ᶜUbayd Allāh's palace there. The success of the Ḳarmaṭīs in Syria was, however, short-lived. By 291/903, the Ḳarmaṭīs were severely defeated by an ᶜAbbāsid army near Salamiyya; and their leader in Syria, one of Zikrawayh's sons, was captured and taken before the ᶜAbbāsid caliph al-Muktafī, who had him executed. Meanwhile, ᶜUbayd Allāh had embarked on the fateful journey that took him to North Africa where he founded the Fāṭimid caliphate. It is not impossible that the quadrangular citadel in the centre of Salamiyya goes back to the Ismāᶜīlī period of the town; according to van Berchem, it belongs to an early period architecturally.

In the 4th/10th century, Salamiyya must have been in an area inhabited by Bedouins (Sayf al-Dawla's campaign; cf. Hartmann, in *ZDPV*, xxii [1899], 175, 176). At the end of the 5th/11th century, it was included in the possessions of the brigand Khalaf b. Mulāᶜib, who acknowledged Fāṭimid suzerainty. There is evidence of this in an inscription in Kūfic characters, dated 481/1088, on the door beam of a mosque in Salamiyya. According to Ibn al-Athīr (x, 184), Khalaf took Salamiyya in 476/1083-4; he was then already master of Ḥimṣ. But in 485/1092, he lost Ḥimṣ and the lands that went with it to the Saldjūḳ Tutush, brother of Malik Shāh (Ibn al-Ḳalānisī, *Dhayl taʾrīkh Dimashḳ*, ed. H.F. Amedroz, Leiden 1908, 115, 120, 132, 149-50; Ibn Muyassar, *Akhbār Miṣr*, ed. A.F. Sayyid, Cairo 1981, 63, 76). In the inscription, studied extensively by Rey, Hartmann, van Berchem and Littmann, Khalaf says that he has erected this *mashhad* on the tomb of the *ḳāʾid* Abu 'l-Ḥasan ᶜAlī b. Djarīr (or Djaᶜfar), whose servant (*ṣāniᶜ*) he calls himself. However, the Syrian Ismāᶜīlīs have traditionally regarded this tomb as that of their early *imām* ᶜAbd Allāh, one of the hidden *imāms* of the pre-Fāṭimid period, calling the mausoleum locally as the *maḳām al-imām*. H. Halm, who studied and re-interpreted the inscription in 1980, lends support to the local Syrian Ismāᶜīlī tradition by holding that the mausoleum was in all probability originally erected, about 400/1009, over the tomb of the *imām* ᶜAbd Allāh by the Kutāmī *ḳāʾid* ᶜAlī b. Djaᶜfar (b. Falāḥ), the Fāṭimid commander who seized Salamiyya for the Fāṭimids and whose name appears in the inscription, and that Khalaf merely repaired the site, some four decades later (see Halm, *Les Fatimides à Salamya*, 144-7, with photographs of the site on 148-9).

During the Crusades, Salamiyya is never mentioned as a fortress but frequently as a meeting place for the Muslim armies. Politically it has always shared the fate of Ḥimṣ [*q.v.*]. Thus it passed to Riḍwān, son of Tutush, in 496/11102-3. In 532/1137-8, the Atabeg Zankī b. Aḳ Sunḳur, who was then besieging Ḥimṣ, set out from Salamiyya on his campaign against the Greeks at Shayzar (Ibn al-Athīr, xi, 36 ff.), and in 570/1174-5 Ṣalāḥ al-Dīn obtained the town together with Ḥimṣ and Ḥamāt from the *amīr* Fakhr al-Dīn al-Zaᶜfaranī (*ibid.*, xi, 276). In 626/1229, we find the Ayyūbid al-Malik al-Kāmil I in Salamiyya as a staging-post for ᶜIrāḳ; the lord of Ḥamāt came there to submit to him. Two years later, al-Kāmil gave the town to Asad al-Dīn Shīrkūh, who rebuilt the fortress of Shumaymish north of it on one of the peaks of the Djabal al-Aᶜlā (*ibid.*, xii, 318, 329; van Berchem and Fatio, *Voyage en Syrie*, i, 171, 173) which had been destroyed by the earthquake of 552/1157 (Ibn al-ᶜAdīm, *Zubdat al-ḥalab min taʾrīkh Ḥalab*, i, ed. S. Dahan, Damascus 1954, 306, tr. E. Blochet, *Histoire d'Alep*, Paris 1900, 21). In 698/1299, the Egyptian army was defeated at Salamiyya by the Mongols under Ghāzān; the battle was followed by the brief Mongol occupation of the city of Damascus.

In the 8th/14th century, Salamiyya was part of the important frontier lands (called al-Sharḳiyya) of the *mamlaka* of Damascus. Abu 'l-Fidāʾ, in whose territory as lord of Ḥamāt the town lay during the Mamlūk period, mentions an aqueduct between Salamiyya and Ḥamāt. In 726/1326, he went with his troops to clear out this channel (autobiography of Abu 'l-Fidāʾ in *RHC. Historiens Orientaux*, i, 168, 185; tr. P.M. Holt, *The memoirs of a Syrian Prince, Abu 'l-Fidāʾ, sultan of Ḥamāh*, Wiesbaden 1983, 18, 85). This aqueduct no longer exists. Perhaps it is the same as is mentioned by al-Dimashḳī (207) as in existence between Ḥimṣ and Salamiyya and built by the ᶜAbbāsid ᶜAbd Allāh b. Ṣāliḥ. At this time Yāḳūt (*Muᶜdjam*, iii, 123) speaks of seven prayer-niches near Salamiyya below which some *tābiᶜūn* or Successors were buried; he also mentions the tomb of al-Nuᶜmān b. Bashīr al-Anṣārī, the companion of the Prophet.

Under Ottoman rule, the town gradually ceased to be of importance. By the early decades of the 13th/19th century, Salamiyya was entirely deserted and lying in ruins, probably on account of the lack of adequate protection against the Bedouins (see C.L. Meryon's *Travels of Lady Hester Stanhope*, London 1846, ii, 93, 211-12, and L. de Laborde's *Voyage en*

Orient, Paris 1838, ii, 13, who visited Salamiyya in 1813 and 1827 respectively). A new phase in the history of Salamiyya began in the middle of the 13th/19th century. It was at that time that Ismāʿīl b. Muḥammad, the Ismāʿīlī *amīr* of Ḳadmūs who had succeeded in establishing his authority over a large section of the Ismāʿīlī community in Syria and who had been outlawed earlier for his rebellious activities, was permitted by the Ottoman authorities to settle permanently with his people in an area east of the Orontes river. The Ismāʿīlī settlers were also exempted from military conscription and taxation. These arrangements were evidently confirmed by a *fermān* of Sultan ʿAbd al-Medjīd, dated Shaʿbān 1265/July 1849. Ismāʿīl b. Muḥammad chose the ruins of Salamiyya as the site of his new Ismāʿīlī settlement. An increasing number of Ismāʿīlīs from the western mountains gradually joined the original settlers in Salamiyya, attracted by the prospect of receiving free land in a district where they would furthermore be neither taxed nor conscripted (for details, see N.N. Lewis, *The Ismaʿilis of Syria today*, in *Royal Central Asian Society Journal*, xxxiv [1952], 69 ff.; M. Ghālib, *The Ismailis of Syria*, Beirut 1970, 156 ff.).

By 1861, Salamiyya had become a large village with numerous dwellings in its restored fort (J.H. Skene, *Rambles in the deserts of Syria*, London 1864, 158). Soon the Ismāʿīlī settlers, whose numbers increased continuously by new arrivals, established villages around Salamiyya, expanding the cultivable land of the district and improving its irrigation. By 1878, Circassians also began to migrate to Salamiyya. However, the bulk of the land of Salamiyya and its villages remained in the hands of the Ismāʿīlīs. In time, the growth and prosperity of Salamiyya was officially recognised by the Ottoman authorities who, in 1884, created a special administrative district (*ḳaḍāʾ*) centred on Salamiyya within the *sandjak* of Ḥamāt; a few years later, troops were stationed there, conscription was initiated, normal taxes were levied, and Salamiyya began to appear regularly in the annual *Sālnāme-yi Sūriye wilāyeti* of the Ottomans. By the end of the 13th/19th century, Salamiyya reportedly had more than 6,000 inhabitants, with a good irrigation system (V. Cuinet, *Syrie, Liban et Palestine*, Paris 1896, 436, 453 ff.). The last major migration of the Syrian Ismāʿīlīs to Salamiyya occurred in 1919; these settlers built their houses in a new quarter of the town known as the "quarter of the Ḳadmūsīs". In the present century, Salamiyya has become an important agricultural centre in Syria, where a variety of crops, including wheat and legumes, are cultivated.

In 1304/1887, the Ismāʿīlīs of Salamiyya, who, like the bulk of the Syrian Ismāʿīlīs, had hitherto belonged to the Muḥammad Shāhī branch of Nizārī Ismāʿīlism, transferred their allegiance to the Ḳāsim Shāhī line of Nizārī *imāms*, then represented by Agha Khān III. The latter organised the Ismāʿīlīs of Salamiyya and also built several schools and an agricultural institution there. With a population of 95,000 in 1993, the great majority of whom are Nizārī Ismāʿīlīs, Salamiyya now accounts for the largest concentration of Ismāʿīlīs in Syria as well as in the Near East. In recent years, the Ismāʿīlī community of Salamiyya has benefited from the communal and religious activities of Agha Khān IV, the 49th and present *imām* of the Ḳāsim Shāhī Nizārīs, whose father Prince ʿAlī Khān is buried in Salamiyya in a special mausoleum adjacent to the town's newly-constructed Ismāʿīlī centre (*djamāʿat-khāna*).

(J.H. KRAMERS-[F. DAFTARY])

SALAR, a Muslim and Turkic-speaking minority in Northwestern China.

They are otherwise called Sa-la in Chinese. Their total population in the P.R.C. is about 69,000 and the greater part of them live in the Sala Autonomous Prefecture of Hsün-hua, Ch'ing-hai province; the population here was *ca.* 49,000 in 1984. The Salar oral traditions unanimously tell that they emigrated from Samarḳand to Hsün-hua in 1370 under the reign of the first Ming Emperor. They are regarded to have originated from Salar (or Salor [see SALUR]) tribesmen of the Turkmen nation distributed in the Samarḳand region. The Ch'ing-hai Salars were firstly reported in Ch'ing source in the middle of the 18th century. The Salars are Muslims and some of them became adherents of the Ṣūfī order of the Djahriyya from the early 18th century. In 1781 conflicts broke out among the Salars, who had been divided into two sects, that of the New Teaching (Djahriyya) and that of the Old Teaching, but adherents of the New Sect were severely militarily repressed by the Ch'ing authorities. There were several rebellions of the Salar New Sect against the local authorities down to the late 19th century. The Salars at Hsün-hua consisted of eight *kung* (originally eleven *kung*; *kung* means village or community) with their base at Hsün-hua. They were engaged in farming, cattle-breeding, fishing, etc. In the Salar region, there were nine large, core mosques, each of which administered subordinate mosques. Religious leaders of Salar mosques, on the lines of *akhōn, imām, mullā, ḳāḍī* and *khaṭīb*, were known: festivals, such as the *ʿīd al-fiṭr, ḳurbān* and *barāt* were observed, and the Salars had tombs called *ḳubbas*

(generally called *kumpei*). The Salars are now officially recognised as one of the 55 minority peoples of the P.R.C., and they coexist with the Han Chinese.

(T. SAGUCHI)

SĀLĀR (P.), commander. From the older Pahlavi *sardār* there arose as early as the Sāsānid period the form *sālār* with the well-known change of *rd* to *l* and compensatory lengthening of the *a* (cf. *Grundr. d. Iran. Phil.*, i,[a] 267, 274). The synonymous word in modern Persian *sardār* is not a survival of the ancient *sardār*, but is a modern formation; indeed, the elements from which the ancient word was composed still exist in the modern language. The old Armenian took over the Pahlavi *sālār* in the form *salar*; the form *sardār* which would give **sardar* in Armenian is not found in the latter language. A latter, probably modern Persian loan-word in Armenian is (*spa*) *salar* with *l* instead of *ł*. On this and on other late Armenian forms, cf. Hübschmann, *Arm. Gramm.*, i, 235, 239. In the first of these two references, the Pahlavi combinations of the word are also given. On the etymology, cf. also Horn, *Grundriss der neup. Etymologie*, 153; Hübschmann, *Persische Studien*, 72; Junker, *The Frahang i Pahlavīk*, Berlin 1912, 37, 79.

In the mediaeval Islamic Persian world and in those lands culturally affected by it, such as the central Arab lands of ʿIrāḳ and Syria, the Caucasus, Central Asia and Muslim India, *sālār* was essentially a military term, as e.g. in *sipah-sālār* "supreme army commander", the equivalent in Persian of the Arabic *amīr al-umarāʾ*, *ḥādjib al-ḥudjdjāb* or *al-ḥādjib al-kabīr* found amongst dynasties like the Sāmānids, Būyids, Ghaznawids and Great Saldjūḳs [see ISPAHSĀLĀR].

But *sālār* by itself was often used for the commander of a particular group, such as the commander of the Muslim *ghāzīs* or fighters for the faith centred on Lahore in the Ghaznawid period and organised for raiding into the Hindu *dār al-kufr* (see Bosworth, *The Ghaznavids*, 114). Certainly in the 5th/11th century, various of the towns and districts of Khurāsān seem to have had *sālārs* heading local forces organised either for defence or for *ghazw*. The *Sālār* of the district between Bādhghīs and Ḳuhistān called Būzgān was an active figure there in the events spanning the transition from Ghaznawid to Saldjūḳ rule in Khurāsān during the 1030s (see *ibid.*, 254, 261, 262-4), and some sources describe this Abu 'l-Ḳāsim ʿAbd al-Ṣamad al-Būzdjānī as becoming the Saldjūḳ Ṭoghrïl Beg's first vizier (see H. Bowen, *Notes on some early Seljuqid viziers*, in *BSOAS*, xx [1957], 105-7). Likewise, in Nīshāpūr at this time, a *sālār* of what was perhaps a local militia is mentioned, and this command may have been one of the functions of the town's *raʾīs* [see RAʾĪS. 2.] (see R.W. Bulliett, *The patricians of Nishapur, a study in medieval Islamic social history*, Cambridge, Mass. 1972, 68-9); he seems to have been regarded as a key figure in 429/1030 when it was a question of the establishing the authority of the dead sultan Maḥmūd of Ghazna's son Masʿūd in Nīshāpur rather than that of his brother Muḥammad (see Ibn Funduḳ, *Taʾrīkh-i Bayhaḳ*, ed. Bahmanyār, 267-8). There was a prominent family in Bayhaḳ, the Sālāriyān, the descendants of one *Sālār* Abu 'l-ʿAbbās al-Muḥsin al-Muṭṭawwiʿ, who had been head of the *ghāzīs* and had fought at Tarsus (*ibid.*, 124).

In administrative documents from mid-6th/12th century eastern Persia and Transoxania, *sālār*, together with such terms as *muḳaddam* and *sarhang*, appears as a rank for commanders just below the supreme commander (H. Horst, *Die Staatsverwaltung der Grosselǧūqen und Ḫōrazmšāhs (1038-1231)*, Wiesbaden 1964, 42, 47, 120, 160.

In general mediaeval Islamic usage, *sālār* is also found—as far west as Mamlūk Egypt and Syria—in such compounds as *ākhur-sālār* "head of the stables" and *khʷān-sālār* "steward", given that these high royal household offices were usually allotted to high-ranking Turkish military commanders.

(V.F. BÜCHNER-[C.E. BOSWORTH])

SĀLĀR DJANG (Sir), the title by which Mīr Turāb ʿAlī, a Sayyid of Persian descent and one of the greatest of modern Indian statesmen, was best known.

He was born at Ḥaydarābād, Deccan, on 2 January, 1829, and, his father having died not long after his birth, was educated by his uncle, Nawwāb Sirādj al-Mulk, Minister of the Ḥaydarābād State. He received an administrative appointment in 1848, at the age of 19, and on his uncle's death in 1853 succeeded him as Minister of the State. He was engaged in reforming the administration until 1857, the year of the Sepoy Mutiny, when the Niẓām, Nāṣir al-Dawla, died and was succeeded by his son Afḍal al-Dawla. The news of the seizure of Dihlī by the mutineers greatly excited the populace, and the British Residency was attacked by a turbulent mob, aided by some irregular troops, but throughout the darkest days of the rebellion Sālār Djang not only remained true to the British connection, but strengthened the hands of his master and suppressed disorder. The services of the State were recognised by the rendition of three of the districts assigned in 1853 on account of debts due to the Company, and by the cession of the territory of the rebellious Rādjā of Shorāpūr. In 1860 and again in 1867 plots to estrange the great Minister from his master and to ensure his dismissal were frustrated by two successive British Residents, and Sālār Djang remained in office. In 1868 an attempt was made to assassinate him but the assassin was arrested and executed, despite Sālār Djang's efforts to obtain a commutation of the sentence. On the death of Afḍal al-Dawla in 1869, Sālār Djang became one of the two co-regents of the State during the minority of his son and successor, Mīr Maḥbūb ʿAlī Khān, and on 5 January 1871, he was invested at Calcutta with the insignia of the G.C.S.I. In November 1875, he and other nobles represented the young Niẓām at Bombay on the occasion of the visit of the Prince of Wales to India, and in April 1876, he visited England and was presented to Queen Victoria. He received the honorary degree of D.C.L. from the University of Oxford and the Freedom of the City of London. In January 1883, he was engaged in making preparations for the contemplated visit of the Niẓām to Europe, but on 7 February, after entertaining Duke John of Mecklenburg-Schwerin, who was visiting Ḥaydarābād, on the Mīr ʿĀlam Lake, he was attacked by cholera and died on the following morning. Though always known by his first title, Sālār Djang, he bore the higher titles Shudjāʿ al-Dawla and Mukhtār al-Mulk.

ṢALĀT (A.), ritual prayer. Unlike other types of prayer—in particular the prayer of supplication [see DUᶜĀʾ], the remembrance of the Divine Names [see DHIKR] or Ṣūfī confraternities' litanies [see WIRD]—the *ṣalāt*, principal prayer of Islam, forms part of the *ᶜibādāt* or cultic obligations. The word clearly derives from the Syriac *ṣᵉlōtā* "prayer" and had adopted its Arabic form before the Islamic period (see Jeffery, 198-9). The structure of this article will be as follows:

I. In the Ḳurʾān.
II. In *ḥadīth* and legal elaborations.
III. The five daily prayers.
IV. The other ritual prayers.
V. *Ṣalāt* and Islam.

I. *In the Ḳurʾān.*

A. General insistence on prayer. In the Sacred Book of Islam, *ṣalāt* stands out prominently in an atmosphere of invocation of God. It would be arbitrary to separate totally the "ritual prayer" from other forms of prayer. *Ṣalāt*, the whole of which expresses praise and adoration, thus becomes the echo of specific prayers in the Ḳurʾān (cf. III, 26; X, 10) and of the usual feelings which it inspires or reflects.

In the Ḳurʾānic universe in fact, there is no religion without prayer. This last is expressed by numerous roots and words which mark its different orientations: thus the prayer of supplication or invocation (*duᶜāʾ*), the appeal for pardon (*istighfār*) and glorification (*tasbīḥ*). The quality of prayer and its acceptance by God are the object of precise considerations (XL, 50; XLI, 49-51; II, 186) and of careful advice (VII, 55-6; XXI, 90; XL, 60; cf. VI, 52). Particularly notable is the diversity of protagonists or subjects of prayer: outside Islam like the associators (VI, 108; VII, 32 and 35) or the Christian hermits (who are probably described in XXIV, 36-8); before Islam like the wife of Pharaoh (LXVI, 11), the Man of the Fish (=Jonah, XXI, 87), and the three great models represented by Abraham, Moses and Zachariah (e.g. XXVI, 83-9; XX, 25-35; XIX, 3-6); within Islam like Muḥammad and the other Muslims (e.g. III, 26-7; XVIII, 80-1; II, 286; XVII, 24); and after Islam, as it were, like those chosen to reside in the Gardens of Delight (X, 10). In short, before becoming the obligatory and codified activity which forms the object of this article, prayer is first of all, and always remains so in the Ḳurʾānic vision of the world, the fundamental fabric of religious behaviour.

It is necessary above all to avoid projecting indiscriminately upon the word *ṣalāt*, and upon the verb *ṣallā* which is constructed on the basis of this substantive, the technical sense of Muslim ritual prayer. In the shortest, and one of the most ancient sūras, the reading is *fa-ṣalli li-rabbika wa-nḥar*, "therefore make the prayer to your Lord and sacrifice [a victim]" (CVIII, 2); this "prayer" could not be the *ṣalāt*. Similarly, in IX, 99 (cf. 103), the *ṣalawāt al-rasūl* probably refer to the prayers of benediction pronounced by the Prophet on Bedouin bringing their offerings (cf. Paret, 210-11). In VIII, 35, *ṣalātuhum* denotes explicitly the prayer of unbelieving Meccans (cf. CVII, 4-7); while in VI, 162, *ṣalātī* represents the totality of the devotional activity of Muḥammad, his life of prayer. Other instances of the root *ṣ-l-w* may also have no connection with ritual prayer (e.g. XVII, 110; LXX, 34).

The fact remains, however, that the word *ṣalāt* most often denotes this ritual prayer, the forms and rhythms of which evolved gradually, but which became at a very early stage a constitutive and distinctive element of Islam.

B. Importance of ritual prayer. There exist 65 instances of *al-ṣalāt* in the singular with the definite article. These usages always seem to indicate a ritual prayer, this being a cultic act comprising certain prescribed gestures and words, which is considered the form of prayer most closely associated with the religion. Its importance is not determined only by the frequent occurrence of the word. The Ḳurʾān opens with the *Fātiḥa*, sūra I, and this is recited at every *rakᶜa*. With its sober and full tenor, as with its wording in the first person plural, it is so well adapted to liturgical use that its composition for this very purpose can scarcely be doubted. Consequently, its location at the opening of the Ḳurʾān gives a particular emphasis to *ṣalāt*. The outstanding worth of the latter is again underlined in II, 3, and the remainder of the Ḳurʾānic text corroborates this status.

Furthermore, the Book places the origin of ritual prayer, under divine guidance, at the outset of humanity. All the prophets practised ritual prayer (cf. XIX, 58-9, and 55; XXI, 73). Abraham appealed to his Lord to grant to him and his descendents, the privilege of performing *ṣalāt* (XIV, 37, 40). The obligation of ritual prayer was intimated to Moses in a particularly solemn manner (X, 87; XX, 14), and to Jesus in a quite different atmosphere (XIX, 31). Thus ritual prayer belonged at all times to the correct and immutable religion which is professed as a *ḥanīf* [*q.v.*] (XXX, 30-1; XCVIII, 5). It is often said that the revealed Laws change with the Messengers of God, while the latter maintain the same proclamation of the Unique One (*tawḥīd*). This view of things needs to be extended. In the Ḳurʾān, ritual prayer is presented as the immediate and constant corollary of belief in God. Whatever variations may exist in the practical prescriptions, a *ṣalāt* forms part of Ḥanīfism.

C. *Ṣalāt* in the evolution of the Ḳurʾānic message. To the above-mentioned uses of the word in the singular with the definite article, there should be added two instances (both in XXIV, 58) of the singular in the genitive construction. Hence, in the technical sense of ritual prayer, there is a total of 67 uses in the singular without affix. None of them belong to the primaeval sūras, i.e. to the most ancient sūras of that which Blachère calls the first Meccan period (the verse LXXIII, 20 is, by general agreement, much later than the remainder of the sūra). It is possible that the word in question does not appear before the period which, on both sides of the Hidjra, extends approximately from 620 to 624. It is significant that there is a single example in the *ḥawāmīm* sūras (in XLII, 38, in the context of moral advice). On the other hand, II, IV, V, IX and XXIV, all of them Medinan and contemporary with or later than the changing of the *ḳibla*, contain 33 uses: half of the total in a text which covers no more than 20% of the length of the Ḳurʾān. In other words, in the five sūras mentioned above, *ṣalāt* is presented proportionally four times more than in the remainder of the Ḳurʾān. This is no accident. The sūras cited correspond to the establishment of Islam as an institutional religion. Ritual prayer is a fundamental element of this, which accounts for the frequency with which it is mentioned.

This analysis is corroborated by the close link between *ṣalāt* and *zakāt*, "purification" of riches through giving. These two practices are prescribed or approved of together at least 25 times: *wa-aḳīmū 'l-ṣalāt wa-ātū*

'l-zakāt (IV, 77, etc.). Now it is known that the notion of alms is also expressed in the Ḳur'ān by the word *ṣadaḳa* [*q.v.*] and by the verb *anfaḳa* (to give of one's goods), and that the concept underlying the three Arabic terms has experienced an evolution: first, free giving from person to person, then religious obligation in the context of Islam. Ultimately the *zakāt*, enjoined especially in the five sūras already mentioned, takes on the precise meaning of a communal tax. "Purification" is accomplished by contributing to the treasury of the community, and the distribution of these henceforward compulsory "alms" (*ṣadaḳāt*) is codified under eight headings in IX, 60. Mention of this obligatory tax alongside ritual prayer is further evidence of the communal importance and finality of the latter.

D. The times of *ṣalāt*. In sketching the general line of an evolution which ends in the establishment of prayer as a pillar for the religion of God and of His Messenger, a thorny problem has been left aside: which are, according to the Book of Islam, the hours and the times of official prayer? Was there in the lifetime of the Prophet a progressive organisation, the signs of which would be perceptible in the Ḳur'ān?

To answer this question, it is not enough to base conclusions on the verses where the word *ṣalāt* is mentioned. It is necessary to take into account all the passages which mention a communal prayer of the disciples of Muḥammad or present as a model his habits of prayer.

Muslim prayer is born from the personal prayer of Muḥammad. The most ancient Ḳur'ānic passages which give temporal indications are addressed to the Prophet. They all enjoin upon him nocturnal prayer (LXXIII, 2-7, etc.), and to this, one adds praise at the setting of the stars (LII, 48-9), another, invocation of the name of his Lord at the dawning and at the declining of the day (LXXVI, 25-6), the last, praise before the rising of the sun and before its setting (L, 39-40). No doubt from the same period is the reference to the dwellers in the Garden of Paradise who previously prayed on the earth, keeping vigil into the last hours of the night (*bi 'l-asḥār*: LI, 16-18).

With different words, the same rhythms, still at Mecca, are subsequently maintained (XX, 130; XVII, 78-80; XL, 55), but it is soon observed that a prayer group is formed around Muḥammad: "Enjoin *ṣalāt* upon your people" (XX, 132); "Stay with those who invoke their Lord" (XVIII, 28; cf. XXV, 64-5; XXXIX, 9).

In the years 620-4, the communal nature of prayer becomes manifest. The most ancient prescription first addressing the community of disciples seems to be VII, 204-6 (cf. XI, 112-4). In XXX, 17-18, the commandment given them is to pray to God evening and morning, then comes this phrase: "To Him be praise in the heavens and on the earth, at the declining of the day (*ʿas̲h̲iyy^{an}*) and when you are at midday (*wa-ḥīna tuẓhirūn*)". To give here to the word *ʿas̲h̲iyy* a sense other than that which it habitually expresses in the Ḳur'ān (cf. XVII, 28 and XL, 55, parallels to XX, 130 or XLVIII, 9, etc.), would be arbitrary. On the other hand, the last section of the phrase does indeed seem to designate an additional time of prayer, the novelty of which is perceptible in II, 238: "Be steadfast in your prayers, in the median prayer as well (*wa 'l-ṣalāti 'l-wusṭā*)...".

The years following the changing of the *ḳibla* see the consolidation of the institutional nature of prayer. Then, as noted above, the link between ritual prayer and the communal tax becomes a great deal tighter (LXXIII, 20, etc.). In IV, 103, a degree of organisation emerges: "Ritual prayer is enjoined upon believers at fixed times". Finally, in XXIV, 58, on both sides of the middle of the day (cf. II, 238, quoted above), there are named incidentally "the prayer of the dawn (*fad̲j̲r*)" and the *ṣalāt al-ʿis̲h̲ā'*.

In the Ḳur'ān as a whole, the times of prayer are indicated with a richness of vocabulary which shows a practice still at the evolutionary stage. There are, it seems, three essential times (to which the median prayer is added somewhat later).

(a) At one of the "two extremities of the day" (XI, 114; cf. XX, 130), is the dawn prayer, *fad̲j̲r*, also called, with slight nuances, by a number of names: *bukra, ibkār, g̲h̲uduww* and *g̲h̲adāt*, as well as "before the rising of the sun" and "when you are in the morning".

(b) At the other extremity, is the decline of the day, *ʿas̲h̲iyy*, in other words the second part of the afternoon, in particular its final phase, *aṣīl*, pl. *āṣāl*, to which apparently corresponds the *dulūk al-s̲h̲ams* of XVII, 78, as well as "before the setting of the sun" and "when you are in the evening".

(c) The nocturnal prayer is denoted by the verb *tahad̲j̲d̲j̲ad* (*hapax* in XVII, 79) and by expressions such as *ānā' al-layl* or *zulaf min al-layl*. LXXIII, 20, recommends moderation in long vigils of prayer, and the explicit inauguration of the *ṣalāt al-ʿis̲h̲ā'* could be ascribed to the same purpose.

Alongside this daily division, prayer is subject to another temporal determination, this time in the weekly context. This is the Friday prayer, mentioned in a single passage of the Ḳur'ān: "O you who believe! When you are called to ritual prayer on the day of assembly, come quickly to the remembrance of God, leave your business" (LXII, 9; see D̲J̲UMʿA).

E. Conditions and characteristics of *ṣalāt*. A public call to prayer, expressed by the verb *nādā*, is mentioned twice (V, 58; LXII, 9). The necessity of ritual purification before prayer is indicated in a detailed fashion in IV, 43, and V, 6, which both authorise *tayammum*, this being the use of fine sand instead of water in the absence of the latter. Ritual prayer must be performed facing in a precise and constant direction. This direction is that of *al-masd̲j̲id al-ḥarām*, i.e. the Kaʿba of Mecca. This is stated three times, most emphatically, in II, 142-50. This outstanding passage, which can be dated with certainty in the year 2/624 (probably in the middle of the month of S̲h̲aʿbān, corresponding to mid-February, but possibly a month earlier, in Rad̲j̲ab), does not confine itself to instituting the *ḳibla*. It enjoins upon the believers the abandonment of a former *ḳibla*, which according to all extra-Ḳur'ānic evidence was the direction of Jerusalem (almost the opposite in fact, for Muslims then living in Medina). A problem remains: what was the *ḳibla* before the Hid̲j̲ra? It was definitely the direction of Jerusalem, but: (1) the Prophet had probably approved it for the Anṣār of Yat̲h̲rib two years before emigrating to there (cf. al-Ṭabarī, *D̲j̲āmiʿ*, ii, 4, 5, 12); but he did not adopt it himself until later, if the account of al-Barā' b. Maʿrūr is to be believed (cf. Ibn His̲h̲ām, 294; al-Ṭabarī, i, 1218-19); (2) the former practice of Muḥammad in the city of his birth remains uncertain. On these questions, see ḲIBLA.

Whatever the case may be, ritual prayer is animated in its entirety by two internal movements, glorification (*tasbīḥ*) and praise (cf. ḤAMDALA; and see XX, 130; XXXIII, 42; XL, 55; L, 39-40, etc.). Appeal for pardon is sometimes included here (XL, 55; cf. III, 17; VII, 204). These sentiments are inseparable from contrasting physical attitudes: stand-

ing upright and prostration (cf. II, 238; IV, 102; L, 39-40, etc.; in addition, for nocturnal prayer, XXV, 64; XXXIX, 9). The technical term *rakʿa* is absent from the Ḳurʾān, but bowing is often expressed by the corresponding verb, normally in association with prostration (V, 55; IX, 112; XLVIII, 29); however, it is not clear that these prostrations form part of *ṣalāt* (cf., in addition, II, 43; III, 43; XXII, 26 and 77). On the other hand, public reading of the Ḳurʾān is a manifest and vital element of it (VII, 204-6; XVII, 78; XVIII, 27-8; XXXIX, 45; XXXV, 29; LXXIII, 20, etc.).

II. *In* ḥadīth *and legal elaborations.*

The two principal Sunnī canonical collections of prophetic traditions both begin with *ḥadīth*s on the five pillars of Islam. After the affirmation of faith, they therefore deal with ritual prayer. Among the *ʿibādāt*, it is this which occupies by far the greatest amount of space in their work: 200 pages in the work of al-Bukhārī, and more than double this in Muslim's. This vast quantity of material is organised by both in a series of "books" (*kitāb*), which form three major blocks. First is the *sine qua non* condition of ritual prayer, this being legal purity (*ṭahāra*): to which correspond in al-Bukhārī's case books of ablution [see WUḌŪʾ], of general washing [see GHUSL], of menstruation [see ḤAYḌ], of washing with fine sand [see TAYAMMUM]. Then come traditions which determine general aspects and elements of *ṣalāt*. Finally, numerous books examine particular cases, such as the prayer of major festivals or that of funerals. This general organisation is not peculiar to the two *Ṣaḥīḥ*s but also belongs, with minor variations, to the other four canonical collections.

In the 3rd/9th century, when all these works were compiled, the time-table and conduct of prayers were fixed. Their detailed rules will be presented below in section III. They were liable to vary all the less in that judicial consideration of these fundamental matters had also, by this stage, been basically concluded. It was, in fact, the 2nd/8th century which saw the activity of the scholars who gave their names to the four great schools or *madhāhib* of Sunnī Islam. This article will seek neither to show the quite modest differences which divide them on the subject of *ṣalawāt* nor to determine their relationship to the traditions and to the traditionists. Considering from a broad perspective the ritualistic doctrine and practice which were then crystallised, our intention is merely to underline a number of principles which govern Muslim prayer and various aspects of its practice.

A. General principles of prayer.

1. *Perfected institutionalisation.* The *ṣalāt* of the traditions is entirely ritual, and linked to five times of the day. This divine determination is presented in two different manners. On the one hand, *ḥadīth*s related by Anas b. Mālik (sometimes quoting Abū Dharr, sometimes Mālik b. Ṣaʿṣaʿa) describe an ascension of the Prophet into the heavens, where he ultimately receives from God Himself, after some haggling, the prescription of five daily prayers for his community (al-Bukhārī, *Ṣalāt, bāb* 1 and *Manāḳib al-Anṣār, bāb* 42; Muslim, *Īmān*, nos. 259, 263, 264). On the other hand, Ibn Shihāb al-Zuhrī records a *ḥadīth* related by Abū Masʿūd al-Anṣārī according to which Gabriel descends five times to Muḥammad to induce him to pray, implicitly at the prescribed times (al-Bukhārī, *Mawāḳit, bāb* 1; Muslim, *Masādjid*, nos. 166-7).

2. *Obligatory nature.* The five prayers are obligatory every day for each Muslim man or woman who is past the age of puberty and of sound mind.

3. *The direction of prayer.* In all the ritual prayers, turning towards the Kaʿba is strictly obligatory; see ḲIBLA.

4. *Use of the Arabic language.* This is a very firm doctrine in the majority of the schools (see e.g. al-Suyūṭī, *al-Itḳān, nawʿ* 35, Beirut 1407/1987, i, 340-1). As regards the recitation of the *Fātiḥa* by a Muslim incapable of saying it in Arabic, the Ḥanafīs have, however, authorised the use of other languages. For discussions of this issue in Turkey and in Egypt in the 20th century, see ḲURʾĀN, i.

5. *The call to prayer.* Each of the five daily prayers is announced by the voice of the muezzin. This call to the Community (mentioned in the Ḳurʾān, as noted above) was established at Medina. Each prayer is preceded by two calls, separated by an interval of time; the first is the *adhān*, the second the *iḳāma* [*q.vv.*].

6. *The* rakʿa. This word denotes an invariable sequence of bodily positions and movements, accompanied by words, which belongs to the substance of *ṣalāt*. In every ritual prayer (with the exception of the prayer over the dead), the *rakʿa* is performed at least twice in succession. The practice of the *rakʿa* is described below, in section III, B.

7. *Importance of communal prayer.* Numerous traditions stress the excellence of the "prayer of the congregation" (*ṣalāt al-djamāʿa*). Two of them are particularly famous. On the one hand, "The prayer which a man performs in congregation is worth twenty-five of his prayers in his home or in the market-place" (al-Bukhārī, *Adhān, bāb*s 30, 31, and *Ṣalāt, bāb* 87; Muslim, *Masādjid*, nos. 245-8, etc.). On the other, the Prophet contemplated personally burning down the houses of those who were not present at the prayer of the congregation (al-Bukhārī, *Adhān, bāb*s 29, 34; Muslim, *Masādjid*, nos. 251-4, etc.). The call to ritual prayer demonstrates its communal nature. The latter is emphasised by the liturgical *Āmīn* added to the *Fātiḥa* (cf. al-Bukhārī, *Adhān, bāb*s 111-13; Muslim, *Ṣalāt*, nos. 72-6), as by the invocation "To you be praise, our Lord!", said in response to the *imām*'s utterance "God hears him who praises Him" (see below, section III, B, third element of the *rakʿa*), and, furthermore, by the final salutations of the *imām* and of the other faithful. The obligation to participate in collective prayer is more strongly asserted by the Mālikīs (al-Malaṭāwī, 166-7) than by the Ḥanafīs (al-Ghāwidjī, 132 ff.). The participation of women is permitted, but not recommended. The favoured place for communal prayer is clearly the mosque: see MASDJID, i, C, 2.

8. *The* imām. For communal prayer to take place, two adults must be present, one of whom is the *imām* of the other. The *imām* is the *sine qua non* condition of congregational prayer. Numerous prophetic traditions determine his function. They are conveniently listed by Muslim, *Ṣalāt*, nos. 77-101, and by al-Bukhārī, *Ṣalāt, bāb*s 43 ff. The *imām* must be male, of good reputation, educated. As a general rule, the faithful place themselves in ranks (*ṣufūf* [see ṢAFF]) behind the *imām*, perform the ritual gestures with him, and repeat his words. If there is only one man with the *imām*, he places himself to his right; if there are two or more, they place themselves behind him. Women always place themselves behind the men; if there is only one woman with the *imām*, she places herself behind him.

9. *The* djahr. In Ḳurʾān XVII, 110, the text reads "Do not raise your voice in your prayer, and do not pray in a whisper, but seek a way between the two." On the basis of a *khabar* of Ibn ʿAbbās, the commentators see in this a measure of caution in the face of Meccan unbelievers (cf. e.g. al-Rāzī, xxi, 70; al-

Ḳurṭubī, x, 343). But traditions show that Muḥammad, at Medina, said certain prayers in a loud voice (*d̲j̲ahr*) and others in a whisper (cf. al-Buk̲h̲ārī, *Ad̲h̲ān, bābs* 96, 97, 99, 100, 105, 108, etc.). From this it has been concluded that the Ḳurʾānic verse was calling, not for a happy medium, but for an alternation of the two styles. As a result, the *imām* is obliged to declaim in a loud voice the first two *rakʿas* of specific prayers, and in a whisper the other contingent *rakʿas* of these prayers and all the *rakʿas* of the other prayers (cf. al-G̲h̲āwad̲j̲ī, 128-9; al-Malaṭāwī, 136-7).

10. *The* ṭumaʾnīna. Prayer must be performed soberly and calmly, with close attention to the rhythm as it unfolds. A tradition shows the Prophet making a worshipper who had neglected this principle start again three times (al-Buk̲h̲ārī, *Ad̲h̲ān, bābs* 95, 122; Muslim, *Ṣalāt*, no. 45). All the authors make this one of the fundamental requirements of ritual prayer (cf. Ibn ʿAbd al-Wahhāb, 31, 36; al-G̲h̲āwid̲j̲ī, 127-8; al-Malaṭāwī, 135).

B. Various aspects. Anyone who has inadvertently omitted or misplaced one of the elements of the prayer and becomes aware of this before the end of the latter is obliged to perform or recast this element and furthermore, at the end of his prayer, to add immediately the "prayer of negligence" (*ṣalāt al-sahw*). This consists of performing two prostrations with their *takbīr*, then sitting for the *tas̲h̲ahhud* and the final salutation. This practice is blended with divergencies imposed by the different schools, and there are also elaborate subtleties according to the judicial qualification of the elements neglected, according to whether the negligence is or is not the act of an *imām* whose direction has been followed since the beginning or otherwise of the prayer, according to the certainty or simple doubt of the worshipper with regard to his own negligence, according also to faults which can include the performance of the "prayer of negligence" itself. See al-G̲h̲āwid̲j̲ī, 236-41; al-Malaṭāwī, 159-63. It may be noted in passing that the worshipper can quite easily make a mistake over the number and the nature of the *rakʿas* which he has already performed especially if he adds supererogatory prayers at the beginning or at the end of a canonical prayer.

It should be stated that the issue of negligence is part of a corpus of traditional and judicial specifications. There is an abundance of minute regulations concerning the words and especially the gestures of prayer, the clothing and shoes to be worn for it, the behaviour to be followed, the place where it is to be performed and the ritual purity which is to be observed. Also worthy of note is the interesting notion of *sutra* [*q.v.*]. This word, which initially denotes a veil or a screen, is the technical term for any object placed by the worshipper some distance before him, in front of which no person should pass while the prayer is being performed.

The legislation regarding prayer is not devoid of flexibility. Traditions show Muḥammad as concerned to alleviate as far as possible the rigours of observance. Thus he shortened the prayer on one occasion, when a child began to cry in the congregation, appreciating the mother's distress (al-Buk̲h̲ārī, *Ad̲h̲ān, bāb* 65; Muslim, *Ṣalāt*, nos. 191, 192). Similarly, he was vehemently opposed to excessively long Ḳurʾānic readings during the ritual prayer and was concerned that people should not consider themselves obliged to imitate his own personal devotions (al-Buk̲h̲ārī, *Ad̲h̲ān, bābs* 60-4, 80-1; Muslim, *Ṣalāt*, nos. 182-90).

This flexibility is also in evidence on other occasions: cancellation of communal prayer when the weather is especially inclement, delay of the prayer of *ẓuhr* at times of excessive heat, and then the combination (*d̲j̲amʿ*) of the latter with the prayer of *ʿaṣr*, as also sometimes happens with the two prayers of *mag̲h̲rib* and of *ʿis̲h̲āʾ*. This amenity of combining the above-mentioned prayers is especially accorded to one who is travelling in haste. Later jurisprudence (or indeed casuistry) did not omit to solve the particular difficulties (notably regarding orientation towards the *ḳibla*, and regarding the execution of the required gestures) encountered by the traveller (cf. below, section IV. F) and the invalid.

Having presented, in the first two sections of this article, the evolution and the fundamentals of ritual prayer in Islam, the next stage is to illustrate the long-established rules of *ṣalāt*.

III. *The five daily prayers.*

A. Distinctive characteristics of each. The five prayers differ from one another in terms of the vocal force with which they should be uttered, but most of all in terms of the time fixed for each and of its length.

1. The prayer of the morning (*ṣubḥ*) or of the dawn (*fad̲j̲r*) is of two *rakʿas*. Here the *Fātiḥa* and the Ḳurʾān are recited in a loud voice (*d̲j̲ahr*). Its time begins with "the true dawn" (*al-fad̲j̲r al-ṣādiḳ*), when faces can still not yet be recognised, and extends until the day-break as such, *before* the sun appears.

2. The prayer of midday (*ẓuhr*) is of four *rakʿas*. Here the *Fātiḥa* and the Ḳurʾān are recited in a whisper (*isrār*). Its time begins when the sun, passing the zenith, commences its decline. It normally continues until the time when the shadow of objects is equal to their height.

3. The prayer of *ʿaṣr* (middle and late afternoon) is of four *rakʿas*. Here the *Fātiḥa* and the Ḳurʾān are recited in a whisper. Its time begins when the shadow of objects is equal to their height, and it normally continues until the time when the light of the sun turns yellow; but this prayer may still be performed until the end of the day, *before* the setting of the sun.

4. The prayer of *mag̲h̲rib* (after the setting of the sun) is of three *rakʿas*. Here the *Fātiḥa* and the Ḳurʾān are recited in a loud voice. Its time begins when the sun has disappeared beneath the horizon, and normally continues until the disappearance of the twilight radiance or *s̲h̲afaḳ* [*q.v.*]. (Concerning the ancient Judaising deviation of Abu 'l-K̲h̲aṭṭāb, for whom the time of this prayer would begin only when the stars shine brightly, see Wasserstrom's article, in Bibl.).

5. The prayer of *ʿis̲h̲āʾ* (evening or beginning of the night), sometimes called *ʿatama* (black night), is of four *rakʿas*. Here the *Fātiḥ* and the Ḳurʾān are recited in a loud voice. Numerous traditions clearly fix the commencement of its time (e.g. al-Buk̲h̲ārī, *Mawāḳīt, bāb* 24, 1, repeated in *Ad̲h̲ān, bāb* 162, 1; al-Buk̲h̲ārī, *ʿUmra, bāb* 20, 1, parallel to *D̲j̲ihād, bāb* 136, 2, and to Muslim, *Musāfirīn*, no. 43; Muslim, *Musāfirīn*, no. 48): it is the disappearance of the *s̲h̲afaḳ*, that redness of the sky which follows the setting of the sun (cf. *LʿA*, x, 180a; the opinion of Abū Ḥanīfa, who interpreted this *s̲h̲afaḳ* as the whiteness of the twilight coming after the redness of the sunset, seems to be isolated). It should be recalled that, in the Ḳurʾān, the word only occurs once, without connection with prayer and in an oath (LXXXIV, 16; cf. the commentaries of al-Ṭabarī, xxx, 119, and al-Rāzī, xxxi, 108-9). As for the symmetrically converse phenomenon in the circadian cycle, i.e. the column of zodiacal light called in Arabic *al-fad̲j̲r al-kād̲h̲ib* "the false dawn" (or *d̲h̲anab al-sirḥān* "the wolf's tail": cf. *LʿA*, s.v. *f-d̲j̲-r*, at v, 45a),

the Muslims astronomers have made a detailed study of it which is of no relevance to this article. The normal time of the prayer of *ʿis͟hāʾ* extends until the end of the first third of the night.

For more details concerning the times of prayer, with references to *ḥadīth*, see MĪḲĀT.

B. Conditions and development of prayer. The conditions (*s͟hurūṭ*) of prayer are nine in number according to Ibn ʿAbd al-Wahhāb (*al-Uṣūl*, 26-30): 1. Being a Muslim; 2. Mental health; 3. Discernment, i.e. the age of reason (seven years); 4. and 5. Ritual purity [see ṬAHĀRA and this article, above, section II]. This is attained on the one hand by *wuḍūʾ* or by *g͟husl*, which respectively annul the minor *ḥadat͟h* and the major *ḥadat͟h* (or *d̲janāba*): this is the *ṭahāra ḥukmiyya*, "prescribed". On the other hand purity demands the elimination of any blemish (*k͟habat͟h*) from the body, the clothing and the place: this is the *ṭahāra ḥaḳīḳiyya*, "real". It is impossible to emphasise too much the considerable importance and the minute precision of the corresponding requirements; see also NAD̲JIS ("impure"); 6. Covering the pudenda in the sense intended by the law; 7. Being present at the time of the corresponding prayer; 8. Being turned in the direction of the *ḳibla*; 9. Formulating the intention (*niyya*) of performing the precise prayer which is about to be undertaken. These conditions are explicitly or implicitly common to all the judicial schools. On the other hand, the schools differ on a number of points regarding the bodily positions or the words or, indeed, the judicial nature of the obligation attached to such-and-such an element. Some of these details will be mentioned below. They do not affect the fundamental pattern of prayer, which is as follows.

The rite begins with sacralisation. First, the hands are raised above the shoulders, to the level of the ears, and the words *Allāhu akbar* "God is most great!" (cf. Ḳurʾān VI, 78) are said. This is the *takbīrat al-iḥrām*. The hands are then placed on the base of the chest, the right hand over the left: the position of *ḳabḍ* (cf. al-G͟hāwid̲jī, 136 ff.). The Imāmīs and, classically, the Mālikīs, on the other hand, let the arms fall at this point: the position of *sadl* or *irsāl* (cf. al-Malaṭāwī, 137, 139-40; however, he considers as permitted the position of *ḳabḍ*, which is spreading in the Mag͟hrib under the influence of the Salafiyya [*q.v.*]).

The majority of Sunnīs add here an opening prayer (*duʿāʾ al-istiftāḥ*) as follows: *subḥānaka Allāhumma wa-bi-ḥamdika wa-tabāraka smuka wa-taʿālā d̲jadduka wa-lā ilāha g͟hayruka* "Glory to You, O God, and praise to You! Let Your name be blessed, exalted Your greatness! There is no other god but You!" (On other possible formulas, in particular the S͟hāfiʿī formula, see al-Ḳurṭubī, vii, 153-4; al-D̲jazāʾirī, 255-6).

And directly thereafter (except in the case of the Mālikīs), *aʿūd͟hu bi'l-Lāh min al-S͟hayṭān al-rad̲jīm* "I take refuge in God against the reprobate Demon".

Then begins the first *rakʿa*. This term ("an inclination") denotes an invariable series of attitudes and formulae which constitute an element to be repeated a set number of times in the course of a completed ritual prayer, which develops as follows:

1. Standing upright. Recitation of the Ḳurʾān (*ḳirāʾa*). Hands and arms are, as above, in the position of *ḳabḍ* or of *sadl* according to schools. First to be recited, with each *rakʿa*, is the *Fātiḥa*, to which the response *Āmīn* is added. Then, in the first two *rakʿas* only, another Ḳurʾānic passage is spoken. This is normally longer with the first *rakʿa* but shorter with the second. Brief sūras such as *al-Naṣr* (CX) or *al-Ik͟hlāṣ* (CXII) may be considered sufficient. The minimum requirement is three short verses or one long verse.

2. The worshipper says *Allāhu akbar*, then leans at a right-angle (*rukūʿ*), the hands placed on the knees, and says three times, *subḥāna rabbiya 'l-ʿaẓīm* "Glory to my Lord, the Great One".

3. The worshipper draws himself up (*iʿtidāl* or *rafʿ*), saying *samiʿa 'Llāhu li-man ḥamidahu* "God hears him who praises Him". Upright, he adds *Rabbanā, wa-laka 'l-ḥamd* "To You be praise, our Lord!" (cf. al-Buk͟hārī, *Ad͟hān, bāb* 82, and 128, 2; Muslim, *Ṣalāt*, nos. 28, 62, 77), or *Allāhumma, Rabbanā, laka 'l-ḥamd* "O God, our Lord, to You be praise!" (cf. al-Buk͟hārī, *Ad͟hān, bāb* 125; Muslim, *Ṣalāt*, nos. 86-9; al-G͟hāwid̲jī, 145).

4. The worshipper prostrates himself (*sud̲jūd*), saying *Allāhu akbar*, then says three times *Subḥāna rabbiya 'l-aʿlā* "Glory to my Lord, the Most High!" The body should then rest on the forehead (and the nose), the palms of both hands, both knees and both feet.

5. The worshipper raises his head to say *Allāhu akbar*, then he sits on his heels (*d̲julūs* or *ḳuʿūd*), knees on the ground, hands placed on the thighs. Then he says *Rabbi g͟hfir lī* "O my Lord, pardon me!"

6. The worshipper prostrates himself a second time, saying *Allāhu akbar*, then he says three times *Subḥāna rabbiya 'l-aʿlā* "Glory to my Lord, the Most High!" The Ḥanbalīs (cf. al-Mardāwī, 48) and the S͟hāfiʿīs return subsequently to a sitting position: this is the *d̲jalsat al-istirāḥa*, a practice which is now widespread among the Mālikīs.

He then stands upright for the second *rakʿa*, identical to the first.

At the end of this second *rakʿa*, instead of standing upright, the worshipper raises his head to say *Allāhu akbar*, then sits on his heels, knees on the ground, hands placed on the thighs. The *tas͟hahhud* "affirmation of faith", is then said, as follows: *al-taḥiyyāt li-Lāh, wa 'l-ṣalawāt wa 'l-ṭayyibāt. Al-salāmu ʿalayka, ayyuhā 'l-nabī, wa-raḥmatu Llāhi wa-barakātuh. Al-salāmu ʿalaynā wa-ʿalā ʿibādi Llāhi 'l-ṣāliḥīn. As͟hhadu an lā ilāha illā Llāhu waḥdahu lā s͟harīka lahu wa-as͟hhadu anna Muḥammadan ʿabduhu wa-rasūluhu* "To God be salutations, prayers and fine words. Peace be upon you, O Prophet, also the mercy and blessings of God. Peace be upon us and upon the good servants of God. I affirm that there is no god other than God, He alone, who has no partner; and I affirm that Muḥammad is His servant and His Messenger". At the beginning of this last phrase, the index finger of the right hand is raised to underline the declaration of Uniqueness. The *tas͟hahhud* above is the version given in al-Buk͟hārī, *Ad͟hān, bābs* 148, 150 (cf. Muslim, *Ṣalāt*, no. 55). The beginning of the formula differs slightly among the Mālikīs (cf. al-Malaṭāwī, 147).

After the *tas͟hahhud*, the worshipper stands up to say, as above, the third and the fourth *rakʿas*.

At the end of the latter, the *tas͟hahhud* is recited again, with the following addition: *Allāhumma ṣalli ʿalā Muḥammadin wa-ʿalā āli Muḥammadin kamā ṣallayta ʿalā Ibrāhīma wa-ʿalā āli Ibrāhīm, wa-bārik ʿalā Muḥammadin wa-ʿalā āli Muḥammadin kamā bārakta ʿalā Ibrāhīma wa-ʿalā āli Ibrāhīma fī 'l-ʿālamīn, innaka ḥamīdun mad̲jīd* "O God, bless Muḥammad and the family of Muḥammad as You blessed Abraham and the family of Abraham, and bless Muḥammad and the family of Muḥammad as You blessed Abraham and the family of Abraham in the worlds. You are worthy of praise and of glory!" This formula (called *al-ṣalawāt al-ibrāhīmiyya*) is inspired in part by Ḳurʾān, XXXIII, 56, and XI, 73, and is found in this form in al-Buk͟hārī, *Anbiyāʾ, bāb* 10, 5; Muslim, *Ṣalāt*, nos 65-6 (cf. also al-Malaṭāwī, 148-9; Ibn ʿAbd al-Wahhāb, 38-9; al-G͟hāwid̲jī, 142).

Finally, still sitting, the worshipper turns to the right, saying *al-salāmu ʿalaykum wa-raḥmatu Llāhi wa-barakātuhu* "Peace be upon you, with the mercy and the blessings of God!" (only the first two Arabic words are strictly obligatory). Then he turns to the left, repeating these words. These two *taslīmas* terminate the prayer through the desacralisation (*taḥlīl*) of the one who has performed it. (In communal prayer, the *imām* makes only one salutation.)

The preceding pattern corresponds to the very frequent case of a prayer in four *rakʿas*. If the prayer has only three *rakʿas*, what would follow the fourth is done at the end of the third. If the prayer has only two *rakʿas*, the second is followed immediately by the *tas̲h̲ahhud*, the "Abrahamic" prayer and the final salutation.

C. Actual practice. Having just described the performance of this ritual prayer, having earlier outlined the other rules regulating it, it would now be appropriate to examine how it is practised in reality. Certain countries, such as Egypt, are more observant in this regard than others, as is easily ascertained. But precise studies seem to be lacking on this subject. Such studies could, according to countries or regions, identify the practice of *ṣalāt* by men and women, individually or communally, for the daily prayers and for the Friday prayer, and enquire, naturally, into the contingent effects of urbanisation, of change of social class, of emigration to a country with a non-Muslim majority.

IV. *The other ritual prayers.*

These are, like the preceding, prayers codified by *fiḳh* and comprising the performance of a fixed number of *rakʿas*. Numerous and varied, they are generally classified by the jurists according to their degree of obligation, which can vary according to the schools (*farḍ, wād̲j̲ib, sunna*). Principal aspects will be presented here in the following order: (1) The major community prayers which mark the week and the year (A and B); (2) The daily prayers which are not strictly obligatory, i.e. which do not form part of the *farāʾiḍ* (C, D, E); (3) Prayers which are performed in particular (F) or exceptional (G, H, I) circumstances; and (4) Finally, the prayer over a deceased person (J).

A. The Friday prayer (*ṣalāt al-d̲j̲umʿa*). The second Arabic word, which now denotes the above-named day of the week, initially signifies "meeting, assembly". It is in this sense that it is found (in the form *al-d̲j̲umuʿa*) in Ḳurʾān, LXII, 9. Before Islam, as is shown in D̲J̲UMʿA, the *yawm al-d̲j̲umuʿa* was nothing other than a market-day. It was usually known by another name, *yawm al-ʿarūba* or, without the article, *yawm ʿarūba* (see *LʿA*, s.v. *ʿ-r-b*, i, 593; al-Zamak̲h̲s̲h̲arī, *Kas̲h̲s̲h̲āf*, on LXII, 9, and al-Ḳurṭubī, xviii, 97: according to a *k̲h̲abar* of these two commentators, the first to have given this gathering the name of *d̲j̲umʿa*, was allegedly Kaʿb b. Luʾayy, an ancestor of Muḥammad, who lived some 150 years before him).

The Friday prayer is performed at the time of the midday prayer, which it replaces. It must take place in a mosque. It is only obligatory in substantial localities, and with the participation of a minimum number of men who are permanent residents, this number being (including the *imām*) four according to the Ḥanafīs, twelve according to the Mālikīs, and forty according to the S̲h̲āfiʿīs and the Ḥanbalīs. Women may participate, but it is not compulsory for them, and they are not included in the required number. (See B.A.B. Badrān, *al-ʿIbādāt al-islāmiyya. Muḳārana ʿalā 'l-mad̲h̲āhib al-arbaʿa*, Alexandria 1969, 95-6; al-G̲h̲āwid̲j̲ī, 160-5; al-Malaṭāwī, 184-5).

It is customary that the Muslim arriving at the mosque for this communal prayer first performs individually a prayer of two *rakʿas*. After the call to prayer, the preacher, standing upright on the *minbar* [*q.v.*], delivers a double sermon [see K̲H̲UṬBA]. Both praise God and call for His blessings on the Prophet, before exhorting the believers. The two sermons are separated by a short pause, during which the orator sits. Subsequently, he normally leads personally an obligatory prayer of two *rakʿas*, in a loud voice.

B. The prayer of the two feasts (*ṣalāt al-ʿīdayn*). See ʿĪD. The two feasts are that of the breaking of fast and that of sacrifices. The special prayer, in a very festive ambience, is of two *rakʿas*, in a loud voice. Its time begins approximately half an hour after the rising of the sun, and concludes when it is at the middle of its course. There is neither *ad̲h̲ān* nor *iḳāma*. But numerous *takbīrāt* are added, their number and place varying slightly according to the judicial schools. At the first *rakʿa*, the sūra *al-Aʿlā* (LXXXVII) is usually read. The prayer is not preceded, but followed by a double *k̲h̲uṭba* performed like that of Friday and relating to the cultic duties of the feast being celebrated, as well as their religious significance. Although women are not obliged to do so, they are strongly advised to attend, even in a state of ritual impurity (in which case they are present for the prayer without performing it), in order to share in the communal joy and edification; cf. e.g. al-Buk̲h̲ārī, *ʿĪdayn*, *bāb*s 15, 21; Muslim, *ʿĪdayn*, nos. 10-12. In Jomier, 45-50, a detailed description is found of the prayer of the feast of sacrifices performed in Cairo in 1379/1960.

C. The *ṣalāt al-witr*. According to the Ḥanafīs, it is a duty (*wād̲j̲ib*) without being an obligation (*farḍ*) in the sense which they give to this word. But for the other schools, it is only a custom (*sunna*), albeit a particularly strong one (*muʾakkada*). The *ṣalāt al-witr* should be performed between the evening prayer and the dawn prayer (preferably towards the end of the night). For its history, see WITR. The term signifies "uneven" and denotes a special *rakʿa* which is performed in isolation or which is added to one or more pairs (*s̲h̲afʿ*) of *rakʿas*. It is forbidden to perform other *rakʿas* between this latter *rakʿa* and the canonical prayer of the dawn. The prayer of *witr* is generally of three *rakʿas*; there are read, respectively, after the *Fātiḥa*, the sūras CXII to CXIV according to the Mālikī al-Malaṭāwī, 196, or LXXXVII (*al-Aʿlā*), CIX (*al-Kāfirūn*) and CXII (*al-Ik̲h̲lāṣ*) according to the Ḥanafī al-G̲h̲āwid̲j̲ī, 188. With the prayer of *witr* the question of *ḳunūt* is associated. In the article ḲUNŪT the various senses of this word in the Ḳurʾān and in tradition are set forth. The Mālikīs deny that there is a *ḳunūt* in the prayer of *witr* (al-Malaṭāwī, 196). The S̲h̲āfiʿīs use a formula transmitted by al-Tirmid̲h̲ī, the translation of which is to be found above, vol. V, 395. The Ḥanafīs (al-G̲h̲āwid̲j̲ī, 188-9) consider as a duty, after the performing of the third *rakʿa*, a *duʿāʾ al-ḳunūt* which begins with *Allāhumma, innā nastaʿīnuka wa-nastahdīka*. The translation is as follows: "O God! we ask for Your aid and Your guidance. We implore Your pardon and return to You. We believe in You, we submit ourselves to You, we praise You for all Your goodness. We are grateful for Your [favours] and not ungrateful, we reject and abandon those who are unfaithful to You. O God! it is You that we worship, to You that our prayers and our prostrations go, towards You that we return with promptitude. We hope for Your mercy and fear Your anger: for Your severe punishment cannot fail to overtake the unbelievers. May the blessings and the peace of God be upon our master Muḥammad, and upon his Fami-

ly and his Companions!" This text, in a slightly shorter form, is found in Abū Dāwūd (*Marāsīl, bāb mā djā'a fī-man nāma ʿan al-ṣalāt*, 12-13), according to whom it was reportedly taught to Muḥammad by Djibrīl himself. As for the Imāmīs, on the contrary, for them the *ḳunūt* is a personal prayer of intercession (*duʿā'*), optional and meritorious, which is definitely said during the *witr*, but which is also said in each of the five daily prayers, while standing, between the Ḳur'ānic reading of the second *rakʿa* and the inclination which follows. This Shīʿī *ḳunūt* is of free content, but certain formulas are frequently used, in particular, the prayer mentioned in Ḳur'ān, II, 201.

D. The nocturnal prayer. See TAHADJDJUD and, for the prayers specific to the nights of Ramaḍān, TARĀWĪḤ.

E. Other supererogatory prayers (*nawāfil*). These are in particular groups of two or four *rakʿas*, the performance of which is recommended, according to the circumstances, before or after one or other of the five obligatory prayers (cf. al-Ghāwidjī, 204 ff.; al-Malaṭāwī, 157-8). But it is also possible, for example, to perform the prayer of the morning (*ṣalāt al-ḍuḥā*), of two *rakʿas* at least; its time begins approximately half an hour after the sunrise, and continues until midday (like the prayer of the two feasts).

F. Prayer on a journey (*ṣalāt al-musāfir*). The text reads in Ḳur'ān, IV, 101, "And when you are travelling through the land, it is no sin for you to shorten your prayer if you fear lest the unbelievers put you to the test; the unbelievers are for you a declared enemy" (cf. al-Rāzī, xi, 16-23; al-Ḳurṭubī, v, 351-62). This verse has been clarified, and its import extended to all journeys, by prophetic traditions, two in particular (Muslim, *Musāfirīn*, nos. 4, 8). The outcome of later elaborations is that the canonical prayers of *ẓuhr*, *ʿaṣr* and *ʿishā'* are reduced to two *rakʿas* (instead of four) during every lawful journey of more than approximately 80 km/50 miles (sixteen parasangs for the Mālikīs and Shāfiʿīs, three days' walking for the Ḥanafīs). The journey is regarded as continuous unless it is broken by a halt of 15 days, according to the Ḥanafīs (al-Ghāwidjī, 27), or four full days according to the other schools (al-Ḳurṭubī, v, 357; al-Malaṭāwī, 179-80). The distance alone is taken into consideration, whatever the means of transport, and thus the duration of the effective displacement. Unlike the other schools, the Ḥanafīs regard the above-mentioned abridgement, not as something permitted but as a duty (*wādjib*); as a result of this, in the case of error on the part of the believer in the course of the prayer, or if he performs it behind an *imām* who is not himself travelling, precise judicial consequences ensue. The prayers of *ṣubḥ* and of *maghrib* remain unchanged.

G. The prayer of fear. See ṢALĀT AL-KHAWF.

H. The prayer appealing for rain (*ṣalāt al-istisḳā'*). This is a communal prayer, the time of which is the same as for the two feasts (above, B). But it takes place in an atmosphere of penitence and of supplication, in ordinary clothing and in the open air. Two *rakʿas* are performed. At the beginning of each, the *imām* appeals at length for the pardon of God. He then delivers a double *khuṭba* (as in B above), exhorting the congregation to practise good deeds. At the end, facing the *ḳibla*, he turns his cloak inside out (a symbolic gesture, magical in origin), members of the congregation do the same, and he begs at length for the coming of rain. This ritual is based on the example of Muḥammad who, in his supplication, raised his hands high towards the sky (cf. the little "books" on *istisḳā'* which are located, in the two *Ṣaḥīḥs*, between the prayer of the two feasts and that of the eclipse. See also al-Malaṭāwī, 200-1; al-Ḳurṭubī, i, 418, xviii, 302, respectively on Ḳur'ān, II, 60 and LXXI, 10-11). On rogatory rites in pre-Islamic Arabia, see ISTISḲĀ'.

I. The prayer of the eclipse (*ṣalāt al-kusūf*). It should first be noted that, in the language of *ḥadīth*, the words *kusūf* and *khusūf*, as well as the verbs of which they are the *maṣdars*, are employed interchangeably for the sun and for the moon. In the classical Arabic language, on the contrary, *kusūf* refers rather to the sun, while *khusūf* is reserved for the moon (cf. *LʿA*, ix, 67a, 298). The fact remains that the two *Ṣaḥīḥs*, as well as al-Nasā'ī, devote a whole "book" to the *kusūf*. Here as elsewhere, the conduct of the Prophet has served as a model for the Community after him. In the case of eclipse of the sun or of the moon, a communal prayer of two *rakʿas* is held in the mosque. Its time is the same as that of the two feasts (see B, H). There is neither call to prayer nor *iḳāma* nor sermon. The Ḳur'ānic recitations are spoken in a whisper. The peculiarity of this prayer is that each *rakʿa* contains, after the inclination and the standing upright, which are very prolonged, a second long inclination and a second standing upright before the prostration (cf. al-Malaṭāwī, 200). See also KHUSŪF.

J. The prayer over a dead person (*ṣalāt ʿalā 'l-mayyit*). It is also called *ṣalāt al-djanāza* (or *djināza*). It is an obligation which is incumbent on the community (*farḍ kifāya*) and not on each individual concerned. Unlike the others, this prayer involves no performance of *rakʿa*. The *imām* stands upright facing the *ḳibla* (the body of the deceased being laid crosswise before him). The others line up in ranks behind him as for every ritual prayer. The *imām* says, in a loud voice, four *Allāhu akbars*. After the first, he gives praise to God; after the second, he says the "Abrahamic prayers" (see above, III. B, towards the end); after the third, he prays (*duʿā'*) for the deceased; after the fourth, he pronounces the final salutation (cf. *ibid.*). Several points need to be underlined. (1) The recitation of the *Fātiḥa* after the first *takbīra* is obligatory according to al-Shāfiʿī and Ibn Ḥanbal; it may optionally take the place of praise of God according to Ḥanafīs and Mālikīs (cf. al-Ḳurṭubī, viii, 222; al-Ghāwidjī, 176). (2) The *duʿā'* for the deceased, which is not said in a loud voice, does not have a fixed formula, but some fine traditional texts are to be found in al-Malaṭāwī, 212-13. They contain substantial variants when the deceased is a woman and in the case of a child. (3) The prayer *ʿalā 'l-mayyit* is performed only once, and normally in the presence of the corpse. However, this last condition is dispensed with, on the one hand when the body has disappeared in some natural disaster, such as a flood, or in battle, on the other hand when homage is rendered in several places to an eminent Muslim person who has recently died. (4) In reference to the Hypocrites of Medina [see AL-MUNĀFIḲŪN], it was enjoined upon Muḥammad, in Ḳur'ān, IX, 84, "Do not ever pray for one of them when he dies, and do not stand by his tomb; they have not believed in God and His Messenger, and they die in impiety". On this basis, and on that of diversely interpreted prophetic traditions, jurists have sought to determine which Muslims should be denied the ritual burial prayer. It may be recalled that the great judge of Rayy, ʿAbd al-Djabbār, a Muʿtazilī but nevertheless a Shāfiʿī, refused to pray, in 385/995, over the mortal remains of the vizier Ibn ʿAbbād, on account of extortions which he had committed and for which he had shown no repentance. Al-Ḳurṭubī, viii, 221, asserts that the prayer should be performed over all

Muslims, even those guilty of serious sins, except for "heretics" and declared rebels (*ahl al-bidaʿ wa 'l-bughāt*). Although suicide is denounced by Islam, the prayer should be performed over one who is guilty of this, according to al-Ghāwidjī, 180, and al-Malaṭāwī, 211, l. 8. For mortuary ablutions and the burial itself, see DJANĀZA.

V. Ṣalāt *and Islam*.

A. The position of *ṣalāt* in relation to other religions. When Islam came into existence, and spread rapidly to the Near and Middle East, it came into contact there, besides traditional cults and gnostic sects, with four organised religions. Rabbinical Judaism, within a liturgical system which was essentially synagogical, already included three daily prayers which the believer is required to recite, even in isolation: at dawn (*shaharit*), in the afternoon (*minḥāh*) and the evening (*arvit*). These *tefillōt* have a communal nature which is demonstrated by the use of the plural in their formulas. Syriac (or Byzantine) Christianity had structured monastic prayer in seven offices. The third religion, Manichaeism, although admittedly less actively manifest than the others, was far from being dead; it was to show itself unexpectedly active in the first two centuries of the caliphal empire. It is known that the Manichaean "hearers (*auditores*)" (as distinct from the "elect", to whom they were subordinate) were under an individual obligation to perform four prayers every day at fixed times (cf. Ibn al-Nadīm, *Fihrist*, ed. Tadjaddud, 396-7, tr. Bayard Dodge, *The Fihrist of al-Nadim*, 790-1; al-Shahrastānī, *al-Milal wa 'l-niḥal*, ed. Badrān, 629, tr. G. Monnot, *Livre des religions et des sectes*, i, 661). These ritual prayers were a sequence of prostrations, accompanied by praises to higher beings, and punctuated by return to the upright position. The formulas of adoration seem to have been impersonal, but with reference to Mani as "our Guide", in the plural (*hādīnā* in the text of the *Fihrist*). Mazdaeism, finally, imposed on each Zoroastrian the ritual of five daily prayers, to be said individually at prescribed times (cf. Mary Boyce, *Zoroastrians. Their religious beliefs and practices*, London 1979, 32-3; eadem, *Zoroastrianism*, Costa Mesa, Calif. 1992, 138-9; J. Duchesne-Guillemin, *La religion de l'Iran ancien*, Paris 1962, 76).

Five daily prayers: this is the rhythm of *ṣalāt*. It is known that Ignaz Goldziher saw here, not a simple coincidence but the result of a "Persian" influence (*Islamisme et parsisme*, in *RHR*, xliii [1901], 15, repr. in *Gesammelte Schriften*, Hildesheim 1970, iv, 246). It seems, indeed, inappropriate to attach too much importance to the number of prayers, the result of contingent evolution rather than of deliberate organisation. A comparison between religions would more usefully examine the integration of the cosmos in the prayer, or the converse, but such is not the subject of this article. Also very significant is the tonality of a rite, communal or otherwise. The value ascribed by *ḥadīth* to prayer in assembly has been noted (cf. above, section II. A. 7), and there will be discussion below of the links woven between Muslims by their ritual prayer. However, the latter, it must alway be remembered, is fundamentally individual. Its obligation is personal. Almost all its formulas, excepting the *Fātiḥa*, are in the first person singular. The faithful, behind the *imām*, repeat the phrases which he himself has spoken in the singular and in his own name; he does not represent the congregation in any way but merely serves it as a model of correct practice. Without intermediary or intercession on the earth, the believer acts spiritually only on his own account (cf. Ḳurʾān, II, 48; VI, 164; etc.; R. Arnaldez, *L'Islam*, Paris 1988, 22, 28). This general flavour was to be further accentuated by the Ṣūfīs. As far as ritual prayer is concerned, even when it is practised communally, the Muslim is alone before the One.

B. The place of *ṣalāt* in the Muslim religion. Ritual prayer is the heart of Islam. It is by means of it that the Muslim remains in permanent contact with the Ḳurʾān, from which it has been inseparable from the outset (cf. XVII, 78, etc.). Ḳurʾānic recitation is a fundamental element of all *ṣalāt*, as is prominently expressed by the recitation of the first sūra with each *rakʿa* (cf. above, section III. B. 1). It is also above all in ritual prayer that the worshipper adheres to and obeys the Muslim Law, since *ṣalāt*, which is the second pillar of Islam, includes the first, i.e. the profession of faith, explicitly contained and renewed in the call to prayer as in the *tashahhud*. Furthermore, the ritual prayer, of which the institutional link to *zakāt* has been observed above (cf. above, section I. C), is also intimately linked to the other two major cultic obligations, sc. fasting and the Pilgrimage. But even more than by virtue of this central situation among the *ʿibādāt*, Muslim prayer owes its exceptional importance to the constant link which it establish between the faithful individual and the three supreme realities of his religious universe: the Community, the Prophet and God.

The link to the Community is first established by the marked preference for prayer performed communally (cf. above, section II. A. 7). It is remarkable that even in prayer spoken in isolation, modalities are retained which relate intrinsically to a congregational prayer: the *Āmīn* added to the *Fātiḥa* which is initially the response of the faithful to the recitation of the latter by the *imām*, and the final *taslīm*. The *Fātiḥa* itself is in the first person plural, as is a phrase of the *tashahhud*, "May peace be upon us and upon the good servants of God"; thus every *rakʿa* begins and concludes on a note of solidarity in the faith. But the communal nature of the prayer is expressed and realised to its ultimate extent in the mosque. "Place of prostration", zenith and epitome of the plastic and decorative arts, living museum of religious eloquence and chant, the mosque is furthermore a rich and complex institution [see MASDJID]. Here are manifested vividly the unity and the diversity of Islam, of its tones, of its cultures. The mosque, in addition, is the setting for the great Friday prayer (cf. above, section IV. A). It is here that the local community finds and finds again its cohesion at all levels, by means of the assembly of believers, certainly, but also by virtue of the personality and the speech of the one who addresses them in the *khuṭba*. In parallel, the Muslim community twice each year reaches a heightened awareness of its worldwide unity by the celebration of another ritual prayer, that of the two feasts (cf. above, section IV, B), both of which come at the conclusion of an intense collective process. The second, the "great feast", is in tune with the action of the pilgrims at Mecca and Minā. It is quite remarkable that, in regard to what is done there on 10 Dhu 'l-Ḥidjdja, a tradition explicitly underlines the pre-eminence of *ṣalāt* and of its *ḳibla* over ritual sacrifice (al-Bukhārī, *Aḍāḥī*, *bāb* 12; Muslim, *Aḍāḥī*, no. 6). That which the Pilgrimage attains once per year, prayer accomplishes five times in a day. It turns the Muslim towards the centre of Islam; one can truly say that it makes the man a Muslim. Two traditions affirm this. "Between man and his association [with God], and unbelief, there is only the abandonment of ritual prayer" (Muslim, *Īmān*, no. 134); and "He who performs our

ritual prayer, and turns towards our *ḳibla*, and eats animals slaughtered according to our manner, he is the Muslim" (al-Bukhārī, *Ṣalāt, bāb* 28). It is impossible to exaggerate the importance of the *ḳibla*. By turning from all quarters towards the symbolic place given by God to their Prophet, the Muslims converge, and their prayer thereby acquires, much more than by virtue of the contingent public performance of this individual rite, a communal nature. It is therefore not surprising that the simple words *ahl al-ḳibla*, meaning the people who maintain that prayer must be performed in the direction of the Kaʿba, have often been used to denote and define the members of the community (cf. Ibn Mādja, *Djanāʾiz*, 31, one of the earliest instances of this usage).

On the other hand, *ṣalāt* maintains incessantly the link between the Muslim and his Prophet. The latter is mentioned twice in the *tashahhud*, of which the second phrase is addressed directly to him. As for the prayers known as "Abrahamic" (cf. above, section III. B), they could be called Muḥammadan, since the name of Muḥammad occurs there four times, as often as that of Abraham, just before the *taslīm* of desacralisation. Thus each *ṣalāt*, like each second *rakʿa*, is concluded with veneration of the Messenger. But this is not all. It must not be forgotten that the entire content and the precise timing of the ritual prayer bear the mark of the Prophet. The Ḳurʾān, as has been seen, firmly lays down the principle of *ṣalāt* and its major characteristics. But almost all the details of its ritual, the temporal limits of its performance and the rules governing the abridgment or the combination of daily prayers as well as the performance of other ritual prayers, are based on the personal authority of the Prophet, in other words on the exemplary and inspired practice of the one of whom it is written, "In the Messenger of God, you surely have a fine model" (Ḳurʾān, XXXIII, 21; cf. al-Bukhārī, *Witr, bāb* 5; Muslim, *Musāfirīn*, no. 36). Invariably, even when no saying of Muḥammad is reported, the rule of the prayer is expressed in the words "I have seen the Prophet do thus" (al-Bukhārī, *Ṣalāt, bāb* 50; cf. *Adhān, bābs* 95-6 etc.). In point of fact, *ṣalāt* is an imitation of Muḥammad.

However, the essence of *ṣalāt* is elsewhere. It is towards God that the Muslim turns his face (cf. Ḳurʾān, VI, 79). Hence the value of prayer. It may be asked for guidance in the making of a choice: cf. ISTIKHĀRA, and al-Ghāwidjī, 220-1 (who quotes al-Bukhārī, *Tahadjdjud, bāb* 25); the caliph al-Maʾmūn made this prayer before replying to a message of the Basileus, as is related by al-Masʿūdī (*Murūdj*, vii, 95 = § 2779). Appeal may be made to it in the case of great need, in particular when recovery from an illness is sought. In any case, purification from one's sins is to be found in prayer; a well-known tradition likens prayer to a stream of water passing before the house of a man, who washes himself in it five times a day (al-Bukhārī, *Mawāḳīt, bāb* 6; Muslim, *Masādjid*, nos. 283-4). In a general manner, in charging with meaning all the gestural and verbal acts of prayer, the Muslims have merely developed the virtualities of its rite. For this purpose, they have contemplated numerous passages of the Ḳurʾān. "Say: My ritual prayer and my sacrificial offering, my life and my death, are for God, the Lord of the Worlds, who has no partner; this is the commandment which I have received, and I am the first of those who submit" (VI, 162-3); and "It is I who am God. There is no god other than Me. Therefore worship Me, and accomplish prayer in remembrance of Me" (XX, 14, addressed to Moses; cf. Isa. xliii. 11, and xlv. 5). The faithful of Islam were directed towards this spiritualisation by *ḥadīths* such as the following, recounted by Abū Hurayra: "It is when he is in prostration that the man is closest to his Lord" (Muslim, *Ṣalāt*, no. 215). Another form of the same tradition, this time recounted by Ibn Masʿūd, is mentioned by al-Ṭabarsī/al-Tibrisī, *Madjmaʿ al-bayān*, in his commentary on a striking commandment of God to his Messenger, "Prostrate yourself and draw near!" (XCVI, 19). Mystics have specifically applied to ritual prayer the definition of *iḥsān* in the *ḥadīth* of Gabriel, "Good conduct is to worship God as if you saw Him: for you do not see Him, but He sees you" (al-Bukhārī, *Īmān, bāb* 37; Muslim, *Īmān*, no. 1). Al-Ghazālī devoted to ritual prayer the fourth volume of his interpretation of the *ʿibādāt* in the *Iḥyāʾ*. Here he insists on humility as the basis of a true prayer, and on the "presence of the heart" which must accompany it throughout. These are the same central perceptions as those shown by al-Rāzī in his commentary on Ḳurʾān, XXIX, 45: "Recite that which has been revealed to you of the Book and accomplish ritual prayer, for ritual prayer banishes lewdness and that which is denounced...". The author of the *Mafātīḥ al-ghayb* poses an analogy: "If a sweeper wore a garment of gold brocade, it would become impossible for him to concern himself with filth. Similarly, the man who performs prayer has put on the garment of religious fear (*taḳwā*), for he stands in the presence of God, the right hand placed over the left hand, in the attitude of one who looks upon a majestic king. The garment of religious fear is the finest of garments: it is more noble for the heart than is gold brocade for the body. Also, the man who wears it cannot concern himself at all with the filth of turpitude" (xxv, 72-3). This king, quite evidently, is the King of the Day of Judgment. This conviction gives meaning to the *ṣalāt* which numerous Muslims have sought to perform immediately before their death (cf. for example al-Masʿūdī, *Murūdj*, §§ 1774, 3361).

The Ṣūfīs were to do nothing in this context other than to develop, sometimes magnificently, the common spirituality of Islam. The central idea being always that of the presence, two lines emerge (cf. *djalāl* and *djamāl*): on the one hand, the presence of God makes it possible to speak to Him in confidence (*munādjāt*); on the other the presence before God as on the Day of Resurrection fills one with fear. During the *ṣalāt*, the worshipper leaves the world. It is a spiritual ascension comparable to the *miʿrādj* of the Prophet (Dāya, 168 = tr. Algar, 184; Schimmel, 218-19). Or further, according to a striking expression: "The key of the Garden is ritual prayer; and the key of ritual prayer is ritual purification" (Ibn Ḥanbal, iii, 340 [*sic*], towards the end). This prophetic tradition throws into sharp relief the two inseparable faces of *ṣalāt*, legal prescription and spiritual dimension.

ṢALĀT AL-KHAWF (A.), "the prayer of fear". In a context of warfare "in the way of God", the text reads in Ḳurʾān, IV, 102: "When you are with the believers and you perform the prayer at their head, let a group of them pray with you, while they stand ready with their arms, and keep behind you during the prostration. Then let another group which has not yet prayed come to pray with you, while they stand guard, with weapons to hand. Those who refuse to believe would prefer that you lay aside your arms and your baggage, so that they may catch you unawares." This alternative ritual prayer has received its name from another passage of the Ḳurʾān: "If you *fear* [an attack, pray] on foot or on horseback" (II, 239). Notwithstanding the ellipses of syntax (which permit a different translation), the general sense of the first verse is clear: when a Muslim band is close to the enemy, one group will perform the ritual prayer while the other stands guard, then the roles are to be reversed.

The text of the Ḳurʾān is clarified by prophetic traditions. The canonical collections are of very varied scope with regard to this issue. Muslim has eight *ḥadīth*s on the question, and Ibn Mādja only three, while al-Nasāʾī has compiled 27 of them. The general arrangement enunciated by the Ḳurʾān poses a series of technical questions. The traditions do not all convey the same answer.

The central question, which includes several gradations, is the following. Two prayer-groups are distinguished and separated by the Ḳurʾānic text; to these will be added their common *imām* who, it should be recalled, is obliged to perform the prayer in his own name. Thus there is a total of three praying units, singular or co-ordinated. The rules of prayer being as they are, for each of these units there are numerous judicial problems to be solved.

When is the *takbīr* of sacralisation pronounced? By all present together, with the *imām*, at the beginning of his prayer, even if one of the two groups then turns its back towards the *ḳibla* (Abū Dāwūd, no. 1240; al-Nasāʾī, 141; cf. Muslim, no. 307). But according to others, the second group performs the *takbīr* at the beginning of its own prayer (Abū Dāwūd, no. 1239; cf. Muslim, no. 308).

How many *rakʿa*s are performed by the *imām*, and how many by each of the two groups? The question is especially posed, historically, for the prayers of *ẓuhr* and of *ʿaṣr*, which normally have four *rakʿa*s. There are three answers.

(a) The *imām* performs four *rakʿa*s, successively guiding each of the groups as it performs two *rakʿa*s: a tradition related by Djābir (e.g. in Muslim, no. 311-12; Abū Dāwūd, no. 1248) and followed by Ḥasan al-Baṣrī according to al-Ḳurṭubī (v, 368) and al-Rāzī.

(b) The *imām* performs two *rakʿa*s, successively guiding each of the groups as it performs only one *rakʿa*; a tradition related notably by Ibn ʿAbbās via Mudjāhid (e.g. al-Bukhārī, *bāb* 3; Abū Dāwūd, nos. 1246-7; cf. al-Tirmidhī, no. 567).

(c) The generally accepted solution: everybody performs two *rakʿa*s. In other words, the number of *rakʿa*s is the same for the prayer of fear as for the prayer on a journey (cf. ṣalāt. IV. F; consequently, three *rakʿa*s will be retained at the prayer of *maghrib*).

It being thus accepted that the *imām* performs the same number of *rakʿa*s as each of the groups, the questions remain, how is the whole of the rite organised, and when does each of those praying perform the *taslīm* of desacralisation? The successive *rakʿa*s will be designated by the following symbols: A = performed by group A only; B = performed by group B only; MA = performed by group A with Muḥammad (or at a later stage with the *imām*); MB = performed by group B with Muḥammad. Theoretically, a dozen or so solutions are possible. In fact, the canonical *ḥadīth*s present three (appropriate references are given in each case):

MA, MB, B, A: tradition of Ibn ʿUmar via his son Sālim (al-Bukhārī, *bāb* 1; Muslim, no. 305; al-Nasāʾī, 139-40; al-Tirmidhī, no. 564), followed by certain Mālikī teachers (al-Ḳurṭubī, v, 366-7); Ibn Masʿūd (*ibid.*).

MA, B, MB, A: tradition of Djabr b. ʿAbd Allāh (Muslim, no. 307; al-Nasāʾī, 143-4).

MA, A, MB, B: well-known tradition of Sahl b. Abī Ḥathma via Ṣāliḥ b. Khawwāt, which comprises two versions:

— Version transmitted by Yazīd b. Rūmān: Muḥammad performs the *taslīm* with group B at the very end (Muslim, no. 310; al-Nasāʾī, 139): this is the doctrine of al-Shāfiʿī and of Ibn Ḥanbal, according to al-Ḳurṭubī, v, 366.

— Version transmitted by al-Ḳāsim b. Muḥammad: Muḥammad performs the *taslīm* after the end of *rakʿa* "MB" (Abū Dāwūd, no. 1239; cf. Muslim, no. 309, and Ibn Mādja, no. 1259); this is the doctrine of Mālik (according to al-Ḳurṭubī) and of al-Malaṭāwī.

The community of traditionists and jurists acknowledge that these *ḥadīth*s cannot be harmonised. They record various measures taken by Muḥammad in different circumstances, where the requirements of security were not always of the same urgency. Two examples are recalled with particular clarity. On the one hand, the encounter at Dhāt al-Riḳāʿ, in Nadjd, during the expedition against the Ghaṭafān, in 4/626 (cf. Ibn Hishām, i, 662; al-Ṭabarī, i, 1454-5; al-Masʿūdī, *Murūdj*, § 1489). The place is mentioned in the tradition of Sahl b. Abī Ḥathma, also for example in the tradition of Abū Hurayra (al-Nasāʾī, 141). The enemy was then located in the direction opposite to the *ḳibla*; while performing the prayer, the Muslims then turned their backs towards the adversary, put-

ting themselves in the greatest danger. On the other hand, on an occasion when the Muslims, at ʿUsfān, confronted an enemy band commanded by Khālid b. al-Walīd, the enemy was located in the direction of the *ḳibla*, a much more advantageous situation (tradition of Abū ʿAyyāsh al-Zuraḳī, in Abū Dāwūd, no. 1236; al-Nasāʾī, 144-5).

The "prayer of fear" is specifically Muslim. However, the conflict between the duty, the desire or the need to pray on the one hand, and on the other the necessity of fighting, may be encountered in other religions. In the context, not of prayer admittedly, but of a pious work, this situation applied during the restoration of the walls of the Holy City, *ca.* 445 B.C.: "From that day forward half the men under me were engaged in the actual building, while the other half stood by holding their spears, shields and bows, and wearing coats of mail; and officers supervised all the people of Judah who were engaged on the wall" (*Neh.* iv, 16, tr. *NEB*).

Thus far, consideration has been given to the original arrangements applied to the prayer rite in order to permit its observance "in assembly" in proximity to the enemy, on the very solid basis of Ḳurʾān, IV, 102. But also quoted, at the outset, was another passage: "If you fear [an attack, pray] on foot or on horseback" (II, 239). In commenting on it, Fakhr al-Dīn correctly observes: "The prayer of fear is of two kinds. The first, when one is in a position of combat, and this is what is envisaged by this verse. The second, when one is not (yet) in a position of combat, is that which is mentioned in the sūrat al-Nisāʾ (IV)" (al-Rāzī, vi, 154). Once battle has been engaged or is imminent, in the presence of the enemy, there is a duty, according to Abū Hanifa, to delay the prayer until the situation is more favourable. But al-Shāfiʿī and Mālik firmly assert, on the contrary, that prayer should be observed at its proper time, during the battle itself, individually, even when mounted, with the understandable reduction to two *rakʿas* of the prayers which normally comprise four, and with two considerable relaxations of the ritual prescriptions. The first is, in case of necessity, abandonment of the *ḳibla*. The second is the replacement of bowings and prostrations by their *īmāʾ* (cf. the tradition related by Ibn ʿUmar, in al-Bukhārī, *bāb* 2 and Muslim, no. 306, and that related by al-Awzāʿī, in al-Bukhārī, *bāb* 4). This means that it is sufficient to signify the corresponding act by its outline. The body or the head is slightly inclined to symbolise and signify ritual bowing; a rather deeper inclination represents prostration. These relaxations of the rite are not isolated; on the contrary they are related to similar dispositions concerning the prayer of the traveller and that of the invalid. Thus Islamic law contains precedents which could be used to find solutions to other problems.

Bibliography: See the bibliography to ṢALĀT, and in particular Ḳurṭubī, iii, 223-6, v, 364-73; Malaṭāwī, 193-4; Rāzī, vi, 153-6, xi, 24-7. As for the four works of *sunan*, the "prayer of fear" is treated there as follows: Abū Dāwūd, ed. M.M. al-Dīn ʿAbd al-Ḥamīd, 4 vols., Cairo 1348/1930, ii, 11-18; Ibn Mādja, ed. M.F. ʿAbd al-Bāḳī, 2 vols., Cairo 1391/1972, i, 399-400; Nasāʾī, 10 vols., Cairo 1383/1964, iii, 136-46; Tirmidhī, ed. Aḥmad Muḥammad Shākir, 5 vols., Cairo 1356/1937, ii, 453-7. (G. MONNOT)

ṢALAWĀT [see TAṢLIYA].

AL-**SALĀWĪ** [see AL-NĀṢIR AL-SALĀWĪ].

ṢALB (A.), "crucifixion". In Islamic doctrine and practice, it refers to a criminal punishment in which the body of the criminal, either living or dead, is affixed to or impaled on a beam or tree trunk and exposed for some days or longer.

Before Islam, many cultures, including the Persian and Roman ones, practised crucifixion as a punishment for traitors, rebels, robbers and criminal slaves (M. Hengle, *Crucifixion in the ancient world*, London 1977).

The Ḳurʾān refers to crucifixion in six places. The significant verse for legal practice is V, 33: "The recompense of those who make war on (*yuḥāribūn*) God and His messenger and sow corruption (*fasād*) in the earth shall but be that they shall be slain, or be crucified (*yuṣallabū*), or have their hands and feet cut off on opposite sides, or be banished from the earth...".

The standard *ḥadīth* collections report one case where Muḥammad practiced crucifixion (of persons who murdered a shepherd and stole camels). This account is, however, contradicted by many others describing a different punishment (cutting hands and feet and gouging eyes) (see al-Nasāʾī, *taḥrīm al-dam*, *bābs* 7-9). In another *ḥadīth*, the first crucifixion in Medina was by ʿUmar, of two slaves who killed their mistress (see Abū Dāwūd, *ṣalāt, bāb* 61).

Fiḳh [*q.v.*] applies the above verse chiefly to highway robbers, as *ḥadd* [*q.v.*; and see ḲATL]. The choice of crucifixion, instead of another of the four stated penalties, is governed by complex, contested rules. Most scholars require that a robber who both killed and took property be crucified, as a *ḥadd* penalty (see ḲATL); others, while requiring execution, do not demand crucifixion. For most scholars, offenders are to be beheaded before being crucified. Mālikīs, with most Ḥanafīs and most Twelver Shīʿīs, provide that the offender is crucified alive, but then killed by lance thrust. For the Ẓāhirīs, crucifixion itself must cause the death. Most scholars limit the period of crucifixion to three days (after which the body is to be washed, prayed over and buried).

Various minority views permit or prescribe crucifixion for crimes other than highway robbery, usually on authority of the same verse. These crimes include insults to the Prophet (*sabb al-nabī*) [see ḲATL], heresy (*zandaḳa*) [see MURTADD; ZINDĪḲ], sorcery [see SIḤR], and killing by stranglers (*khannāḳūn*) and assassins drugging their victims (*mubannidjūn*), such punishments sometimes represented as *ḥadd* and sometimes as *taʿzīr* [*q.v.*]. The quoted verse itself conceivably applies to anyone whose corrupting effect on society can be prevented only thereby (Ibn Taymiyya, *al-Siyāsa al-sharʿiyya*, Cairo 1322, 55). Al-Māwardī (apparently alone) permitted crucifixion while alive (but not necessarily to death) as a generally applicable form of *taʿzīr* (*al-Aḥkām al-sulṭāniyya*, Cairo 1966, 239; cf. al-Ramlī, *Nihāyat al-muḥtādj*, Cairo 1967, viii, 21).

Reports of actual crucifixions exist under most of these doctrinal headings. Exposure, often extremely prolonged, of headless bodies is common, especially for political or religious opponents [see e.g. ʿABD ALLĀH B. AL-ZUBAYR; ḤASANAK; IBN BAḲIYYA]. Crucifixion while alive also appears, such as for al-Ḥallādj [*q.v.*] and murderous slaves (H. Ritter, *Kreuzigung eines Knaben*, in *Oriens*, xxv [1976], 38-40, suggesting a frequency in the 7th/13th century of crucifixion to death).

In later Persian and Turkish usage, *ṣalb* meant "hanging". In the form of exposure after beheading, crucifixion is practised in Saudi Arabia today.

SAL<u>DJ</u>ŪḲIDS, a Turkish dynasty of mediaeval Islam which, at the peak of its power during the 5th-6th/11th-12th centuries, ruled over, either directly or through vassal princes, a wide area of Western Asia from Transoxania, Far<u>gh</u>āna, the Semirečye and <u>Kh</u>ʷārazm in the east to Anatolia, Syria and the Ḥi<u>dj</u>āz in the west. From the core of what became the Great Sal<u>dj</u>ūḳ empire, subordinate lines of the Sal<u>dj</u>ūḳ family maintained themselves in regions like Kirmān (till towards the end of the 6th/12th century), Syria (till the opening years of the 6th/12th century) and Rūm or Anatolia (till the beginning of the 8th/14th century) (see below, section III).

I. The historical significance of the Sal<u>dj</u>ūḳs

The appearance of the Sal<u>dj</u>ūḳs undoubtedly marks a change in the course of the history of the central and eastern Islamic lands, but the nature and extent of this change, affecting a wide range of aspects of both material and religio-cultural life, are not easy to evaluate and have given rise to controversy (see below).

The Sal<u>dj</u>ūḳs arrived on the scene of the Islamic world only a few decades after the practical and moral authority of the ʿAbbāsid caliphs in Ba<u>gh</u>dād had reached its lowest ebb under the political and military tutelage of the <u>Sh</u>īʿī Būyids [see buwayhids]. At the same time, many of the petty Arab principalities of ʿIrāḳ, al-<u>Dj</u>azīra and northern Syria were also <u>Sh</u>īʿī, but the most serious threat of all came from the constituting of the rival Ismāʿīlī <u>Sh</u>īʿī caliphate in North Africa, Egypt and southern Syria of the Fāṭimids, still in a militant, expansionist stage and with a capital, Cairo, which was beginning to outstrip Ba<u>gh</u>dād in material and intellectual splendour alike.

The installation of the Turkish Sal<u>dj</u>ūḳs in Persia, ʿIrāḳ, al-<u>Dj</u>azīra and northern Syria reversed this apparently unrelenting march of political <u>Sh</u>īʿism, and it was to be another four centuries or so before <u>Sh</u>īʿism would be able permanently to affect the religious complexion of large stretches of the northern tier of the Middle East, sc. Persia and eastern Anatolia (and, somewhat paradoxically, through the agency of further Turkish/Turkmen elements there, notably through the Ṣafawids and their Ḳizilba<u>sh</u> followers). The Sal<u>dj</u>ūḳs were Sunnīs, and Ḥanafīs in *ma<u>dh</u>hab*, who wished to replace existing powers in Persia, including the <u>Gh</u>aznawids and the generally <u>Sh</u>īʿī Daylamī dynasties of northern and western Persia (at the same time, by the removal of the latter relieving the ʿAbbāsids of a certain amount of pressure and constriction) without, however, giving up the fruits of military and political victory, which they now wished to enjoy themselves. This explains why, although al-Ḳāʾim welcomed Ṭo<u>gh</u>rïl Beg's appearance at the outset, subsequent relations between the ʿAbbāsids and the Great Sal<u>dj</u>ūḳs were not always smooth. The caliphs soon found that they had little more freedom to manoeuvre than they had had under the Būyids. They only came into their own again during the middle years of the 6th/12th century, when they were able to show increased independence of mind and of freedom of action vis-à-vis the declining Sal<u>dj</u>ūḳs. This revival of the caliphate was to be transitory; both ʿAbbāsids and Sal<u>dj</u>ūḳs were shortly to be swept away by new, dynamic forces from the East, notably the <u>Kh</u>ʷārazm<u>sh</u>āhs and above all the Mongols. Yet through the co-existence for something like 130 years of the two dynasties, the conditions were created for the development within Islam, even if dictated by practical necessity, of the concept of the caliph-imām as spiritual and moral leader and the sultan, in this case the Sal<u>dj</u>ūḳ one, as secular, executive leader of a large proportion of the Muslims (see further, <u>kh</u>alīfa. (i) b; sulṭān; and below, section V. 1).

The irruption of the Sal<u>dj</u>ūḳs into the Islamic lands was only the beginning of a prolonged movement of peoples from Inner Asia into the Middle East, one which was to have long-term social and economic as well as political and constitutional effects. Whilst many of the Turkmen elements percolating into northern Persia all through the Sal<u>dj</u>ūḳ period passed on towards Anatolia, others became part of the increasing nomadic and transhumant population of Persia and the central Arab lands, and this process became accelerated in the time of the succeeding invaders mentioned above, sc. the <u>Kh</u>ʷārazm<u>sh</u>āhs and Mongols, through the movements of Turco-Mongol peoples. There resulted a transformation of land utilisation, social organisation and ethnic composition in the territories affected, associated with new systems of land tenure such as the *iḳṭāʿ* and the later *soyur<u>gh</u>al* [*q.vv.*] and with the pastoralisation of extensive areas of the northern tier of the Middle East, so that Turkish (and, to a much lesser extent, Mongol) tribesmen became integral parts of the population there, previously mainly Persian and Arab, bringing with them their languages. The use of these land grants to support professional soldiers, and the availability of reservoirs of tribal manpower, first of all in the Sal<u>dj</u>ūḳ period buttressed the authority of the sultans and their epigoni, the atabegs [see atabak]; but in the course of time it led to the political and military domination of Turkish dynasts or military leaders from Bengal to Algiers.

A further effect of the assumption of political leadership by the Great Sal<u>dj</u>ūḳs lay in the consolidation of Sunnī authority as the dominant ethos of rule in the central Islamic lands. Although barbarians at the outset (and the first Sal<u>dj</u>ūḳ sultans, at least in Persia and ʿIrāḳ, remained substantially unlettered), these Turks knew how to make the best use of the existing Persian and Arab administrative structures already in place, and the viziers and officials whom they employed, such as al-Kundurī, Niẓām al-Mulk and al-Ṭu<u>gh</u>rāʾī [*q.vv.*], shed as much lustre on their masters as had done the great viziers of the 4th/10th century on their Būyid employers. Culturally, the constituting of the Sal<u>dj</u>ūḳ empire marked a further

step in the dethronement of Arabic from being the sole lingua franca of educated and polite society in the Middle East. Coming as they did through a Transoxania which was still substantially Iranian and into Persia proper, the Saldjūḳs—with no high-level Turkish cultural or literary heritage of their own—took over that of Persia, so that the Persian language became that of administration and culture in their lands of Persia and Anatolia. The Persian culture of the Rūm Saldjūḳs was particularly splendid, and it was only gradually that Turkish emerged there as a parallel language in the fields of government and *adab* [*q.v.*]; the Persian imprint on Ottoman civilisation was to remain strong until the 19th century.

The region of the Middle East where the coming of the Saldjūḳs was to have the most immediate and obvious impact, with enduring political, religious and cultural effects which are strongly visible today, was Anatolia. Here the Saldjūḳ sultanate of Rūm based on Ḳonya and other Turkish principalities in northern and eastern Anatolia took over the greater part of the former Byzantine and Armenian territories of Asia Minor. It is for this region that the geographical designation Turcia/Turchia, etc., first apparently appears specifically in Western European usage at the time of the Third Crusade of the Emperor Frederick Barbarossa (1187-92) (thus according to Cl. Cahen, *Pre-Ottoman Turkey. A general survey of the material and spiritual culture and history c. 1071-1330*, London 1968, 144-5).

The details of the Saldjūḳs' part in the gradual Turkification of Asia Minor will be considered below under section III. 5; see also ANADOLU. iii. i. But it should be noted that the consolidation of the Saldjūḳ sultanate of Rūm as the political, cultural, religious and geographical predecessor of the modern Turkish Republic, has been a salient point in the assessment of the general importance of the Saldjūḳs in Middle Eastern history by contemporary Turkish historians. Over some half-a-century, the role of the Saldjūḳs as the first Turkish, Islamic power to establish itself in the heartlands of the Islamic world (ignoring dynasties on the far peripheries like the Ghaznawids in Afghānistān and India and the Ḳarakhānids in Transoxania) has been the starting-point for much analysis and speculation by these Turkish scholars. In part, this has been a reaction against 19th century European views, those formed in the light of the Greek and Balkan peoples' freeing themselves from what was viewed as Ottoman Turkish religious oppression and maladministration and in the light of the issues raised by the "Eastern Question", and expressed by such scholars as Ernest Renan. According to these views, the Turks, unlike the Semitic Arabs and the Indo-European or Aryan Persians, had contributed nothing to the fabric of Islamic civilisation since they came from the one region of the Old World, Inner Asia, from which no great religions or cultures have ever emerged. But it has also been a reaction against a long-established, inter-Islamic judgement, arising out of specific political conditions, sc. the four centuries' long domination by the Ottoman Turks of the heartlands of Arab-Islamic culture, the lands from Egypt to ʿIrāḳ. From this has arisen the contemptuous dismissal of the Turks as essentially unoriginal barbarians, deriving their culture from the Arabs and Persians, a nation of soldiers and administrators rather than one of creative achievers in the intellectual and cultural fields. The persistence of such views, still enshrined today in the school and university textbooks of the Arab world, reflect attitudes of ethnic disparagement (and enables the Turks to be cast as continuingly responsible for the ills and failures of Arab political systems and society since the break-up of the Ottoman empire). (See on these attitudes, B. Lewis, *The Mongols, the Turks and the Muslim polity*, in *Islam in history. Ideas, men and events in the Middle East*, London 1973, 179-98; U. Haarmann, *Ideology and history: the Arab image of the Turk through the centuries*, in *IJMES*, xx [1988], 175-96.)

It is not therefore surprising that 20th-century Turkish historians have combatted such attitudes and have seen the Saldjūḳ Turks as bringing new and valuable influences into the Islamic society which they found on entering it. According to such a view, elements of Turkish steppe culture were not completely overlaid but contributed to and enriched Islamic civilisation, which became a synthesis of Turkish plus existing Islamic elements: the principle of social mobility and democracy within the steppe tribal unit, the conception of world dominion which enabled the Turkish sultan to act as the executive counterpart of the caliph's universal religious and moral authority, the traces of the role in steppe life of Turkish holy men within later Turkish Ṣūfism, etc. Indeed, the Turks revitalised Islam. The going-back to the Saldjūḳs as Turkish heroes and as the founding fathers of the Muslim Turkish culture, actually goes back to the earlier part of the 20th century, to Ziyā Gök Alp and Kemāl Atatürk [*q.vv.*], figures who, in an age of Ottoman terminal decline or recent disappearance, tended to view the Ottoman interlude of Turkish history with ambivalent feelings: an empire tainted with cosmopolitanism and a semi-colony of the West. The Saldjūḳs who founded the Rūm sultanate, within almost the same geographical bounds as post-1922 Turkey, could thus be regarded as the precursors of the modern Republic. All sorts of other arguments have been brought into play here, such as the question whether the Turkish invasions of Anatolia from the later 5th/11th century onwards were unplanned plunder raids or part of a pre-planned grand strategy going back to the early decades of the century, a reasoning put forward by some Turkish nationalist historians (see further, below, section III. 1, 5).

These discussions have arisen out of the process, common enough in the recent history of central and eastern Europe as well as of Turkey, in which historical, linguistic and nationalist feelings are used as a formative impulse in, or as a justification for, the consolidation of a nation state, a process which has come into existence as a protest against, and in conflict with, the existing state pattern (see H. Kohn, *The idea of nationalism, a study in its origins and background.* New York 1961, 324-5, 329-31). As forming a fascinating case study, they have attracted the attention and the analyses of western orientalists, notably of Martin Strohmeier, *Seldschukische Geschichte und türkische Geschichtswissenschaft. Die Seldschuken im Urteil moderner Türkischer Historiker*, Berlin 1984, who surveys the whole topic in great detail, and of Gary Leiser in his useful *A history of the Seljuks. İbrahim Kafesoğlu's interpretation and the resulting controversy. Translated, edited and with an introduction ...*, Carbondale and Edwardsville, Ill. 1988, which makes available in an annotated English translation Kafesoğlu's lengthy *İA* article on the dynasty plus the views of other Turkish scholars involved in Saldjūḳ history, notably Osman Turan and Ahmed Ateş.

II. Origins and early history

The Saldjūḳs were in origin a family group or clan of the Oghuz Turkish people. The Toḳuz Oghuz or "nine tribes of the Oghūz" formed part of the early Gök Türk empire of the early 8th century, and as such

are mentioned in that empire's royal annals, the Orkhon [*q.v.*] inscriptions. When that empire collapsed in 741, the Oghuz chief eventually acquired the military office of Yabghu (a term which turns up later in the early history of the Saldjūḳs in Transoxania and Khurāsān, see below) of the right wing of the horde of the Western Turks. The Oghuz moved southwestwards through the Siberian steppes to the Aral Sea and the frontiers of Transoxania, and westwards to the Volga and South Russia. The Arab envoy to the king of the Bulghārs, Ibn Faḍlān [*q.v.*], found the Oghuz nomadising in the steppes between Khwārazm and the lower and middle Volga in the opening decades of the 4th/10th century; and with their appearance on the northern fringes of the Sāmānid amirate later in that century, they enter the full light of Islamic history [see GHUZZ].

(Following one of the conventional Western spellings, Saldjūḳ is used here in the *EI*. However, Barthold pointed out (*Turkestan*[3], 257 n. 1; *Histoire des Turcs d'Asie centrale*, Paris 1945, 80) that the frequently-found spelling Seldjūḳ contravenes the rules of vowel harmony in Turkish languages and that Maḥmūd Kāshgharī in his *Dīwān lughāt al-Turk* (ed. Kilisli Rifʿat Bey, i, 397, tr. Atalay, i, 428) spells the name with *kāf* and presumably front vowels, i.e. Seldjük or Selčük, with similar spellings in the *Kitāb-i Dede Ḳorḳut* and other texts. P. Pelliot, in his *Quelques noms turcs d'hommes et de peuples en -ar/-är, ur/ür, -ïr/ir*, in *Oeuvres posthumes*, Paris 1949, ii, 176-7 n. 2, took a similar line: "si je donnerais une transcription scientifique, je parlerais des Säljük". On the other hand, the spelling with *ḳāf* and implied back vowels is very old in the Arabic-script sources and in such Armenian renderings as *Salčʾuk*, pl. *Salčʾukhik*, of Kirakos of Gandja. Karl Menges suggested (in *JNES*, x [1951], 268 n. 2), an origin of the name in the verb *salmak* "attack, charge" (Clauson, *Etymological dictionary*, 824, has, however, for the root *sal-* the related but somewhat different meaning of "violently to move, agitate s. th.") > *salčuk* "dashing, charging". Many Western scholars have preferred to use some form of the name with back vowels, whilst commenting on the extremely fluid state of Turkish vowel harmony and orthography at this early period. See further C.E. Bosworth in *The Ghaznavids*, 299 n. 44, and the opening section of Kafesoğlu's *İA* art. *Selçuklular*, tr. Leiser, 21-2.)

Within the Oghuz people, the leading tribe was that of the Ḳïnïḳ, from whom their princes sprang, according to Kāshgharī again (i, 56, tr. i, 55). The Saldjūḳ family or kin-group (it does not seem in origin to have been a much greater social group) came from the Ḳïnïḳ; later, when the Saldjūḳs had achieved power in Persia, attempts were made to give the family a glorious past, and Ṭoghril Beg's official Abu 'l-ʿAlāʾ Ibn Ḥassūl (d. 450/1058) linked them with the legendary Turkish king Afrāsiyāb. On somewhat more certain historical ground, during the 4th/10th century the Saldjūḳ leader (called Saldjūḳ b. Duḳaḳ b. Temür Yalïgh "Iron bow") seems to have held the office of Sü Bashï or military commander, at the side of the Yabghu. Because of dissensions, the Saldjūḳs fled with their herds from the Yabghu to Djand [*q.v.* in Suppl.] on the lower Syr Darya, and it was in this region that Saldjūḳ died and that his family and followers became Muslim; the hostility of these two branches of the Ḳiniḳ was not resolved till 433/1041, when the Saldjūḳs, by then victorious in Khurāsān and Khwārazm, drove out from the latter province the Yabghu ʿAlī's son and successor Shāh Malik (see Barthold, *Turkestan*, 177-8, 256-7; Bosworth, *op. cit.*, 210-19).

Now on the borders of Khwārazm and Transoxania, the Saldjūḳs and other Oghuz bands hired out their military services, to the Sāmānids [*q.v.*], by this time in increasing difficulties, to the latter's eventual supplanters north of the Oxus, the Ḳarakhānids [see ILEK KHĀNS] and to the local rulers in Khwārazm, moving into the steppe fringes of these regions and into the Ḳara Ḳum [*q.v.*] in what is now the Turkmenistan Republic. At the outset, the Saldjūḳs were led by the three sons of Saldjūḳ, Mūsā, Mīkāʾīl and Arslan Isrāʾīl [see ARSLAN B. SALDJŪḲ] (and possibly by a fourth one, Yūsuf) and, from the next generation, Mīkāʾīl's two sons Ṭoghrïl Beg Muḥammad and Čaghrï Beg Dāwūd [*q.vv.*].

Bands of Oghuz were scattered after a defeat by Sultan Maḥmūd of Ghazna [*q.v.*] in 428/1029 throughout Khurāsān and northern Persia (the so-called "ʿIrāḳī" Turkmens), but whether a raid as far as Ādharbāydjān and Armenia under Čaghrī Beg had taken place some ten years earlier is uncertain (though upheld as such by a nationalist-minded historian like Kafesoğlu as a kind of *praeparatio evangelica* for the Saldjūḳ incursions into Anatolia in the second half of the century). By 426/1035 the Saldjūḳs and their followers were asking Masʿūd b. Maḥmūd [*q.v.*] for a grant of Nasā, Farāwa and Sarakhs [*q.vv.*] and their pasture lands on the northern rim of Khurāsān. Over the next few years, they infiltrated Khurāsān and raided westwards into northern Persia, their lightly-armed and highly-mobile cavalrymen proving more than a match for the more heavily-armed but cumbersome Ghaznawid army, so that with the defeat of Masʿūd at Dandānḳān [*q.v.* in Suppl.] in 431/1040, the Saldjūḳs were soon able to overrun Khurāsān and then to sweep into the remainder of Persia. We need not assume that the actual numbers of the Turkmens were very large, for the ways of life possible in the steppes meant that there were natural and environmental limitations on the numbers of the nomads. Yuri Bregel has implied, working from the 16,000 Oghuz mentioned by the Ghaznawid historian Bayhaḳī as present on the battle field of Dandānḳān (*Taʾrīkh-i Masʿūdī*, ed. Ghanī and Fayyāḍ, Tehran 1324/1945, 619), that we should probably assume, in this instance, a ratio of one fighting man to four other members of the family, yielding some 64,000 Turkmens moving into Khurāsān at this time (*Turko-Mongol influences in Central Asia*, in R.L. Canfield (ed.), *Turko-Persia in historical perspective*, Cambridge 1991, 58 and n. 10).

But various Kurdish and Daylamī dynasties of the Caspian regions and Djibāl were now attacked, although the process of overcoming the more powerful and long-established Būyids in Fārs and ʿIrāḳ was slower. It was not until 447/1055 that Ṭoghrïl was first able to enter Baghdād and depose the Būyid prince al-Malik al-Raḥīm Khusraw Fīrūz [*q.v.*], and the last Būyids to rule in southern Persia lost their power only a few years later. What had helped the Saldjūḳ chiefs to triumph, A.K.S. Lambton has suggested, were their obvious leadership qualities combined with a certain level of sophistication derived from a past in the steppes which had been not altogether unfamiliar with urban life in, for example, the towns on the lower Syr Darya; hence they were able to lead the Oghuz bands towards the formation of a higher political organism, the sultanate in Persia and ʿIrāḳ, than those Oghuz who stayed behind in the steppes between the Syr Darya and the lower Volga, what were later called the Ḳïpčaḳ steppes (*Aspects of Saljūq-Ghuzz settlement in Persia*, in D.S. Richards (ed.), *Islamic civilisation 950-1150*, Oxford 1973, 111).

Ṭoghrïl had already adopted something of the style

of an independent ruler during his first, temporary occupation of Nīs̲h̲āpūr [*q.v.*], the capital of K̲h̲urāsān (429/1038), making the *k̲h̲uṭba* in his own name (though perhaps at the side of Sultan Masʿūd's name) and assuming the title of *al-Sulṭān al-Muʿaẓẓam* "Exalted Ruler", one which subsequently appears on his coins. He was now in touch with the ʿAbbāsid caliph in Bag̲h̲dād, the fount of legitimising authority for Sunnī rulers, and when he entered Bag̲h̲dād for a second time in 449/1058, al-Ḳāʾim [*q.v.*] bestowed on him *alḳāb* or honorific titles and robes of honour in the ʿAbbāsid colour of black. Ṭog̲h̲rïl was to exult in his role of deliverer of the caliph from the pressure of S̲h̲īʿī powers like the Būyids, Mazyadids and Fāṭimids, and even aspired to take an ʿAbbāsid princess to wife, a proposal which her father fought off, however, for as long as possible (see below, 2). All this now gave Ṭog̲h̲rïl an authority quite different in nature from the limited authority which he had enjoyed under Turkish tribal custom as war leader and tribal chieftain, one which set the Sald̲j̲ūḳs on the road to becoming rulers integrated within the Perso-Islamic monarchical tradition—a process which was never, however, fully completed (see below).

Ṭog̲h̲rïl had thus become supreme ruler over the former Būyid lands in western and southern Persia, in addition to the former G̲h̲aznawid ones in the east, with the title of sultan and the position of head of the Sald̲j̲ūḳ family, now starting on the process of becoming a ruling dynasty. His position crystallised the new division of authority, within the central and eastern lands of Sunnī Islam, between the ʿAbbāsid caliph-imām as spiritual and moral head and the Sald̲j̲ūḳ sultan as secular ruler, and this dichotomy was to become a major feature of the Sald̲j̲ūḳ period in Islamic history, although it was to be some considerable time before the writers on law and the state, constitutional theory would recognise the fait accompli. It could obviously not have been discernible to a writer like al-Māwardī (d. 450/1058 [*q.v.*]) in his *al-Aḥkām al-sulṭāniyya* (al-Māwardī had actually met Ṭog̲h̲rïl in the 1040s in a meeting near Rayy as the caliph's envoy, protesting against Turkmen depredations in Persia), and even when the process was perfectly apparent, e.g. to Abū Ḥāmid al-G̲h̲azālī (d. 505/1111 [*q.v.*]), the latter was reluctant to spell out the full implications and resorted to what Carole Hillenbrand has called "pious dishonesty" or else to tortuous and casuistic argumentation (*Islamic orthodoxy or Realpolitik? Al-G̲h̲azālī's views on government*, in *Iran, JBIPS*, xxxvi [1988], 86; see also Lambton, *Concepts of authority in Persia: eleventh to nineteenth centuries A.D.*, in *ibid.*, 97-8) in order to preserve the fiction of the caliph's supreme executive power over the *Dār al-Islām*. In fact, the direct authority of the caliphs within ʿIrāḳ and western Persia was to revive and expand considerably during the course of the 6th/12th century *pari passu* with the increased dynastic squabbling and diminished military effectiveness of the Great Sald̲j̲ūḳ sultans (in addition to the articles K̲H̲ALĪF and SULṬĀN, see for a good, concise account of these topics and events, T. Nagel, in U. Haarmann (ed.), *Geschichte der arabischen Welt*, Munich 1987, 146 ff.).

The sultans never conceived of themselves as despotic rulers over a monolithic empire, rulers in the Perso-Islamic tradition of the power state as it had developed, for instance, under the early G̲h̲aznawids [*q.v.*]. They had risen to power as the successful military leaders of bands of their fellow-Og̲h̲uz tribesmen, and at the outset depended solely on these tribal elements. The position of the Sald̲j̲ūḳ sultans was thus fundamentally different from their predecessors in the East, both from the Sāmānids, with their aristocratic Iranian background but a military dependence on professional, largely slave Turkish, troops, and from the G̲h̲aznawids, themselves of slave origin and dependent on a purely professional, salaried standing army; likewise, their opponents in the West, the Būyids and Fāṭimids, had come to depend upon professional, multi-ethnic armies. The sultans did not prove to be wholly exempt from the pressures arising out of the ethos of power in the Middle East at this time; they endeavoured to increase their own authority and to some extent to marginalise the Turkmen tribal elements, yet these last remained strong within the empire, and on occasions, powerful enough to aspire, through their favoured candidates for the supreme office of sultan, to a controlling influence in the state.

In any case, the sultans, especially those of the 5th/11th century, could not divest themselves completely of their steppe origins, and we have no reason to think that they wished completely to do so. Ṭog̲h̲rïl, Čag̲h̲rï and Alp Arslan had grown up within the Og̲h̲uz tribe, and when they became Islamic territorial rulers they were nevertheless careful still to observe tribal law and custom when those did not clash with their new roles as sultans (but for an occasion when the new Islamic principles firmly overrode tribal custom, sc. in regard to the succession, see below, section III. 1). Sand̲j̲ar, having within his K̲h̲urāsānian dominions substantial groups of still unassimilated, tribally-organised Og̲h̲uz, was likewise conscious of his dual position. One later Turkish source states that, in accordance with ancient practice, he gave the right wing of his army to the Ḳayï and Bayat clans of the Og̲h̲uz and the left wing to the Bayïndir and Bičine (*Muntak̲h̲ab-i tawārik̲h̲-i sald̲j̲ūḳiyye*, quoted by İ.H. Uzunçarşılı, *Osmanlı devleti teşkilâtına medhal*, Istanbul 1941, 22-4). Several administrative documents from the period illustrate Sand̲j̲ar's care to regulate his relations with his G̲h̲uzz subjects; cf. Lambton, *The administration of Sanjar's empire as illustrated in the* ʿAtabat al-kataba, in *BSOAS*, xx (1957), 382, and eadem, *Aspects of Saljūq-Ghuzz settlement in Persia*, 109-11. During Malik S̲h̲āh's reign, the great vizier of Alp Arslan and Malik S̲h̲āh, Niẓām al-Mulk, commented in his *Siyāsat-nāma*, § 26, that the sultans had obligations towards their former backers, the Turkmens, hence should preserve some role for them in the state apparatus amidst the trends towards administrative and military centralisation and professionalism (see also Lambton, in *Camb. hist. of Iran*, v, 246-7).

The persistence of influences from the Og̲h̲uz tribal past is seen in the sultans' policy of allotting various provinces of the empire as appanages from Sald̲j̲ūḳ male relatives who had a claim, by virtue of seniority or experience, to some share in the material advantages of power. Ṭog̲h̲rïl's brother Čag̲h̲rï had from the time of the Dandānḳān victory been left with control over the eastern territories: K̲h̲urāsān; any lands north of the Oxus that he could conquer from the Ḳarak̲h̲ānids or from the Og̲h̲uz Yabg̲h̲u in K̲h̲ʷārazm; and any further parts of Afg̲h̲ānistān that he could wrest from the G̲h̲aznawids. (Exactly in what degree Čag̲h̲rï was considered by the Sald̲j̲ūḳs' Turkmen followers as inferior in status to Ṭog̲h̲rïl, or whether he was inferior at all, is a question discussed by R.W. Bulliet in his article *Numismatic evidence for the relationship between Ṭughril Beg and Chaghrī Beg*, in D.K. Kouymjian (ed.), *Near Eastern numismatics iconography, epigraphy and history. Studies in honor of George C. Miles*, Beirut 1974, 289-96; his conclusion is that they were

in fact equal, at least at the outset, and that this equality in status was recognised by symbols on their coins.) Čag͟hrī died in 452/1060, and his son Alp Arslan, already active latterly in the affairs of the East, took over power there; after Ṭog͟hrïl's death in 455/1063, he moved westwards and assumed supreme direction of the Sald̲j̲ūḳ empire; all subsequent rulers of the Great Sald̲j̲ūḳ line and the Sald̲j̲ūḳ rulers in ʿIrāḳ and western Persia sprang from Alp Arslan. A further brother of Ṭog͟hrïl's and Čag͟hrī's, Mūsā Bīg͟hū or Payg͟hū [see PAYG͟HŪ], was left to bring under his control as much as possible of Sīstān, at that time ruled by the Maliks of Nīmrūz of the Naṣrid line [see SĪSTĀN]. Čag͟hrī's eldest son Ḳāwurd [*q.v.*] was to expand southwards through Ḳuhistān to Kirmān, and in fact founded the largely autonomous Sald̲j̲ūḳ amirate in Kirmān which was to last for nearly a century and a half (see below, II, 4). Other members of the Sald̲j̲ūḳ family also received grants: Ibrāhīm Inal or Yinal (who may have been a cousin and half-brother on his mother's side to Ṭog͟hrïl but whose precise position within the family is not wholly clear, cf. V. Minorsky, *Äïnallu/Inallu*, in *RO*, xvii [1951-2], 5-6) received Ḳuhistān, and Ḳutlumus̲h̲ (or Ḳutamis̲h̲) b. Arslan Isrāʾīl received Gurgān and Ḳūmis, whilst the sons of Čag͟hrī, Yāḳūtī and Alp Arslan, accompanied Ṭog͟hrïl westwards at this time.

Over the following years, there was much discontent within the Sald̲j̲ūḳ family over the idea of father-son descent from Čag͟hrī to Alp Arslan and then to Malik S̲h̲āh. Already during Ṭog͟hrïl's lifetime, Ibrāhīm Inal and two of his nephews had rebelled unsuccessfully against Ṭog͟hrïl (451/1059). When Alp Arslan claimed the throne of the whole Sald̲j̲ūḳ dominions in 455/1063, his uncle Ḳutlumus̲h̲ revolted at Sāwa [*q.v.*] in the next year, voicing the old Turkish idea of the seniorate, the right of the eldest suitable male relative to have the supreme leadership; and when Malik S̲h̲āh succeeded to power in 465/1072, his uncle Ḳāwurd rebelled, but was executed at the prompting of Niẓām al-Mulk. As some compensation for the rejection of Ḳutlumus̲h̲'s claim, Alp Arslan deflected the latter's son Sulaymān, together with other Turkmen elements who were imbued with the spirit of plunder and *g͟hazw* and who were probably impatient of the increasingly centralised direction of the state, westwards into Anatolia, where new vistas of expansion opened up in the wake of the Sald̲j̲ūḳ victory over the Byzantines in 463/1071 of Malāzgird [*q.v.*]. In this way, there eventually came into being the Sald̲j̲ūḳ sultanate of Rūm based on Ḳonya (see below, section III. 5).

Bibliography: A good survey of both primary and secondary sources (to *ca.* 1960) is to be found in the *Bibl.* to Cl. Cahen's art. G͟HUZZ; especially to be noted is Cahen's further article *Le Malik-Nameh et l'histoire des origines seljukides*, in *Oriens*, ii (1949), 31-65, which brings together information from the lost *Malik-nāma* (which was probably written for the young prince Alp Arslan shortly after the death of his father Čag͟hrī Beg in 452/1060; see also Bosworth, *The Ghaznavids*, 219) preserved in Ṣadr al-Dīn al-Ḥusaynī, Ibn al-Athīr, Barhebraeus and Mīrk͟hʷānd. Of additional and/or subsequent secondary sources, see R. Grousset, *L'empire des steppes*[4], 203 ff.; *İA*, arts. *Oğuzlar* (Faruk Sümer) and *Selçuklular* (Kafesoğlu); W. Barthold, *Four studies on the history of Central Asia. iii. A history of the Turkman people*, Leiden 1962, 99-102; C.E. Bosworth, in *Camb. hist. of Iran*, v, 15-23, 42 ff.; M.A. Köymen, *Büyük Selçuklu imparatorluğu tarihi.* i. *Kuruluş devri*, Ankara 1979; P.B. Golden, in *Camb. hist. of early Inner Asia*, Cambridge 1990, 361 ff.; art. TURKMENS. III. The various branches of the Sald̲j̲ūḳs

The history of the Sald̲j̲ūḳ dynasty may now be followed through its component lines as listed above. Only salient events and major trends will be noted; for a detailed treatment of historical events, see the articles on individual sultans and princes and on the various provinces and regions ruled at times by the Sald̲j̲ūḳs.

1. The Great Sald̲j̲ūḳs of Persia and ʿIrāḳ (429-552/1038-1157)

The definitive capture of the former capital of G͟haznawid K͟hurāsān, Nīs̲h̲āpūr, took place in 431/1040. Leaving affairs to his brother Čag͟hrī (see above, section II), Ṭog͟hrïl's main aim now was to expand westwards against the Daylamī and Kurdish princes of northern Persia, making Rayy his temporary capital and base for these operations. The securing of the rich lands of D̲j̲ibāl and the reduction of the Būyids were thus is objectives, with Ād̲h̲arbāyd̲j̲ān and the routes into the Caucasus, Armenia and Anatolia being left to the less-disciplined bands of Turkmens. The civil strife which broke out amongst the sons of the Būyid Abū Kālīd̲j̲ār [*q.v.*] after his death in 449/1048-9 facilitated Ṭog͟hrïl's intervention, especially when political chaos in Būyid Bag͟hdād seemed likely to lead to a degree of Fāṭimid control over the very capital of the ʿAbbāsids. In 447/1055 Ṭog͟hrïl assembled troops in D̲j̲ibāl and at Hamad̲h̲ān and marched on Bag͟hdād, ending there the feeble rule of the Būyid al-Malik al-Raḥim. Other Būyid princes survived only as Sald̲j̲ūḳ puppets in Fārs, and by 451/1060 all immediate threats to the ʿAbbāsids had been averted. Ṭog͟hrïl now exulted in his role of deliverer of the caliph. He received the honorific titles (*alḳāb* [see LAḲAB]) of *Rukn al-Dawla* and *Malik al-Mas̲h̲riḳ wa 'l-Mag͟hrib*, and was formally addressed as *Sulṭān* [*q.v.*] (a title for princes already in informal use, but now raised to the formal level and appearing as such e.g. on Ṭog͟hrïl's coins). He put pressure on al-Ḳāʾim to let him marry one of the ʿAbbāsid's daughters, so that the rapprochement between Sald̲j̲ūḳs and ʿAbbāsids, now the secular and spiritual leaders respectively of Sunnism in the central lands of the *Dār al-Islām*, begun by al-Ḳāʾim's marriage with a daughter of Čag͟hrī Beg some years before, could further be made closer (for a detailed analysis of this episode, and of Ṭog͟hrïl's probable motives, see G. Makdisi, *The marriage of Ṭug͟hril Beg*, in *IJMES*, i [1970], 259-75).

Whilst Ṭog͟hrïl was occupied in the west, Čag͟hrī, from a base at Marw (which was to remain the Sald̲j̲ūḳ capital in the east up to and including Sand̲j̲ar's time), maintained control over K͟hʷārazm against pressure from Ḳïpčaḳ nomads and a possible revival of Ḳarak͟hānid ambitions their. He and his son Alp Arslan also kept up warfare against the G͟haznawids, who, under Masʿūd's son Mawdūd [*q.v.*], were unreconciled to the loss of their Persian provinces; operations and counter-operations took place in northern Afg͟hānistān during the 430s-440s/1040s-1050s until peace was finally made on the accession of the G͟haznawid sultan Ibrāhīm b. Masʿūd in 451/1059, with a division of territories more or less dividing what is modern Afg͟hānistān by a north-south line. It was during these years also that Čag͟hrī's son Ḳāwurd set up an amirate of his own in Kirmān (see below, 3), and Sald̲j̲ūḳ suzerainty was extended

over the local maliks in the nearby province of Sīstān.

When the childless Ṭoghrīl died, Čaghrī's son Alp Arslan, who had been governing the province of Khurasān since his father's death, succeeded to the Saldjūķ sultanate against the claims of another brother, Sulaymān. The great commanders of the Saldjūķ army, and certainly Alp Arslan's vizier Niẓām al-Mulk, seem to have felt that the interests of the Saldjūķ family and of their followers—and perhaps even the interests of the Saldjūķ dominions, if such a sophisticated and prescient attitude may be attributed to their new ruling class—would best be served by a strong, unified rule; hence Alp Arslan became supreme sultan of all the Saldjūķ lands. His ten years' reign (455-65/1063-73) and the twenty years' one of his son and successor Malik Shāh (465-85/1073-92) mark the zenith of the Great Saldjūķ sultanate. Both rulers kept control over their far-flung territories by living lives of ceaseless journeying through the lands and campaigning on their borders. The threat of economic dislocation to the agricultural prosperity of Persia was alleviated by the deflection of the Turkmens and their herds westwards, against the Christian princes of the Caucasus and Anatolia and against the Fāṭimids and their allies in Syria, and Alp Arslan attached such importance to these projects that he fought in Georgia and Armenia personally in 456/1064 and 460/1068. Hence during their reigns, Persia and ʿIrāķ enjoyed considerable agricultural and commercial prosperity.

Behind the two sultans stood the vizier Niẓām al-Mulk, whose influence was so marked and all-pervasive in the state that a later historian like Ibn al-Athīr calls his thirty years of office *al-dawla al-Niẓāmiyya*. Alp Arslan never himself visited Baghdād, but the Saldjūķ presence was upheld there by a *shiḥna* or military governor, usually one of the Turkish commanders in the Saldjūķ army of slave origin. During his reign, relations with the caliph were on the whole more cordial than they had been in Ṭoghrīl's time and were crowned in 464/1071-2 by the marriage of the sultan's daughter to al-Ķāʾim's son and heir, the future caliph al-Muķtadī [*q.v.*]. What gave Alp Arslan a great personal reputation as a Muslim hero was of course his campaign into Anatolia and defeat of the Byzantine emperor Romanus Diogenes at Malāzgird [*q.v.*] in 463/1071, although there are no indications that this was part of an official, systematic programme of aggressive expansionism in Asia Minor; Alp Arslan was probably content to nibble away at the eastern frontiers of Byzantium, and on this occasion confined himself to imposing tribute on Romanus and demanding the retrocession of some formerly Muslim border towns along the Byzantine-Muslim frontier (requirements which the deposition of the Emperor at Constantinople shortly afterwards rendered null and void).

Alp Arslan made Malik Shāh heir to the throne in 458/1066, and on this occasion, mindful of traditional obligations to his family, redistributed various governorships on the eastern fringes of the empire to princes of the Saldjūķ family. The sultan was concerned to make firm the Saldjūķ position on the far northeastern fringes of his empire, and several marriage alliances were made with the dominant Turkish power in Transoxania and eastern Turkestan, the Ķarakhānids; but the granting out of these eastern march lands of the empire as appanages seems to indicate that the Great Saldjūķs now regarded Persia and ʿIrāķ as the real centre of gravity of their empire.

Malik Shāh continued and in some ways surpassed the achievements of his father, even though he was still only thirty-seven when he died. Niẓām al-Mulk remained the administrative mainstay of the sultanate, guiding the new, only eighteen-years old, monarch on his accession and hoping to mould him into the ideal of a Perso-Islamic despotic ruler, the image implicit in his treatise on statecraft, the *Siyāsat-nāma*. The vizier aimed at the creation of a centralised administration built around his *dīwān*, but the old Turkish ways and attitudes continued to be significant in regard to the sultan's conception of his own authority and his obligations to his own people, although these ways and attitudes are not always apparent from the exclusively Persian and Arabic sources. Senior members of the Saldjūķ family were still very much conscious of what they regarded as their rights under steppe and tribal custom. Thus Ķāwurd, Malik Shāh's uncle, a commander of great experience and *amīr* in Kirmān for a quarter of a century (see below, 3), took military action soon after Malik Shāh's accession in 465/1073 to enforce his claim to supreme power, as he saw it, since he was the senior member of the Saldjūķ family, a claim grounded in the older, pre-Islamic ways, one which Malik Shāh nevertheless rejected on the grounds of the superiority of father-son descent in the transmission of power, the procedure which was now the norm in the new world of Perso-Islamic governmental tradition. It was the new, professional slave soldier element of Malik Shāh's army which secured for him the victory at Hamadhān over Ķāwurd, rather than the Turkmen, tribal one, and the Turkmens established in those northern and eastern parts of Persia suitable for pastoral nomadism or transhumance probably now began to feel a certain alienation from what was going on in the sultans' main centres in the west at Hamadhān and Iṣfahān; these discontents were to well up in Khurāsān during the latter part of Sandjar's reign there (see below).

The new sultan was strong enough to exclude the ʿAbbāsid caliph from secular affairs in ʿIrāķ, but day-to-day relations between the two powers were conducted through their respective viziers. The marriage alliance with the caliphate in 480/1087, when al-Muķtadī married one of Malik Shāh's daughters, did not bring about the expected harmony, and shortly before he died Malik Shāh set about making Baghdād his winter capital and may even have toyed with the idea of deposing al-Muķtadī and replacing him with his infant grandson, the offspring of the marriage just mentioned.

Externally, Malik Shāh inherited his father's concern about the northwestern territories, the regions of especial Turkmen concentration, Ādharbāydjān and Arrān, which he placed under his cousin Ismāʿīl b. Yāķūtī b. Čaghrī's governorship, and he himself led campaigns against Georgia. But the policy of expansion into Anatolia by the sons of Qutlumush b. Arslan Isrāʾīl, Sulaymān and Manṣūr, who by 474/1081 were raiding as far as Iznik and the shores of the Sea of Marmara, was not an official one by the Saldjūķ sultanate but the result of private enterprise by these cousins of the sultan, acting outside his own sphere of control, an enterprise which he did not necessarily regard with any great approval. Of more pressing importance to Malik Shāh was the upholding of Saldjūķ authority in al-Djazīra and Syria against the local Arab amirates there, some of which were Shīʿī and therefore possibly pro-Fāṭimid in sentiment. From the Saldjūķ bases in ʿIrāķ and Syria (the latter province dominated after 471/1078 by Malik Shāh's brother Tutush, see below, 4), the sultan towards the end of his life secured the *khuṭba* for the ʿAbbāsids from the

venal Sharīfs of Mecca and set about extending Saldjūḳ power down the west coast of Arabia into the Ḥidjāz and to Yemen and down the east coast into al-Aḥsā, projects permanently cut short by his death. At the other end of the empire, Malik Shāh had invaded Transoxania in 466/1073-4 in retaliation for a Ḳarakhānid attack on Ṭukhāristān prompted by Alp Arslan's death. He now in 482/1089 intervened militarily again in Transoxania in order to uphold Saldjūḳ overlordship, at a point when the Ḳarakhānid realm was internally troubled, and he even received the homage of the eastern Ḳarakhānid ruler of Kāshghar. With the Ghaznawids, however, the sultan had to treat on equal terms, arranging marriage links, although there seems to have been, certainly in the spheres of coinage and titulature, a perceptible Saldjūḳ cultural influence in Ghazna at this time.

Malik Shāh's death in 485/1092 marked the end of halcyon days for the Great Saldjūḳs. Instead of that sultan's firm rule, a situation immediately arose involving various young, untried princes and their ambitious mothers, with no wise and restraining hand in the state like that of Niẓām al-Mulk. An attempt by Malik Shāh's widow Terken Khātūn and the enemies of the recently-assassinated Niẓām al-Mulk to place Malik Shāh's four year-old son on the throne as Maḥmūd (I) failed. His older sons Berk-yaruḳ and Muḥammad Tapar, joined by their ambitious uncle Tutush until this latter was defeated and killed by Berk-yaruḳ's troops in 488/1095, now engaged in prolonged warfare with each other over the succession until Berk-yaruḳ died in 498/1105. Muḥammad brushed aside an attempt to raise Berk-yaruḳ's infant son to the throne as Malik Shāh (II), and from his base in Ādharbāydjān was able to succeed to the throne of the united Saldjūḳ dominions of western Persia and ʿIrāḳ, Khurāsān and the east having been placed by Berk-yaruḳ under the governorship of his young half-brother Aḥmad Sandjar (see below). Fortunately for the Saldjūḳs, distracted as they largely were by internal strife, the external frontiers of the empire held firm in these years, for the appearance of the Frankish Crusaders in the Syrian coastlands and the region of the upper Euphrates bend in 1098 and then the next year in Palestine was not felt as a major threat to the Saldjūḳ positions in central Syria and al-Djazīra. But the internecine warfare, affecting western Persia in particular, inevitably affected the personal authority of the contenders, who had to seek military support from the great slave commanders of the army and from the Turkmen begs and their personal followings. As a result, Turkmen principalities now began to take shape in provinces like Khūzistān, Diyār Bakr and al-Djazīra, headed by Turkish atabegs, nominally the tutors and guardians of young Saldjūḳ princes granted these provincial appanages according to the still-influential Turkish conception of a patrimonial share-out of offices and governorships. Not only did the central authority of the state decline in effectiveness, but continual warfare and the need for money to support the rival armies heralded a period of economic and social regression compared with the internal peace of previous reigns. The number of *iḳṭāʿ*s granted out during these years increased perceptibly, and the relaxation of central political control and general uncertainty and stress amongst the populace allowed a radical group of the Shīʿa like the Ismāʿīlīs or Assassins (see ISMĀʿĪLIYYA, and add to the *Bibl.* there, F. Daftary, *The Ismāʿīlīs, their history and doctrine*, Cambridge 1990) to strengthen their grip on various strongholds seized by them towards the end of Malik Shāh's reign in both Syria and Persia (see M.G.S. Hodgson, *The Order of Assassins. The struggle of the early Nizārī Ismāʿīlīs against the Islamic world*, The Hague 1955, 72-98; idem, in *Camb. hist. of Iran*, v, 424-51; Daftary, *op. cit.*, 324 ff.).

Muḥammad, undisputed sultan 498-511/1105-18, succeeded in re-asserting a good measure of control over the empire, with action against the Assassins in Djibāl and Daylam, and in 501/1108 he overthrew the Shīʿī Mazyadid *amīr* of Ḥilla in central ʿIrāḳ, Ṣadaḳa b. Manṣūr [see MAZYAD, BANŪ], thereby gaining the preponderance in ʿIrāḳ. Muḥammad was, indeed, the last Great Saldjūḳ sultan to rule the western parts of the empire with any degree of firmness, having left his brother Sandjar in Khurāsān as his viceroy, with the title of malik. When Muḥammad died, Sandjar was the senior member of the dynasty, and although it had been the practice over some eighty years for the supreme sultanate to be held by the Saldjūḳ who controlled western Persia and ʿIrāḳ, Sandjar's seniority gave him a special standing under Turkish tribal custom. He had first been appointed as governor of Khurāsān by Berk-yaruḳ, and Sandjar's coins minted up to 493/1100 acknowledge Berk-yaruḳ as his suzerain; but after that date, he had transferred his allegiance to Muḥammad (see N.M. Lowick, *Seljuq coins*, in *NC*, 7th ser., vol. x [1970], 244-6). He now assumed the role of supreme sultan, a move which the weaker, quarrelling sons of Muḥammad were unable to oppose, so that Sandjar's name was generally placed on their coins before their own; thus coins minted early in his reign by Maḥmūd (II) b. Muḥammad, sultan in western Persia and ʿIrāḳ (511-25/1118-31), attribute to Sandjar the title *al-Sulṭān al-Muʿaẓẓam* but simply give Maḥmūd's own name and patronymic.

Aḥmad Sandjar thus became ruler over northern Persia and Khurāsān, whilst his nephew Maḥmūd tried to maintain his authority in western Persia and ʿIrāḳ over his unruly brothers (see below, 2). Sandjar brought Maḥmūd, who was reluctant to acknowledge his uncle's supreme authority, to heel by defeating him in battle near Sāwa [*q.v.*] in 513/1119. Henceforth, Maḥmūd, and then his successors Ṭoghrïl (II) (526-9/1132-4) and Masʿūd (529-47/1134-52), remained clearly his vassals, with the title of sultans but in reality with the status of maliks; only latterly, during the period of Sandjar's preoccupation with affairs in Transoxania and Khwārazm, did Masʿūd attain somewhat more freedom of action. Even so, the passage of time and the unprecedented length of Sandjar's rule in the east, first as malik and then as supreme sultan, in general strengthened Sandjar's moral authority within the dynasty.

Sandjar continued the policy of Berk-yaruḳ and Muḥammad by launching attacks on the Ismāʿīlīs of both Daylam and Ḳuhistān after the death in 518/1124 of Ḥasan-i Ṣabbāḥ, but without seriously affecting these sectarians' power in those localities. He also endeavoured, both as malik and then as sultan, to retain the Saldjūḳ overlordship established beyond the northeastern borders of the Saldjūḳ empire by his father Malik Shāh, who had made the Ḳarakhānids of Transoxania his tributaries. He placed Arslan Khān Muḥammad on the throne in Samarḳand in 495/1102 and confirmed the religious leadership in Bukhārā of the *ṣadr*s of the Āl-i Burhān [see ṢADR AL-ṢUDŪR], but at the end of Arslan Khān's long reign, Sandjar once more appeared at Samarḳand and placed a fresh nominee on the Ḳarakhānid throne. In neighbouring Khwārazm, the Turkish Shāhs of the line of Anūsh-tigīn Gharčaʾī [see KHWĀRAZM-SHĀHS] ruled also as

Sandjar's vassals; Ḳuṭb al-Dīn Muḥammad b. Anūshtigin always remained respectful towards the Saldjūḳ sultan, but his son Atsiz had his own ambitions and in 533/1138 rebelled openly against Sandjar's overlordship. The latter led expeditions against him on this and on subsequent occasions, but events were soon to prove that Saldjūḳ resources were overstretched in attempting to keep up any degree of military control beyond the Oxus. More lasting, however, was the assertion of Saldjūḳ suzerainty over, and the communication of a strong Saldjūḳ cultural influence within, the Ghaznawid sultanate in Afghānistān and northern India, when the sultan in 510/1117 placed his protégé Bahrām Shāh on the throne of Ghazna.

The catalyst for the ending of Saldjūḳ influence beyond the Oxus was the appearance within the Islamic lands there of a new power, the pagan Ḳara Khiṭay [*q.v.*] from northern China, who moved against Transoxania, provoking Sandjar to intervene as suzerain of the threatened Ḳarakhānids there. But in a fiercely-fought battle in the Ḳaṭwān steppes to the east of Samarḳand, the Muslim forces were routed by the Ḳara Khiṭay, and Sandjar and the Ḳarakhānid ruler Maḥmūd Khān had to flee southwards to Khurāsān (536/1141).

Sandjar's prestige was badly affected, and the remaining years of his reign were spent in trying to preserve his Khurāsānian possessions at a time when new, aggressive powers, in addition to the Ḳara Khiṭay (who soon showed that they had no ambitions south of the Oxus), were arising in the east, sc. the Khwārazm Shāhs and the Ghūrids [*q.v.*] from central Afghānistān. But it was stresses and discontents within Khurāsān which, despite Sandjar's attempts to stay attuned to Turkmen feeling there (see above, section II), brought his rule there to a dismal and painful end. The expense of warfare in these far eastern lands meant increased taxation demands on the population of Khurāsān, including on the bands there of nomadising Oghuz or Ghuzz. They became increasingly restive under Saldjūḳ financial oppression, until in 548/1153 they burst out into open revolt against the sultan. The province lapsed into chaos and violence, but most disastrously, Sandjar himself was captured by the Ghuzz and kept in close tutelage. He managed to escape only after a lengthy confinement, and shortly afterward died, at the age of seventy-one, in 552/1157. The leaderless commanders of the Saldjūḳ army in Khurāsān had offered the sultanate to the Ḳarakhānid Maḥmūd Khān, who was actually Sandjar's nephew. The then Saldjūḳ sultan in the west, Muḥammad (II) b. Maḥmūd, agreed to this, and it was clear that the *amīrs* of the Saldjūḳ army in Khurāsān regarded effective rule by the Saldjūḳ family there as finished, and in the ensuing years they were to divide out amongst themselves the power in Khurāsān. To contemporaries, it seemed like the end of an epoch, for Sandjar had ruled, as malik and sultan, for over sixty years.

2. The Saldjūḳs of Western Persia and ʿIrāḳ (511-90/1118-94)

The history of this line of sultans follows on from the reign of the last Great Saldjūḳ sultan in the west, Muḥammad b. Malik Shāh, but the unity and effectiveness of the sultanate here, briefly re-established by Muḥammad, could not be maintained. His sons and successors include several of mediocre capabilities, but some also of high calibre; yet the conditions in which they endeavoured to exercise their power were now very different from those of forceful rulers like Ṭoghrïl Beg, Alp Arslan and Malik Shāh. Following old Turkish practice of a patrimonial share-out of power, five of Muḥammad's sons contended for mastery in various parts of the realm over the next three or four decades: Maḥmūd, Masʿūd, Ṭoghrïl, Sulaymān Shāh and Saldjūḳ Shāh, all exerting some sort of authority for a while and all but the last actually ruling as sultans. With the succession permanently in dispute, a decisive voice was that of the Turkish atabegs, commanders who were originally attached as tutors to young Saldjūḳ princes sent out as provincial governors but who frequently arrogated to themselves political and military power in these governorships (see ATABAK, and. Lambton, *Continuity and change in medieval Persia*, London 1988, 229-33), and of those *amīrs* who had personal armies and could therefore lend their support to one or other of the contenders. Naturally, this support had its price: the interference of these *amīrs* in central government affairs and the increased alienation of state lands which had to be distributed as *iḳṭāʿ*s in payment to the military. The decay of the once mighty and united sultanate was lamented by contemporaries, and in Maḥmūd's reign, the secretary and historian Anūshirwān b. Khālid [*q.v.*] mourned the situation: "In Muḥammad's reign the kingdom was united and secure from all attacks; but when it passed to his son Maḥmūd, they split up that unity and destroyed its cohesion. They claimed a share with him in the power, and left him only a bare subsistence". He likewise asserts that, by the time of his death in 525/1131, Maḥmūd had got through the treasury of eighteen million dīnārs plus estates, jewels, clothing, etc., left by his father (al-Bundārī, 134-5, 155-6).

The general tendency during these years of civil strife between the sons of Muḥammad was for the sultan to exercise authority in ʿIrāḳ and southern Djibāl, but to have little beyond these regions; thus during Maḥmūd's reign (511-25/1118-31), Ṭoghrïl held northern Djibāl and the Caspian provinces and Maḥmūd was never able to dislodge him, whilst Masʿūd held Ādharbāydjān, Mawṣil and al-Djazīra. Even within ʿIrāḳ, Maḥmūd's position was challenged by local powers there like the Mazyadids and ambitious commanders like ʿImād al-Dīn Zangī (see on this last, H.A.R. Gibb, *Zengi and the fall of Edessa*, in *A history of the Crusades*, i, 449-62), so that the Saldjūḳ hold on ʿIrāḳ tended to be confined to the central part only. Anūshirwān b. Khālid, again, noted how Sandjar had appropriated all the northern Persian provinces as *iḳṭāʿ*s, how most of Fārs and Khūzistān was held by Maḥmūd's rival Saldjūḳ Shāh, and how the Mazyadid Dubays b. Ṣadaḳa held much of southern and central ʿIrāḳ, so that the sultan was left with only an exiguous amount of territory from which he could grant *iḳṭāʿ*s to his supporters, and had to resort to arbitrary confiscations (al-Bundārī, 134-5). The preoccupations of the Saldjūḳs within their own territories allowed the Christian Georgians, under the great David "the Restorer", to recover ground in eastern Transcaucasia [see AL-KURDJ]. A longer-term trend was that Saldjūḳ dissensions gave the ʿAbbāsids an opportunity to increase their military effectiveness and secular power during the course of the 6th/12th century, under the forceful rule of such figures as al-Mustarshid (512-29/1118-35 [*q.v.*]), al-Muḳtafī (530-55/1136-60 [*q.v.*]) and, above all, al-Nāṣir (575-622/1180-1225 [*q.v.*]). Their lengthy periods of rule contrasted with the frequent changes in the holders of power within the sultanate, and these caliphs were moreover served by capable viziers such as ʿAwn al-Dīn Ibn Hubayra and his son ʿIzz al-Dīn [see IBN HUBAYRA] dedicated to raising the effectiveness of the

caliphate in the politics of the age. Accordingly, it became more and more difficult for the Saldjūḳs to maintain what they had come to regard as their rights in Baghdād, including the payment of tribute to them by the caliphs and the maintenance of a *shiḥna* within the city. The high points of Saldjūḳ authority at this time were reached in 529/1135, when Masʿūd b. Muḥammad (529-47/1134-52) defeated the caliph al-Mustarshid outside Hamadhān, soon after which the caliph was mysteriously killed in the sultan's camp; and in 530/1136, when Masʿūd deposed al-Mustarshid's successor al-Rāshid (529-30/1135-6 [*q.v.*])—who had assembled, but in the end unsuccessfully, a grand coalition of discontented Saldjūḳ princes and Turkish commanders against the sultan—and installed in his stead his uncle al-Muḳtafī. However, the new caliph soon began vigorously to assert his secular rights, to build up his army by purchasing Armenian and Greek slave soldiers and then to defy the sultan. When Masʿūd died, al-Muḳtafī expelled from Baghdād the Saldjūḳ *shiḥna* and appropriated the sultan's palace and lands there; no representative of the Saldjūḳs were allowed in the capital again.

Ādharbāydjān, where Masʿūd had maintained himself before achieving the sultanate, passed to the Saldjūḳ prince Dāwūd b. Maḥmūd, from where he made several attempts to secure the sultanate for himself; but by the end of Masʿūd's reign, power in Ādharbāydjān was monopolised by two Turkish commanders, Eldigüz or Ildeniz [*q.v.*], atabeg of prince Arslan b. Ṭoghrïl (II), and Aḳ Sunḳur Aḥmadīlī [see AḤMADĪLĪS] of Marāgha. The line of Eldigüzids or Ildeñizids [*q.v.*] was to form a significant power in Arrān, most of Ādharbāydjān and parts of Djibāl until the early 7th/13th century: until the death of the last Saldjūḳ of Persia, Ṭoghrïl (III) b. Arslan (590/1194) as theoretical vassals of the Saldjūḳs, but thereafter as a fully-independent if short-lived dynasty. Likewise, Fārs was during Masʿūd's reign dominated by the Turkish commander Boz Aba, who towards the end of his rule there supported the claims to the sultanate of two of the sons of Maḥmūd, Malik Shāh (III) (547-8/1152-3) and Muḥammad (II) 548-55/1153-60); after this, Fārs became the base for the atabeg dynasty there of the Salghurids [*q.v.*]. Mawṣil and al-Djazīra, a march province against the Frankish County of Edessa and various recalcitrant Turkmen potentates of Syria and southeastern Anatolia, was governed by a Saldjūḳ freedman Aḳ Ṣonḳur al-Bursuḳī [*q.v.*] until 519/1126, but he was the last ruler in this region who could really be described as a dependent of the Saldjūḳs, for the sultans' increasing difficulties were to allow Zangī after 521/1127 to achieve virtual independence there. Indicative of the growing real power of the Atabegs was the appearance of their names on Saldjūḳ coins minted from 511/1118 onwards, i.e. from the accession of Maḥmūd b. Muḥammad, whereas previously, only the names of the caliph and the sultan had been given on them (cf. Lowick, *Seljuq coins*, 246-50).

With Masʿūd's death in 547/1152, the Saldjūḳ sultanate of the west entered its final phase of decline; Ibn al-Athīr writes that "with him, the fortunes of the Saldjūḳ family died; after him there was no banner to depend upon or to rally round". This juncture was also, as will be recalled from 1. above, the one when the senior member of the family, Sandjar, was becoming embroiled with the Ghuzz in Khurāsān, hence could give no help to his kinsmen in the west. Trends discernible during the previous three decades were now accentuated. The northwest of Persia remained dominated by the Eldigüzids and Aḥmadīlīs; Armenia and Diyār Bakr were disputed by the atabeg line of the Shāh Armanids of Akhlāṭ and the Ayyūbids [*q.vv.*]; Mawṣil and al-Djazīra were held by the Zangids; Turkmen governors controlled Khūzistān; and the Salghurids strengthened their grip on Fārs, one which was to endure well into Il-Khānid times. The caliph al-Muḳtafī was now the chief power in ʿIrāḳ, and after 575/1180, al-Nāṣir b. al-Mustaḍīʾ made himself a central figure in the politics and diplomacy of the central Islamic lands; but by now, the main threat to the ʿAbbāsids came not from the Saldjūḳ sultans but from the vigorous and expanding Khwārazm Shāhs.

Sultan Masʿūd left no direct heir so that, as after his father Muḥammad's death, there ensued a series of succession disputes amongst the Saldjūḳ princes with claims to the throne, including his brother Sulaymān Shāh and various of his nephews, none of whom, with the exception of Muḥammad (II) b. Maḥmūd (548-54/1153-9), were of more than mediocre ability. They were all largely dependent on the support of the great Turkish commanders, who used Saldjūḳ claimants as shields for their own personal ambitions and who were often allied by marriage with the Saldjūḳ family; thus Arslan Shāh b. Ṭoghrïl (II) (556-71/1161-76) was the stepson of the atabeg Eldigüz, since the latter had married Ṭoghrïl's widow. The Saldjūḳ family still had a certain amount of *baraka* and prestige in its name, especially in the eyes of their Turkmen tribal followers. The Oghuz of Khurāsān treated the captive Sandjar in a contemptuous and humiliating fashion, but did not apparently ill-treat him, and when in 549/1154-5 the *amīrs* of the Saldjūḳ army in ʿIrāḳ were trying to rally their forces against the caliph al-Muḳtafī, they brought out from his captivity in the citadel of Takrīt Arslan Shāh b. Ṭoghrïl (II), the future penultimate sultan of the dynasty, in order to inspirit the army and the Turkmens (al-Bundārī, 236-7). But such feelings now began to wear thin.

During his six years or so as sultan, Muḥammad (II) tried energetically to restore the Saldjūḳ position in ʿIrāḳ, defeating his uncle and rival Sulaymān Shāh and besieging Baghdād (551-2/1157) before illness and death overtook him with his task inaccomplished. The Turkish commanders were at variance over the choice of a successor, for the prestige of the Saldjūk name still demanded a Saldjūḳ prince as nominal supreme ruler in western Persia. In 556/1161 Eldigüz's candidate Arslan b. Ṭoghrïl was installed in the capital Hamadhān, but the caliph al-Mustandjid [*q.v.*] refused to recognise him as sultan, fearing the constituting of a powerful Saldjūḳ-Eldigüzid state which would once again reduce caliphal power. Eldigüz and, after 570/1175, his sons Pahlawān Muḥammad and Ḳïzïl Arslan [*q.vv.*], secured the *khuṭba* for their protégé sultan Arslan in Khurāsān, now ruled by Turkish *amīrs*, and also in Mawṣil and al-Djazīra, by exerting pressure on the Zangids there; the Eldigüzids did indeed dominate the politics of northern Persia and beyond at this time, and were the most effective deterrent to the ambitions of the Khwārazm Shāhs within Persia.

Arslan not surprisingly chafed under Eldigüzid tutelage. On Eldigüz's death he tried to break away from this, but himself died shortly afterwards, and Pahlawān Muḥammad now set up the last of the Saldjūḳ sultans of Persia, the child Ṭoghrïl (III) b. Arslan (571-90/1176-94). Ṭoghrïl was praised by contemporaries both for his learning and for his martial abilities. On reaching his maturity, Ṭoghrïl attempted, with aid from the Turkish commander in Rayy,

Ḳutlugh̲ Inanč Muḥammad, to break away from Ḳïzïl Arslan ʿUth̲mān's grip, but failed and was seized and jailed by the latter, who then claimed the sultanate for himself before he died mysteriously a year later. Ṭogh̲rïl was released after two years' incarceration, gathered support in northern Persia and made himself master of Dj̲ibāl; but he was unable to prevail against the Kh̲ʷārazm Sh̲āh Tekish̲, and in a battle outside Rayy in 590/1194 was defeated and killed. Since the line of Ḳāwurd's descendants in Kirmān had ended only a few years before (see below, 3), this marked the end of the Saldj̲ūḳ dynasty in Persia and ʿIrāḳ. The sources note that the dynasty began with a Ṭogh̲rïl and ended with a Ṭogh̲rïl. The dynasty's demise does not seem to have stirred up any feelings of regret or nostalgia; for almost four decades the sultans had been only one element, and that an increasingly enfeebled one, in the complex pattern of Persian politics on the eve of the twin catastrophes of Kh̲ʷārazmian and then Mongol invasion.

Bibliography: The bibliography for a century and a half of the history of much of the central and eastern lands of Islam is immense. Detailed reference may be made to the bibls. to the articles on individual sultans, caliphs and atabegs. There are relevant sections in J. Sauvaget, *Introd. à l'histoire de l'Orient musulman*, 140 ff., in Cl. Cahen's English *refonte* and enlargement, *Jean Sauvaget's Introduction to the history of the Muslim East*, Berkeley and Los Angeles 1965, 151 ff., and Cahen's *Introd. à l'histoire du monde musulman médiéval VII^e-XV^e siècle*, Paris 1982, 149-50. Kosuke Shimizu, *Bibliography on Seljuk studies*, Tokyo 1979, is based on a previous Turkish bibl. *The Index islamicus* of J.D. Pearson *et alii* has items on Saldj̲ūḳ history in its sections on Turkey and Persia. Finally, there are extensive bibls. by Bosworth, in *Camb. hist. of Iran*, v, 683-9, and by Leiser, in *A history of the Seljuks*, 190-6; see also the bibl. given above in section I. Hence only some of the main sources specifically bearing on Saldj̲ūḳ history will be noted here summarily.

3. The Saldj̲ūḳs of Kirmān (440-582/1048-1186)

After his victory in Kh̲urāsān, Ṭogh̲rïl Beg sent an expedition in 433/1041 to conquer the province of Kirmān, in southeastern Persia, from its Būyid ruler, ʿImād al-Dīn Abū Kālīdj̲ār Marzubān [*q.v.*]. This was repulsed, but Saldj̲ūḳ rule was imposed on Kirmān, and on the mountain peoples of the southern part of the province, the Ḳufṣ [*q.v.*] and Balūč [see BALŪČISTĀN. A.], by Ḳara Arslan Ḳāwurd in 440/1048. Eventually, this control was extended to the Arabian Sea coast in Makrān, and over the Gulf of Oman to ʿUmān, where a Saldj̲ūḳ *sh̲iḥna* was installed and suzerainty exerted over the local Arab rulers for nearly eighty years. The varied topography and climatic zones of Kirmān itself were congenial to Ḳāwurd's Gh̲uzz followers, who were able to practice there a transhumant way of life with their flocks, whilst the slave and other professional soldiers in his forces were granted *iḳṭāʿ*s from the agricultural lands there.

The detailed history of the Saldj̲ūḳ amirate which now came into being can be followed in KIRMĀN. History, and only a few general points will be made here. The compact geographical boundaries of the amirate seem to have allowed a greater degree of administrative centralisation within it as compared with the lands of the wider Saldj̲ūḳ sultanate in Persia and ʿIrāḳ. Muḥammad Sh̲āh b. Malik Sh̲āh of Kirmān (537-51/1142-56) had, according to the local historian Muḥammad b. Ibrāhīm, 29-30, a highly-developed espionage and intelligence system, both within Kirmān and outside, extending as far as Kh̲urāsān and Iṣfahān. On the whole, and until the chaos of the last decade or so of the amirate's existence, Kirmān enjoyed a period of peace and prosperity. This was helped by the province's position on the trade routes which ran down from Kh̲urāsān and Central Asia to the Gulf shores, carrying commerce which the *amīrs* themselves, since they drew a substantial income from transit taxes on merchants and from customs dues levied at ports like Tīz in Makrān (see below, section V. 1), encouraged considerably. Thus caravanserais were built and the roads protected against the brigandage of the Ḳufṣ and other lawless elements. During the long rule of Arslan Sh̲āh (I) b. Kirmān Shāh (495-537/1101-42) and during that of Bahrām Shāh b. Ṭoghrïl Shāh (565-70/1170-5), foreign merchants, including Rūmīs and Indians, established trading colonies in the towns of Kirmān or Bardasīr (the *amīrs*' summer capital) and in Dj̲īruft [*q.v.*] (the winter capital) (Afḍal al-Dīn Kirmānī, *ʿIḳd al-ʿulā*, Tehran 1311/1932-3, 70-1; Muḥammad b. Ibrāhīm, 25-6, 49). It was Arslan Sh̲āh, one of the outstanding rulers of his family, who, according to Ibn al-Dj̲awzī,

in 533/1138-9 sought the mediation of Sultan Masʿūd b. Muḥammad in seeking the hand of the ʿAbbāsid caliph al-Mustarshid's widow; he had already cemented links with the main branch of the Saldjūḳs by marrying one of Muḥammad b. Malik Shāh's daughters. Indeed, relations with the supreme sultans in western Persia and ʿIrāḳ, and with Sandjar in the east, remained close; at the outset, Ḳāwurd's coins had acknowledged the authority of the ruler of the east, his father Čaghrī Beg, and in general, the Kirmān *amīrs* continued to express their subordination on their coins (see Lowick, *Seljuq coins*, 250-1, and Bulliet, *Numismatic evidence for the relationship between Ṭughril Beg and Chaghrī Beg*, 290-1).

For most of the amirate's existence, its rulers were content to enjoy their own province, but on certain occasions the *amīrs* endeavoured to extend their military power or their diplomatic activities beyond the boundaries of Kirmān. It was Ḳāwurd's army which in 454/1062 entered the neighbouring province of Fārs, defeated the Shabānkāraʾī Kurdish chief Faḍlūya there and ended the rule of the nominal rulers of Fārs, the Būyids; Fārs now became part of Ṭoghrïl Beg's sultanate, although Saldjūḳ control was not finally made firm until Faḍlūya was captured and killed in 461/1069. Ḳāwurd's own claim to the Great Saldjūḳ sultanate, as senior member of the family after Alp Arslan's death, and his resultant bid for power, have been mentioned above in 1. Arslan Shāh in 508/1114-15 invaded Fārs, then under the Turkish commander, on behalf of Muḥammad b. Malik Shāh, Čawuli Saḳāʾū, and also intervened at one point in a succession dispute at Yazd involving the vassal governor of the Saldjūḳs there, the Daylamī ʿAlāʾ al-Dawla Garshāsp [see KĀKŪYIDS].

Many of Kirmān's historic contacts were with the lands further east; in previous times Kirmān had formed part of such military empires as those of the Ṣaffārids (later 3rd/9th and early 4th/10th centuries) and of the Ghaznawids (early 5th/11th century). In the succession dispute of 510-12/1117-18 between the Ghaznawids Arslan Shāh and his brother Bahrām Shāh, the latter appealed to Arslan Shāh of Kirmān for help; but Arslan Shāh preferred to leave a situation which came more within Sandjar's sphere of interest (the dispute was in fact resolved by Sandjar's military support at Ghazna for Bahrām Shāh's candidature). At some date unspecified by Muḥammad b. Ibrāhīm, Ḳāwurd sent his son Amīrān Shāh with an army into Sīstān, although at this time Sīstān was attached, as a vassal state, to the Great Saldjūḳs controlling Khurāsān, to Ṭoghrïl's brother Mūsā Bīghū or Payghū and shortly afterwards to Čaghrī's son Yāḳūtī, and then in the next century, to Sandjar.

The events of the last years of the Saldjūḳ amirate in Kirmān were in many ways a replica of what had already happened in the Saldjūḳ lands of western Persia and Khurāsān. In a period of short-reigning *amīrs*, especially after 565/1170, the Saldjūḳ princes in Kirmān fell under the control of slave commander atabegs, such as Muʾayyid al-Dīn Rayḥān, the former atabeg of Ṭoghrïl Shāh b. Muḥammad (I) Shāh b. Arslan Shāh. The warfare which raged between the contenders for power devastated the countryside of Kirmān and imposed new financial burdens on its people. Added to this, from 575/1179-80 onwards, Kirmān was afflicted by fresh bands of Oghuz tribesmen deflected southwards from Khurāsān by the fighting there between the Khwārazm Shāhs and the Ghūrids, and these bands brought further ruin to agriculture and trade, bringing about severe famine in towns like Bardasīr. Finally, in 582/1186, the Oghuz leader Malik Dīnār took over the province from the last Saldjūḳ *amīr*, Muḥammad (II) Shāh b. Bahrām Shāh, who fled and ultimately entered the service of the Ghūrids. This event came only eight years before the end also of the Saldjūḳ sultanate in Western Persia; only in Anatolia did the Saldjūḳs now remain as rulers.

Bibliography: In addition to the general primary sources for Saldjūḳ history listed in 2. above (Rāwandī, Bundārī, Ḥusaynī, Ibn al-Athīr, etc.), Kirmān is especially well served for this period by its quite abundant local histories, in particular, by Afḍal al-Dīn Kirmānī's *ʿIḳd al-ʿulā li 'l-mawḳif al-aʿlā* and his *Badāyiʿ al-zamān fī waḳāyiʿ Kirmān*, but also by what is in effect a special history of the Saldjūḳs of Kirmān, Muḥammad b. Ibrāhīm's *Taʾrīkh-Saldjūḳiyān-i Kirmān*. For full details, see the *Bibl.* to KIRMĀN.

Of secondary sources, see M.Th. Houtsma, *Zur Geschichte der Selǵuqen von Kermân*, in *ZDMG*, xxxix (1885), 362-410 (essentially a résumé of Houtsma's own edition of Muḥammad b. Ibrāhīm); Bosworth, in *Camb. hist. of Iran*, v, 58-60, 87-90, 117, 173-4; Erdoğan Merçil, *Kirman Selçuklan*, Istanbul 1980.

4. The Saldjūḳs of Syria (471-511/1078-1117)

The Turkmen bands which had come westwards with the Saldjūḳ brothers went mainly towards Armenia, the Caucasus and Anatolia, but others of them infiltrated the regions of Diyār Bakr and the upper part of al-Djazīra. Already in the later part of Ṭoghrïl's reign, Turkmens had reached Malaṭya. In the 1060s they were harrying the countryside around Edessa (Urfa or al-Ruhā [*q.v.*]), and Alp Arslan, during the course of his campaign against the Byzantines, attacked the city in spring 453/1071, and it may have accepted the nominal suzerainty of the Saldjūḳ sultan; over the next three decades, until the arrival of the Frankish Crusaders, Edessa was to be attacked by various Turkmen commanders, including the Saldjūḳ prince Tutush and the Artuḳid Sukman of Ḥiṣn Kayfā and Mārdīn (see J.B. Segal, *Edessa 'The Blessed City'*, Oxford 1970, 220 ff.).

The Saldjūḳ sultans came to attach importance to Syria as the westwards extension of the position which they had established for themselves since Ṭoghrïl's time in Mawṣil and the southern parts of al-Djazīra, but most of all because it was a march province between themselves, the champions of Sunnī orthodoxy as they saw themselves, and their Shīʿī opponents and rivals, the Fāṭimids. Syria was a region of great fragmentation, politically, ethnically and confessionally, with a strong local strain of Shīʿīsm amongst the Muslim Arab tribes and principalities there; the First Crusade was shortly afterwards to take advantage of these political, tribal and sectarian divisions.

In the second half of the 5th/11th century, the Fāṭimids' hold on southern Syria and Palestine was progressively reduced, until by the time of appearance of the Franks, they held only some fortresses on the Palestinian and Lebanese coasts. This rolling-back of Fāṭimid control from inland Syria and Palestine was in part the work of various Turkmen commanders despatched there by the Great Saldjūḳs, and in part that of Turkmen begs and their flocks, allowed to infiltrate Syria and act on their own initiative. This last was the case with the tribal beg Atsïz b. Uvak [*q.v.*], who first, in 463/1071, entered southern Syria and Palestine at the invitation of the Fāṭimid caliph al-Mustanṣir [*q.v.*], who hoped to use him as a counterforce against the rebellious Bedouin Arab tribesmen

of the region. Atsïz tried to set up a Turkmen principality of his own there but, having fallen out with the Fāṭimids, whose army besieged him in Damascus, he had to appeal for aid to the Saldjūḳ sultan Malik Shāh. The latter in fact decided to allot central and southern Syria and Palestine as an appanage for his brother Tutush [*q.v.*]; once Tutush arrived in Syria, he lifted the siege of Damascus but executed his potential rival Atsïz (471/1078).

Tutush then began an amirate in Syria which lasted for seventeen years (471-88/1078-95). Northern Syria, with its strategically-placed centre of Aleppo, had been controlled by the Arab Mirdāsids [see MIRDĀS, BANŪ], latterly in full decline, and replaced after 472/1080 by the Saldjūḳs' vassal, the ʿUḳaylid Muslim b. Ḳuraysh [see ʿUḲAYLIDS]. Disputes over possession of Aleppo between Tutush and the Saldjūḳ leader of raids into Rūm, Sulaymān b. Ḳutulmush (see below, 5), which ended in Sulaymān's defeat and death in battle in 479/1086, led to Malik Shāh's coming west from Iṣfahān personally with a large army in order to impose order in Syria. He occupied Aleppo and appointed various of his commanders as governors: Bozan in Edessa, Yaghï Siyan in Antioch, Aḳ Sonḳur in Aleppo and northern Syria, and the Turkmen beg Artuḳ in Jerusalem. Al-Djazīra and Syria were thus firmly brought within the supreme sultan's control, with Tutush's authority confined to central and southern Syria. All these local governors and Tutush were ordered to conduct operations against the coastal areas of the Levant, where petty rulers like Ibn ʿAmmār of Tripoli [see ʿAMMĀR, BANŪ] still enjoyed virtually undisturbed power.

The death of Malik Shāh in 485/1092 enabled Tutush to put forward his claim, as the most experienced of the surviving sons of Alp Arslan, to the supreme Saldjūḳ sultanate. He proclaimed himself sultan at Damascus, managed to kill Aḳ Sonḳur and Bozan, and extended his military power over all Syria and al-Djazīra, preparing to march eastwards into Persia against Malik Shāh's successor Berk-yaruḳ (see above, 1). But a majority of the great Turkish commanders—doubtless hoping to achieve a greater role in the state under the youthful Berk-yaruḳ than under the mature Tutush—eventually rallied to Berk-yaruḳ, and Tutush was defeated and killed near Rayy (Ṣafar 488/February 1095).

Berk-yaruḳ was never, however, able to exert his authority in the lands west of ʿIrāḳ, and Tutush's two sons Riḍwān and Duḳāḳ, encouraged by the latter's atabeg Ṭughtigin [*q.v.*], a former slave commander of Tutush's, succeeded to their father as maliks in Syria at Aleppo and Damascus respectively, refusing to recognise Berk-yaruḳ as sultan and making the *khuṭba* in Syria in their own names. The reigns of both of these princes largely coincided with the arrival in the Levant of the First Crusade, which injected a new element into the already complex political and dynastic rivalries in Syria.

Duḳāḳ (488-97/1095-1104) remained for all of his reign very much in the shadow of Ṭughtigin, who was not only his atabeg but also his stepfather, since Tutush had given Duḳāḳ's mother in marriage to Ṭughtigin. From the outset, Riḍwān (488-507/1095-1113 [*q.v.*]) was at odds with his brother and with Ṭughtigin, and in 489/1096 or the following year, the two sides clashed in battle near Ḳinnasrīn [*q.v.*], Riḍwān having secured troop reinforcements from the Fāṭimids. Duḳāḳ and Yaghï Siyan were decisively defeated, and had to agree to placing Riḍwān's name in the *khuṭba*s of Damascus and Antioch before their own. When the Crusaders besieged Yaghï Siyan in Antioch, Duḳāḳ and Ṭughtigin sent soldiers to reinforce an army sent by the supreme sultan Berk-yaruḳ, but failed to save the city (henceforth the centre of the Latin Principality of Antioch), and Riḍwān himself was soon afterwards defeated by the Franks. Duḳāḳ died in 497/1104, and Ṭughtigin simply replaced him at Damascus by Duḳāḳ's young brother Ertash or Begtash, until shortly afterwards Ṭughtigin dispensed with them and assumed both *de jure* and *de facto* power. With this, Saldjūḳ rule in Damascus ended.

Although there were local, temporary alliances amongst the Turkish and Arab princes of Syria and Palestine against the Crusaders, the irreconcilable division between Riḍwān and Ṭughtigin had allowed the Franks to continue their march southwards to Jerusalem and beyond. Damascus, a firmly Sunnī city and the bastion of orthodoxy in Syria, was, under the skilful rule of Ṭughtigin, able to withstand pressure from the Crusaders, and Ṭughtigin went on to found his own short-lived Turkish dynasty there, the Börids [see BŪRIDS]; before his death in 522/1128, he had in 509/1116 been reconciled to the Saldjūḳ sultan Maḥmūd b. Muḥammad and had been appointed governor for the Saldjūḳs over Syria.

After Duḳāḳ's death, the Aleppo branch of the Saldjūḳs of Syria had nevertheless another decade of life under Riḍwān. This last was in a more difficult position than his brother had been in Damascus. Aleppo was more exposed to Frankish attacks, both from the nearby County of Edessa and also from the Crusaders in the west Syrian Levantine coastlands. His willingness to use the Ismāʿīli or Assassin elements within Aleppo as his allies, in the often desperate situations in which he found himself, gave him a tainted reputation amongst the orthodox Muslims. Conscious of his weak position, he tried to avoid warfare if the risks were too high and, if necessary, to buy off the Crusader princes. He was perfectly prepared to ally with the Franks in the complex, petty rivalries of the north Syrian region, as in 501/1108, when he allied with Tancred of Edessa and Antioch against the lord of Mawṣil, the Saldjūḳ commander Čawuli Saḳāʾū and the latter's ally, the dispossessed Baldwin of Edessa; and when, later, Mawdūd of Mawṣil and Ṭughtigin organised an *djihād* against the Crusaders, Riḍwān sent only a small, token force.

Riḍwān died in 507/1113, and was succeeded briefly by his young sons Alp Arslan (507/1113) and Sulṭān Shāh (508-17/1114-23), the latter under the tutelage of the Artuḳids Il Ghāzī and then Nūr al-Dawla Balak, control of Aleppo falling after 517/1123 to Aḳ Ṣonḳor al-Bursuḳī. The Saldjūḳ sultans in western Persia and ʿIrāḳ thus no longer had any influence in Syrian affairs, and relations between ʿIrāḳ and Syria were henceforth to be the responsibility of autonomous, former Saldjūḳ commanders like Aḳ Sonḳur al-Bursuḳī and ʿImād al-Dīn Zangī. The long-term effect of direct Saldjūḳ interest in Syria, from the middle years of the 5th/11th century onwards for roughly half-a-century, had been to introduce the new element of Turkmen begs and their tribesmen, and in their followings, a number of Kurds also, into what had previously been a predominantly Semitic land; henceforth, the region became even more ethnically varied.

5. The Saldjūḳs of Rūm (*ca.* 483-707/*ca.* 1081-1307)

It is soon after Alp Arslan's victory at Malāzgird (see above, section III. 1) that we hear of the activities in Anatolia of the four sons of Ḳutalmïsh or Ḳutlumush b. Arslan Isrāʾīl, and the descendants of one of these sons, Sulaymān, were to found in central Anatolia the Saldjūḳ sultanate of Rūm based on Iconium or Konya [*q.v.*]. As noted above (*loc. cit.*), and *pace* the views of some modern Turkish nationalist historians, these activities seem to have been purely acts of individual enterprise, although later official historiography promoted by the Saldjūḳs of Rūm in the 7th/13th century asserted that the Great Saldjūḳ sultan Malik Shāh had, on his accession, personally bestowed the land of Rūm on his cousins, the sons of Ḳutalmïsh. In fact, these last seem earlier to have been under official Saldjūḳ surveillance, and only managed to escape to the safety of the fluid, governmentally uncontrolled Anatolian frontiers after Alp Arslan's death. Official disapproval continued under Malik Shāh, who had Manṣūr b. Ḳutalmïsh killed, and although Sulaymān escaped, he was later killed in battle, contending with his kinsman Tutush for control of Aleppo in 479/1086.

Meanwhile, Turkmen bands had been operating within Asia Minor, raiding as far as the shores of the Sea of Marmara and the Aegean, so that Sulaymān had reached Nicaea or Iznik in the far north-west of the land, and it is from this time that one may roughly date the beginnings of a Saldjūḳ principality in Anatolia. After Malik Shāh's death in 485/1092, Sulaymān's son Ḳïlïč Arslan I (485-500/1092-1107) managed to escape from captivity and was raised to the leadership of the Turkmens on northwestern Anatolia, only moving his capital to Konya after the Frankish armies of the First Crusade recaptured Nicaea in 1097. Malik Shāh had not had any definite plan for the overrunning of Anatolia. He did, however, regard himself as head of all the Turks, and wished to control the Turkmens, the most anarchically-inclined of his people, and in pursuit of this had been prepared to make an agreement with the Byzantine Emperor Alexis Comnenus, whose empire was being threatened by the Turkmens' depredations.

The infant Saldjūḳ principality in Konya was only one of several Turkmen *beyliks* which now took shape in central and eastern Anatolia, such as the Saltuḳids [see SALTUḲ OGHULLARÏ] in Erzerum, the Mengüdjekids [see MENGÜČEK] in Erzincan and other towns of the east, the Shāh Armanids [*q.v.*] of Sökmen's line in Akhlāṭ to the west of Lake Van and the Artuḳids [*q.v.*] in Diyārbakr. The most serious rival, because geographically closest to the Saldjūḳs, was the Dānishmendids [*q.v.*] of north-central Anatolia, who controlled the northerly route across the land via Sivas, Kayseri and Ankara, and who after 529/1134-5 enjoyed the title of *Malik* bestowed on them by the ʿAbbāsid caliph for their zeal in *ghazw* against the Byzantines.

When Ḳïlïč Arslan I was killed in battle, there was a temporary division of the Saldjūḳ lands. The appearance of the First Crusaders and a re-assertion of Byzantine power, plus the policy of containment of the Turkmens applied on their western frontier by the Great Saldjūḳ sultans in Persia and ʿIrāḳ, had meant that the various Turkish groups in Anatolia were confined to the interior of Asia Minor. There was some occasional cooperation between the Saldjūḳ of Rūm Rukn al-Dīn Masʿūd I b. Ḳïlïč Arslan I (510-51/1117-56) and the Dānishmendids against such foes as the Byzantines and the Armenians of Cilicia and Little Armenia, but after the death of the Dānishmendid Muhammad b. Gümüshtigin in 536/1142, the Saldjūḳs gradually secured the preponderance in central Anatolia. Masʿūd fought off only with difficulty a Byzantine attack on Konya led by Manuel I Comnenus (541/1147), being saved by the Emperor's receiving news of the appearance further west of the Second Crusade. Masʿūd's son ʿIzz al-Dīn Ḳïlïč Arslan II (551-*ca.* 581/1156-*ca.* 1185) secured revenge by inflicting a severe defeat on Manuel's army at the pass of Myriocephalon near Lake Eğridir in 572/1176, thereby preventing a further attack on the capital. Myriocephalon was as significant in its long-term effects as Malāzgird had been. The Frankish-Byzantine project for the recovery of Anatolia collapsed and Greek hopes of such a reconquest faded, a process to be sealed by the capture of Constantinople in 1204 by the Fourth Crusaders and the reduction of Byzantine control over Anatolia to the region around Nicaea and the principality of Trebizond. The Saldjūḳ sultanate of Rūm and the general Turkish presence were now an inassailable reality and could not be regarded in any way as temporary. In practice, as with Alp Arslan after Malāzgird, Ḳïlïč Arslan II's policy towards the Greeks was restrained and moderate, and he seems to have been content with the aim of uniting all the Turks of central and eastern Anatolia under his own rule rather than with dealing further direct blows at the Byzantine empire.

Neither the Muslim nor the Byzantine sources are very informative about the question of Saldjūḳ titulature and monarchical practices at this time. Greek writers had accorded the title of "sultan" to Sulaymān in the later 5th/11th century, but this can only have reflected an informal usage by Sulaymān's Turkmen followers, for neither the Great Saldjūḳ sultan not the ʿAbbāsid caliph can have bestowed it on him. Writers of the 6th/12th century seem to have described the rulers in Konya as *Malik*s more often than as sultans, but it is difficult to discern what the relationship between the two titles was at this time. From coins and inscriptions, and from some quasi-official documents, we know that Ḳïlïč Arslan II called himself "Sultan of the Arabs and the ʿAdjam", the latter term clearly implying the Turks rather than the Persians (as in traditional, earlier usage) and, latterly, "Sultan of the land of Rūm, and of the Armenians, Franks and Syria" (the Saldjūḳs referred to their land at this time, at least in informal usage, as Rūm, and themselves as the Saldjūḳs of Rūm; see RŪM. 2). The title of *Ghāzī*, employed by the Dānishmendids and the eastern Anatolian Turkmen princes, is absent amongst the Saldjūḳs. Like the Great Saldjūḳs of the 6th/12th century, young members of the Rūm Saldjūḳs had Atabegs at their sides, and these are still found—although little is known of them beyond their names—in the 7th/13th century; but the office never acquired in Rūm the importance, with its potentialities for seizure of *de facto* power in the state, which it did in the Saldjūḳ dominions further east.

A further consequence of the Myriocephalon victory was that it eventually opened up for the Saldjūḳs the way towards the Mediterranean shores and the

ports of Antalya (seized by Kay Khusraw I in 601/1207) and Alanya (named ʿAlāʾiyya after the sultan ʿAlāʾ al-Dīn Kay Ḳubādh I, 616-34/1220-37). Also, towards the end of the 6th/12th century the Turkmen *amīr* of Tokat captured Samsun [see ṢĀMṢŪN], thus bringing Turkish arms to the Black Sea shores, and this was followed by the conquest of Sinope [see SĪNŪB] by ʿIzz al-Dīn Kay Kāwūs I (608-16/1211-20) from the Trebizond Comneni in 611/1214. Hence whereas the Turkish powers of Anatolia had been essentially landlocked and confined to the interior plateau, they now had access to the seas. For the Saldjūḳs, this was to mean exploitation of their position athwart the north-south trade routes of Anatolia and trade relations with the Venetians—enemies of the Byzantines—in Antalya, so that the sultanate benefited from Venetian trade with Alexandria. Commerce between the Black Sea ports and the great Crimean entrepôt of Sughdāḳ tended to be controlled by the Greek principality of Trebizond, but from 1225 to 1239, the date of the definitive conquest of South Russia and the Crimea by the Mongols of the Golden Horde [see BATU], Kay Ḳubādh I was able, through Kastamonu and the Black Sea ports, to establish his suzerainty in Sughdāḳ [*q.v.* and ḲIRĪM].

Towards the end of his life, in one of the periodic recrudescences of the old Turkish principle of patrimonial division, Ḳilič Arslan II divided his kingdom amongst his ten sons and some other male relatives, allotting various towns to each of them. Not surprisingly, a period of succession disputes and weakness ensued over the next two decades. In 1190 the Emperor Frederick Barbarossa and his Crusading army plundered Konya whilst Ḳilič Arslan took refuge in the citadel. But the crisis in the state was surmounted by the opening of the 7th/13th century, and the first forty years of this century were to mark the apogee of the sultanate under such rulers as Kay Kāwūs I and Kay Ḳubādh I. For half a century there was peace with Byzantium, the result of an agreement between Kay Kāwūs I and Theodore Lascaris, and the Saldjūḳs henceforth concentrated their military efforts on the eastern frontiers, in Cilicia, Syria, al-Djazīra, and against Trebizond. But these eastern fringes of Anatolia were now in fact becoming threatened by the expansionism of the Khʷārazm Shāhs [*q.v.*]. The Khʷārazmians first appeared in eastern Anatolia in 623/1226, leading Kay Ḳubādh I to ally with the Ayyūbids of Syria and Diyārbakr, equally menaced. The Saldjūḳ sultan was now at the height of his power, as undisputed master of most of Anatolia and suzerain of the surrounding smaller Christian Greek, Armenian and Georgian states; the financial and artistic resources which he could command for building purposes and the splendour of his manner of life are seen in the many palaces which he constructed, such as the Ḳubādhābād palace on Lake Beyşehir and the Kay Ḳubādhiyya one near Kayseri [*q.vv.*], both only now being excavated properly.

The Mongols appeared in eastern Anatolia in 640/1242-3 at a time when the Ghiyāth al-Dīn Kay Khusraw II had only just with difficulty quelled the prolonged rebellion in eastern and northern Anatolia, which had started in 638/1240, of a Turkish popular holy man, Baba Isḥāḳ, who claimed to be a prophetic messenger (*rasūl*) [see BĀBĀʾĪ, and below, section IV. 2]. Kay Khusraw II (634-44/1237-46) was distinctly less capable than his predecessors, but he assembled an army which included, as well as his own troops, Armenians, Greeks and Franks; however, he was defeated by the Mongol commander Baydju at Köse Dagh [*q.v.*] in the region of Sivas (641/1243). Although the Mongols allowed the sultan to retain his throne in Konya, it was as a vassal of the Mongols liable to heavy tribute. There was subsequently dissent within the client Saldjūḳ state when the dead Kay Khusraw II's throne was disputed by the officials and commanders supporting his minor sons. Only in 659/1261 did Rukn al-Dīn Kay Kāwūs II establish a certain measure of power in Konya. But until his execution in 676/1277 by the Il Khānid Abaḳa after a Mongol defeat at the hands of the invading Mamlūk army of Baybars of Egypt and Syria, real power in the Saldjūḳ state was exercised by the *Parwāna* Muʿīn al-Dīn Sulaymān [*q.v.*], son of a former vizier of the Saldjūḳs, who worked closely with the Mongols and endeavoured to reduce tensions between incoming Turco-Mongol soldiers and the established Turkmen groups of Anatolia. His death marks the end of semi-independence for the sultans in Konya, for the Il Khānids now resorted to direct rule through their own alien Persian and Turco-Mongol official and commanders. The Saldjūḳ military forces were disbanded, to swell the ranks of malcontents and bandits throughout the Anatolian countryside.

Specifically Perso-Mongol institutions and practices were now introduced into Anatolia, in particular, fiscal ones (see below, section V. 2). Mongol taxation in Anatolia was undoubtedly heavy, but there was nevertheless little perceptible adverse effect on the general economic and commercial well-being of the area, with agricultural production and external trade remaining buoyant and with a continued endowment and construction of public and charitable buildings (see below, sections V. 2, and VI. 2).

The Il Khāns led various expeditions into Anatolia to quell local rulers such as the Ḳaramānids [see ḲARAMĀN-OGHULLARĪ] and Ashrafids [see ASHRAF-OGHULLARĪ] and other unrest, and to reassert Mongol financial demands, such as the expedition of Gaykhatu in 690-1/1291-2 which spread terror and devastation throughout southern Anatolia as far west as Menteshe [see MENTESHE-ELI] and the Aegean Sea coastlands. Various ambitious Turco-Mongol commanders within Anatolia also led revolts, contributing to a general atmosphere of disintegration and tyrannical rule. The *fainéant* Saldjūḳ sultan ʿAlāʾ al-Dīn Kay Ḳubādh III was executed by Ghazan Khān [*q.v.*] in 702/1303, and the sultanate disappeared, in obscure circumstances, in 707/1307. It was only after a period of control by the Il Khānids' commanders of the Čobanid family [see ČŪBĀNIDS] that Anatolia eventually emerged into the age of the *beyliks*, with a fragmentation of *ṭawāʾif* or petty principalities comparable to those in 5th/11th-century Muslim Spain.

Some descendants of the Rūm Saldjūḳs seem to have survived into later times. One Ḳilič Arslan b. Luṭfī b. Sawčī, possibly a Saldjūḳ, governed Alanya in the 1460s before the Ottoman annexation of 876/1471; and a later Ottoman historian, ʿĀlī, says that after the deposition of the last Saldjūḳ Ghiyāth al-Dīn Masʿūd III, Ghazan granted Sinope to a Saldjūḳ prince, Ghāzī Čelebi, who became active from there against the Greeks of Trebizond and the Genoese in the Black Sea.

IV. Intellectual and religious history

1. In Persia and ʿIrāḳ

The territories of the Great Saldjūḳs and their successors here formed a mighty empire, of an extent not seen since the heyday of the ʿAbbāsid caliphate, that century between 750 and 850 A.D. As heads of this empire, the Saldjūḳ rulers in the second half of the 5th/11th century came to a working arrangement with the caliphs of their time which involved an affirmation of the caliph as the moral and spiritual head of the orthodox Sunnī community but which also incorporated the sultanate as the executive arm of the ideal Islamic government. The two were interconnected, for whilst the sultan derived, under the *sharīʿa*, his ruling authority from the caliph, the latter recognised that the sultanate provided the restraining and coercive power, Ibn Khaldūn's *wāziʿ*, which alone could bring about stability in civil government and thus enable the subjects to live the good Muslim life in the present world and to achieve salvation in the next. It was to be the task of al-Ghazālī, in particular—a man whose whole career was spent during the halcyon decades of Saldjūḳ power—to establish the theoretical bases for this relationship and partnership between caliph and sultan (see L. Binder, *Al-Ghazali's theory of Islamic government*, in *MW*, xlv [1955], 229-41).

The orthodox Sunnism which al-Ghazālī represented was thus the religious force behind the Saldjūḳ ideal of government. Now that the Shīʿī Būyids had been overthrown, Sunnism had behind it the full support of the Saldjūḳ ruling authority in the ʿIrāḳī and Persian lands, and it was at this time a vital, intellectually far-ranging force, uniting within itself many stimulating curents of thought. Thus although Muʿtazilism [see MUʿTAZILA] was in the end successfully challenged by what became the Ashʿarī and, later, the Māturīdī forms of *kalām* or dogmatic theology and argumentation, it still retained some strength amongst Sunnī scholars in Baghdād and in the eastern parts of the empire, notably Khurāsān, as also in Khwārazm and Transoxania, as well as influencing some strains of Shīʿism. In addition to this, Sunnī orthodoxy was represented within the Saldjūḳ dominions by the traditionalist Ḥanbalism and, much more widely, by the two orthodox theological systems of the Ashʿarī and then the Māturīdī *kalām*, mentioned above, whose counterparts in the sphere of law or *fiḳh* tended to be the Shāfiʿī and Ḥanafī *madhhabs*, although the correspondence was not always an exact one, and the various *madhāhib* did not necessarily have ties to any particular theological school; George Makdisi has pointed out that Ashʿarism was not coterminous with Shāfiʿism and that there were Shāfiʿī opponents of the Ashʿarī *kalām*, though such opposition was obviously not so violent as e.g. amongst the Ḥanbalīs (see his *Ashʿarī and the Ashʿarites in Islamic religious history*, in *SI*, xvii [1962], 37-80, xviii [1963], 19-39; he also makes the general point here that the strength and importance of Ashʿarism in the historical development of Islamic theology has in any case been exaggerated). Shāfiʿism-Ashʿarism, which gave especial emphasis to tradition, *ḥadīth* [*q.v.*, and see ASHʿARIYYA], in the formation of law and theology, became implanted at Nīshāpūr in the early 5th/11th century through the efforts of certain famous *mutakallimūn* like Ibn Fūrak [*q.v.*], as part of a general eastwards expansion into Persia by Shāfiʿism in the 4th/10th century. Ḥanafism, with its greater emphasis on rationalism in the evolution of *fiḳh* [see ḤANAFIYYA] had early become dominant in Persia, spreading to Sāmānid Transoxania, and remaining entrenched in such northern Persian centres as Rayy. During the Saldjūḳ period it had the great advantage of support from the Turkish ruling establishment, above all, from such sultans as Ṭoghril Beg and Alp Arslan, who were especially fervent proponents of Ḥanafism. They pursued deliberate policies of appointing Ḥanafī *imāms*, *ḳāḍīs* and *khaṭībs* wherever possible within their dominions, and of curbing the Shāfiʿīs; it was not until after Alp Arslan's death that the Ashʿarī-Shāfiʿī vizier Niẓām al-Mulk was able cautiously to promote his own favoured party and to endeavour to redress the balance somewhat in favour of the Ashʿarīs and Shāfiʿīs (see for the effects of this policy in one place, R.W. Bulliet, *The political-religious history of Nishapur in the eleventh century*, in D.S. Richards (ed.), *Islamic civilisation 950-1150*, Oxford 1973, 85-8). Ḥanbalism during the Saldjūḳ period was essentially centred on Baghdād and Damascus (the latter city, of course, only directly ruled by the Saldjūḳs for some forty years, see above, section III. 4). It had been strengthened in the century preceding Ṭoghrïl Beg's appearance in the ʿAbbāsid capital through its rôle as the focus there for Sunnī opposition to the Būyids' pro-Shīʿī measures [see ḤANĀBILA]. After 447/1061 it had to compete there with other forms of Sunnism, such as the Shāfiʿism-Ashʿarism taught from the Baghdād *madrasa* or college founded by Niẓām al-Mulk in 459/1067 (see further on this, below), and with Muʿtazilism and Ṣūfī mysticism. But it produced one of the greatest theologico-political figures of Baghdād's history, Ibn ʿAḳīl (d. 513/1119 [*q.v.*]), and in the 6th/12th century Ḥanbalism enjoyed a resurgence in influence under the patronage of caliphal officials like ʿAwn al-Dīn Ibn Hubayra (d. 560/1165 [*q.v.*]) and the example of the Ṣūfī *shaykh* ʿAbd al-Ḳādir al-Djīlānī (d. 561/1146 [*q.v.*]; during this period, several Ḥanbalī *madrasas* were founded by influential patrons (see Makdisi, *Muslim institutions of learning in eleventh-century Baghdad*, in *BSOAS*, xxiv [1961], 26-9). The deleterious effects of the sectarian-social rivalries between Sunnī theological and legal schools, the Shīʿa and the Karrāmiyya, were visible in the social and religious turmoil in many of the towns

of the Saldjūḳ empire, from Baghdād to Harāt, mentioned below in section V.1, concerning the *ʿaṣabiyyāt* (see in general on Sunnism at this time, W. Madelung, *Religious trends in early Islamic Iran*, Albany 1988, 26-38).

The dominant forms of Sunnī *kalām* just described likewise triumphed in the end over the more speculative forms of Islamic thought, those of the *falāsifa* or philosophers [see FALĀSIFA; FAYLASŪF], with their Aristotelian or Neoplatonist forms of reasoning; al-Ghazālī's exposé in his autobiographical *al-Munḳidh min al-ḍalāl* of the insufficiency of philosophy to provide a sure foundation for man's salvation, and his polemic against its exponents, his *Tahāfut al-falāsifa*, were only two of several attempted refutations. Nevertheless, the succession of followers of the great Ibn Sīnā (d. 428/1037 [*q.v.*]) continued in the Persian lands during the Saldjūḳ period, and the scientist, philosopher and poet ʿUmar Khayyām (d. 526/1131 [*q.v.*]) regarded Ibn Sīnā as his master; it seems that ʿUmar entered the service of Malik Shāh after that sultan's expedition into Transoxania against the Ḳarakhānid Shams al-Mulk Naṣr in 466/1073-4 (see above, section III.1) and became one of his *nadīms* [*q.v.*] or intimates.

Above all, the overriding strength of Sunnism manifested itself in the religious-educational field, with the great impetus to the foundation and endowment of new *madrasas* and *masdjids*, mosque-colleges, under the patronage not only of the Saldjūḳ sultans but of numerous of their viziers, officials, of merchants, of city notables, etc. (see on this movement, below), a movement which affected not only the lands of Persia and ʿIrāḳ ruled over by the Saldjūḳs but also the more westerly ones of the Levant and Egypt, especially after the disappearance of the Shīʿī Fāṭimids from there.

Madrasas, mosque-colleges and associated teaching institutions like the *dār al-ʿilm* had existed in ʿIrāḳ and the Persian lands since at least the 4th/10th century, and the Būyids and such governors of theirs as Badr b. Ḥasanawayh [see ḤASANWAYH] had enthusiastically furthered and endowed their foundation. But their spread received an impetus under the Saldjūḳs through the patronage of great men like the Shāfiʿī-Ashʿarīs Niẓām al-Mulk and Malik Shāh's *mustawfī* or chief accountant Tādj al-Mulk Abu 'l-Ghanāʾim; the Ḥanafī *mustawfī* of Alp Arslan, Sharaf al-Mulk Abū Saʿd, who founded the shrine-college of Abū Ḥanīfa in Baghdād which seems to have been more important than the celebrated Niẓāmiyya there; and the Ḥanbalī viziers of the ʿAbbāsid caliphs, such as Niẓām al-Dīn Abū Naṣr Ibn Djahīr [see DJAHĪR, BANŪ], whose residence in the capital, subsequently turned into a *madrasa*, was presided over by the prominent scholar Ibn al-Djawzī [*q.v.*] (see Makdisi, *op. cit.*, 17 ff.). Best known is the network of Shāfiʿī-Ashʿarī colleges founded by Niẓām al-Mulk across the Saldjūḳ dominions (the later biographer of Shāfiʿī *ʿulamāʾ*, al-Subkī [*q.v.*], enumerates nine *Niẓāmiyyas*, of which five were in Khurāsān and the Caspian provinces, one in Djibāl and three in ʿIrāḳ); a novel feature here was that the vizier reserved for himself and his descendants administrative control of them. But the general religious and cultural significance of these institutions may have been disproportionately stressed in both the contemporary sources and in modern studies, for by the 6th/12th century the Niẓāmiyyas do not seem to have been particularly flourishing, and the descendants of the vizier had lost control of them. In Nīshāpūr, the *Niẓāmiyya* there was headed in the first half of that century by a pupil of al-Ghazālī's, but he was killed by the Oghuz in 548/1153-4, when several other *madrasas* and mosques were destroyed (see Bulliet, *The patricians of Nishapur. A study in medieval Islamic social history*, Cambridge, Mass. 1972, 73-5, 254-5, and, in general, MADRASA. I. 4 and NIẒĀM AL-MULK].

Much light is shown on the distribution of Shīʿism during the Saldjūḳ period by two Shīʿī works of the time, the *Kitāb al-Naḳḍ* of ʿAbd al-Djalīl Ḳazwīnī Rāzī (mid-6th/12th century) and the *Tabṣirat al-ʿawāmm* of Sayyid Murtaḍā Rāzī from the opening of the 7th/13th century. They confirm the impression of the historical and biographical sources that Khurāsān and Transoxania were strongholds of Sunnī orthodoxy, apart from communities of *sayyids* in places like Nīshāpūr, Ṭūs and Bayhaḳ, but that Shīʿism had some strong groups in northwestern Persia, with the Zaydīs in the Caspian provinces (where the *khuṭba* was still made in some places for the Zaydī *imām*), and the Djaʿfarīs or Twelvers influential in the urban centres of Djibāl like Rayy, Ḳazwīn, Ḳumm, Āwa and Kāshān, having their own *madrasas* and *ḳubbas* [*q.v.*] or tombs in some of these centres. The establishment of Ismāʿīlism in Daylam, the region of Iṣfahān and Ḳuhistān has already been noted (above, section III, 1). The two great groups of the Sunnīs and Shīʿīs, although on occasion at odds with each other, and with the Shīʿa stigmatised as *Rawāfiḍ* [see RĀFIḌA] in Sunnī works like Niẓām al-Mulk's *Siyāsat-nāma*, in practice mostly co-existed peacefully with each other, and Shīʿīs were represented quite significantly in the ranks of Saldjūḳ officialdom right up to the office of vizier; the common enemy of both was Ismāʿīlism (see A. Bausani, in *Camb. hist. of Iran*, v, 290-6; J. Calmard, *Le chiisme imamite en Iran à l'époque seldjoukide d'après le* Kitāb al-Naqd, in *Le monde iranien et l'Islam, sociétés et cultures*, i [Geneva-Paris, 1971], 43-67).

The Saldjūḳ period was further important for the development of Ṣūfism in provinces like Khurāsān, Transoxania and ʿIrāḳ, with a distinctive school of Ṣūfism now emerging in the Persian lands. This was particularly the case with Khurāsān, where Ṣūfism was henceforth to benefit much from official Saldjūḳ patronage, whereas, up to the opening of the 5th/11th century, *zuhd* or asceticism there had been mainly the province of the Karrāmiyya (on whom see below), with some adherents of the Malāmatiyya [*q.v.*] in the towns (see J. Chabbi, *Remarques sur le développement historique des mouvements ascétiques et mystiques au Khurasan*, in *SI*, xlvi [1977], 41-5, 55-9). In the early years of the Saldjūḳ period, the Ṣūfī *shaykh* and thaumaturge Abū Saʿīd b. Abi 'l-Khayr was still living (d. 440/1048-9 [*q.v.*]) and allegedly foretold the greatness of Ṭoghrïl and Čaghrï when they visited him at Mayhana [*q.v.*] (see F. Meier, *Abū Saʿīd-i Abū l-Ḫayr (357-440/967-1049), Wirklichkeit und Legende*, Leiden-Tehran-Liège 1976, 327-9). From the next generation or so were ʿAbd Allāh al-Anṣārī (d. 481/1089 [*q.v.*]) and Abu 'l-Ḳāsim al-Ḳushayrī (d. 465/1072) [*q.v.*]) who, together with Abū Ḥāmid al-Ghazālī (d. 505/1111 [*q.v.*]), did much to incorporate the moderate form of Ṣūfī mysticism into the fabric of Sunnī orthodoxy. A notable feature of Persian Ṣūfism at this time came to be its grouping around the *khānaḳāhs* [see KHĀNḲĀH] or dervish convents, and the influence of Khurāsānī *shaykhs* and their institutions spread westwards through the Saldjūḳ lands; thus Chabbi has noted that the founders of the *ribāṭs* [*q.v.*] or centres for devotion, study, preaching, etc., in Baghdād during the first half of the 5th/11th century were almost all Khurāsānīs (*La fonction du ribat à Bagdad du Vᵉ siècle au début du VIIᵉ siècle*, in *REI*, xlii

[1974], 107). The next century, the 6th/12th one, was notable for the formation of several of the major dervish orders (*ṭuruḳ* [see ṬARĪḲA]), including the Ḳādiriyya [*q.v.*], the Yasawiyya [see AḤMAD YASAWĪ], the Rifāʿiyya, the Suhrawardiyya [*q.vv.*] and the Kubrawiyya [see KUBRĀ, NADJM AL-DĪN]. See further, J.S. Trimingham, *The Sufi orders in Islam*, Oxford 1971, 31-60; Bausani, in *Camb. hist. of Iran*, v, 296-302; Madelung, *op. cit.*, 49-53.

As just noted, the ascetic strain within Ṣūfism originally had had its counterpart in eastern Persia in the form of the ascetic but activist movement of the Karrāmiyya [*q.v.*], especially vociferous in Nīshāpūr and strong in the rural, mountainous, eastern fringes of the province, what is now western Afghānistān. In the early years of the 5th/11th century, the Karrāmiyya and their *khānaḳāhs* had enjoyed some patronage from the Ghaznawids; this favour disappeared with the advent of the Saldjūḳs and became an active disapproval on the part of the ruling authority, but the Karrāmiyya remained an assertive element in Nīshāpūr and elsewhere all through that same century (as their mention as participants in the *ʿaṣabiyyāt* of the time shows); it was only during the course of the succeeding 6th/12th century that they were pushed eastwards into regions less accessible to Saldjūḳ control such as Gharčistān and Ghūr; thus the Karrāmī *madrasa* at Bayhaḳ, founded in the opening years of the 5th/11th century, had disappeared when the local historian Ibn Funduḳ wrote (sc. in 563/1168), although the Ḥanafī and Shāfiʿī ones still survived (*Taʾrīkh-i Bayhaḳ*, ed. Aḥmad Bahmanyār, Tehran 1317/1938, 194, 220-1; and, in general on the Karrāmiyya, Madelung, *op. cit.*, 39-46).

Bibliography: Given in the article; see especially Bausani's ch. *Religion in the Saljuq period*, in *Camb. hist. Iran*, v, 283-302; and Madelung's *Religious trends in early Islamic Iran*, which in part covers the Saldjūḳ period, notably chs. 3-4, 6-7.

2. In Anatolia

The Turkmens who entered Anatolia no doubt brought with them vestiges of the pre-Islamic, Inner Asian shamanistic past (survivals of which were explored by Fuad Köprülü in various of his works, such as his *Influence du chamanisme turco-mongol sur les ordres mystiques musulmans*, Mems. de l'Institut de Turcologie de l'Université de Stamboul, N.S. 1, Istanbul 1929), but eventually became in considerable measure firm adherents of the near-universal Islamic *madhhab* for the Turks, the Ḥanafī one. But there seems to have been little original or creative theological and legal writing within Rūm until well into the 7th/13th century, and the Turks of Anatolia were content to take from the ample heritage of the flourishing and productive Ḥanafī scholarship of Khurāsān and Transoxiana, transmitted to the lands further west by those scholars who in the 7th/13th century moved westwards before the advancing Mongols, such as Yūsuf b. Abī Saʿīd Aḥmad al-Sidjistānī, who composed at Sivas in 639/1241-2 his *Munyat al-muftī*, which became a popular law book throughout the central and eastern Islamic lands (cf. Brockelmann, I², 473, S I, 653). The concrete embodiments of the Islamic faith, in the form of mosques and *madrasas*, were somewhat late in appearing in Anatolia. The earliest mosques appear in the dominions of the Saldjūḳs and of the Turkmen dynasties of the Dānishmendids, Mengüdjekids and Saltuḳids only after *ca.* 550/1155, whilst the earliest *madrasa* in Anatolia, known from its foundation inscription, was built at Kayseri in 589/1193; this institution had by that time been flourishing in the Arab-Persian lands further east for nearly two centuries. Only with the consolidation of the sultanate in the 7th/13th century do mosques and *madrasas* become numerous in such towns as Konya, Kayseri and several other Anatolian ones, as also in Artukid Mārdīn [see MADRASA, III, at vol. V, 1145-6].

Mysticism soon enjoyed a particularly lively growth in Anatolia, not only drawing its strength from the Persian lands (see below) but also attracting such a figure as the great Arab mystic of Spanish Muslim origin, Ibn al-ʿArabī (d. 638/1240 [*q.v.*]), who travelled to Malatya and as far as Sivas and Konya. He was followed by his disciple ʿAfīf al-Dīn Sulaymān al-Tilimsānī (d. 690/1291 [*q.v.*]), who settled in Rūm for some time. Ibn al-ʿArabī was to have a considerable influence in Anatolia through Ṣadr al-Dīn Ḳūnawī (d. 673/1274 [*q.v.*]), so that his works later became standard texts for study in the curricula of the Ottoman *madrasas*. Contacts with North African pilgrims who returned home via Anatolia were sufficient for them to have a small mosque of their own in Konya. Yet it was the Persian spiritual and literary tradition which speedily became dominant, reflecting Persian influence in other spheres such as administration and court life (see below, section V. 2). The Saldjūḳ sultans themselves earlier adopted Persian epic names like Kay Kāwūs, Kay Khusraw and Kay Ḳubādh. The process was necessarily accentuated in the 7th/13th century when there arrived in Konya such distinguished refugees as Bahāʾ al-Dīn Muḥammad Walad (d. 628/1231) and his son Djalāl al-Dīn Rūmī (d. 672/1275 [*q.v.*]), from an ancient family in Balkh of preachers and mystics. Bahāʾ al-Dīn Walad was invited to his captal by the sultan Kay Ḳubādh I, but did not survive there for long. His son, on the other hand, spent the greater part of his adult life at Konya, and it was there that he composed his *Mathnawī* (see below, section VII. 2). The Saldjūḳ capital accordingly became the centre of the Mawlawī Ṣūfī order as developed by Mawlānā's son Sulṭān Walad (d. 712/1312 [*q.v.*]), with Rūmī's tomb as its spiritual power-house for centuries to come [see MAWLAWIYYA]. Another figure who came westwards to Rūm was Nadjm al-Dīn Rāzī Dāya (d. 654/156 [*q.v.*]), a former *murīd* of the Ṣūfī master Nadjm al-Dīn Kubrā [*q.v.*], eponymous founder of the Kubrawiyya order, who does not, however, seem to have found Anatolia congenial and who moved back to Tabrīz and Baghdād; even so, his *Mirṣād al-ʿibād* (see below, section VII. 2) became very popular in Anatolia and was later translated into Turkish.

Such religious traditions and practices as those outlined above helped to consolidate what became the dominant, official Sunnism of Anatolia. But at a less exalted and articulate level were currents of beliefs which may well have gone back to the animistic past of the Turks, mentioned at the beginning of this section, especially amongst the Turkmens outside the towns, and there probably existed also ill-formed and emotionally-based pro-Shīʿī feelings such as were to be undoubtedly discernible amongst the ʿAlawī Turkmens of eastern Anatolia in the early Ottoman period. Only at times of particular political and social stress or upheaval did these somewhat inchoate trends of belief and thought come to the surface, assume tangible form and impinge on the wider political scene. Such was the case with the Bābāʾī movement, a religious one with social overtones, which disturbed much of Anatolia in the years just before the Mongol invasion there. Its leader, a popular, charismatic figure, Baba Isḥāḳ, defied the Saldjūḳ armies for some time, and his movement was never completely ex-

tinguished in the countryside. It seems to have included extremist, messianic Shīʿī elements which recrudesced, or merged, soon afterwards, in the Bektās͟hī movement, a connection explicitly made by the 8th/14th-century Ṣūfī biographer Aflākī; Ḥād͟jd͟jī Bektās͟h may have been a disciple of Baba Isḥāḳ [see BĀBĀʾĪ; BEKTĀS͟HIYYA].

Finally, a word should be said about the possible interaction of the great faiths in Anatolia, specifically between Islam and the Christian substratum there. It is hard to reach firm conclusions on such an elusive matter, but it seems that certain sultans, such as Kay Ḳubād͟h I, were enlightened and tolerant rulers, conscious of the mixture of faiths and ethnoi over which they ruled. There were both Armenians and Greeks in the capital Konya, the latter with their monastery of St. Chariton and some Jews. Rūmī seems to have had harmonious relations with the local *D͟himmīs*, whilst remaining convinced of his own divine mission to convert them. Throughout Anatolia there was at the popular level an interchange, or double veneration, by Christians and Muslims at many holy sites (some no doubt with a continuity of *mana* going back to classical times), with the frequent equating of a saint of one faith with a saint of the other. The best-known of such equations is that of St. George with K͟hiḍr Ilyās [*q.v.*]; at Konya, Muslims revered St. Amphilochius in the guise of Aflāṭūn or Plato, whose tomb was considered to be located there; elsewhere, they identified Ṣarī Saltuḳ Dede [*q.v.*] with St. Nicholas and Ḥād͟jd͟jī Bektās͟h at Ḳīrs͟hehir with St. Charalambros.

V. Administrative, social and economic history

1. In Persia and ʿIrāḳ

Such an empire as the Sald͟jūḳ one was not homogenous in social and ethnic composition, and, as noted above in section I, could not be ruled as a despotism, with a highly-centralised administration, like its predecessor in the eastern Persian lands, the G͟haznawid empire. For, to take one prerequisite for centralised, authoritarian control over a far-flung empire, sc. an efficient internal espionage system and postal service network (*barīd*, later *ulag͟h*), the Sald͟jūḳ sultans deliberately eschewed this; Niẓām al-Mulk's lament that the Sald͟jūḳ sultans showed no interest in this system is well-known (*Siyāsat-nāma*, § 10), and Anūs͟hirwān b. K͟hālid implies that Alp Arslan's abolition of the previously-existing *barīd* and *k͟habar* system, on the basis of what he calls a "whim" (*wahm*) but which was more likely a deliberate choice, was a cause of the spread of Ismāʿīlism and of the terror in people's minds which exaggerated, ill-informed accounts of the Assassins' activities brought about (al-Bundārī, ed. Houtsma, 67).

In any case, the early sultans, with their Central Asian tribal origins, did not at first conceive of themselves as territorial monarchs but as leaders of nomadic hordes who happened to range with their flocks in search of pasture over a particularly large stretch of territory within the *Dār al-Islām*. But these ideas soon became modified as, already by the end of Ṭog͟hrïl's reign and during that of Alp Arslan, the sultans settled down as rulers over a defined territory, even though the Sald͟jūḳs never, until the end of the dynasty, resided in one permanent, fixed capital. As rulers over an empire of vastly differing climatic and topographical zones, from the deserts and steppe lands of northern Syria and ʿIrāḳ to mountains and plateaux of Persia, they often moved between summer and winter capitals, echoing their nomadic past. Hence a fair number of the cities of their empire, including Nīs͟hāpūr, Rayy, Iṣfahān, Hamad͟hān and Bag͟hdād itself, served at one time or another as centres for their power (see below). Normally, of course, the court and administrative departments of central government travelled with the sultans when they were on campaign or simply journeying across their lands.

Thus by Malik S͟hāh's reign, the sultan came to exercise a delimited territorial authority, although it was one exerted with different degrees of intensity. Right to the end of the Sald͟jūḳ empire, there were whole stretches of territory which were substantially left, usually on payment of some taxation, to their indigenous tribal peoples, such as those of Kurdistān and Luristān in D͟jibāl and much of Fārs, and the Ḳufṣ and Balūč in Kirmān and Makrān, or to the Og͟huz nomads in such areas as the Mūḳān steppes in Arrān [*q.vv.*] and the steppe lands of Gurgān and Dihistān [*q.vv.*] to the southeast of the Caspian Sea; and the sultans took care to maintain, as far as was possible with the demands of security and financial requirements, amicable links with such groups (see on the tribes during this period, A.K.S. Lambton, *Aspects of Saljūq-Ghuzz settlement in Persia*, in Richards (ed.), *Islamic civilisation 950-1150*, 121-4, and ĪLĀT. For the sultans' attitudes towards their fellow-Turkmens, see above, section II). Regarding the Kurds, Anūs͟hirwān b. Khālid says that Muḥammad b. Malik S͟hāh carefully conciliated the S͟habānkāra [*q.v.*], normally a turbulent element in Fārs and the scourge of the settled population, by attaching their chiefs to his service at court; when his successor Maḥmūd stopped this practice, the S͟habānkāra reverted to their old plundering ways (al-Bundārī, 122), with deleterious effects on the economy of Fārs and the upper Persian Gulf region (see further, below). But in general, Lambton concluded (*op. cit.*, 124-5), that the additional nomads who came into Persia with the Sald͟jūḳ invasions did not cause widespread dislocation but may even have contributed to the general prosperity of the lands in that they now supplied the cities and towns with milk and meat products and may have contributed to the stock of transport animals available for trading purposes.

On the fringes of the empire, local princes were often allowed to remain as feudatories. In the northwest, the S͟haddādids [*q.v.*] of Dwin and Gand͟ja and the Marwānids [*q.v.*] of Diyār Bakr were left in power until Malik S͟hāh's reign. In ʿIrāḳ, the ʿUḳaylids [*q.v.*] held Mawṣil till the end of the 5th/11th century, with minor branches persisting in Diyār Muḍar till the advent of the Zangids, whilst the Mazyadids [see MAZYAD, BANŪ] of Ḥilla in central ʿIrāḳ were particularly adept at playing off against each other the Sald͟jūḳ sultans and the ʿAbbāsid caliphs in order to preserve their own authority, a policy which was successful for over ninety years, until the middle years of the 6th/12th century. In the Caspian provinces, various petty princes were left alone, as were the survivors of the Kākūyid dynasty [*q.v.*] in central Persia. On the eastern fringes of the empire, the Maliks of Nīmrūz or Sīstān were left alone, and survived there long after the Sald͟jūḳs themselves had disappeared from history. Such dependents forwarded tribute and/or troops contingents to the sultans' armies when required; thus we read of the Kākūyid princes, the rulers of Sistan and the Bāwandids [*q.v.*] of Māzandarān participating in Sand͟jar's wars. When the sultans were able to extend

their authority by military force into lands outside the empire, as happened with the Ḳarakhānids in Transoxania on various occasions, the Ghaznawids in eastern Afghānistān (see above, section III. 1) and the Shīrwānshāhs in eastern Caucasia (see al-Bundārī, 139-41), tribute would be exacted from those potentates, although this source of income was obviously sporadic.

Within the directly-administered areas of the empire, much land was, in the course of time, alienated by assignments of revenue on particular lands, *iḳṭāʿ*s, a term which covered, however, a very wide variety of different types of grant (see Lambton, in *Camb. hist. of Iran*, v, 233-4; and IḲṬĀʿ). The grants of the first Saldjūḳ sultans were mainly as appanages for other members of the family who had claims, under tribal concepts, of a share-out of the total assets of the ruling family or the chiefs; these were especially to be found in northern Persia, Khurāsān and the upper Oxus lands (see above, sections II and III. 2). But grants were also made at an early date to the Turkish generals of the professional, standing army which Ṭoghrïl in his later years, and then Alp Arslan and Malik Shāh, were compelled to recruit after the danger of sole reliance on the Oghuz tribal bands had been demonstrated by the latter's part in the revolts of disgruntled Saldjūḳ princes, such as Ibrāhīm Inal and Ḳāwurd (see above, section I). Such earlier grants were delegations of the sultan's authority, and did not imply any hierarchy of vassalage or a bestowal of permanent territorial or financial rights. These last only crept in during the 6th/12th century, when the warring Saldjūḳ sultans and princes were desperate to acquire troops and had to alienate more and more lands to great commanders as the price of their military support. Eventually, the process was to lead to the formation of the autonomous atabeg principalities of northern and western Persia, of northern Syria and al-Djazīra and of eastern Anatolia (see above, section II), but, from the legal aspect, these principalities rested upon an act of usurpation and not one of delegation or vassalage. All these trends were to have long-term effects upon land utilisation, the social and economic status of the cultivators and the ethnic complexion of the regions in question. For a fuller consideration of the trends, see Lambton, *Landlord and peasant in Persia*, London 1953, ch. III; eadem, in *Camb. hist. of Iran*, v, 231 ff.; eadem, *Continuity and change in medieval Persia*, London 1988, 97-115; Bosworth, in *ibid.*, 82-4; and IḲṬĀʿ.

The heart of the sultans' power lay in their own court entourage, the *dargāh*, whose smooth functioning was ensured by a series of influential officials such as the *wakīl-i dār* or intendant, the *ḥādjibs* or chamberlains, the *djāma-dār* or master of the sultan's wardrobe, the *ākhur-sālār* or head of the royal stables, the *khʷān-sālār* or master of the royal kitchens; the latter's function were especially important for the dispensing of general hospitality in accordance with steppe traditions and of feasts (*shölen*) for the Saldjūḳs' tribal followers, the providing of which Niẓām al-Mulk (*Siyasat-nāma*, § 35) was keen to uphold (see Uzunçarsılı, *Osmanlı devletinin teşkilâtına medhal*, 33-41; Lambton, in *Camb. hist. of Iran*, v, 224-7, 238-90). These offices tended to be held by great Turkish commanders, either the ruler's slaves or his freedmen. The importance of the court entourage and its members within the state varied according to the ruling sultan's strength of character and his control over its factions and rivalries. The sultans' womenfolk might at times exercise an influence which could affect the direction or the running of the state, especially at the deaths of sultans and the not infrequent succession crises and disputes which ensued. The sultans normally proclaimed during their own lifetime one of their sons as heir (*walī al-ʿahd*), but their wishes did not always prevail unchallenged, not only from discontented Saldjūḳ princes who thought they had claims to the throne (see above, sections II and III. 1) but also from the rulers' widows and other female relatives, pushing the claims of their own sons; this was notoriously the case when Malik Shāh died, and his widow Terken Khātūn unsuccessfully proclaimed her own child Maḥmūd in Iṣfahān against Berk-yaruḳ (see on the role of the women at this time of troubles, Sanaullah, *op. cit.*, 8-17; and, in general, for courts and court life during the Saldjūḳ period, Bosworth, *EIr* art. *Courts and courtiers. iii. In the Islamic period to the Mongol conquest*).

The means by which this power of the sultans was exercised were, firstly, through the army and the coercive force which it could exert, and secondly, through the civil administration of the empire controlled by a series of *dīwāns*, both of which were, of course, interconnected through the overriding need for the provision of finance for them. By Malik Shāh's time the army's main strength lay in its professional troops, in part supported by *iḳṭāʿ*s but to a significant extent still paid directly in cash from the royal treasury (cf. Niẓām al-Mulk, *Siyāsat-nāma*, § 23). Its nucleus was the force of slave *ghulām* and freedmen troops, a large proportion of whom, though not all, were Turks. Supplementing this were the free troops, and here, as with the slave core for an army, the Saldjūḳs were following in the steps of other Middle Eastern imperial powers like the Fāṭimids and Ghaznavids by recruiting from a wide array of races. Niẓām al-Mulk recommended the employment of Daylamīs, Khurāsānīs, Georgians and Shabānkāraʾī Kurds (*Siyāsat-nāma*, § 24). This army was normally stationed in the capital with the sultan himself; and according to Rāwandī, the number of cavalrymen was not allowed to fall below 46,000 (see M.F. Sanaullah, *The decline of the Saljūqid empire*, Calcutta 1938, 18-35; Uzunçarsılı, *op. cit.*, 56-61; Bosworth, in *Camb. hist. of Iran*, v, 80-1; Lambton, *Continuity and change in medieval Persia*, 4-14; GHULĀM. ii; and ḤARB. v).

Complementing the court's role in the running of the state was the central administration, comprising essentially the *dīwān-i aʿlā*, presided over by the sultan's chief executive officer, the vizier. The vizier, and the personnel of his bureaux, were normally representatives of the Perso-Islamic secretarial class. It is possible that, in the Saldjūḳ period, some of these had received an education and training in the *madrasas* (for which, see above, section IV. 1), although this point requires further research. The vizier headed a complex of *dīwāns*, his intermediary and link with the court being the *wakīl-i dār* (cf. al-Bundārī, 93-4). The *dīwān-i aʿlā* was above all responsible for the provision of finance for the sultan and hence for the running of the empire, and had component *dīwāns* such as the chancery, for official and diplomatic correspondence (*inshāʾ*); the finance bureau, for the collection of revenue and its allocation (*istīfāʾ*); the bureau for overseeing accounts and financial transactions (*ishrāf*); and the department of the army (*ʿarḍ*), responsible for the recruitment, payment and fighting calibre of the troops. The heads of these component bureaux were powerful officials in their own right, who not infrequently followed their own policies or had supporters at court who might be at odds with the vizier. Other high-ranking persons in the state, such as the sultans' consorts and the queen-mothers and Saldjūḳ princes

allotted appanages in the provinces, might have their own households with miniature replicas of the central *dīwāns* (see Uzunçarsılı, *op. cit.*, 42-51; Lambton, in *Camb. hist. of Iran*, v, 257 ff.).

Nevertheless, the vizier was a very powerful figure throughout the Saldjūḳ period, with his position buttressed by the patronage which he exercised and the opportunities which he had for self-enrichment through confiscations, etc. He normally had his own *iḳṭāʿ*s, and an outstanding figure like Niẓām al-Mulk built up around himself what was in effect a private army of *mamlūk*s and other retainers, the Niẓāmiyya [*q.v.*], who continued to play a significant role in politics well after their master's death.

Justice and equity of an "administrative" or "secular" kind was exercised through the sultan's own *maẓālim* [*q.v.*] jurisdiction, both personally and by delegation to special *maẓālim* courts. At the side of these, the local *ḳāḍī*s dispensed justice according to the *sharīʿa*, and with the restatement of the relationship between caliph and sultan (see above), the judges, theoretically the deputies of the caliph and deriving their spiritual jurisdiction from him, were in practice appointed by the sultan and were salaried servants of the sultanate, as were the *khaṭīb*s [*q.v.*] or preachers of the Friday sermon and the *muḥtasib*s or market inspectors [see ḤISBA]. A chief judge of the empire, the *ḳāḍī-yi djumla-yi mamālīk*, is mentioned under Alp Arslan, with oversight of the religious law, of religious buildings and of *awḳāf* or pious trusts (which spread considerably within the Saldjūḳ empire as a result of benefactions from the great *amīr*s, the atabegs and the women in the ruling classes, see Lambton, *Continuity and change in medieval Persia*, 149-51), but the mass of judges were local officials in the towns of the empire and thus served as a link between the central government and the local urban communities (see eadem, in *Camb. hist. of Iran*, v, 269-72).

The cities and towns of Persia, ʿIrāḳ, al-Djazīra and Syria seem in general to have flourished during the 5th/11th century, doubtless benefiting from the general internal peace in the years before Malik Shāh's death and having a resilience and continuity of tradition which enabled them to function and to prosper to a fair extent in the more troubled decades of the 6th/12th century, when the Crusaders and Ismāʿīlīs destabilised Syria, when al-Djazīra and western Persia were affected by the warfare among rival Saldjūḳ princes and the atabegs, and when the ascendancy of anarchic Oghuz tribesmen in Khurāsān and Kirmān led to widespread looting and devastation there, a foretaste of the worse disasters which the arrival of the Mongols was to bring. Whether there was in the 6th/12th century a distinct decline in economic life, a deterioration of the status and richness of the town bourgeoisies, technological stagnation in construction and production methods, and even a decrease of population, as was asserted by E. Ashtor, requires further investigation (see his *A social and economic history of the Near East in the Middle Ages*, London 1976, 209-48). It is true that he adduces an array of natural disasters, including earthquakes and epidemics, from the chronicles of the Saldjūḳ period, and it may be true that the alienation of land as *iḳṭāʿ*s, particularly after the weakening of the sultan's power from Berk-yaruḳ's accession onwards, reduced the amount of lands from which taxation could be directly collected and drove the rulers into an increased reliance on non-canonical taxes, *mukūs* [see MAKS]. Yet as a counter to this, one may note that the Saldjūḳ government, for its part, had an enduring interest in fostering, as far as possible, the economic well-being of the cities and towns, with their roles as centres of craft production and of long-distance trading, from which they derived so much of the taxation needed to run the empire. As Bulliet has observed, "given the desire on the part of the rulers to preserve the commercial, urban character of Islamic society, the cities were more important to the ruler than the ruler was to the cities" (*The patricians of Nishapur*, 61).

As in other regions and at other times of the premodern age, the cities and towns of the Saldjūḳ empire had no corporate or autonomous life of their own within the concept of divinely-dispensed authority in Islam. But the local historians of cities and towns like Nīshāpūr, Bayhaḳ, Harāt, Iṣfahān and Shīrāz certainly demonstrate the vitality of urban life at this time and the cohesiveness and common interests of their oligarchies, whether these comprised Ḥanafīs, Shāfiʿīs or Ḥanbalīs (and also, in Khurāsān, Karrāmīs). This class of *ʿulamāʾ*, merchants and other notables largely monopolised such state offices as those of *ḳāḍī*, *khaṭīb*, etc. (see above). Above all, it was from their ranks that there came the *raʾīs* or mayor, the mouthpiece of the town notables vis-à-vis the provincial and central government; and, since the relations between the towns and the ruling authority were essentially financial, it was he who forwarded the taxation due from the town to the local *dīwān*. See, in general, RAʾĪS. 1. and 2.; Bosworth, *The Ghaznavids*, 171 ff.; Bulliet, *op. cit.*, 66-8. For the duties of a *raʾīs* in Māzandarān and Gurgān in the second quarter of the 12th century A.D., Lambton, *The administration of Sanjar's empire as illustrated in the* ʿAtabat al-kataba, 383-7. For these institutions in Syria under Saldjūḳ rule, A. Havemann, *Riʾāsa und qaḍāʾ. Institutionen als Ausdruck wechselnde Kräfteverhältnisse in syrischen Städten vom 10. bis zum 12. Jahrhundert*, Freiburg-im Breisgau 1975, and idem, *The vizier and the raʾīs in Saljuq Syria: the struggle for urban self-representation*, in *IJMES*, xxi (1989), 233-42.

There were, of course, counterforces in the cities and towns and in their agricultural hinterlands working against this urban group solidarity in the face of external attackers or tyrannical government actions. The *ʿaṣabiyyāt* or factional divisions noted by the geographer al-Muḳaddasī in the later 4th/10th century continued unabated throughout the Saldjūḳ period, breaking out into violence when the absence of external threat allowed such a luxury. The chroniclers and the local historians mention the perennial clashes between Sunnīs, above all, Ḥanbalīs, and Shīʿī in Baghdād, and those between Ḥanafīs, Shāfiʿīs and Karrāmīs, in varying combinations, in Nīshāpūr, Bayhaḳ, Harāt and other towns of Khurāsān. The Saldjūḳ sultans themselves, by their enthusiastic adoption of the Ḥanafī *madhhab* and by the efforts of their servants, from the ʿAmīd al-Mulk al-Kundurī [*q.v.*] onwards, to further the cause of Ḥanafism (see above, section IV. 1), probably stimulated rather than stilled such passions, as various items of information in the sources suggest. In the course of Ḥanafī-Shāfiʿī riots at Nīshāpūr during Sandjar's reign, seventy people from the former group were killed. In the reign of sultan Masʿūd b. Muḥammad, a powerful group of the Turkish commanders, fiercely Ḥanafī, persecuted and expelled Shāfiʿī *ʿulamāʾ* and other local notables adhering to Shāfiʿism in Baghdād, Rayy and Iṣfahān, to the point that some of these last made politic conversions to Ḥanafism, whilst a purge of the Shāfiʿīs at Iṣfahān in 542/1147-8 caused *fitna* there (al-Ḥusaynī, 125-6; al-Bundārī, 193-4, 220-1). Towards the end of Sandjar's reign and shortly afterwards, it was, accord-

ing to Rāwandī, internal factional feuding, rather than the ravages of the Oghuz, which really consummated the ruin of the city (cited in Bulliet, *The political-religious history of Nishapur in the eleventh century*, 90-1). This last author has put forward the view that, earlier on, Niẓām al-Mulk was endeavouring to restore the balance in Nīshāpūr by favouring the less powerful Shāfiʿīs there against the dominant Ḥanafīs by his founding of *madrasas*, his Niẓāmiyyas, for which he personally retained the right of appointing the professors (*The patricians of Nishapur*, 72-4; and see above, section IV. 1); but not long after this, both of these *madhhabs* were uniting in Nīshāpūr against the Karrāmiyya (see Ibn al-Athīr, ed. Beirut, x, 251, year 488/1095).

Another divisive element in certain cities and towns of the Saldjūḳ empire at this time was that of the *ʿayyārs* [*q.v.*] or mobsters. Baghdād, the Syrian towns and those of Khurāsān suffered especially badly, but there is reason to believe that towns elsewhere had similar problems, conceivably evidence of some underlying social-political malaise in them such as the exclusion of sections of the urban populace from participation in higher municipal affairs; but this is conjecture. Outbreaks of *ʿayyār* violence were a matter of concern for the urban authorities, who alone could take steps to curb it; hence when, at Bayhaq, *ʿayyārs* took advantage of the relaxation of central authority in the state after Malik Shāh's death in 485/1092, one of the town's numerous and influential body of Sayyids organised, at his own expense, a police force of citizens and their slaves against unruly elements (Ibn Funduḳ, *Taʾrīkh-i Bayhaḳ*, ed. Bahmanyār, 274-5; cf. J. Aubin, *L'aristocratie urbain dans l'Iran seldjukide: l'exemple de Sabzavâr*, in *Mélanges René Crozet*, Poitiers 1966, 328).

As the secular counterparts of the caliphs, the Sunnī Saldjūḳ sultans had an obligation to further Islamic learning within their dominions. The role of them and their servants in the movement for founding *madrasas*, mosque- and shrine-colleges, etc., has been outlined above, in section IV. 1. The sultans of the first two or three generations were probably illiterate, and undoubtedly so in Persian and Arabic; it must be remembered that Malik Shāh was the first monarch not to grow up purely in the Oghuz tribal environment. Barthold (*Turkestan down to the Mongol invasion*³, 308) thought that Sandjar remained illiterate all his life, but this requires further investigation. By the 6th/12th century, however, various of the sultans in western Persia and ʿIrāḳ are praised in the sources for their culture and education. Thus Anūshirwān b. Khālid, who is severely condemnatory about Maḥmūd b. Muḥammad's policies, nevertheless praises him for his fine Arabic scholarship, his knowledge of poetry and *adab*, history and *sīra*; and among the Saldjūḳ *amīrs* of Kirmān of this century, Arslan Shāh and Muḥammad Shāh encouraged scholarship by providing bursaries for students, pensions for the *fuḳahāʾ*, etc. (al-Bundārī, 156; Muḥammad b. Ibrāhīm, 25-6, 29).

Concerning the non-Muslim population of the empire, mentions of the *dhimmīs*, Jews, Christians and Zoroastrians, become sparser in the Saldjūḳ period than for the preceding ones, e.g. the Būyid period. The Christians were still, however, strong in ʿIrāḳ and al-Djazīra and in such western Persian provinces as Khūzistān and Fārs and the city of Iṣfahān, and the ʿAbbāsids and the Saldjūḳ sultans in Baghdād used the services extensively of Jews and Christians for the traditional pursuits of these last, such as administration and the practice of medicine. Despite mention still of a metropolitan for the Christians of Fārs in the early Saldjūḳ period, the western Persian communities of Christians and of Zoroastrians (the latter of whom were an important element in Būyid Fārs), seem to have fallen into decline, the prelude to the eventual disappearance of the Christians, at least, there. The Christians of ʿIrāḳ, on the other hand remained numerous and vigorous, and influential enough in public life to bring down on their heads sporadic Muslim persecution. Thus the caliph's vizier Abū Shudjāʿ al-Rūdhrāwarī [*q.v.*] in 484/1091 drastically enforced the discriminatory laws against *dhimmīs* [see GHIYĀR], bringing about the conversion to Islam of the Christian head of the caliph's *dīwān al-inshāʾ*, Abū Saʿd Ibn al-Mawṣilāyā and of his nephew, the *ṣāḥib al-khabar* Abū Naṣr Hibat Allāh (al-Bundārī, 78; Ibn al-Athīr, x, 186). In the east, the metropolitan of Marw was still the most important dignitary of the Nestorian Church in Khurāsān, and a bishop of Ṭūs is mentioned as late as 1279; Abū Saʿīd b. Abi 'l-Khayr of Mayhana (see above, section IV. 1) is said to have converted large numbers of Christians at Nīshāpūr around the time of the change from Ghaznawid to Saldjūḳ rule in the city (see Bosworth, *The Ghaznavids*, 200-2).

Jewish communities existed in most of the cities of Saldjūḳ Persia and ʿIrāḳ, often with a special quarter of their own, sometimes specifically called the *yahūdiyya*, and spiritually they were under the headship of the Rēsh Gālūthā. Special areas of concentration were the towns of Fārs and Khūzistān and in Iṣfahān, and towns like Ahwāz and Shushtar had colonies of the Rādhānī merchants [see AL-RĀDHĀNIYYA]. The Spanish Jewish traveller during later Saldjūḳ times, Benjamin of Tudela (1179), mentions as Jewish centres in western Persia Susa, Ḥulwān, Hamadhān, Iṣfahān and Shīrāz, whilst in the east of Persia (which Benjamin did not visit), there were important communities in Marw, Harāt and Balkh (this last having a *yahūdiyya* quarter and being known as a resort of Rādhānī merchants) which sent substantial financial contributions back to Mesopotamia (see W.J. Fischel, *The Jews of Central Asia (Khorasan) in mediaeval Hebrew and Islamic literature*, in *Historia Judaica*, New York, vii [1945], 35-42).

It is hard to find concrete information on trade and economic life within the Saldjūḳ empire. The rich geographical and travel literature in Arabic and then Persian of the 3rd-4th/9th-10th centuries dwindles almost to nothing during the Saldjūḳ period, and there is a general paucity of information in the historical sources. One region about which we know a certain amount is Kirmān and eastern Persia, from items mentioned by the local historians of Kirmān and noted above in section III. 3. They reveal the existence of an important trade route from the Persian Gulf and the Gulf of Oman shores northwards through Kirmān to Ḳuhistān and Khurāsān, a trade which had international ramifications, since Hindus and Greeks are mentioned as amongst the merchants at the trading suburb of Ḳumādīn (the Camadi of Marco Polo, through whose ruined site he passed in the later 7th/13th century, see Yule and Cordier, *The book of Ser Marco Polo*³, London 1903, i, 97-9) outside Djīruft in Kirmān, where there were extensive warehouses for storing goods in transit (Muḥammad b. Ibrāhīm, 49). At the northern end of this trade route, Nīshāpūr was the great emporium of Khurāsān at this time, certainly up to the Ghuzz sackings of the second half of the 6th/12th century. It was probably the main centre in the Great Saldjūḳ state for the minting of the Saldjūḳs' gold coinage, judging by the

number of extant dīnārs which were minted there (see further, below, section VIII. 1), and although information is regrettably lacking, it must have continued, as it did in Sāmānid and Ghaznawid times, to have commercial contacts with the Central Asian steppe lands and beyond.

The southern end of the route, running down to the Gulf of Oman and across it, connected the eastern Persian world with the Arabian one. Al-Muḳaddasī, 321, had noted that the name of Ḳā'in, in Ḳuhistān, had a great renown in ʿUmān; at the beginning of the Saldjūḳ period, the traveller Nāṣir-i Khusraw [*q.v.*] found that transactions at Faladj in central Arabia were done in the dīnārs of Nīshāpūr (*Safar-namā*, ed. Muḥammad Dabīr-Siyāḳī, Tehran 1335/1956, 106, tr. W.M. Thackston, *Nāṣer-e Khosraw's Book of Travels*, Albany 1986, 85). The Ḳufṣ or Kūfičī bandits who had been such a menace to commerce and to travellers along the edges of the central Great Desert of Persia in the Būyid period [see ḲUFṢ] seem to have been mastered by Ḳāwurd, who also took measures against another predatory people of the region, the Balūč; and Nāṣir-i Khusraw, again, found that the *amīr* of Ṭabas (al-Tamr) in the eastern part of the Great Desert, Abu 'l-Ḥasan Gīlakī, had established perfect security in a region formerly terrorised by the Ḳufṣ who must, in any case, have been pushed back southwards by the incoming bands of Oghuz (*op. cit.*, 124-5, tr. 99-100). Ḳāwurd further extended his power across the sea into ʿUmān, thereby controlling both sides of the lower Gulf (Muḥammad b. Ibrāhīm, 8-10; cf. above, section III. 3). This northwards-southwards-running trade route through eastern Persia was thus of prime importance all through the Saldjūḳ period as the link between the Indian Ocean shores and the Arabian peninsula with Khurāsān and Central Asia, and its significance continued to be recognised by the Khʷārazm Shāh ʿAlā' al-Dīn Muḥammad [*q.v.*] when he annexed Kirmān in the early 7th/13th century and in 611/1214-15 proclaimed his authority over the ports of ʿUmān. Only did its importance decline during the Mongol and Il-Khānid periods in favour of a trade route further westwards and nearer the head of the Persian Gulf (see Aubin, *La ruine de Sîrâf et les routes du Golfe Persique*, in *Cahiers de civilisation médiévale*, ii/3 [1959], 300-1).

This last route, on the other hand, had been in eclipse during the Saldjūḳ period. The disappearance of firm Būyid control in Fārs allowed the Shabānkāra'ī Kurds to become a destructive force there as early as Alp Arslan's time, one which the governors deputed to govern the province for the Saldjūḳs, such as the atabeg Čawuli Saḳā'ū, did much to curb without, however, eliminating the problem completely, so that the prosperity of Fārs in Saldjūḳ times had many ups and downs. A further element of disruption within the Gulf was caused by the pirates of the island of Ḳays [*q.v.*]. Hence formerly flourishing ports of Fārs on the northern shore of the Gulf, such as Sīrāf [*q.v.*] and Nadjīram, which had had an international trade, as entrepôts for South and South-East Asian products destined for the central lands of the caliphate, fell into decline in the later 5th/11th century, despite efforts to revive their prosperity by the Saldjūḳ governor of Fārs, the atabeg Rukn al-Dawla Khumārtigin (Ibn al-Balkhī, *Fārs-nāma*, ed. Le Strange, 136-7, tr. idem, *Description of the province of Fars in Persia* ..., London 1912, 41-3, also in Sir Arnold Wilson, *The Persian Gulf*, London 1928, 94-6). What remained of the once great port of Sīrāf now had only a local commercial role to play, probably as a centre for pearl-fishing. The towns on or near the route going inland from the Gulf shores to western Persia were accordingly affected too, and Shīrāz during the Saldjūḳ period shrank from its peak of size and splendour as the Būyid *amīr* ʿAḍud al-Dawla's [*q.v.*] capital, and now had only a small area enclosed by a wall against the Shabānkāra and the Turkmens, with much of its former area ruinous; another fairly important town of Fārs, Kāzarūn, had suffered similarly (Ibn al-Balkhī, 132-4, 145-6, tr. 36-8, 55-6). It was only in the Il-Khānid and Muẓaffarid periods that Shīrāz revived completely (see Aubin, *op. cit.*, 297-9; SHĪRĀZ; SĪRĀF).

We have virtually no information about trade along the great, historic highway across Persia from ʿIrāḳ either via the more northerly Hamadhān route or the more southerly Iṣfahān one to Rayy and Khurāsān, although this must have continued to be a major commercial artery between the central Islamic lands and the northeastern fringes of the Islamic world, even after the comparative peace within the Saldjūḳ empire up to Malik Shāh's death had been brought to an end by fairly continuous fighting in Djibāl, Kurdistān and Luristān during the ensuing succession disputes. We do know, however, that the great cities along this route continued to thrive. Hamadhān [*q.v.*] was a lively trade centre with a prosperous agricultural hinterland, and in the later decades of the 6th/12th century served as the sultans' capital. Rayy [*q.v.*] was taken over by Ṭoghrïl Beg in 434/1042-3 from the Turkmen leader Ibrāhīm Inal when the former came westwards from Khurāsān, becoming his capital for a while, and the city flourished for the next half-century; fine dīnārs were minted there by Ṭoghrïl, Alp Arslan and Malik Shāh. After 485/1092, however, the internecine warfare had deleterious effects on the city's prosperity; from this date, the Saldjūḳ coins minted there become sparser and almost dry up, being of feeble quality, reflecting the degeneration of the coinage (see G.C. Miles, *The numismatic history of Rayy*, New York 1938, 196-217. The standard of the coinage is, of course, concrete evidence of the health or otherwise of the economy in general; for a consideration of the Great Saldjūḳs' coins, see below, section VIII. 1). It is Iṣfahān [*q.v.*] that we are best informed about. It finally passed into Ṭoghrïl's possession from the Kākūyids in 443/1051, and the sultan immediately put in hand measures for its revival after the preceeding years of warfare. Hence on his homeward journey in 444/1052, Nāṣir-i Khusraw found it in a highly flourishing state, wih busy markets, including a bazaar for the money-changers with 200 shops and fifty *khāns* in one street alone, whilst the caravan with which he travelled brought 300 assloads of goods (*Safar-nāma*, 123, tr. 98). Ṭoghrïl moved thither his capital from Rayy, and the city continued till the death of Muḥammad b. Malik Shāh to be a favoured centre for the sultans, directly administered by them and not granted out to one of their servants or commanders (Māfarrukhī, *K. Maḥāsin Iṣfahān*, ed. Sayyid Djalāl al-Dīn Ṭihrānī, Tehran 1312/1933, 101 ff.; and see, in general, on the cities of Persia at this time, Lambton, *Aspects of Saljūq-Ghuzz settlement in Persia*, 116-20).

One result of the general healthiness of the economies of the cities of Persia and of the countryside during the 5th/11th century at least seems to have been a buoyant revenue accrueing from the lands of the empire, comparing favourably both with the preceding Būyid period and certainly with the succeeding Mongol and Il-Khānid ones. We have no global figures stemming from the Saldjūḳ period itself, but the late Il-Khānid period writer Ḥamd Allāh

Mustawfī states, from a lost *Risāla-yi Malik Shāhī*, that the total revenue of the empire was in that sultan's time 215 million red gold dīnārs, the equivalent of rather more than 500 million of his own time but in fact a much higher figure than that during Il-Khānid times (cited in Lambton, *op. cit.*, 120-1).

Bibliography: Given in the article. There are no full-scale works devoted to Saldjūḳ social and economic history, nor any chapters on them in *Camb. hist. of Iran*, v, but for administration, A.K.S. Lambton's magistral chapter *The internal structure of the Saljuq empire*, in *ibid.*, 203-82, provides a detailed account, to be supplemented now by Carla L. Klausner, *The Seljuk vezirate. A study of civil administration 1055-1194*, Cambridge, Mass. 1973, and Bulliet's *The patricians of Nishapur*. Also, Lambton's *Continuity and change in medieval Persia*, whilst covering a wider expanse of Persian history than just the Saldjūḳ period, nevertheless contains much important material on Saldjūḳ administration, land tenure and social conditions. The question of patronage, loyalty, clientship, etc. in the Saldjūḳ empire has recently been examined by A. Jurado Aceituno, *La "ḫidma" selyuqí: la red de relaciones de dependencia mutua, la dinámica del poder y las formas de obtención de los beneficios*, diss. Universidad Autónoma de Madrid 1994, unpubl.

2. In Anatolia

The Saldjūḳ administration in Anatolia was probably less developed and certainly less extensive in its sphere of operations than that of the Great Saldjūḳs. The rulers depended on secretaries and officials from the Saldjūḳ lands further east, essentially of Perso-Islamic culture, for any existing, pre-Saldjūḳ Greek or Armenian officials would have been of little practical use, given their ignorance of Arabic and Persian and of the whole Islamic administrative tradition. Hence the administration, like the culture of the Rūm Saldjūḳs, became strongly Persian in ethos. In the formative, earlier period, however, the possibility of extraneous influences from the earlier, Byzantine civilisation should be considered, and the question whether the Saldjūḳs and, after them, the Ottomans, made use of Byzantine models or worked purely within the Perso-Islamic and/or native Turkish traditions, has been much discussed by scholars.

The sultan's chief executive was the vizier, but viziers never seem to have achieved the great power and influence in the state which several of those of the Great Saldjūḳs enjoyed, at least before the mid-7th/13th century, when we then have the dominating figure of the *Parwāna* Muʿīn al-Dīn Sulaymān [*q.v.*] and other officials who had to act as intermediaries between the puppet sultans and their Mongol overlords. The chancery in Konya generally used Persian for correspondence, but Arabic was naturally of great importance e.g. for diplomatic relations with the Muslim powers of Syria, Egypt and ʿIrāḳ; Ibn Bībī even mentions *nūṭār* = *notarioi*, who were presumably used for correspondence with Byzantine and other Christian powers and, possibly, for contacts with the indigenous Greek population of Anatolia. Also, Turkish must have been necessary for communicating with the increasing numbers of Turks amongst the Anatolian population, both in the towns and the countryside, and, in particular, with the army, whose payment was the responsibility of the central *dīwān* or one of its offshoots concerned with military affairs. When the Ḳaramānid Shams al-Dīn Muḥammad captured Konya in 675/1277, he is said to have ordered that Turkish only should be used in the chancery there [see ḲARAMĀN-OGHULLARĪ, at vol. IV, 620a], but this innovation cannot have lasted very long.

The army, although arising out of the Turkmen bands which had raided across Anatolia from the outset, came to be a much more ethnically-varied force, not only because it contained Greeks and Armenians who had been captured and enslaved (although there is no sign of anything like the later Ottoman *dewshirme* [*q.v.*]), but also because companies of foreign troops, sometimes vaguely characterised as "Franks" (*firang*), were employed. The position is not clear regarding these, but they may have been mercenaries; for the 7th/13th century, Ibn Bībī speaks of hired troops (*djīra-khʷār*), apparently including Khʷārazmians, Armenians from Cilicia and Greeks from Trebizond.

Connected with the idea of continuity or discontinuity of institutions in Saldjūḳ Anatolia, and the use of local peoples in the state apparatus, is the topic of the progress of Islamisation on the Anatolian plateau and attendant problems raised by it. Islamisation was clearly a gradual process, but exactly at what speed it progressed, and with what degree of violence and hardship for the indigenous peoples, are questions which have been discussed by historians. Undoubtedly, the Greeks and Armenians suffered from the uncontrolled raiding of barbaric Turkmens, often themselves only imperfectly Islamised, and they were exposed to the enslavement of their male children by the Muslim conquerors. The remaining churches and monasteries, cut off from their previous sources of benefactions and revenues, became impoverished. In general, there was some movement of the Christian population from the central plateau to the maritime fringes and to mountain areas, but of course, substantial Christian elements remained in the towns and countryside of central and inland Anatolia right up to the early 20th century and the exchange of Greek and Turkish populations in an age of sharpened nationalisms. Between these peoples and incoming Turkish groups some degree of intermarriage apparently took place, and contemporary Greek sources speak of a new generation of Anatolians of mixed ancestry, the *mixovarvaroi*, who could be found in the forces of some Turkish chiefs. Such intermarriage, added to the social and legal disadvantages of non-Muslims living under Islamic rule, must have favoured a degree of conversion and must have contributed to some decline in the numbers of Christians in Anatolia. Nevertheless, the situation of Christians under Turkish rule appears to have been more favourable than in the Arabo-Persian heartlands of the *Dār al-Islām*. The Saldjūḳ sultans of Rūm retained something of the tolerance towards, or indifference to, other faiths which had characterised the Turks and Mongols in their Inner Asian homelands; they themselves married Greek and Georgian princesses; churches and monasteries remained in their dominions, and the Greek clergy found no difficulty in maintaining links with their Patriarchate in Constantinople. It must always be remembered, too, that the Turks were almost certainly still a minority within the lands they ruled, so that the Greco-Armenian presence within Anatolia remained a substantial one and may have favoured a some degree of religious syncretism with the local forms of Islam, a possibility explored by such scholars as F.W. Hasluck and Fuad Köprülü (see on this, above, section IV. 2).

Economic and commercial life within the core lands of the sultanate seems to have been flourishing, certainly by the early 7th/13th century. It was the frontier regions, where periodic fighting and raiding per-

sisted, which suffered economic and social dislocation, whereas the sultans had an obvious interest in promoting the agricultural prosperity of their dominions. The taxes levied by the Saldjūḳ administration on the Christian populace may conceivably have been lighter than those of the retreating Byzantine fiscal system. With the virtual Mongol takeover of the Saldjūḳ sultanate in the later 7th/13th century, however, taxation on all classes must have increased perceptibly. Anatolia had to pay tribute to support the Mongol army and administration there, and there there were various taxes whose names are known but whose exact nature is unclear (e.g. *balīsh*, *indju* and *dalay*, although *indju* seems to denote domains in Rūm belonging to the Il Khānid state). As part of the great vizier to the Mongols Rashīd al-Dīn Ṭabīb's [*q.v.*] general financial re-ordering of the Il Khānid empire in *ca.* 700/1300, an effort seems to have been made to recover *iḳṭāʿ*s [*q.v.*] which had been transformed into *milk* [*q.v.*] or private property under the later Saldjūḳ sultans.

Despite these burdens, the lands of the sultanate continued in general to prosper. As noted above, during the first half of the 7th/13th century the sultans secured access to the Mediterranean and the Black Sea shores, and even made their presence felt as far away as the Crimea (see above, section III. 5). There was consequently a great fillip to internal trade and the transit trade across Anatolia, signalled by a perceptible building programme by the sultans, from Ḳilič Arslan II in the later 6th/12th century onwards, and by great men in the state, along the Anatolian caravan routes, seen in bridges, caravanserails, *ʿimārets* and other facilities for travellers and merchants (see below, section VI. 2). The first tentative trade agreements were made with European powers like the Venetians, specifically in this case concerning access to Mediterranean trade through Antalya (610/1213 and 613/1216). At the same time, urban life within the sultanate revived by the later 6th/12th century from its depressed state under the later Byzantines, and many towns received new or strengthened walls, visible now in the walls of Alanya (those of Konya only having disappeared in recent times). Although the Saldjūḳ towns, almost all of them corresponding to their Byzantine and/or classical forerunners, had no more autonomy than the towns elsewhere in the Islamic world, they had a vigorous life, accentuated by the mélange of peoples and faiths within them. In the 7th/13th century we have mention of such groups of mixed parentage called *ikdīsh* "crossbreeds", and of the *akhīs* [*q.v.*], whose importance in almost all the towns of Anatolia was later to strike the Moroccan traveller Ibn Baṭṭūṭa.

VI. Art and architecture

1. In Persia

This article will confine itself to the output of the Saldjūḳ period in Persia, for that was the centre of Saldjūḳ power; and while some Saldjūḳ rulers extended their authority far to the west, and even to the north-east at times, their hold on this territory was much more tenuous. Moreover, the visual arts in Syria and ʿIrāḳ between *ca.* 1000 and *ca.* 1220 followed their own path, in which local traditions played a major role. For the art of the Saldjūḳs in Anatolia, see section 2. below.

The importance of Saldjūḳ art within the broader context of Islamic art as a whole lies in the way that it established the dominant position of Persia; one may compare the pivotal role of Italy in European art. It also determined the future development of art in the Persian world for centuries. In its own time its impact was felt, either through the agency of the Saldjūḳs themselves or through their successor states, from Syria to Northern India. The period 1000-1220 set benchmarks for all sorts of fields, from pottery and metalwork to the arts of the book and architecture. It is important to note that this time frame begins well before the Saldjūḳ period and ends well after it, a reminder that the chronology of artistic styles is often out of phase with that of political history. A by-product of this is that the overlap between Saldjūḳ art and that of the Būyids, Ghaznawids, Ghūrids, Ḳarakhanids and Khwārazmshāhs—to name only some of the major stylistic groupings of the time—is such that these dynastic labels are often unhelpful if not downright misleading. The basic fact to bear in mind is the existence of an artistic *koiné* in the eastern Islamic world between 1000 and 1220. That *koiné*, moreover, was at its most vigorous in the years of Saldjūḳ decline and after the fall of the dynasty in 1194, and it owed much to the political unity imposed by the Saldjūḳs on eastern and western Persia. It is to this later period that the major technical advances of Saldjūḳ art can be attributed. The period from *ca.* 1150 (the pen case of 542/1148 in the Hermitage provides a convenient point of departure) saw an unprecedented expansion of figural decoration, whether in the form of narrative scenes (taken, for example, from the *Shāh-nāma* of Firdawsī), pictures of courtiers, animals, zodiacal themes, and images from the so-called "princely cycle" featuring hunting, banqueting, music-making and the like. Long benedictory inscriptions in Arabic now become the norm in the portable arts. Sculpture in stucco, ceramic and metal now takes on a new importance.

The sheer productivity of these centuries in the visual arts [see KHAZAF and MAʿDIN] represents, in comparison with the output of earlier centuries, a quantum leap forward. With this increased quantity—which is helped by a standardisation of shapes—comes an expansion in patronage, which now not only operates at court level but also has a new popular dimension, perhaps an expression of widespread urban wealth deriving from a buoyant economy. This art, then, reveals a cross-section of contemporary society and its tastes; luxury and utility Ḳurʾāns, large royal and small provincial mosques, expensive lustre or *mināʾī* [*q.v.*] pottery and coarse glazed ware reminiscent of folk art, elaborately inlaid metalwork and virtually plain cast pieces. One can identify numerous local schools, for example in architecture and ceramics. A natural by-product of this intensive activity was a wide range of technical and stylistic innovations. It must be remembered, however, that the picture is skewed, especially in the fields of pottery and metalwork, by the massive scale of illegal excavations in Persia over the past hundred years, for which there is no parallel in the rest of the Islamic world. In other countries most of the comparable material is still in the ground. And the paucity of detailed monographic studies of key objects and buildings means that much basic information is still either unavailable or inadequately contextualised.

Thus the originality of Saldjūḳ art is apt to be exag-

gerated. In many cases, the artists of the Saldjūḳ period (it is misleading to speak of "the Saldjūḳs" in this connection) consolidated, and indeed at times perfected, forms and ideas that had long been known. In architecture one may cite the 4-*īwān* plan, the dome chamber over the *miḥrāb* in the mosque, and the tomb tower; in Ḳurānic calligraphy, the apotheosis of the "New Style" of Kūfic, now integrated with lavish illumination; in metalwork, the technique of inlay using several metals; and in painting, the development of the frontispiece. Above all, there is surprisingly little for which a source right outside the Persian world can be posited. Although the Saldjūḳs themselves were Turks, it is hard to point to any specifically Turkish elements in the art of Persia and its eastern provinces in the period under review. This seems to point to the dominance of Persian artisans in the visual arts. Parenthetically, one may note that the picture in Anatolia, where people of Turkish extraction formed a larger proportion of the population, is distinctively different; there, references to pagan Turkish religious beliefs, funerary customs and royal ceremonial are frequently encountered (see section 2. below).

What of patronage? Only two pieces of Saldjūḳ pottery made for a person of high rank, one an *amīr*, the other a vizier, are known, and the situation is little better in the case of metalwork. The overwhelmingly rich and varied production in these fields ought presumably, therefore, to be attributed to patronage exercised at a lower level of society, such as merchants, members of the leaned class and professional people. Most of it was presumably made for the market, though this would not exclude its use by those of high rank. Architecture, involving as it did much larger sums of money, is a different story altogether. Inscriptions in mosques and mausolea mention the Saldjūḳ sultans themselves (e.g. Malik Shāh and Muḥammad), viziers (Niẓam al-Mulk, Tādj al-Mulk), Turkish chieftains (the towers of Kharraḳān), army commanders (Urmiya) and numerous *amīrs* (Marāgha, Mihmandust, Ḳazwīn and Abarḳūh).

Problems of provenance have bedevilled the study of the so-called "minor arts" in the Saldjūḳ period. These problems have been exacerbated by the fact that most of the known material has not been scientifically excavated and lacks inscriptions yielding solid information on provenance. Confusing and contradictory information on this topic proliferates. The very few securely provenanced pieces perforce act as a peg on which to hang all manner of other pieces, and their evidential value is simply not enough to justify this practice. It is now generally accepted (thanks to O. Watson) that virtually all lustre and *mīnā'ī* wares—the most expensive ceramics of the period—were made in Kāshān (though the distinctive heavy red body of lustre tiles found in the Kirmān area suggests local production there), and this luxury ware was widely traded, to judge by the sherding carried out by A. Williamson and others. But conversely, many other slightly less luxurious but still fine wares cannot be securely associated with any one city or area, and they might therefore have been produced in several places independently (like the Sāmānid epigraphic ware of the 10th century, which was produced in both Samarḳand and Nīshāpūr, and apparently in Marw too). Similarly, the fact that the celebrated Bobrinski bucket and the Tiflis ewer both bear an inscription stating that they were made in Harāt indicates that fine inlaid metalwork was produced in that city, and the occurrence of craftsmen's *nisbas* indicating Khurāsānī cities—Harāt, Marw, Nīshāpūr—confirms the important role of this province in metalwork. But it is not enough to justify the wholesale attribution to Harāt of wares that merely share some of the features found on Harātī work. This is particularly unlikely for metalwork that is technically simpler than the inlaid pieces, since the demand for such simpler work must have been too widespread to be catered for by a single production centre. But exactly where these other Persian workshops were located must be determined by future research. The astonishing range of forms encountered in Saldjūḳ metalwork (including many derived from architectural forms) also points to numerous centres of production. It seems likely that some of the best craftsmen travelled widely to execute commissions, and that fine pieces (e.g. of Kāshān tilework) were shipped over long distances. There is evidence too of a division of labour in metalwork and lustreware that ensured a higher level of quality overall. But the key question remains; scholarship has not yet established whether the pockets of intense activity in a limited geographical area have a wider significance for pan-Persian production or whether they reflect a well-developed specialisation confined to a given area.

Laboratory examination has yet to be used in a systematic way on Saldjūḳ metalwork; the evidence that it would provide on alloys, for instance, could then be correlated with other factors—shape, technique, decoration—to create a more nuanced picture of the various known types. In the current state of knowledge it is safe to say that wares constructed from sheet metal were made of brass while most others were of quaternary alloy; true bronzes are uncommon.

The very few pieces of Saldjūḳ metalwork in silver point to a serious shortage of that metal which became more critical as the 11th century advanced. It was perhaps in part a result of the practice followed by the Viking traders travelling along the great Russian rivers, who hoarded the Islamic silver coins with which they were paid for slaves, furs and amber and who thus took the coins out of circulation. Indeed, the gradual cessation of the minting of silver coins in Persia and Anatolia in this period, and their replacement by copper dirhams, provides incontrovertible and, as it were, statistical evidence of this trend, anecdotal evidence of the survival or use of individual silver objects notwithstanding. Base metal had perforce to fill the gap, but its value was greatly enhanced by the practice of inlaying it with copper, silver, gold and a bituminous black substance, the whole giving an effect of polychrome splendour. Thus fine craftsmanship did duty for precious metal. This technique with its plethora of detail explains why such metalwork now bore elaborate figural scenes; even inscriptions took on human and animal form. These inlaid objects survive in large quantities, probably because their metal content (unlike that of silver and gold objects) was not sufficiently valuable to be worth melting down, whereas the intrinsic value of their top-quality craftsmanship was obvious.

In ceramics, the earliest dated underglaze-painted, lustre and *mīnā'ī* wares are respectively placed by their inscriptions to the years 562/1166, 575/1179 and 582/1186, and therefore all postdate the death of the last Great Saldjūḳ ruler, Sandjar, in 552/1157. Conversely, in metalwork there are several pieces dated between 455/1063 and 542/1148—i.e., truly in the Saldjūḳ period. The frequency of dated ceramics (and many are signed) argues a higher status for fine pottery than had previously obtained. A new light body known as stone-paste or fritware was devised; it was made largely from ground quartz, with

small quantities of ground glass and fine clay, presumably an attempt by Islamic potters to imitate the body of Chinese porcelain, though the necessary evidence of trade with China is missing. Such pieces were mostly moulded. Others belonged to categories known as silhouette or double-shell wares and in these, as in lakabi and other sgraffiato wares, much of the decoration was incised with a knife or a pointed object. Such incised wares continued a fashion well established before the Saldjūḳ period. Underglaze painting in blue and black was also popular, as was a type of translucent white ware, often pierced for greater effect. Many of the more expensive wares bear hurried cursive inscriptions in Persian love poetry of mostly indifferent quality, and praise the maker of the piece. Scientific analysis of pottery has successfully differentiated between the original ceramic and modern repairs to body and decoration alike, a crucial distinction since virtually no mediaeval pieces have remained intact.

A close connection existed between the most elaborate wares and book painting, including Ḳurʾānic illumination, as shown by figural types, narrative strips and numerous stylistic features, while many details of the shape and decoration of Saldjūḳ ceramics—handles, stepped feet, imitation chains, incising, gilding, fluting—derive from metalwork. Similarly, the ornamental sheen and decorative motifs of Saldjūḳ metalwork reveal close familiarity with manuscript illumination. All this points both to the interdependence of the arts in this period and to the existence of hierarchies within the visual arts.

The recent demonstration (Bloom, Blair and Wardwell, in *Ars Orientalis*, xxii [1992]) that the majority of textiles once thought to be Būyid or Saldjūḳ are in fact of modern manufacture has made it imperative to submit all so-called Saldjūḳ silks to scientific tests, and renders premature any art-historical enquiry into them.

It is not possible to say much about book painting in Saldjūḳ times, for the principal centre of production in this period was ʿIrāḳ, which was then under the control of the newly renascent caliphate [see TAṢWĪR]. Thus ʿIrāḳī painting, for all its stylistic affinities with Saldjūḳ art, cannot be brought into the present discussion. The most likely condidate to represent the largely vanished art of Saldjūḳ book painting is the verse romance *Warḳa wa Gulshāh*, written in Persian by the poet ʿAyyūḳī and signed by the painter ʿAbd al-Muʾmin al-Khūyī. This suggests a provenance in north-west Persia, but Anatolia is a distinct possibility too. The manuscript (in the Topkapı Sarayı library in Istanbul) has 70 brightly coloured illustrations in strip format against a plain coloured or patterned ground, with figural types of the kind familiar in *mināʾī* pottery, but with an unexpected additional feature: obtrusive animals which have been shown by Daneshvari to have iconographic significance, for example as symbolic and prophetic references to the action. A fragment of al-Ṣūfī's treatise *Fixed stars* in the Bodleian Library, Oxford (ms. Or. 133), undated and unprovenanced but probably of the 13th century, might be of Persian origin. But for all the paucity of the surviving material, the clear dependence of both fine ceramics and fine metalwork on manuscript painting and illumination shows clearly enough the high profile which the arts of the book enjoyed in the Saldjūḳ period. And book painting in Mesopotamia after the fall of the Saldjūḳ dynasty often has marked Persian features, a factor which suggests the existence of an earlier pan-Saldjūḳ school of painting in which distinctions between ʿIrāḳ and Persia were perhaps not very significant.

Several fine Saldjūḳ Ḳurʾāns have survived [see KHAṬṬ]. They include dated examples in Mashhad (466/1073), Tehran (485/1092 and 606-8/1209-11), Philadelphia (559/1164; produced in Hamadān) and London (582/1186), as well as examples which slightly pre-date the advent of the Saldjūḳs (London, 427/1036 and Dublin, 428/1037). There are also numerous undated but probably Saldjūḳ examples in Dublin, Paris, Istanbul, Tehran and London, to say nothing of parts of Ḳurʾāns or individual leaves in dozens of collections throughout the world. Saldjūḳ Ḳurʾāns are notable for their magnificent full-page or double-page frontispieces and colophon pages, often of pronounced geometric character, with script in panels taking a prime role. They are known both in *naskhī* and in "New Style", otherwise known as "East Persian", Kūfic. There is a substantial variation in scale—from small one-volume Ḳurʾāns measuring 12 by 10 cm to large ones of 41 by 28 cm and there are some in 30 or 60 parts, large and small, each part with its own frontispiece. The discrepancy in size and layout extends to the number of lines per page, which varies from 2 to 20, and to the scale, quantity and placing of illumination. The task of establishing dates and provenances for this ample material, and devising working categories for it, has only just begun.

In architecture even more than in other fields the dividing line, so far as style is concerned, between what is definably Saldjūḳ and what precedes that period is very hard to draw, though the Mongol invasion and the architectural vacuum that followed it means that there is a distinct break in continuity after *ca.* 1220. A few examples will make this clear. The characteristic minarets of Saldjūḳ type—lofty, cylindrical, set on a polygonal plinth and garnished with inscription bands and geometric brick patterning—are known from at least as early as the 1020s (Dāmghān, Simnān). Of the two standard types of Saldjūḳ mausoleum, the tomb tower perhaps reached its apogee in the Gunbad-i Ḳābūs, dated 397/1006-7 [*q.v.*], while the other type, the domed square, is already brought to a pitch of perfection in the so-called "Tomb of the Sāmānids" in Bukhārā, datable before 943. That building also exhibits a highly developed style of brick and terracotta ornament. Similarly, such standard features of Saldjūḳ architecture as the trilobed squinch and the *pīshṭāḳ* [*q.v.*] are already to be encountered in the 10th century (mausoleum of Arab-Ata, Tim). The same phenomenon can be detected in other art forms, for example in sgraffiato pottery or the continuity of ring and dot decoration from pre-Saldjūḳ to Saldjūḳ metalwork; and while the quantity and range of architectural tilework is indisputably a "Saldjūḳ" phenomenon, its roots in Islamic monuments lie as far back as Sāmarrā.

The distinctive Saldjūḳ contribution lies rather in the final establishment of several of the classical forms of Persia architecture and in the capacity of Saldjūḳ artists to draw out the utmost variety from these types. Mosques with one, two, three or four *īwāns* are known, and the 4-*īwān* plan receives its classic formulation in association with an open courtyard and a monumental domed chamber; a hierarchy of size distinguished major *īwāns* from minor ones [see MASDJID I.H]. The Friday Mosques of Zawāra, Ardistān and above all Iṣfahān, are outstanding examples of this trend. Saldjūḳ domed chambers are characterised by external simplicity, with a frank emphasis on the exterior zone of transition, now reduced to powerful contrasting geometric planes, while the interior is dominated by a highly elaborate transition zone (in the Iṣfahān area this made a leitmotif of the trilobed

arch) whose depth, energy and rhythmical movement has as its foil the austere, low-relief articulation vouchsafed to the lower walls and to the inner dome itself. But other Saldjūķ mosque types, such as the free-standing domed chamber or the arcaded hall, are also known.

In mausolea [see TURBA], the *pīshtāķ* was developed from a simple salient porch to a great screen which conferred a grandiose façade on the building behind it (Ṭūs, Sarakhs). The originally simple formula of the domed square underwent other major changes too, notably in the development of a gallery zone (Sangbast), engaged corner columns (Takistān, Hamadān), and double dome (mausoleum of Sultan Sandjar, Marw). Lofty tomb towers proliferated across northern Persia, many of them built as secular memorials for *amīrs* and others of high rank, though some have *miḥrābs* and therefore served at least in part a religious purpose. Their form varied: some were square, cylindrical or flanged but most had 7, 8, 10 or 12 sides, with inner domes crowned by conical or polyhedral roofs. Their form was well suited to the development of brick ornament, for it ensured a constant change of plane and therefore much variety in the play of shadow. Here, too, some of the earliest uses of glazed tilework are to be found.

The impressive sequence of some 40 Saldjūķ minarets [see MANĀRA. 1] comprises all manner of structural variations, including single or double staircases with or without a central column, flaring corbelled balconies, three-tier elevations, shafts articulated by flanges and engaged columns, and—an innovation destined to have a long history in Persian architecture—the double minaret flanking a portal, whether this was the entrance to a building or the *ķibla īwān*. Thus the minaret came to have a symbolic rather than a strictly liturgical role. They also occur as free-standing monuments unrelated to other buildings, and in such cases seem to have functioned as land-locked lighthouses.

No Saldjūķ palaces survive in good condition, though excavations have revealed the ground plan of the 4-*īwān* palace at Marw and the palatial kiosk of Ķalʿa-yi Dukhtar in Ādharbaydjān still stands despite its ruined state. But the palaces of Tirmidh, Ghazna and Lashkar-i Bāzār, all yielding abundant decoration, belong to much the same cultural sphere even though they are linked to Sāmānid and Ghaznawid rulers respectively. The same situation applies in the case of the *madrasa*, a particularly serious deficiency given the unambiguous testimony of the literary sources that such buildings were erected throughout the Saldjūķ empire [see MADRASA. III]. Controversial remains at Khargird, Ṭabas, Rayy, Samarķand and near Sayot in Tadjkistan (Khʷadja Mashhad) permit no clear statement as to the form of the *madrasa* in Saldjūķ times. The luxuriously embellished and largely ruined Shāh-i Mashhad of 571/1175-6 in Gharčistān, identified by its inscription as a *madrasa*, is a Ghūrid foundation, while the building at Zūzan, dated 615/1218-19 and also identified epigraphically as a *madrasa*, was erected by a governor of the Khʷārazm Shāhs. Taken together, their awesome scale and magnificence suggest that the *madrasas* of the Persian world in this period far outshone those from other Islamic territories.

Several caravansarais datable to the Saldjūķ period are known; four of them—Ribāṭ-i Malik, Dāya Khātūn, Ribāṭ-i Māhī and Ribāṭ-i Sharaf—bear lavish decoration. Indeed, Ribāt-i Sharaf [*q.v.*; probably 508/1114-5, repaired 549/1154-5], with its huge double courtyard plan (repeated at Aķče Ķalʿa in Turkmenistan) is a museum of contemporary decorative techniques. This splendour, when linked to its location astride the main road from Marw to Nīshāpūr, makes it plausible that this building served as a royal stopover. Most Saldjūķ caravansarais, however, are built for use rather than display, with rubble masonry, strong fortifications and minimal comfort. In many of these buildings the prescriptive power of the 4-*īwān* plan made itself felt.

2. In Anatolia

N.B. Buildings and objects with dated inscriptions are indicated thus: *. TIEM = Türk ve Islam Eserleri Müzesi (Museum of Turkish and Islamic Art), Istanbul.

(a) *Architecture and its decoration.*

A general survey of the art and architecture of Anatolia in the Saldjūḳ period necessarily involves both the Sultanate of Konya (*ca.* 1118-1308) and its provincial capitals and the Turcoman amīrates which were subdued and more or less incorporated into it during the reigns of Kaykāwūs I and Kayḳubād I [*q.vv.*], among them the Dānishmendids, the Saltūḳids, the Mengüdjükids, and the Ayyūbid-Artuḳid confederation which Kayḳubād I defeated at the battle of Yassī Čimen (1230). These all had, however, their own traditions which were often locally persistent. This complicates a purely linear treatment of their art and architecture.

Building typology. The architecture of Saldjūḳ Anatolia is typologically very rich. Extant or recorded buildings include not only mosques, *madrasas* and *khānḳāhs* but also hospitals (notably at Kayseri 602*/1205-6, Sivas 614*/1217-8 and Divriği 626*/1228-9) and tomb-towers and other mausolea (*türbe, kümbed*); and secular buildings—palaces, fortifications, dockyards, caravansarays, bridges, baths and even thermal establishments (*kaplīdja*), as at Ilgın, from which an inscription of 666/1267-8 in the name of the vizier Fakhr al-Dīn ʿAlī (Ṣāḥib Ata) was recorded.

Mosques and complexes. A persistent plan for Great Mosques, possibly inherited from the Dānishmendids, is basilical, as at Sivas and Kayseri (both later 12th century), sometimes with a flat roof on wooden columns (cf. Otto-Dorn, 1959). The minarets of this early date are brick and tend to be exaggeratedly tall. Later 13th century minarets, such as the Burmalı Minare at Amasya (c. 640/1242-3) and the Ince Minare at Konya (?663/1264-5; Meinecke, 1976, ii, no. 78) in its original two-tiered form, also tend to height, though they are mostly in stone.

The evidence for complexes (*külliyes* [*q.v.*]), foundations including buildings of diverse functions, which in Ayyūbid Syria and Egypt had become standard by the early 13th century, is less good in Anatolia, largely because, with exceptions like the Great Mosque and Hospital at Divriği and the foundation of Huant (Khʷānd) Hatun at Kayseri (Shawwāl 635*/May-June 1238; cf. Akok, 1968), mosques, *madrasas* and baths may have been adjacent but were not integrated structures, so that substantial parts could well have disappeared without damage to the rest. Funerary foundations, with the pyramidal or conical roof of a mausoleum clearly visible from the exterior, also appear to have been less common than in Ayyūbid Syria: among the exceptions are the Citadel Mosque at Konya (616-17/1219-21) replacing a mosque of Masʿūd I (d. 550/1155), which contains two mausolea with the tombs of the Sultans of Rūm (Kaykāwūs I is buried, however, in the hospital he founded at Sivas [614*/1217-8]); the hospital at Divriği (626*/1228-9) and the complex of Huant (Khʷānd) Hatun at Kayseri (Shawwāl 635*/May-June 1238). The mosque of the vizier Fakhr al-Dīn ʿAlī (656*/1258; cf. Meinecke, 1976, ii, no. 79) was augmented by a *khānḳāh* (668*/1269-70; cf. Meinecke, 1976, ii, nos. 79 and 89) which on his death was partially transformed into a family mausoleum. Many other monuments contain provision for a mausoleum, even if they have no burials, but they are unmarked architecturally and may well have been afterthoughts.

Mausolea. The vast majority of mausolea are isolated tomb-towers. Despite marked local variation in decoration, their construction is basically standard, a pyramidal or conical drum with a pyramidal or conical roof on a raised square podium which houses the crypt. The interior often contains a *miḥrāb*, not necessarily because prayers were to be said there but to orient the burial. These *türbes* or *kümbeds* derive from the brick tomb-towers of later-12th century Djibāl, as at Nakhčiwān [*q.v.*] and Marāgha [*q.v.*], though they are virtually all of cut stone without any tilework. Many are anonymous but those which bear inscriptions are generally of *amīrs* or high-born ladies. In the cemeteries of Ahlat (Gabriel and Sauvaget, 1940; Karamağaralı, 1972) they occur alongside conventional inhumations with a cenotaph and head- and foot-stones. Another monumental tomb-type is the so-called Gömeç Hatun Türbe at Konya (late 13th century; cf. Meinecke, ii, no. 86), an open *īwān* built over a crypt and with traces of tile decoration on the façade. Such tombs remain quite common in the Kayseri area.

Fortifications. The building or restoration of fortifications by the Saldjūḳ sultans of Konya closely follows the unification of their territories, particularly in the reigns of Kaykāwūs I and Kayḳubād I as they subjugated the smaller Turcoman amirates and expanded into Byzantine territory. These include the walls of the city and Citadel of Konya (600*/1203-4, 610*/1213-4 and 618/1221-2); Sinop (Rabīʿ II 612*/July 1215), Antalya (Djumādā I 617*/July 1220, 622*/1225-6, 626*/1228-9 and 642*/1244-5) and the Citadel of Kayseri (621*/1224-5). The walls and Citadel of Sivas were probably restored early in the reign of Kayḳubād I, and after his capture of Erzurum in 1230 its walls also were restored. The latest of his Turcoman rivals to build or restore their walls were the Mengüdjükids at Divriği (inscriptions of 634*/1236-7, 640*/1242-3, 650*/1252-3 and 652*/1254-5), long after they had accepted Saldjūḳ suzerainty, and indeed when they had passed under Mongol overlordship. The most imposing structures were at Konya (Bombaci, 1969), but Sarre (1936; and cf. Laborde, 1836) pointed out that they were the walls not of the city but of Kayḳubād I's palace-citadel, hence for show rather than defence. The most

important fortifications are therefore those of Alanya/ᶜAlāʾiyya [*q.v.*] (623-9*/1226-31; cf. Rice and Seton Lloyd, 1958) with a 5-bay naval dockyard (*tersāne*), unique among extant Islamic naval installations. This is attached by a curtain wall to the principal tower, the Kızıl Kule, which bears the signature of an engineer Abu ʾl-ᶜĀlī b. Abi ʾl-Radjāʾ b. al-Kattānī al-Ḥalabī, whose name also appears on the walls of Sinop, refortified in 1215*.

Palaces. Of the pavilion (*köşk*) on the Citadel at Konya, a brick construction with mud-brick core, nothing survives, but a photograph of 1895 shows its upper floor corbelled out over a projecting rectangular tower of a line of inner walls and with an open arch showing the remains of a tile revetment on the exterior. This bore an inscription in the name of Ḳilīdj Arslan, in Sarre's view (1936) of the fourth ruler of that name (655-63/1257-65 [*q.v.*]). Tile remains from the inner rooms include *mīnāʾī* tiles with human figures. Excavations are still continuing at the palace of Ḳubādābād [*q.v.*] on Lake Beyşehir and have so far revealed a complex plan, with a central four-*īwān* cour d'honneur, a mosque (633*/1235-6), baths, a quay and a small dockyard (*tersāne*), and a game reserve.

Khāns. One of the most striking features of Anatolian Saldjūḳ architecture is the chains of caravansarays roughly 25 km/16 miles, one day's march, apart [see KHĀN], linking the principal cities of the Sultanate of Rum, in particular Antalya, Eğridir and Konya; Konya and Afyon Karahisar; Konya and Denizli; Konya, Āḳ Sarāy and Kayseri; Kayseri and Sivas; Kayseri and Malatya; and Malatya, Sivas, Amasya and Sinop. No urban *khāns* of the Saldjūḳ period are preserved.

Though the earliest caravansarays date to the late 12th century, the capture of Antalya (1207) and the annexation of Sinop (1215) by Kaykāwūs I were essential preliminaries to developing them as chains. Their principal function was evidently to service the north-south overland trade of strategic exports such as timber and Ḳïpčāḳ slaves from the Crimea to Antalya, whence they made their way by sea to the Ayyūbid states of Syria and Egypt, and to levy transit taxes on international trade. The peak period of foundations, 1230-45, follows hard upon the completion of the fortifications of Antalya. The Sultan Han near Āḳ Sarāy (Radjab 626*/June 1229) and the contemporary Sultan Han near Kayseri may well have been purposely built as halts for Kayḳubād I on his progresses from city to city, but these, like the smaller *khāns*, were also convenient for pilgrims on the *ḥadjdj* or for inter-urban trade, and in time of war could be used for garrisons or as refuges. Inexplicably, the east-west trade was much less favoured: despite the increasingly difficult terrain, the density of distribution east of Sivas very markedly decreases. This may explain why the Mkhargrdzeli governors of Ānī (Rogers, 1976) built their own chain of caravansarays to tap the trade along the Araxes.

The founders of these Anatolian caravansarays included the sultans and their ladies, viziers and *amīrs*. Their often well-preserved state suggests, moreover, that the specimen *waḳfiyya*s of Saldjūḳ caravansarays published by Turan (1947-8) are typical and that most of them had *waḳf* endowments. However, the Hekim Han near Malatya (615*/1218; Erdmann, 1961, i, no. 18) founded by an archdeacon and doctor, which bears inscriptions in Arabic, Syriac and Armenian, showing it to have been a family investment, is evidence that not all Saldjūḳ caravansarays need have been pious foundations.

With very few exceptions, for example the Evdir Han near Antalya (datable 1213-19; Erdmann, 1961, i, no. 55) which is built round an open courtyard, the nucleus of these caravansarays was a covered hall. This was the most appropriate to the Anatolian winter climate, though fireplaces and chimneys are generally absent. To the hall, as and when means permitted, a courtyard would be added, often much larger because it was cheaper to build and because the peak season of trade was the summer when shelter was less important. With the courtyard came elaborations. Sixteen out of the surviving courtyard and hall caravansarays include *masdjids* and some of them, like the Sultan Han near Kayseri, have a bath too. In the two Sultan Hans, *masdjids* take the form of richly decorated kiosks raised on a four-bay substructure. The Karatay Han (courtyard 638*/1240-1; Erdmann, 1961, i, no. 32) also includes a spring housed in a *türbe*-like building.

Many of these *khāns* are undecorated but practically all of them, though not built as fortresses, are fortress-like in their appearance, with stout buttresses and corner-towers. Many, however, have grand entrances, both to the courtyard and to the hall; although sometimes the hall porch is the richer, the decoration of the courtyard entrances is directly related to the elaborateness of the plan and the lavishness of the appurtenances. After the Sultan Hans, the richest decoration is that of the Karatay Han, the two porches of which (Erdmann, 1976, ii-ii, Plates 99-113) make use of ornamental bosses, elaborate *muḳarnas* [*q.v.*] systems and angular interlacing strapwork, with animal friezes on the courtyard side of the main entrance and high-relief waterspouts in the form of lions.

It is unclear how the considerable labour force employed at the peak building period of caravansarays (1230-45) was organised. The plans chosen must largely have depended on the terrain, so that variation is not necessarily significant; but the marked dissimilarities in buttresses and corner towers and the apparently random approach to the vaulting of halls and their lighting argue for an absence of centralised direction. The typology of decoration, which has little to do with, for example, tilework, is also difficult to reconstruct, not least because of the large proportion of undated buildings and because, as the work of Muḥammad b. Khawlān al-Dimashḳī on the Sultan Han near Āḳ Sarāy shows, a skilled decorator could vary his repertory to suit his employer. Neighbouring caravansarays tend to have somewhat similar decoration, which argues for the employment of local or provincial gangs of masons. Entrance-profiles were, however, probably largely standardised and analysis of these may well produce significant results.

Bridges. There has been no comprehensive survey of the bridges of Saldjūḳ Anatolia, but Taeschner (i, 182 ff., 236 ff.) observes that for the most part they lie on the major Roman roads and that, for example, most of the Saldjūḳ bridges in the neighbourhood of Sivas either incorporate or replace Roman structures (cf. Gabriel, 1934, 165-7). In the Saldjūḳ period, refortification and the construction of chains of caravansarays made bridge-building particularly important, not least because bridges offered another convenient way of levying transit taxes. Thus many, like the bridge over the Kızıl Irmak near Kayseri on the Kırşehir road (599*/1202-3) built by Rukn al-Din Sulaymān b. Ḳilīdj Arslān II, are royal foundations.

Structure. With the striking exception of the Great Mosque and Hospital at Divriği (Tükel-Yavuz, 1978), the vaulting systems of which include types of domical vault, as well as groined and elaborately ribbed vaults closely paralleled in the chapter-houses,

libraries and refectories of 12th-13th century Greater Armenian monasteries, as at Hagartsin (1248) and Sagh̲mossavank (1255) (cf. K̲h̲al'pak̲h̲čian 1953, 1971), most Anatolian Sald̲j̲ūḳ architecture is structurally simple. Plans, moreover, are often stereotyped and much use is made of open courtyards with one, two or four *īwāns*: despite the harsh winter climate, only mosques are regularly covered.

Building materials. Brick occupies a minor place in the architecture of Sald̲j̲ūḳ Anatolia (Bakırer, i-ii, 1981) and is most characteristic of immigrant or refugee craftsmen from D̲j̲ibāl or Persia, for example, the work of Aḥmad b. Abī Bakr al-Marandī on the mausoleum of Kaykāwūs I in his Hospital at Sivas (4 S̲h̲awwāl 617*/2 December 1220). Though brick continues to be employed for domes, for example the Ince Minare and Büyük Karatay *madrasas* at Konya (latter 649*/1251-2), it generally gives way to stone and the only monument substantially of brick is the Great Mosque (Arık, 1969; Meinecke, 1976, ii, no. 96) at Malatya [*q.v.*]. The principal building material employed is volcanic tuff, carefully squared, with a rubble core. This was also widely used in 12th-13th century Greater Armenia, but though a few decorative features and, for example, the domed crossings of some of the larger caravansarays recall Armenian prototypes, the names of clearly Armenian craftsmen rarely occur and there are few or no obviously Armenian masons' marks. On the contrary, it is the influence of Western Georgia (Tao-Klargeti) which is apparent in the 13th century architecture of Erzurum; and where "Sald̲j̲ūḳ" parallels with Armenian monuments are closest these are mostly of the late 13th or early 14th century (like the monastic church and its porch at Amag̲h̲u-Noravank) when, doubtless, Anatolian craftsmen, faced with the steady contraction of the building industry, were seeking employment elsewhere.

Despite the Anatolian builders' mastery of cut-stone masonry it is evident from Kayḳubād I's first restoration of the Citadel mosque at Konya (completed 617*/1220-1) that the sultans' taste ran to bichrome marble or marble veneer. This raised two problems: lack of available marble, which made the re-use of antique material or spolia inevitable; and a lack of craftsman able to work it. These had to be brought from Syria. The marble decoration of the Citadel mosque, notably a conspicuous angular knot in the spandrels of arches, is essentially that of contemporary Ayyūbid Aleppo, though the craftsman responsible, Muḥammad b. K̲h̲awlān (who also very probably executed the entrance porch of the Büyük Karatay *madrasa* at the same time), signs himself as al-Dimas̲h̲ḳī, not al-Ḥalabī. Reminiscences of the Aleppo knot appear on later stone buildings at Konya, notably the Ince Minare *madrasa* (?663/1264-5; Meinecke, 1976, ii, no. 78), but Muḥammad b. K̲h̲awlān's earlier work cannot have been entirely to the sultans' taste, for when his signature recurs, on the Sultan Han near Āḳ Sarāy (Rad̲j̲ab 626*/June 1229), the decoration and profiling are much closer to standard central Anatolian façade compositions. This rapid assimilation shows itself also on the grandest marble façade of all, the porch of the Gök Medrese, Sivas (670*/1271-2), signed by Kālūyān al-Ḳūnawī (the *nisba* doubtless referring to his specialisation in marble-work). Sarre (1936) and Bombaci (1969) also attribute the collection of marbles outside the Citadel gates of Konya (Laborde, 1836) to Kayḳubād I's own personal taste.

In addition to the marble re-used and re-carved in the above monuments, marble fragments were often incorporated unchanged. This is strikingly the case with the walls of the Zazadin Han (courtyard 634*/1236-7), which include a mass of fragments from Byzantine churches, including crosses. However, they could also be treated as part of the decoration, as on the façade of the mosque of Fak̲h̲r al-Dīn ʿAlī (Ṣāḥib Ata) at Konya, where to each side of the entrance a classical sarcophagus supports an ornamentally framed fountain and serves as a base for the whole composition.

Decoration. The different traditions of stone-carving, woodwork, stucco and tile-mosaic in Anatolian Sald̲j̲ūḳ architecture (Öney, 1978) place its decoration among the richest in Islam. The contrast between this lavish decoration and the relatively simple structural forms implies, moreover, that craftsmen's inscriptions on buildings refer not to their architects but to their decorators, either masons or tile-mosaic specialists.

The decorative repertoire, which, strikingly, makes little use of monumental inscriptions, combines, in varying degrees, elements from the traditions of the Caucasus, Transcaucasia (Armenia and D̲j̲ibāl), North Syria and the D̲j̲azīra: common elements include elaborately profiled entrance porches, and surface ornament of interlaces and foliate arabesques (in Ottoman Turkish appropriately termed *rūmī*) punctuated by carved friezes or high-relief sculpture which very often are figural (Otto-Dorn, 1978-9), including both the traditional Muslim court repertory and animals and monsters—dragons, sphinxes, harpies, gryphons and two-headed eagles, many of them shown as if they were heraldic, as on tiles and woodwork too. The only comparable repertory on carved stone is to be found in 12th-century material from G̲h̲azna [*q.v.*], though its treatment is stylistically unrelated.

In south-west and central Anatolia, at Konya, Kayseri, Niğde and Antalya and the caravansarays between them, these diverse traditions are homogeneously amalgamated, but further east one or other of them tends to be locally dominant. The tombstones of Ahlat and, for example, the dragon-compositions on the façade of the Çifte Minare *madrasa* at Erzurum, are barely islamicised versions of Armenian *k̲h̲ačkars* (commemorative cross-stones). The façade of the Çifte Minare *madrasa* at Sivas (670*/1270-1; Rogers, 1974) and the west porch of the Great Mosque at Divriği (626*/1228-9 or later) are both indebted to the canon-tables of Greater or Cilician Armenian Gospel books. The north porch of the latter is heavily influenced *inter alia* by stucco *miḥrābs* recorded from D̲j̲ibāl and the D̲j̲azīra: the building bears two signatures of an Ak̲h̲lāṭī craftsman, K̲h̲urrams̲h̲āh (or K̲h̲urs̲h̲āh) b. Mug̲h̲īt̲h̲, though neither its vaults nor its interior or its exterior decoration are at all reminiscent of Ahlat work (Karamağaralı, 1972; Rogers, 1988).

The influence of the Divriği mosque and hospital is also apparent, considerably moderated, on both the Çifte Minare *madrasa* and the Gök Medrese at Sivas (both 670*/1271-2). Its extravagance has evoked comparisons with the mid-13th century monuments of Konya signed by a craftsman K. l. w. k. b. ʿAbd Allāh (of obscure origins), whose name appears on the mosque of the vizier Fak̲h̲r al-Dīn ʿAlī (656*/1258), on the Ince Minare *madrasa* (?663/1264-5; Meinecke, 1976, ii, no. 78) and on a no longer extant mausoleum, the Nalıncı Baba Türbe (*ibid.*, no. 76): the latter two may also have been endowed by the vizier. However, their relation to the Divriği complex is not apparent and the very marked differences be-

tween the three Konya monuments testify rather to an inherent freakishly eclectic or "Baroque" tendency in Anatolian Saldjūḳ architectural decoration.

Possibly the most remarkable feature of Saldjūḳ monumental façades is the reproduction of entrance porches. A regrettably unpublished photogrammetric survey of the façades of the Çifte Minare *madrasa* at Erzurum (post-1230; Rogers, *Kunst des Orients*, 1974) and the Gök Medrese at Sivas (670*/1271-2) by Alpay Özdural of Middle East Technical University, Ankara, has demonstrated that the latter was copied to scale. Other copies (Ögel, 1966), smaller in size, include the Eşrefoğlu Camii at Beyşehir (699*/1299-1300) and the Hatuniye Medrese at Karaman (783*/1381-2) [see LĀRANDA. 2. Monuments]. The reasons for the popularity of this façade remain unknown and, apart from the Gök Medrese at Sivas which records, probably, the marble-worker involved, none bears a craftsman's name. Their repeated duplication points, anyway, to the employment of techniques described by Byzantine writers on architecture (Downey, 1948) but ill-attested elsewhere in mediaeval Islam.

Patronage. Although in the light of the foundation inscriptions extant, the overwhelming majority of Saldjūḳ buildings appears to have been the work of individual *amīrs* (Rogers, 1976), the sultans may well have been indirectly involved in giving grants of land (*tamlīk*) to found the *waḳfs*. Among individuals who were notably assiduous builders, the primacy is held by the vizier Fakhr al-Dīn ʿAlī (Ṣāḥib Ata), whose attested foundations include a *khān* at Ishaklı (647*/1249-50); the Taş Medrese and a *masdjid* at Āḳ Şehir (648*/1250-1), with a *khānḳāh* there (659*/1260-1); a mosque at Konya (656*/1258); the Sahabiye Medrese and a *sabīl* at Kayseri (665*-666*/1266-7 and 1267) (Akok, 1967); a thermal establishment and a *khān* at Ilgın (666/1267); the Gök Medrese at Sivas (670*/1271-2); a *khānḳāh* at Konya attached to his mosque there (668*/1269-70) and which was later transformed into a family mausoleum (682*/1283-4); and the Tahir or Zühre *masdjid* at Konya (*ca.* 1280). But another high official, the Pervāne Muʿīn al-Dīn Sulaymān [*q.v.*], was almost equally active in the Pontic provinces (Kaymaz, 1970, 187-8). At Sinop he built the Alaüddin Medrese (664*/1265-6, correcting *RCEA* 4505) and a mosque (667*/1268-9), a mosque at Merzifon (663*/1264-5) and the Durak Han near the confluence of the Gök Irmak and the Kızıl Irmak (664*/1265-6). There is also archival evidence that he founded a hospital at Tokat in 674/1275-6. Not surprisingly, Fakhr al-Dīn ʿAlī and Muʿīn al-Dīn Sulaymān were prominent among the high officials of the Anatolian Saldjūḳ sultans to profit from the decline of the central power and establish hereditary, if short-lived, local dynasties.

Tilework. Polychrome and terracotta tilework is widespread in Saldjūḳ Anatolia, though it only exceptionally occurs on the façades of buildings. The earliest uses of glazed-brick or cut faience mosaic in Saldjūḳ architecture (for example, Divriği, Kale Camii 576*/1180-1; Kayseri, Külük Camii, 607*/1210-11, or substantially later (cf. Meinecke, 1976, ii, no. 52); Sivas, Hospital of Kaykāwūs, 614*/1217-18) predate the Mongol invasion of Persia and show strong influence from Djibāl, both Marāgha and Marand, and from the Ildeñizid architecture of Nakhčiwān [*q.v.*; and see Jacobsthal, 1899]. The colours mostly used are turquoise and manganese-purple or -black, but by the 1240s, both cobalt blue and white occur. As the signature of the *bannāʾ* Muḥammad b. Muḥammad b. ʿUthmān al-Ṭūsī on the tile-mosaic of the Sırçalı *madrasa* at Konya (640*/1242-3; Meinecke, 1976, i, 35-45; ii, no. 71) strongly suggests, innovation owed much to refugee craftsmen from Khurāsān or even Ghūrid Harāt. Al-Ṭūsī's workshop at Konya seems to have executed tile revetments from the Citadel Mosque, *ca.* 1235, up to the Büyük Karatay Medrese (649*/1251-2; Meinecke, 1976, ii, no. 75). This last houses by far the most elaborate decoration of any Anatolian Saldjūḳ monument, including large areas of cut faience mosaic and mosaics of relief-carved elements in turquoise and manganese-purple, as well as dadoes of hexagonal turquoise tiles with fired gilt decoration. The last elaborate tile mosaic decoration at Konya is in the funerary *khānḳāh*, dated 678*/1279-80 and restored in Muḥarram 682*/April 1283 (Meinecke, ii, no. 79 and 89), which the vizier Fakhr al-Dīn ʿAlī (Ṣāḥib Ata) added to his mosque (656*/1258). The revival of tile-mosaic in late 13th century Īl-Khānid Persia is very probably indebted to Anatolian craftsmen conscripted by Ghāzān Khan for the works he ordered at Tabrīz and elsewhere.

An even more characteristic feature of Anatolian Saldjūḳ architectural decoration is star and cross-tiles for the dadoes of palaces at Konya, Antalya, Ḳubādābād, Kayḳubādiyya and Diyarbekir [*q.vv.*], for the bath built at Kayseri by Huant (Khʷānd) Hatun, the wife of Kayḳubād I in Shawwāl 635*/May-June 1238 and in the Roman theatre at Aspendos. The Ḳubādābād-Huant Hatun-Aspendos group is technically varied (Öney, 1974; 1978) including underglaze-painted, lustre-painted and sgraffiato tiles, with a rich repertory of human figures, animals, birds, Zodiac and planet figures and monsters, many of them, as on Saldjūḳ stonework, displayed in quasi- or pseudo-heraldic fashion: it has not been demonstrated that any of them were either personal or dynastic heraldic emblems (Rogers, 1977-8). Stylistically many of the tiles show closer similarities to underglaze-painted wares from Raḳḳa [*q.v.*] and other Euphrates potteries than to 13th century Kāshān tilework. But the lustre-painted tiles from Ḳubādābād and the tiles from Kayḳubādiyya are *sui generis* (cf. Aslanapa, 1965, Plates 5-8).

Stucco. The most elaborate uses of carved and moulded stucco in architectural decoration are the figural reliefs from the Saldjūḳ palaces. They include a fine frieze with a mounted dragon-slayer and a lion-slayer from Konya, TIEM 2831, and animal friezes and frames for windows, niches or wall-cupboards with phoenixes in the spandrels of their broken arches from Ḳubādābād, now in the Konya Musuem. In Sarre's view (1909, 22) the stone window hood in the TIEM (Kühnel, 1938, Pl. 7) was mistakenly attributed to Diyarbekir and is actually from Konya (or Ḳubādābād). Very similar fragments, now in the Historical Museum, Erevan, were discovered at Ānī [*q.v.*; cf. Marr, 1934], and phoenixes also decorate spandrels on the façades of the church of Tigran Honents (1215) there. This should, however, be seen in the context of the evident taste of the Mkhargrdzeli governors of the city for Anatolian Saldjūḳ decoration (Rogers, 1976).

In religious buildings, stucco was often used as a plain white ground for faience-mosaic inlay. The *miḥrāb* of the Ahi Şerefüddin or Arslanhane Camii at Ankara (*minbar* dated 688*/1289-90), however, brilliantly combines carved stucco inscriptions and pilasters with ceramic mosaic inlay, foreshadowing the elaborate carved stucco of early 14th century Īl-Khānid Persia.

(b) *The minor arts.*

Woodwork. Anatolia has always been rich in

wood, and the wood-carving of the Anatolian Saldjūķs, often in solid walnut, is among the finest in Islam. It was used not only for *minbars* and other mosque furniture, doors and sets of window-shutters, but also for cenotaphs and folding Ķurʾān-stands (*rahle*) ingeniously carved from a single plank (Çulpan, 1968). Techniques included lattices of turned wood (*mashrabiyya* [*q.v.*]) and tongue-and-groove panelling of polygons and stars set in a strapwork skeleton (*kündekārī*), as well as imitations of this worked on solid planks. On *minbars*, the names of scribes or calligraphers frequently appear alongside the craftsman's name: the latter describe themselves variously as *miʿmār*, as on the cenotaph of Djalāl al-Dīn Rūmī at Konya (5 Djumādā II 672*/17 December 1273; cf. Meinecke, 1976, ii, no. 84: the form of the original building is unknown), *bannāʾ*, and *nadjdjār*. Although on the earliest of the known series of Anatolian Saldjūķ *minbars*, from the Great Mosque at Āķ Sarāy, bearing the names of Masʿūd I and Ķilidj Arslān II and datable therefore pre-550/1155, a certain Khwādja Nūshtekīn al-Djamālī is named as *miʿmār al-masdjid wa 'l-minbar*, this must record not his workmanship but the official installation of the *minbar* which turned the *masdjid* into a Great Mosque.

Other important Saldjūķ wooden *minbars* (Oral, 1962) include those from the Citadel mosque at Konya (Radjab 550*/September 1155); the Great Mosque at Siirt (611*/1214); the Great Mosque (Muḥarram 621*/January-February 1224 [Arık, 1969] and 638*/1240-1) at Malatya [*q.v.*]; and those from the Arslanhane Camii and the Kızıl Beg Camii at Ankara (689*/1290-1 and 699*/1299-1300, respectively) the work of a *nadjdjār* who also built the *minbar* of the Great Mosque at Çorum. The finest of the series is the *minbar* of the Great Mosque at Divriği (638*/1240-1), the work of Aḥmad b. Ibrāhīm al-Tiflīsī and a scribe Muḥammad, with *mashrabiyya* balustrades, grandly designed inscriptions and heavily undercut foliate arabesques. Wooden window-shutters and remains of a "Royal box" up in the rafters (Tükel-Yavuz, 1978), though in rather different styles, are equally sumptuous. The occurrence of *nisbas* among the woodworkers' names relating to Akhlāṭ and Tiflīs/Tbilisi may or may not be significant. Even the Divriği *minbar* gives way, however, to the *rahle* for the mausoleum-shrine of Djalāl al-Dīn Rūmī at Konya (678*/1279-80) (Konya Museum 352; Riefstahl, 1933) with rich carving on the outside and with painting inside of compositions of two-headed eagles and lions in scrolling arabesques under yellow varnish.

Ceramics and glass. Apart from finds of frit-ware at the Citadel in Konya (Akok, Alaüddin Köşkü, 1968), now in the Konya Museum, possibly made by craftsmen brought in from Raķķa or other Euphrates potteries, most Anatolian Saldjūķ pottery belongs to the large family of polychrome-stained sgraffiato wares manufactured in the Eastern Mediterranean from Cyprus to the Caucasus and Transcaucasia and the Black Sea. The Anatolian material is still undifferentiated and little, if anything, is known of where it was made; but, not surprisingly, figural decoration is conspicuous and close parallels to much of it have been excavated at Örenkale/Baylakan [see ÖRENKALE in Suppl.] in Ādharbaydjān (Yessen, 1959, Pls. I-XII). Heavy unglazed relief-wares, mostly crocks with lively animal-friezes, found at Ānī and other Eastern Anatolian sites (e.g. TIEM 1964) have also been found in quantity at Örenkale (Yessen, 1959, 192-205). Excavations at Ahlat, now in progress (cf. Karamağaralı, 1981), have also brought a wide range of kiln material to light and claims have been made that lustre-wares were made there.

The only recorded piece of fine glass from Saldjūķ Anatolia must have been a special commission. This is a gilt and enamelled dish found at Ķubādābād, typically Syrian in manufacture, in the name of Kaykhusraw II (Otto-Dorn *et alii*, 1966; 1969-70).

Metalwork. Although Saldjūķ objects in precious metal with an Anatolian provenance are so far absent, the rich finds of silver and silver-gilt belt-trappings and drinking cups from 13th-14th century steppe-burials in South Russia, the Crimea and the northern Caucasus are evidence that Saldjūķ Anatolian silver- and goldsmith's-work was exported northwards (cf. Marshak and Kramarovsky, 1993), creating a tradition which was continued *in situ*, probably by Armenian goldsmiths and jewellers. Brass and steel were also worked, though many categories of object are represented by single specimens. South-eastern Anatolia and the Djazīra are particularly well represented. Significant numbers of mortars with cast and engraved decoration have come from Diyarbekir; and a group of cast candlesticks sparingly inlaid with silver have been attributed to Siirt (Allan, 1978). Two large 12th or 13th century drums engraved with human-headed Kufic and fine scrolls (TIEM 2832-3) were also discovered at Diyarbekir. And although the doors made by al-Djazarī (Hill, 1974, 191-5) for the palace of the Artuķid ruler at Diyarbekir with cast brass plates inlaid with copper and silver and knockers of confronted dragons and knobs in the form of a lion's head have not survived, they were much imitated. Knockers of this type and brass plaques from the doors of the Ulu Cami, Cizre, bear the remains of an inscription in the name of Sandjar Shāh, Atabak of Djazīrat Ibn ʿUmar [*q.v.*] in 1208 (*The Anatolian civilisations*, iii, 1983, D. 95). Dragon-knockers, in varying sizes and for other buildings include that in Berlin, Museum für Islamische Kunst I. 2242.

Other metalwork well represented from finds in Anatolia includes zoomorphic padlocks of well-known mediaeval Persian or Syrian type, brass/bronze mirrors and cast brass dirham ring-weights for steelyards. Types represented by single specimens are an open-work mosque-lamp from the Eşrefoğlu Camii at Beyşehir (Ankara, Etnografya Müzesi 7591) made in 699*/1299-1300 by a craftsman ʿAlī b. Muḥammad from Nuṣaybīn, evidently for the inauguration of the mosque; and an open-work cast brass set-square (Kocabaş, 1963), now in the Sadberk Hanım Museum in Istanbul. Evidence for fine steel-working, moreover, is a mirror inlaid in gold (Topkapı Saray Museum 2/1792; cf. Rice, 1961) with a rider trampling a dragon and with a procession of animals and monsters round the edge.

Manuscript illustration. Too few illustrated manuscripts have survived from mediaeval Anatolia to speak of school of painting there, and the two most important of those that do, the automaton book of al-Djazarī [*q.v.* in Suppl.], Topkapı Saray Library A. 3472 (Shaʿbān 602/April-May 1205), and the Dioscorides in the Shrine Library, Mashhad (Grube, 1959, 163-4), datable 542-72/1152-76, were executed for Artuķid, not Saldjūķ patrons. The *Romance of Warķa and Gulshāh*, Topkapı Saray Library H. 841, may well have been executed at Konya *ca.* 1240 (Ateş 1961; Melikian-Chirvani, 1970; Özergin, 1970), though by a painter of north-west Persian origin. A magical miscellany presented to Kaykhusraw III, Bibliothèque Nationale pers. 174 (Barrucand, 1990), dated variously Ramaḍān 670/April 1272 and mid-

Shawwāl 671/early May 1273, was, however, written partly at Āḳ Sarāy and partly at Kayseri. Many of its illustrations, of demons, angels and marvels, are of later date and the only original illustrations appear to be line-drawings of talismans.

Figural coinage. As with their neighbours, the Turcoman dynasties of northern Syria and the Djazīra, issues of figural types are common in the coinage of Saldjūḳ Anatolia. The prototypes are similarly varied (cf. Brown, 1974), Hellenistic, Roman and Byzantine, but other types bear Zodiac or planet figures, animals and monsters, some perhaps heraldic, and, in particular, the Lion and the Sun (*Shīr ū Khurshīd*). This device is most characteristic of the coinage of Kaykhusraw II, but the claim, following contemporary historians, that he adopted it at the behest of his Georgian wife, Rusudan (Gürcü Hatun), has not been proved. For a fuller discussion of these questions, see below, section VIII. 2.

Textiles. A silk with double-headed eagles and dragon-headed scrolls formerly in the church of St. Servatius, Siegburg (now Berlin, Kunstgewerbemuseum, 81.745) which has been attributed by Sarre to an Anatolian manufactory, and a medallion silk with addorsed lions in the Musée des Tissus, Lyons, bearing an inscription in the name of Kayḳubād b. Kaykhusraw, Kayḳubād I (or Kayḳubād III), is evidence for a silk industry in 13th century Anatolia. There is also copious literary evidence for the widespread manufacture of floor-coverings by nomads, perhaps, however, flat-weaves, not pile carpets. It is difficult to say what they looked like, but varied and undoubtedly ancient fragments from the Citadel Mosque at Konya, the Eşrefoğlu Camii at Beyşehir (Riefstahl, 1931) and the Great Mosque at Divriği are often accepted to be Saldjūḳ in date. Both relative and absolute chronologies are, however, lacking. No evidence, moreover, has been found that carpets were yet being exported to the northern Mediterranean countries.

VII. Literature

1. In Persia and ʿIrāḳ

The Saldjūḳs were important patrons of Persian and, to a lesser extent, also of Arabic belles-lettres. In this article we shall begin by looking at the panegyric poetry directed towards them (it is here that the relationship between patron and client is most immediately obvious) before taking a briefer look at the narrative and didactic poetry and the literary prose that were composed under their patronage.

Generally speaking, the great majority of the *ḳaṣīdas* dedicated to the Saldjūḳ *amīrs* are in Persian, while the contemporary Arabic language poets more commonly direct their panegyrics to the *wazīrs* and other educated members of the bureaucracy; this contrasts with the situation under the Būyids, whose knowledge of Arabic and whose appreciation of Arabic poetry were evidently superior to those of the Saldjūḳ ruling family. The earliest major literary figure in the entourage of the Saldjūḳs was the bilingual writer ʿAlī b. al-Ḥasan al-Bākharzī (died 467/1075 [*q.v.*]). He was closely attached to Ṭoghrïl's minister al-Kundurī and is best known as the author of the *Dumyat al-ḳaṣr wa-ʿuṣrat ahl al-ʿaṣr*, an anthology of contemporary Arabic poets in the manner of and in continuation of al-Thaʿālibī's celebrated *Yatīmat al-dahr*. His Arabic *dīwān* is extant (see O. Rescher, in *RSO*, iv [1911-12], 726) but unpublished, though some of the poems are known from biographical sources. A few samples of his Persian verse, among them several *rubāʿiyyāt*, are quoted by ʿAwfī (*Lubāb*, i, 68-71).

Lāmiʿī Gurgānī [*q.v.*] is the author of an extant *dīwān* in Persian. He began his career as a panegyrist of the Ziyārid ruler of his native Gurgān, Anūshirwān b. Manūčihr, but then passed into the service of the Saldjūḳs. His *dīwān* contains poems in praise of al-Kundurī and Niẓām al-Mulk, as well as of the *amīr* Alp Arslan.

Azraḳī Harawī [*q.v.*] flourished under two Saldjūḳ princes (the ruler of Harāt Abu 'l-Fawāris Ṭoghānshāh b. Alp Arslan and his cousin Abu 'l-Muẓaffar Amīrānshāh), and has left a Persian *dīwān* consisting largely of poems in praise of these two men. Niẓāmī ʿArūḍī (*Čahār maḳāla*, ed. Ḳazwīnī, London-Leiden 1910, 43-4) singles out Ṭoghānshāh as a particularly generous patron of poetry and lists another half-dozen poets who served at his court, but all their works are now lost apart from stray verses.

During the early part of the reign of Malik Shāh, the young poet Muʿizzī Naysābūrī [*q.v.*] inherited from his father, Burhānī, the position of "prince of the poets" (*amīr al-shuʿarāʾ*); he was, in other words, the head of the bureaucratically organised hierarchy of professional panegyrists (or in any event of those who wrote in Persian) who congregated at the Saldjūḳ court. His extensive *dīwān* contains odes to the *amīrs* from Malik Shāh down to Sandjar, to their ministers and various other persons. He lived perhaps until the middle of the 6th/12th century.

Among the Arabic panegyrists of Niẓām al-Mulk we can mention Aḥmad b. ʿAbd al-Razzāḳ al-

Ṭanṭarānī, the author of an elaborate *ḳaṣīda tardjīʿiyya* in praise of the minister. Al-Ḥusayn b. ʿAlī al-Ṭug͟hrāʾī al-Iṣbahānī (453-515/1061-1121 [*q.v.*]), was a secretary under Malik S͟hāh and his son Muḥammad I and then *wazīr* to the latter's son Masʿūd during his ill-fated rebellion against his brother Maḥmūd II. His Arabic *dīwān* contains odes to Muḥammad and Masʿūd, to Niẓām al-Mulk and his son Muʾayyad al-Mulk, and to other high-ranking officials. He has also left a number of books on alchemy. Ibrāhīm b. ʿUt͟hmān al-G͟hazzī (441-524/1049-1130 [*q.v.* in Suppl.]), whose *dīwān* still awaits publication, praised Malik S͟hāh and Sandjar, but especially the *wazīr* of the ruler of Kirmān, Mukarram b. al-ʿAlāʾ. The extensive *dīwān* of Aḥmad b. Muḥammad al-Arradjānī [*q.v.*] contains a few poems to Muḥammad b. Muḥammad b. Malik S͟hāh and his brother Maḥmūd, but the majority are dedicated to the *wazīrs* of the Saldjūḳs, especially to the sons of Niẓām al-Mulk.

During the long reign of Sandjar, a large number of Persian poets frequented his court; we can restrict ourselves to those whose *dīwāns* have actually survived. After the death of the already mentioned Muʿizzī, Sandjar's pre-eminent panegyrist appears to have been Awḥad al-Dīn Anwarī [*q.v.*]. According to Djuwaynī (ii, 8), he accompanied the *amīr* when, in 542/1147, the latter laid siege to the K͟hʷārazm S͟hāh Atsïz in Hazārasp and participated in the campaign by writing poems mocking the enemy, which Sandjar's archers shot into the besieged fortress. Atsïz retaliated by doing the same with verses of his court-poet and secretary, Ras͟hīd al-Dīn Waṭwāṭ [*q.v.*] (who on other occasions also wrote poems in praise of Sandjar). Anwarī survived his master and went on to serve Sulaymān b. Muḥammad and others. Another poet whose services to Sandjar went beyond the purely literary was Adīb Ṣābir [*q.v.*] whom the Saldjūḳ ruler sent as a spy to the court of the just-mentioned Atsïz, where he was apprehended and executed.

The *dīwān* of ʿAbd al-Wāsiʿ Djabalī [see ʿABD AL-WĀSIʿ] consists largely of panegyrics to Sandjar and to various persons of his entourage, notably his son-in-law, the vassal ruler of Sīstān, the Naṣrid Malik of Nīmrūz Naṣr (II) b. K͟halaf, but he also eulogised the Saldjūḳ ruler of Kirmān, Arslan (I) b. Kirmāns͟hāh, and others.

Sayyid Ḥasan G͟haznawī [*q.v.*] began his poetic career as a panegyrist of the G͟haznavid Bahrāms͟hāh, but later attached himself to the more opulent Saldjūḳ court. He wrote poems for Sandjar, composed an elegy on the death of Masʿūd II and poems celebrating the coronation of Malikṣ͟hāh III and of Sulaymān b. Muḥammad before finally attaching himself to the Ḳarak͟hānid Maḥmūd II.

The satirical poet Sūzanī Samarḳandī was attached to the court of the Ḳarak͟hānids, but on occasion also dedicated laudatory odes to Sandjar. ʿAmʿaḳ Buk͟hārī [*q.v.* in Suppl.] was, according to Niẓāmī ʿArūḍī (*op. cit.*, 46), the *amīr al-s͟huʿarāʾ* at the court of the Ḳarak͟hānid K͟hiḍr b. Ibrāhīm; his extant poems are mostly dedicated to K͟hiḍr and to his brother and predecessor Naṣr b. Ibrāhīm, but include also one poem to Naṣr's brother-in-law Sandjar, and Dawlats͟hāh (64-5) says that when Sandjar's daughter Māh-i Mulk K͟hātūn died (in 524/1130), the *amīr* commissioned the by then elderly ʿAmʿaḳ to write an elegy.

The Persian panegyrists of the Saldjūḳs of Western Persia after the time of Sandjar include At͟hīr Ak͟hsīkatī, who praised Arslan b. Ṭog͟hrïl and others. ʿImādī G͟haznawī [*q.v.*], most of whose poems praise the Bāwandid prince Farāmarz b. Rustam, also sent a number of poems to the Saldjūḳ Ṭog͟hrïl II. S͟haraf al-Dīn S͟hufurwa, besides serving the Atabegs of Ād͟harbāydjān, also dedicated poems to Arslan b. Ṭog͟hrïl and to Ṭog͟hrïl III. Another court poet of the Eldigüzids who on occasion composed odes to the Saldjūḳ *amīr* was Mudjīr al-Dīn Baylaḳānī.

The Saldjūḳs were the dedicatees of several important works of narrative and didactic poetry in Persian rhymed couplets. The romantic epic *Wīs u Rāmīn* of Fak͟hr al-Dīn Gurgānī [*q.v.*] contains a dedication to Ṭog͟hrïl I, to his minister Abū Naṣr b. Manṣūr and his governor in Iṣfahān, Abu 'l-Fatḥ b. Muḥammad, the poet's actual patron. Malik S͟hāh is the dedicatee of an anthology of verses from Firdawsī's *S͟hāh-nāma* compiled in 474/1081-2 by an otherwise unknown ʿAlī b. Aḥmad. Two long heroic epics in the style of Firdawsī's poem, the *Bahman-nāma* and the *Kūs͟h-nāma*, are the work of a single anonymous author, who dedicated them to Muḥammad b. Malik S͟hāh.

One important author of Arabic narrative poetry flourished in the same period, namely Ibn al-Habbāriyya [*q.v.*]. His versification of the book of *Kalīla wa-Dimna* under the title *Natāʾidj al-fitna fī naẓm Kalīla wa-Dimna* was dedicated to the minister Madjd al-Mulk. Later, he composed a collection of apparently original stories in verse with the title *al-Ṣādiḥ wa 'l-bāg͟him*. He ended his days as a poet at the court of the Saldjūḳ ruler of Kirmān, Īrāns͟hāh.

The most important Persian narrative poet of the 6th/12th century, Niẓāmī [*q.v.*], had at least a tangential connection with the Saldjūḳs in so far as he dedicated the first of his romantic epics, *K͟husraw u S͟hīrīn*, to the Atabeg of Ād͟harbāydjān Muḥammad Djahan-Pahlawān b. Eldigüz and included in it a eulogy on his patron's nominal master, Ṭog͟hrïl III. But all his other works are dedicated to local rulers of Transcaucasia and northern ʿIrāḳ.

The last major poet of the Saldjūḳs was Aḥmad b. Maḥmūd Ḳāniʿī, a native of Ṭūs who fled his homeland at the time of the Mongol invasion and made his way (via India, Aden, the Holy Cities and Bag͟hdād) to Anatolia, where he served the Rūm Saldjūḳ Kay Ḳubād I and his successors Kay K͟husraw II and Kay Kāwūs II, to whom he dedicated a Persian versification of (once again) *Kalīla wa-Dimna* in 658/1260. He is presumably identical with the *malik al-s͟huʿarāʾ amīr* Bahāʾ al-Dīn Ḳāniʿī of whom Aflākī (*Manāḳib al-ʿārifīn*, ed. Tahsin Yazıcı, Ankara 1959-61, 221, 322) says that he visited Mawlāna Djalāl al-Dīn Rūmī during his lifetime and, again (*ibid.*, 595), that he was among those who paid their respects at Rūmī's grave after he died in 672/1273. This produces at least an indirect link between the Saldjūḳs of Rūm and Rūmī, the most famous poet who lived in their domain.

The best-known work in Persian prose emanating from the Saldjūḳ courts is doubtless the *Siyāsat-nāma* (alias *Siyar al-mulūk*) of Malik S͟hāh's minister Niẓām al-Mulk. Apart from this, a number of major Persian historical works were dedicated to the Saldjūḳ rulers; these include the *Fārs-nāma* of Ibn al-Balk͟hī [*q.v.* in Suppl.] (dedicated to Muḥammad b. Malik S͟hāh), the Persian history of Anūs͟hirwān b. K͟hālid [*q.v.*], who was *wazīr* to Maḥmūd II and Masʿūd (not extant, but its contents are known from the Arabic version by al-Bundarī), the *Saldjūḳ-nāma* of Ẓahīr al-Dīn Naysābūrī [see NĪS͟HĀPŪRĪ] and its continuation, the *Rāḥat al-ṣudūr* of Rāwandī [*q.v.*] (dedicated to the Rūm Saldjūḳ Kay K͟husraw I). A survey of Saldjūḳ literature would hardly be complete without at least mentioning the celebrated astronomer and amateur poet in Arabic, ʿUmar K͟hayyām [*q.v.*], who flour-

ished at the court of Malik S͟hāh, although his claim to a place in the history of Sald͟jūḳ belles-lettres rests on the Persian *rubāʿiyyāt* and the *adab* composition *Nawrūz-nāma* that have been ascribed to him but are both of more than questionable authenticity.

Although the Sald͟jūḳs were not the first Islamic dynasty to use Persian as the language of their court (the Sāmānids, Ziyārids and G͟haznavids had done so before them), they were the first to do so in an empire which encompassed the greater part of the Persian-speaking world. This meant that the Persian of the Sald͟jūḳ writers inevitably played a tremendous role in the standardisation of the classical Persian language and can indeed be said to represent classical Persian par excellence, as opposed to the pre-classical language of the previous period with its many local and dialect features. Similarly, the style of the Sald͟jūḳ poets set the standard for later periods. Although the Sald͟jūḳ *ḳaṣīda*, like that of the older K͟hurāsānian school of Persian poetry, stands very clearly under the influence of Arabic models, the nature of these models had shifted; while the K͟hurāsānian school had, on the whole, emulated the ancient Arabic poets of the *D͟jāhilī* and Umayyad periods, the Sald͟jūḳ poets imitated the highly mannered style of the "modern" poets from the time of al-Mutanabbī onwards. It is this style which continued to dominate Persian literature until the dawn of the modern era.

Bibliography: For the individual Arabic and Persian authors discussed in this article, see the relevant entries in Brockelmann and Storey-de Blois respectively. For a detailed survey of the Arabic poets, see also ʿAlī D͟jawād al-Ṭāhir, *al-S͟hiʿr al-ʿarabī fi 'l-ʿIrāḳ wa-bilād al-ʿad͟jam fi 'l-ʿaṣr al-Sald͟jūḳī*, Bag͟hdād 1958-61, 2nd ed., Beirut 1405/1985. (F.C. de Blois)

2. In Anatolia

As noted above, in sections IV. 2 and V. 2, the high culture and the administration of the Sald͟jūḳ Sultanate was essentially a Persian one, and it was in this language that works in such fields as historiography and, in part, mysticism, tended to be composed. Of contemporary historians, notable is Ibn Bībī's [*q.v.*] history of the Rūm Sald͟jūḳs, *al-Awāmir al-ʿalāʾiyya*, completed in 680/181, covering the history of the preceding ninety years and existing in the original Persian full version and an epitome and in a later Turkish paraphrase. Other important sources on Rūm Sald͟jūḳ history, such as Karīm al-Dīn Maḥmūd Aḳsarāyī's *Musāmarat al-ak͟hbār*, Ḳāḍī Aḥmad's *al-Walad al-s͟hafīḳ* and the anonymous *Taʾrīk͟h-i āl-i Sald͟jūḳ*, actually stem from the 8th/14th century. But we know of the existence of other historical or para-historical works written during the 7th/13th century and now lost, such as the *S͟hāh-nāmas* extolling the deeds of the Rūm sultans by Aḥmad Ḳāniʿī and K͟hʷād͟ja Dahhānī, the latter commissioned by ʿAlāʾ al-Dīn Kay Ḳubād͟h (in Köprülü's view, Kay Ḳubād͟h III, hence almost at the end of the family's life), producing 20,000 couplets on the dynasty's exploits.

Mystical theology and that branch of biographical literature devoted to the lives of Ṣūfī saints (the *manāḳib-nāmas*) flourished exceedingly in the strong mystical atmosphere and tradition of the age (see above, section IV. 2). The towering figure of Rūmī produced during his residence at Konya his poetic *dīwān* and his masterpiece, the *Mat͟hnawī*, and he was followed by his son Sulṭān Walad, proficient both in Persian and Turkish (see below). Nad͟jm al-Dīn Rāzī Dāya wrote his *Mirṣād al-ʿibād* in Sivas but dedicated it to Kay Ḳubād͟h I and finally settled at Konya. Several *manāḳib-nāmas* were written about the famous saints of Sald͟jūḳ Anatolia, those of the Mawlawīs attracting particular attention, although the outstanding and most informative work in this genre, the *Manāḳib al-ʿārifīn* of S͟hams al-Dīn Aflākī [*q.v.*], dates from the first half of the 8th/14th century, hence after the demise of the Sald͟jūḳs.

Arabic naturally retained supreme prestige as the language of dogmatic theology, law and science, and Anatolia became, in particular, a centre for the production, transmission and copying of Ḥanafī *fiḳh* texts. But Arabic was also a language used for mystical theology, as seen in the prolific works of Ibn al-ʿArabī, some of these being composed during his stays in Konya and other Anatolian towns during the early 7th/13th century (see above, IV. 2); thus his mystical poetic work the *Tard͟jumān al-as͟hwāḳ* was completed at Kayseri, and his disciple Ṣadr al-Dīn Ḳūnawī was the author of numerous works in Arabic, including commentaries on the Ḳurʾān, *Ḥadīt͟h* and the Ninety-Nine Most Beautiful Names of God, and works in the field of theoretical Ṣūfism.

All of these works emanated from learned or courtly circles in Rūm, but the day-to-day language of the Turkish masses, urban as well as rural, was of course Turkish. Although the Ḳaramānids' introduction of Turkish as the official language for the *dīwāns* in Konya (see above, section V. 2) was only a brief interlude, it served to demonstrate the fact that an adoption of Turkish for public purposes was now a practical possibility. However, the literary use of Turkish in the Sultanate was for long at the popular, folk-literature level. Little from this has survived. An anonymous *S͟heyk͟h Ṣanʿān ḳiṣṣaṣi* of unknown date was handed down by Güls͟hehri (d. after 717/1317 [*q.v.*]), and a *Ṣalṣāl-nāme* in verse and prose by a poet S͟heyyād ʿĪsā describes the caliph ʿAlī's struggle with the giant Ṣalṣāl. Such works reflected the contemporary spirit of *g͟hazw* evident also in the oldest-preserved work of the class of popular epics, the *Sald͟jūḳ-nāme*, existing in both long and short versions, and the *Dānis͟hmend-nāme* on the heroic deeds of Dānis͟hmend G͟hāzī composed by Ibn al-ʿAlāʾ at the command of sultan Kay Kāwūs II.

But when it came to literature of a more elevated, artistic order, Turkish had an uphill fight to establish itself, and for long authors writing in it excused themselves for not using Persian or Arabic, Turkish being still regarded as the tongue of ignorant peasants or nomads, the *Atrāk-i bī-idrāk*. Rūmī included a few Turkish verses in his work, and from his long stay in the Sald͟jūḳ capital must have been fully conversant with the language; but his son Sulṭān Walad can definitely be regarded as a significant Turkish author, for there are at least 367 Turkish verses scattered through this works, couched in a simple style and probably aimed at spreading Mawlawī ideas amongst the people. A contemporary of Rūmī's was the Ṣūfī poet Aḥmed Faḳīh of Konya, whose mystical *Čark͟h-nāme* was a forerunner of Mawlānā's work; though brief, it constitutes the first complete work in Anatolian Turkish. In addition to a *mat͟hnawī* on the Yūsuf and Zulayk͟hā theme, Aḥmed Faḳīh's pupil S͟heyyād Ḥamza left examples of secular, court poetry apparently written for the Turco-Mongol official classes of his time and milieu, whilst the K͟hʷād͟ja Dahhānī mentioned above wrote both Persian and Turkish court poetry at the very end of the Sald͟jūḳ period. Finally, it was at this time, and in the years immediately after the disappearance of the sultans, that the greatest poet in early Turkish, stemming from northwestern Anatolia, Yūnus Emre (*ca.* 648-720/*ca.* 1250-1320 [*q.v.*]) produced his moving Ṣūfī

poetry. With this poet's later career, we enter the age of the *beyliks*, when the formation of several provincial capitals was to provide fresh opportunities for writers in Turkish.

VIII. Numismatics

1. In Persia and ʿIrāḳ

Coins were struck by all branches of the Saldjūḳ dynasty, but in widely varying quality and quantity. They were all Sunnī in character, acknowledging the spiritual leadership of the ʿAbbāsid caliphate, and inscribing the name of the reigning caliph in a place of honour where it proclaimed the ruler's support of orthodoxy. Despite their great domains, the Saldjūḳs never established an imperial coinage on the pattern of the Umayyads or early ʿAbbāsids, but were content to adapt themselves to coinage patterns previously established by the Buwayhids, Kākūyids or Kākawayhids and Ghaznawids [*q.vv.*]. Their coinage thus tends to be strongly regional in character, reflecting the general economic conditions in each of the major areas under their control. In order to facilitate trade, the alloy of regional coinages tended to be similar to the currencies of neighbouring states, such as the Fāṭimids in the west and the Ḳarakhānids and Ghaznawids in the east. The regional nature of the coinage was further emphasised by princes and governors who struck coins in their own name whenever they were permitted to, or when they felt their power was great enough to seize this privilege.

The origin of the complexity stemmed from the Saldjūḳ family's sudden coming to power fresh from lands beyond the frontiers of the *Dār al-Islām*. Their social organisation was that of central Asian nomads where tribal sense was strong but whose experience of oriental monarchy, imperial bureaucracy, or even coinage itself, was almost non-existent. The Saldjūḳs had very little time to adapt themselves to their sudden good fortune, and their history reveals that behind a façade of Islamic kingship lay a deeply ingrained lack of dynastic discipline, added to which their followers did not easily transform themselves into docile town-dwellers.

The nature of the Saldjūḳ state was fissiparous from the outset. After the battle of Dandānḳān [*q.v.* in Suppl.] in 431/1040, the Saldjūḳ conquests were divided amongst the family whose principal members all appear to have enjoyed the right of *sikka* [*q.v.*]; see above, II. and III. on the various branches of the family which evolved.

Most of the surviving Saldjūḳ coinage is struck in gold. There are a few fine silver dirhams, some billon coinage and a small number of copper *fulūs*. The gold dīnārs were not struck to a fixed weight standard, but the weight range of most lies between two and five gr. In the mints from Nīshāpur westwards, the flans were manufactured from virtually pure gold, as was the custom elsewhere in the Islamic world of the time. In the east, the Saldjūḳs followed the example of the mint of Ghazna by using base gold in the form of electrum for their dīnārs. The near-absence of silver coinage is one of the chief features of the monetary history of the Middle East between 450 and 570/1058-1175. As the minor coinage metal, silver does not appear to have been replaced by copper until the second quarter of the 6th/11th century, and no glass token currency was in circulation as it was in Fāṭimid Egypt. Thus while the nobility, army and great merchants were obviously paid and dealt in gold, it is far from clear how the daily economy was financed.

The family member who struck the most abundant coinage was Ṭoghrïl Beg, who had the good fortune to acquire the great mint towns of Nīshāpur in 432/1040-1, al-Rayy in 434/1042-3, Iṣfahān in 443/1051-2 and Baghdād (*Madīnat al-Salām*) in 447/1055. These mints, plus a considerable number of lesser ones, issued very large quantities of high-quality gold dīnārs in Ṭoghrïl's name until his death in 455/1063. Ḳara Arslan Ḳawurd also struck a plentiful coinage in Kirmān, principally from the mints of Bardasīr and Djīruft. The coinages of Čaghrï Beg, Mūsā Yabghu and Ibrāhīm Ināl, however, are all very rare, reflecting either the poverty of eastern Khurāsān after the Saldjūḳ conquest or the nomads' inability to form a stable administrative system which could organise and sustain a sophisticated coinage.

Ṭoghrïl was succeeded by his nephew Alp Arslan in 455/1063 who, as governor of Harāt before his accession, struck coins on which he acknowledged his father Čaghrï as overlord. His coinage appears to have been somewhat less abundant than Ṭoghrïl's. Under Alp Arslan's son and successor Malik Shāh (465-85/1072-92), the plentiful coinage of dīnārs continued on the same pattern as before, although the use of electrum dīnārs apparently declined in the eastern mints, as it did with the contemporary Ghaznawids.

The succession struggles among Malik Shāh's sons were reflected in their complex coinages, but the decline in the quality and quantity of the coins themselves also reveals that the economy was gradually being ruined as a result of these conflicts. Nāsir al-Dīn Maḥmūd's coins are rare because of the confusions of his brief reign in Iṣfahān, 485-87/1092-4. After the death of his father, Rukn al-Dīn Berkyaruḳ first issued coinage at Rayy, and quickly established himself in power elsewhere because he was both older and more experienced than his brothers. After a turbulent reign, Berkyaruḳ was succeeded in 498/1105 by Ghiyāth al-Dīn Muḥammad. The last Great Saldjūḳ was Malik Shāh's youngest son, Muʿizz al-Dīn Sandjar, governor of Khurāsān from 490/1097, who was looked up to as the nominal head of the family until his death in 552/1157. There were also parallel lines of Saldjūḳ rulers in ʿIrāḳ Persia, Kirmān and Syria (see above, III.). The ruling members of these families normally acknowledged the overlordship of the Great Saldjūḳs on their coins.

The conspicuous decline in the quality of the currency during the 6th/12th century was due to structural problems within the Saldjūḳ state, which had no central bureaucracy that could impose uniform standards for the coinage and oversee its production. The ruler did not govern the cities in his realm directly, but through the agency of members of his family, their Atabegs [*q.v.*], *amīrs* of his army or locally powerful semi-independent governors, many of whom included their names on the coins they issued after those of the caliph and their principal overlords. The presence of these names makes the study of the later Saldjūḳ coinage particularly useful to the historian but their elucidation is greatly complicated by the fact that many of the pieces were so carelessly manufactured that their legends are often mis-struck, or the margins are missing from the flan. Thus it is often impossible to read the mint names and dates of striking. The coinage of the later Saldjūḳs leads on to that of their

successors, such as the revived ʿAbbāsid caliphate in Baghdād, the Zangids in Mawṣil, the Artuḳids in Ḥiṣn Kayfā and Mārdīn, the Ildegizids in Ardabīl and the Salghūrids in Fārs.

Because the Saldjūḳs were champions of Sunnism, the legends on their coins reproduce the traditional ʿAbbāsid type, which had survived intact at Nīshāpur, the great mint for gold in Khurāsān under both the Sāmānids and the Ghaznawids. The religious legends, therefore, show little variation in their texts. The obverse field contained the first statement of the *kalima, lā ilāh illā Allāh waḥdahu lā sharīk lahu*. Around this were two marginal legends, the inner containing the mint and date formula and the outer inscribed with parts of vv. 4 and 5 of sūra XXX, *al-Rūm*. The reverse field contained the second statement of the *kalima, Muḥammad rasūl Allāh*, and the single marginal legend was an adaptation of v. 33 of sūra IX, *al-Tawba*.

Occasionally, the Saldjūḳs struck dīnārs which were intended to have talismanic qualities, such as an issue of Alp Arslan from Marw dated 461 which inscribed the ninety-nine beautiful names of God in the obverse and reverse fields. A more common practice was to engrave v. 255 of sūra II, *al-Baḳara*, the Throne Verse, in minute letters in the reverse field. This calligraphic *tour de force* is found on occasional issues from Iṣfahān, ʿAskar Mukram and Marw. On rare occasions, the engravers included their own names on their best works in tiny letters in the outer margins.

The secular legends outside the mint and date formula were limited to names and titles. The reigning caliph's name was usually placed below the *kalima* in the obverse field, sometimes, if space permitted, with his title *Amīr al-Muʾminīn*. On his own coinage in Madīnat al-Salām, the caliph was entitled *al-Imām*, and his heir's name also appeared vertically in either the obverse or reverse field. The rest of the space was devoted to the name and titles of the ruler who struck the coin and those of his secular overlords, if he was obliged to acknowledge any. In order of importance these were the *ism*, e.g. Ṭoghrïl Beg; *kunya*, Abū Ṭālib; *laḳab* Muʿizz al-Dīn, Rukn al-Islām, ʿAḍud al-Dawla; and *ʿalāma* and *ʿunwan*, al-Amīr al-Adjall/Shāhanshāh, al-Sulṭān al-Aʿẓam or Muʿaẓẓam. Unlike the Sāmānids, Ghaznawids and Buwayhids, whose titulature was generally uniform in their various mints, having been based on titles and *laḳabs* actually conferred by the caliph, the Saldjūḳs were often inconsistent in their royal styles. This may have been a result of their decentralised mint system or because of their preference for the grand effect rather than strict accuracy. For example, until 438/1046-7, Ṭoghrïl was entitled *al-Amīr al-Adjall* on the coinage of Nīshāpūr, and *al-Amīr al-Sayyid* in Rayy. A look at any of the catalogues where Saldjūḳ coins appear will reveal many other examples of this practice. It is interesting to note that, in addition to their Turkish names, Ṭoghrïl and Alp Arslan were both given the Muslim *ism* of *Muḥammad*, which occasionally appears on their coinage. Ṭoghrïl was known as *Muḥammad b. Mīkāʾīl* on coins struck in Rayy and Hamadhān between 434 and 438. Alp Arslan was named *Muḥammad* on the coinage of Nīshāpur throughout his reign, but without the inclusion of his *nasab*, while the same mint called his son *Malik Shāh b. Muḥammad*. The later Great Saldjūḳs were commonly named as sons of Malik Shāh, but neither this nor any other Saldjūḳ *nasab* was ever used on coins struck at the caliph's mint in Baghdād. Lastly, the coins of Ṭoghrïl, Alp Arslan and Malik Shāh frequently placed the Saldjūḳ *tamgha*, the bow and arrow, above the obverse or reverse fields, or sometimes both. Other, more traditionally Islamic words were often inscribed in the same position, such as *li'llāh, naṣr, fatḥ, ʿadl* or isolated letters like *ẓ*, which was probably an abbreviation of *ẓafar*.

The coinage of Madīnat al-Salām occupies a special place in the history of the Saldjūḳ coinage because it throws some light on the relationship between the caliph and the ruler. Throughout Ṭoghrïl's rule, the caliph al-Ḳāʾim [*q.v.*] accorded him a full set of titles, *al-Sulṭān al-Muʿaẓẓam Shāhanshāh Rukn al-Dīn Ṭoghrïl Beg*, but in the brief period of uncertainty after Ṭoghrïl's death in 455/1063, the caliph seized the opportunity to strike coinage in his own name and that of his heir for the first time in nearly a century. Then on the coinage of 456 and 457 the ruler is described as *Shāhanshāh al-Aʿẓam ʿAḍud al-Dawla Abū Shudjāʿ Malik al-ʿArab wa 'l-ʿAdjam Alb Arslān*, while on the dīnārs of 461 and later he is simply styled *ʿAḍud al-Dawla Alb Arslān*. From then on it became the custom to name the Saldjūḳ ruler on the caliph's coinage with only one *laḳab*, possibly an epithet and his throne name. The caliph al-Muḳtadī [*q.v.*] termed the ruler *Djalāl al-Dawla Malik Shāh*. During the succession struggle after Malik Shāh's death in 485/1092, the caliph once again struck dīnārs in his own name. This was followed by an issue where the ruler was styled *Muʿizz al-Dawla al-Ḳāhira Berkyaruḳ*. In 489/1096 the caliph al-Mustaẓhir [*q.v.*], altered Berkyaruḳ's *laḳab* to *ʿAḍud al-Dawla*, while in 491/1098 and 493/1100 the caliph again struck dīnārs in his own name, under what circumstances is not clear. The caliph entitled his successor *Ghiyāth al-Dunyā wa 'l-Dīn Muḥammad*, and then when the state was divided after Muḥammad's death in 511/1118, the caliph al-Mustarshid [*q.v.*], named the senior ruler as *Muʿizz al-Dunyā wa 'l-Dīn Sandjar* and the ruler of ʿIrāḳ as *wa-walī ʿahdihi Mughīth al-Dunyā wa 'l-Dīn Maḥmūd*. Finally, the caliph al-Muḳtafī [*q.v.*], retained no more than the *laḳabs* of *Muʿizz al-Dunyā wa 'l-Dīn* and *Ghiyāth al-Dunyā wa 'l-Dīn*, until the inclusion of Saldjūḳ names on the caliph's coinage was dropped altogether after the death of Ghiyāth al-Dīn Masʿūd in 547/1152.

A much larger body of numismatic evidence needs to be assembled before a comprehensive and analytical study of the Saldjūḳ coinage can be made. This is particularly true of the post-Malik Shāh period, when the constantly changing political scene is chronicled by the frequent striking of coins in the names of two rulers, rebels and usurpers, local governors and Atabegs.

2. In Anatolia

The Rūm Saldjūḳ coinage is entirely separate in origin from that of their distant cousins the Great Saldjūḳs (see above, VIII. 1). Their earliest coin is a crudely executed copper *fals* struck by Rukn al-Dīn Masʿūd I b. Ḳïlïč Arslan (510-51/1116-56), which copies a contemporary Byzantine *folis* with a full-face imperial bust on the obverse, and the ruler's name on the reverse.

The earliest coinage of ʿIzz al-Dīn Ḳilič Arslan II (551-88/1156-92) was similar to that of his father Masʿūd I. This was followed by the well-known design of a mounted lancer galloping to the right on the obverse, borrowed from Christian iconography where it portrayed St. George the warrior saint of Cappadocia. In 571/1175-6 Ḳilič Arslan II introduced traditional Islamic gold dīnārs and silver dirhams to Anatolia, at the same time as the Zangids of Aleppo reintroduced silver coinage to Syria. There is a unique gold dinar of 573/1177-8, while the earliest silver is dated 571/1175-6. Both bear conventional legends, with the mint in the obverse margin and the caliph's name in the field, and the date in the reverse margin and the ruler's name in the field. They are known only from the mint of Konya.

The Rūm Saldjūḳ dirham was struck at the traditional Islamic weight standard of 2.90-3.00 grs of virtually pure silver, with the *kalima* and the caliph's name on the obverse, and the sultan's titles, name and patronymic on the reverse. The table which summarises the political information on the coinage shows that some rulers identified themselves with the spiritual leadership of the ʿAbbāsid caliphate by describing themselves as Helper, etc. of the Commander of the Faithful.

When Ḳilič Arslan II abdicated in 588/1192 he divided his realm among his numerous sons and a daughter, and apparently granted them all the right of *sikka* [*q.v.*]. His youngest son, Ghiyāth al-Dīn Kay Khusraw I, who ruled in Konya, 588-93/1192-6, struck coins modelled on those of his father. The eldest son Rukn al-Dīn Sulaymān Shāh placed the mounted lancer on his copper coinage, and, exceptionally, on his rarely found silver and gold. Ḳuṭb al-Dīn Malik Shāh issued a rare but conventional dirham, Muʿizz al-Dīn Ḳayṣar Shāh struck a lancer copper, Muḥyī al-Dīn Masʿūd struck coins in Ankara on which he was styled *al-ʿAbd al-Ḍaʿīf*, and Mughīth al-Dīn Ṭoghrīl, ruling in Erzurum, issued a plentiful silver coinage.

After Sulaymān Shāh's death in 600/1203, the western Saldjūḳ realms were reunited under Ghiyāth al-Dīn Kay Khusraw I (second reign 601-7/1204-10). His silver coins are known from Konya, Kayseri and Malatya, and he was the last Saldjūḳ ruler to strike an abundant mounted lancer copper coinage. He was succeeded by ʿIzz al-Dīn Kay Kāwūs, 607-16/1210-19, and al-Manṣūr Kay Ḳubādh who ruled the appanage of Tokat during his brother's lifetime, and struck a beautiful mounted lancer coinage in silver and copper. The coinage of Kay Kāwūs I, purely Islamic in character, adopted the square in circle design favoured by the Ayyūbids on their silver coins of Damascus. It is known only from Konya and Sivas. Kay Kāwūs I was succeeded by his more famous brother ʿAlāʾ al-Dīn Kay Ḳubādh I, 616-34/1219-36. Under his rule, Rūm Saldjūḳ dirhams, struck in huge quantities in Sivas and Konya, with a small production from the mints of Kayseri, Erzincan and Erzurum, became an international trade coin throughout the Middle East. Copper is known only from Bilveren and Sivas. Other coins struck in the name of Kay Ḳubādh I were an undated silver dirham of Hetum I, King of Cilician Armenia, and a silver dirham from the mint of Dunaysir dated 625/1228, and a copper *fals* from Mārdīn dated 634/1236-7 struck by Artuḳ Arslan, the Artuḳid ruler of Mārdīn.

Kay Ḳubādh I's successor Ghiyāth al-Dīn Kay Khusraw II (634-44/1236-46), issued conventional epigraphic silver and a few gold coins in Sivas and Konya between 634/1236-7 and 638/1240-1, but from 638/1240-1 to 641/1243-4 he struck large quantities of the most famous Rūm Saldjūḳ coin bearing the device of the lion and sun and the caliph's name on the obverse. The auspicious sign of the sun in Leo was probably used to exemplify the ruler's power. On one rare issue of 640/1242-3 in gold and silver, the sun rests on the backs of two lions rampant with their tails interlaced.

The Mongol Il Khans exercised indirect rule rather than occupying Anatolia after their defeat of Kay Khusraw II at Köse Dagh at the end of 639/1242 (see above, section III. 5). Surprisingly, the Rūm Saldjūḳ coinage did not mention them as overlords until much later. However, the number of dirhams struck in 640 and 641 decreased, and the lion and sun type was abandoned in 641. Kay Khusraw II returned to a purely epigraphic style of coinage, and assumed the grandiloquent title *Ẓill Allāh fi 'l-ʿĀlam*, "The Shadow of God in the World". Before the Mongol victory, King Hetum of Armenia struck silver horseman dirhams bearing Kay Khusraw's name as overlord at the mint of Sis between 637 and 640; the Ayyūbid ruler of Aleppo, al-Malik al-Nāṣir Yūsuf II, struck silver dirhams dated 636 to 638; Artuḳ Arslan, the Artuḳid ruler of Mārdīn struck another dated 636 in Dunaysir, and a copper *fals* of Mārdīn dated 637, while Badr al-Dīn Luʾluʾ, the Luʾluʾid ruler of Mawṣil, issued gold dīnārs from 638 to 641.

On the gold and silver struck in Sivas and Konya, ʿIzz al-Dīn Kay Kāwūs II (644-7/1246-9) followed the square in circle design, and included the title *Ẓill Allāh fi 'l-ʿĀlam*. He introduced the Rūm Saldjūḳ practice of dating coins with *dīwānī* abbreviations of the Arabic names for the numbers, borrowed from accounting conventions, for the units and decades of the year. Al-Malik al-Kāmil Muḥammad II, the Ayyūbid ruler of Mayyāfāriḳīn and Āmid, also struck a few undated copper coins naming Kay Kāwūs II as overlord.

In 646 Rukn al-Dīn Ḳilič Arslan IV challenged his brother Kay Kāwūs II, and demonstrated his sole power in Sivas by striking the last Saldjūḳ horseman coinage. Its artistic inspiration was Persian rather than Anatolian, replacing the warrior-saint of the Byzantines with an elaborately-dressed archer, drawing his bow on the back of a prancing horse. The Il Khān Hülegü's anger at the rivalry between Kay Kāwūs II and Ḳilič Arslan IV caused him to establish a triumvirate among the three sons of Kay Khusraw II, and between 647 and 656 a conjoint coinage was issued in the names of ʿIzz al-Dīn Kay Kāwūs II, Rukn al-Dīn Ḳilič Arslan IV and ʿAlāʾ al-Dīn Kay Ḳubādh II. Their silver is plentiful and a few gold coins are known, but there appears to be no copper. Most were struck in Sivas and Konya, but there were also minor mints in Kayseri, Malatya and Luʾluʾa. The latter, located in the Taurus mountains, appears to have been the Rūm Saldjūḳs' first mining mint. The one sign of disunity amongst the brothers on their coinage is a dirham of 652 struck in Kayseri which names only Ḳilič Arslan IV and Kay Ḳubādh II.

When conjoint rule ended on the death of Kay Ḳubādh II, ʿIzz al-Dīn Kay Kāwūs II issued coins in his own name between 655 and 658/1257-60 at several western mints, the principal one being Konya and others in Ankara, Develü, Gümüşpazar and Luʾluʾa. After the fall of the Baghdād ʿAbbāsids in 656/1258 Kay Kāwūs continued to use the *kalima* and the caliph's name on his coins until 658/1260, when he replaced them with the laudation *al-ʿIzza li'llāh* "Glory belongs to God!" in the obverse field with the mint and date in the margin. In the east, Ḳilič Arslan

Table. *Summary of names and titles found on the Rūm Saldjūḳ coinage.*

Name	Laḳab	Kunya	Regal style	Caliphal relationship	Laudation
Masʿūd (I)	[1]Rukn al-Dunyā wa 'l-Dīn	-	al-Sulṭān al-Muʿaẓẓam	-	-
Ḳilič Arslan (II)	ʿIzz	-	al-Sulṭān al-Muʿaẓẓam	-	-
Kay Khusraw (I)	Ghiyāth	-	al-Sulṭān al-Muʿaẓẓam	-	-
Sulayman Shāh	Rukn	Abu 'l-Fatḥ	al-Malik al-Ḳahir/ al-Sulṭān al-Ḳāhir	Nāṣir Amīr al-Muʾminīn/ Burhān al-Muʾminīn	-
Malik Shāh	Ḳuṭb	Abu 'l-Fatḥ	-	-	-
Ḳayṣar Shāh	Muʿizz	-	al-Malik al-Muʾayyad	-	-
Masʿūd	Muḥyī	-	al-ʿAbd al-Ḍaʿīf	-	-
Ṭoghrïl	Mughīth	Abu 'l-Fatḥ	-		
Kay Khusraw (I) (2nd reign)	Ghiyāth	Abu 'l-Fatḥ	al-Sulṭān al-Muʿaẓẓam	-	al-Minna li'llāh
Kay Kāwūs (I)	ʿIzz	-	al-Sulṭān al-Ghālib	-	-

Kay Ḳubādh (I)	ʿAlāʾ	Abu 'l-Fatḥ	al-Malik al-Manṣūr/ al-Sulṭān al-Muʿaẓẓam/ al-Sulṭān al-Aʿẓam	Naṣr Amīr al-Muʾminīn/ - -	-
Kay Khusraw (II)	Ghiyāth	Abu 'l-Fatḥ	al-Sulṭān al-Muʿaẓẓam/ al-Sulṭān al-Aʿẓam Ẓill Allāh fi 'l-ʿĀlam	Ḳasīm Amīr al-Muʾminīn	
Kay Kāwūs (II) (1st reign)	ʿIzz	Abu 'l-Fatḥ	al-Sulṭān al-Aʿẓam Ẓill Allāh fi 'l-ʿĀlam	Ḳasīm Amīr al-Muʾminīn

"Three Brothers" Kay Kāwūs (II)/ Ḳilič Arslan (IV)/ Kay Ḳubādh (II)	ʿIzz/ Rukn/ ʿAlāʾ	-	al-Salāṭin al-ʿIẓām	-	-
Kay Kāwūs (II) (2nd reign)	ʿIzz	Abu 'l-Fatḥ	al-Sulṭān al-Aʿẓam	-	al-ʿIzza li'llāh
Ḳilič Arslan (IV)	Rukn	Abu 'l-Fatḥ	al-Sulṭān al-Aʿẓam	Burhān Amīr al-Muʾminīn	al-ʿMinna li'llāh
Kay Khusraw (III)	Ghiyāth	Abu 'l-Fatḥ	al-Sulṭān al-Aʿẓam	Burhān Amīr al-Muʾminīn	al-Mulk li'llāh
Masʿūd (II)	Ghiyāth	Abu 'l-Fatḥ	al-Sulṭān al-Aʿẓam Ẓill Allāh fi 'l-ʿĀlam	-	al-ʿUẓma li'llāh
Kay Ḳubādh (III)	ʿAlāʾ	Abu 'l-Fatḥ	al-Sulṭān al-Aʿẓam	-	al-Minna li'llāh

All *laḳabs* include the phrase *al-Dunyā wa'l-Dīn*.

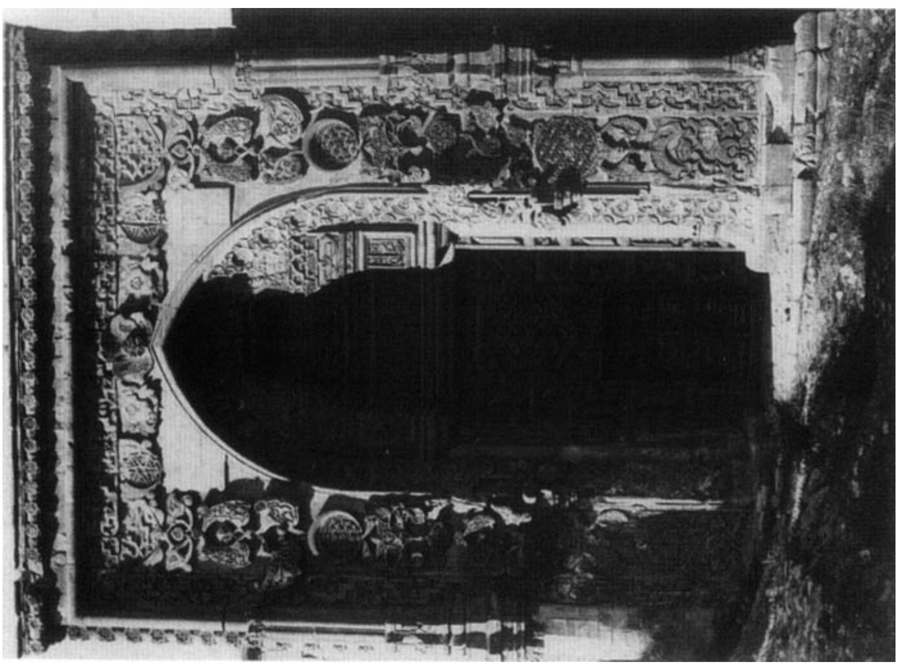
IV struck coins during his second period of rule (655-63/1257-64), still in the name of the caliph al-Mustaʿṣim until the year 662/1264, but in 663/1265 he issued dirhams in that of a fictive caliph *al-Imām al-Maʿṣūm Amīr al-Muʾminīn*, "the Immaculate Imām, Commander of the Faithful". Elsewhere he replaced the *kalima* and mention of the caliph with the laudation *al-Minna li'llāh*, "Grace be to God!". His principal mint was Sivas, but after the death of Kay Kāwūs II in 658 his coins were struck in Erzincan, ʿAlāʾiyya, Antalya, Bazar, Develü, Kayseri, Gümüşpazar, Luʾluʾa, Maʿdan Shehir, Maʿdan Sarus and Malatya. Ḳilič Arslan IV was succeeded by his son Ghiyāth al-Dīn Kay Khusraw III (663-81/1264-82), whose coinage from Erzincan, Erzurum, Antalya, Bazar, Sivas, Sarus, Sinop, Kastamunu, Konya, Kayseri, Gümüşpazar, Luʾluʾa and Maʿdan Shehir was distinguished by the laudation *al-Mulk li 'llāh*, "Sovereignty belongs to God!".

Kay Khusraw III was succeeded by his nephew ʿAlāʾ al-Dīn Kay Ḳubādh III b. Farāmurz in 681/1282, who lost the eastern territories to his cousin Ghiyāth al-Dīn Masʿūd II (first reign 681-97/1282-97). The coins of Masʿūd II, from Erzincan, Erzurum, Antalya, Sarı Kavak, Samsun, Sivas, Konya, Gümüşpazar, Ladik, Luʾluʾa, Maʿdan Bayburt, Maʿdan Shehir and Maʿdan Samasur, occasionally used the laudation *al-ʿUẓma li'llāh*, "Power belongs to God!".

The end of the Rūm Saldjūk coinage is obscure. Sovereignty alternated between Kay Ḳubādh III, Masʿūd II and his son Masʿūd III in the last decade of the seventh century and the first years of the eighth, but their crudely struck coins make it difficult to establish an accurate chronology based on numismatic evidence. Kay Ḳubādh III did occasionally place a lion passant or a lion and sun on his coins, some of which, struck in Erzincan, Sivas and Konya in 698, acknowledged the Il Khānid ruler Maḥmūd Ghazan as overlord. Other mints for Kay Ḳubādh III are Antalya, Sulaymān Shehir, Sarı Kavak, and perhaps Borlu.

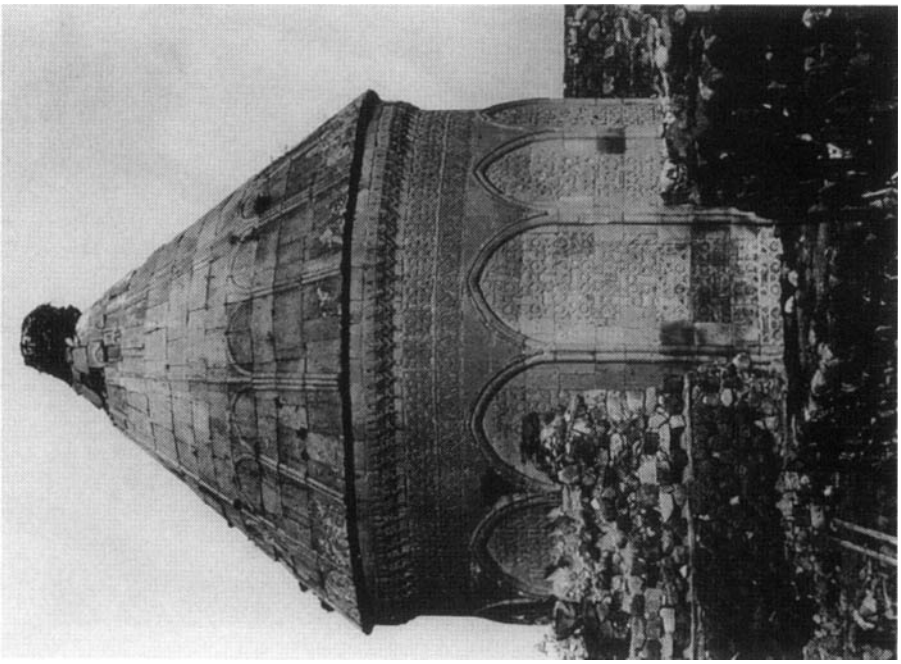
During the last quarter of the seventh century, most coins were struck in silver, and gold became extremely rare. The internal coherence of the state had collapsed, and local governors often used the names of Masʿūd II and Kay Ḳubādh III to give validity to their own coinages. The coins of Kay Ḳubādh III largely disregarded the weight standard of the Islamic silver dirham, and their weight fell to 2.00-2.50 gr. Thus began the transition to the irregular, low weight Anatolian silver issued by the Beylik successors to the Rūm Saldjūḳs, first in the name of the Il Khānids, and later in their own names, which resulted in the introduction of the small silver *akče* as the unit of account in Anatolia by the second quarter of the 8th/14th century.

Bibliography: Rūm Saldjūḳ coinage has been extensively published, having been a particular favourite of Ottoman and modern Turkish numismatists. The Istanbul Mint Museum, the Yapı ve Kredi Kültür Merkezi, American Numismatic Society and Tübingen University have large collections of Rūm Saldjūḳ coins, as do the museums whose catalogues are listed below: İ. and C. Artuk, *Istanbul Arkeoloji Müzeleri teshirdeki islami sikkerler kataloğu*, Istanbul 1971; Ismāʿīl Ghālib Edhem, *Taḳwīm-i meskūkāt-i ʿothmāniyye*, Istanbul 1307/1889-90; G. Hennequin, *Catalogue des monnaies musulmanes de la Bibliothèque Nationale, iv, Asie pré-mongole. Les Salǧuqs et leurs successeurs*, Paris 1985; S. Lane Poole, *Catalogue of oriental coins in the British Museum*, London 1875-90, iii; Aḥmed Tewḥīd, *Müze-yi Humāyūn meskūkāt-i islāmiyye ḳataloghlarī*, Istanbul 1321/1903-4. (R.E. Darley-Doran)



SALGHURIDS, a line of Atabegs which ruled in Fārs during the second half of the 6th/12th century and for much of the 7th/13th one (543-681/1148-1282).

They were of Türkmen origin, and Maḥmūd Kāshgharī considered them as a clan of the Oghuz tribe [see GHUZZ], giving their particular *tamgha* (*Dīwān lughāt al-Turk*, Tkish. tr. Atalay, i, 56, iii, 141, 414); later sources such as Rashīd al-Dīn, Ḥamd Allāh Mustawfī's *Taʾrīkh-i Guzīda* and Abu 'l-Ghāzī's *Shadjara-yi Tarākima* were uncertain whether Salghur was a clan or the name of an eponymous ancestor of the Atabegs (cf. also W. Barthold, *A history of the Turkman people*, in *Four studies on the history of Central Asia*, iii, Leiden 1962, 119, who was sceptical about a connection of the Atabegs with the Salghur or Salur [*q.v.*] clan).



The Salghur clan played a role in the Turkmens' overrunning of Anatolia in the late 5th/11th century. Muẓaffar al-Dīn Sonḳur b. Mawdūd took advantage of the weakening power of the Great Saldjūḳ sultans and in 543/1148 established himself in Fārs after the death of the province's ruler Boz-aba (who may himself have been connected with the Salghur clan). After Sonḳur's death in 556/1161, he was succeeded by his brother Muẓaffar al-Dīn Zangī and then in 570/1175 by the latter's son Tekele or Degele, so that the hereditary rule of the Salghurids in Fārs became established, whilst at the same time they acknowledged, until 590/1194, the overlordship of the last Great Saldjūḳs. Tekele had eliminated his rival for power, Sonḳur's son Ḳuṭb al-Dīn Ṭoghrïl, in 577/1181-2, according to the *Niẓām al-tawārīkh* of al-Bayḍāwī (who was a contemporary in Fārs of the Salghurids of the 7th/13th century; his account is accordingly followed by Merçil, see *Bibl.*, and here), and he probably reigned until 594/1198, when his brother ʿIzz al-Dīn Saʿd (I) b. Zangī [*q.v.*] came to power. (It therefore seems probable that we should eliminate Ṭoghrïl from the list of Salghurids who actually ruled in Fārs, although he thus figures in much of the secondary literature, including in the *EI*[1] art., as being still alive and ruling in Fārs in the later 1190s and first years of the 13th century; there are significant differences in the information of the historians on the events of these years).

Saʿd, like his predecessors, campaigned against the local Shabānkāraʾī Kurdish bandits and intervened in the affairs of the neighbouring province of Kirmān [*q.v.*], and in 600/1203-4 captured Iṣfahān; but he came up against the growing power in Persia of the Khwārazm-Shāhs, was captured by ʿAlāʾ al-Dīn Muḥammad Shāh [*q.v.*] in 614/1217-18 and only released on payment of the tribute formerly paid to the Saldjūḳs and the cession of certain districts in Fārs as *iḳṭāʿ*s or land-grants for Khwārazmian commanders. The triumph of the Mongols released the Salghurids from this dependence on the Khwārazm-Shāhs but substituted another yoke. Saʿd's son Abū Bakr (succeeded on his father's death, more probably in 623/1226 than 628/1231) was the vassal of the Great Khān Ögedey and then of the Il-Khān Hülegü [*q.vv.*], and it was the former ruler who conferred on Abū Bakr the title of Ḳutlugh Khān in return for an annual tribute of 30,000 Ruknī dīnārs and the admission of a Mongol *shiḥna* to his principality.

The years after Abū Bakr's death in 658/1260 were filled with a succession of short-ruled Salghurid Atabegs: Muẓaffar al-Dīn Saʿd (II), ʿAḍud al-Dīn

Muḥammad, Muẓaffar al-Dīn Muḥammad Shāh, Muẓaffar al-Dīn Saldjūḳ Shāh, closing with Muẓaffar al-Dīn Ābish Khātūn, the daughter of Saʿd (II), on whom Hülegü bestowed the Atabegate of Fārs. She reigned alone for a year (662-3/1263-4), at the end of which she married Mengü Temür, the eleventh son of Hülegü, who himself assumed *de facto* power in Fārs till his death in 681/1282, with Ābish Khātūn as only nominal Atabeg. The rule of the Salghurids, which had endured for over 130 years, came to an end at this point; Ābish Khātūn herself died in Mongol captivity at Tabrīz in 685/1286.

Fārs especially flourished in the 7th/13th century under the rule of the Salghurids, with a lively cultural and intellectual atmosphere in the capital Shīrāz [*q.v.*], where there lived at this time, *inter alios*, the Ḳāḍī al-Bayḍāwī, the scientist Ḳuṭb al-Dīn Shīrāzī and the historian Waṣṣāf [*q.vv.*]. The poet Saʿdī [*q.v.*] was the panegyrist of the Atabegs, deriving his *takhalluṣ* from Abū Bakr b. Saʿd (I); it was to this last that he dedicated his *Bustān* and to his son, the short-reigned Saʿd (II), that he dedicated the *Gulistān* (cf. J. Rypka *et alii*, *History of Iranian literature*, Dordrecht 1968, 250). Coins were minted by most of the Atabegs up to and including Ābish Khātūn, with the exception possibly of the ephemeral rulers preceding her.

Genealogical table of the Salghurids

X, no. 98; Erdoğan Merçil, *Fars Atabegleri Salgurlar*, Ankara 1975, with a good survey of the primary sources (Afḍal al-Dīn Kirmānī; Nasawī; Ibn al-Athīr; Rashīd al-Dīn; Waṣṣāf; Aḥmad b. Zarkūb, *Shīrāz-nāma*; Mustawfī; etc.) at pp. XI-XIX. (C.E. Bosworth)

SALḤĪN, also Silḥīn, the name of the royal palace of the Sabaean kings in their capital Mārib [*q.v.*]. The house of Salḥīn (*bytn slḥn*; e.g. *CIH* 373) is the building of ancient South Arabia which is most frequently mentioned in the Sabaic inscriptions of the first three centuries A.D. Its name is also attested in the forms Salḥēn and Σιλεῆ in the title of the Abyssinian king ʿĒzānā in Ethiopic and Greek inscriptions of the fourth century A.D. from Aksum. Owing to the lack of excavations, the original site of the palace of Salḥīn in the area of the ancient town of Mārib has not yet been discovered.

Arab tradition enumerates Salḥīn in Mārib among the most famous castles of pre-Islamic Yemen, which are praised by the Arabs in their poems and proverbs (al-Hamdānī, *Ṣifa*, ed. Müller, 203, 11-15). Salḥīn is the foremost of the three castles of ancient Mārib (idem, *Iklīl*, viii, ed. M. al-Akwaʿ al-Ḥiwālī, Damascus 1979, 99, 10), and it is supposed to have been the palace of Bilḳīs [*q.v.*] (*ibid.*, viii, 103, 2). It held the high rank of being the royal residence of the Ḥimyarite kings (Nashwān, *Shams*, 50, 9), and it was an important castle in the country of Yemen, which belonged to the *Tabābiʿa* or Tubbaʿs [*q.v.*], the kings of Yemen (Yāḳūt, *Muʿdjam*, iii, 115, 11). On the authority of Muḥammad b. Khālid, it is reported that the Sabaean kings lived in Mārib and in Ṣanʿāʾ alternately, and whenever they resided in Mārib they stayed in Salḥīn (al-Hamdānī, *Iklīl*, viii, 106, 11-13).

It is said that the palace was built by order of Bilḳīs, the Queen of Sheba, the daughter of al-Hadhād, and that in it her throne stood, as mentioned in Ḳurʾān, XXVII, 23 (Nashwān, *Shams*, 50, 9-11); it is said as well that Solomon commanded the *djinn* to build the palace for Bilḳīs (al-Thaʿlabī, *Ḳiṣaṣ al-anbiyāʾ*, Cairo 1889, 201). According to other traditions one of the *Tabābiʿa* [see TUBBAʿ] gave orders to construct Salḥīn (Yāḳūt, *Muʿdjam*, i, 535, 13), or else the demons built it for Dhū Bataʿ, the king of Hamdān, when he arranged the marriage of Bilḳīs to Solomon (*ibid.*, iii, 115, 12), or when Dhū Bataʿ himself married Bilḳīs at the behest of Solomon respectively (Ibn al-Athīr, i, 238, 1-2). People say that demons had written in a Ḥimyaritic inscription in Yemen: "We built Salḥīn, working on it continuously for seventy-seven years" (al-Ṭabarī, i, 585, 15-16; al-Hamdānī, *Iklīl*, viii, 104, 4-5). In other sources, the duration of the building of Salḥīn is supposed to have lasted seventy years (Yāḳūt, *Muʿdjam*, iii, 115, 18) or eighty years respectively (*ibid.*, i, 535, 13-14; *Tādj al-ʿarūs*, s.v. Salḥīn). Al-Hamdānī, however, doubts whether the *djinn* could have written this for two reasons. In the first place, they say that the demons built Salḥīn in seventy-seven years, but between the visit of Bilḳīs to Solomon and his death there were at most seven years, and after Solomon's death the *djinn* refused to continue their work. In the second place, there is a saying of ʿAlḳama b. Dhī Djadan, mentioning that human beings built Salḥīn and not the *djinn*, when he composed: "and will men built houses (henceforth) after Salḥīn (has been destroyed)?" (*Iklīl*, viii, 105, 3-9; for the variant of this verse, as it is rendered here, cf. Ibn Hishām, *Sīra*, 26, 12; al-Ṭabarī, i, 928, 13; Yāḳūt, iii, 115, 17; *Tādj al-ʿarūs*, *loc. cit.*).

When the Abyssinians under their commander Aryāṭ conquered Yemen, they destroyed Salḥīn, Ghumdān [*q.v.*] and Baynūn [*q.v.*], castles which

were without equals among men (Ibn Hishām, *Sīra*, 26, 13-14; al-Ṭabarī, i, 928, 9-11); they were considered to be palaces of exceptional beauty and splendour, which people had never seen before (al-Thaᶜlabī, *Ḳiṣaṣ*, 201). It seems that no remains of this castle were left in the Islamic period, since reportedly no traces of Salḥīn can be seen any more (Yāḳūt, iii, 115, 19).

From the no longer existent *dīwān* of the previously-mentioned ᶜAlḳama, who was a descendant of the famous Ḥimyarite noble family Dhū Djadan, belonging to the *mathāmina* [*q.v.*], verses are quoted, in which the fate of Salḥīn is deplored, because the castle has been destroyed, so that now foxes bark in it, and because it has become deserted, it is as if it had never been inhabited (al-Hamdānī, *Iklīl*, viii, 103, 3-13). Yemenite nostalgia for times long passed is expressed by the verse "Inquire about Salḥīn and its days, the days when the kingdom belonged to Ḥimyar" (Nashwān, *Shams*, 50, 12).

Müller, *Ancient castles mentioned in the eighth volume of al-Hamdānī's Iklīl and evidence of them in pre-Islamic inscriptions*, in *Al-Hamdānī, a great Yemeni scholar. Studies on the occasion of his millennial anniversary*, Ṣanᶜāʾ 1986, 139-57. (W.W. Müller)

AL-ṢALĪB (A.) pls. *ṣulub, ṣulbān*, a cross, and, particularly, the object of Christian veneration. The term is used for cross-shaped marks e.g. brands on camels and designs woven into cloth, and in legal contexts for the instrument of execution.

The Ḳurʾān refers in six places to the act of crucifying as a punishment. Four of these are set in ancient Egypt: in sūra XII, 41, Yūsuf predicts that one of the men jailed with him will be crucified and birds will eat from his head; in VII, 124, XX, 71, and XXVI, 49, Pharaoh vows to crucify the magicians who have disobeyed him by believing in Mūsā's God, with XX, 71, including the detail that he will use trunks of palm trees in doing this. In fact, according to Ibn ᶜAbbās (al-Ṭabarī, *Tafsīr*, *ad* VII, 124), Pharaoh was the first to employ this means of execution.

The fifth occurrence, in V, 33, refers to crucifixion as the punishment for those who fight against God and the Prophet and spread evil in the land. This verse gave rise to the different views of legal experts concerning the execution of highway robbers: Mālik and Abū Ḥanīfa said they should be hung on a cross, tree or poles and torn apart with spears; while Ibn Ḥanbal said their bodies should be exposed on one of these after their execution [see ḤADD; ḲATL. ii; SALB; SARIḲA].

This verse is also the legal basis for the penalty against those guilty of heresy, *zandaḳa* [*q.v.*]; the crucifixion of al-Ḥusayn b. Manṣūr al-Ḥallādj [*q.v.*] for his uninhibited ecstatic utterances is a well-documented example (L. Massignon, *La passion de Husayn Ibn Mansūr al-Hallāj*, nouvelle édition, Paris 1975, i, 496 ff., 655 ff.).

The sixth occurrence in IV, 157, the denial that the Jews crucified ᶜĪsā [see ᶜĪSĀ. xi], agrees well with the attitude implied in these verses, that execution is reserved for the disobedient and criminal. This denial occasioned a long tradition of Muslim exegetical elucidations (see N. Robinson, *Christ in Islam and Christianity*, London 1991, 127-41) and may have contributed towards the lack of interest in the atonement among Muslim polemical authors.

The rejection of the cross as the symbol of Christianity is attested in a number of *Ḥadīths*: on the last day, ᶜĪsā will break the cross into pieces (al-Bukhārī, *Anbiyāʾ*, *bāb* 49, etc.; Ibn Ḥanbal, *Musnad*, ii, 240, 272, etc.); at the final judgement Christians, "the companions of the cross", will be condemned to hell on their confession that they worshipped ᶜĪsā (al-Bukhārī, *Tawḥīd*, *bāb* 24); the cross is the sign of the Rūm [*q.v.*], the enemies of Islam (Ibn Ḥanbal, *Musnad*, iv, 91, v, 372, v, 409); the Prophet had objects bearing cross designs removed from his dwelling (al-Bukhārī, *Ṣalāt*, *bāb* 15; Ibn Ḥanbal, *Musnad*, vi, 52, 140, 237, etc., all reported on the authority of ᶜĀʾisha). Restrictions were imposed upon public display of crosses from early times. According to Abū Yūsuf the Ḥanafī lawyer, Abū ᶜUbayda Ibn al-Djarrāḥ [*q.v.*], acting on the advice of the caliph ᶜUmar, permitted Christians in Syria to carry their crosses in procession on one day a year, but only outside towns and away from Muslim habitations and mosques (*Kitāb al-Kharādj*, Cairo 1397/1976-7, 152, tr. E. Fagnan, *Le livre de l'impôt foncier*, Paris 1921, 218-19); Khālid b. al-Walīd imposed the same limitation upon the Christians of Ḥīra and neighbouring towns (*ibid.*, 154, 158, tr. Fagnan, 222, 227).

Crosses in public places caused obvious offence. In Palestine, ᶜUmar found it necessary to place crosses under protection, stipulating that in Jerusalem, Lydda and other towns they would not be violated (al-Ṭabarī, i, 2405 ff.). ᶜAbd al-Malik and other Umayyad caliphs ordered their destruction on the outside of churches (see A. Fattal, *Le statut légal des non-Musulmans en pays d'Islam*, Beirut 1958, 183), and, on their imitations of Byzantine coins, had the symbol of the cross on the reverse subtly altered into a pillar by removing the bar (see W.E. Kaegi, *Byzantium and the early Islamic conquests*, Cambridge 1992, 223-7 and Pls. I-II at 207-8). The ᶜAbbāsid caliph al-Mutawakkil forbade their display in processions (al-Ṭabarī, iii, 1390). Under later caliphs, Christians continued to exercise their restricted rights on feast days except when repression prevented them (Fattal, 207 ff.). It is not surprising that crosses were the immediate targets of religious riots in Muslim cities, or that at the time of the Crusades they were erected on mosques by invading Europeans and removed by Muslims. Curiously, the Fāṭimid caliph al-Ḥākim incorporated into his decrees against non-Muslims the requirement that Christians should wear crosses as distinctive signs [see AL-ḤĀKIM BI-AMR ALLĀH and its bibl.].

Many of these prohibitions against Christians were based on the precedent of the so-called "Covenant of ᶜUmar", a formulation of the *dhimmī* status which though of uncertain date reflects the attitudes of early centuries (Fattal, 60 ff. discusses views concerning its origin). According to the earliest version of this document, Christians agree not to display their crosses on streets and markets frequented by Muslims (al-Ṭurṭūshī, *Sirādj al-mulūk*, Cairo 1289/1872, 135 ff.).

The cross and its significance does not feature prominently in Muslim polemical literature, which focusses rather on the two themes which challenged Muslim sensibilities, the Trinity and divinity of Jesus Christ, with no interest in doctrines of the atonement. In the early 3rd/9th century the Zaydī imām al-Ḳāsim b. Ibrāhīm al-Rassī explains the crucifixion briefly as a ransom to God (I. di Matteo, *Confutazione contro i Cristiani dello Zaydito al-Qāsim b. Ibrāhīm*, in *RSO*, ix [1922] 317) but does not discuss it further; while later in the same century, the independently-minded Muᶜtazilī Abū ᶜĪsā al-Warrāḳ [*q.v.*], whose refutation of Christianity is the most elaborate to survive from the early period, gives a concise description (D.

Thomas, *Anti-Christian polemic in early Islam*, Cambridge 1992, 68-9, 72-7), but only mentions the crucifixion incidentally in the course of demonstrating the inadequacies of explanations of the Incarnation (see E. Platti (ed. and tr.), *Abū ʿĪsā al-Warrāq, Yaḥyā Ibn ʿAdī, de l'incarnation*, Louvain 1987 (CSCO, 490-1) e.g. §§ 63 ff.). Later polemicists follow Abū ʿĪsā's example and often refer to the crucifixion only in the course of questioning whether the divine character in Christ could suffer death (e.g. al-Nāshiʾ al-Akbar [*q.v.*], in J. van Ess, *Frühe muʿtazilitische Häresiographie*, Beirut 1971, 83-4; al-Bāḳillānī, *Kitāb al-Tamhīd*, ed. R. McCarthy, Beirut 1957, 97-8; Ibn Taymiyya, *al-Djawāb al-ṣaḥīḥ li-man baddala dīn al-Masīḥ*, Cairo 1905, iii, 42 ff.).

Two exceptions to this indifferent attitude are ʿAbd al-Djabbār b. Aḥmad and Ibn Ḥazm [*q.vv.*], who each attempt to show that the crucifixion need not have involved the person of ʿĪsā, and so could have happened in conformity with the understood teaching of sūra IV, 157-8. Ibn Ḥazm argues that the witnesses to the events of the crucifixion are not necessarily reliable (*K. al-Fiṣal fi 'l-milal wa 'l-ahwāʾ wa 'l-niḥal*, Cairo 1317, i, 58 ff.), while ʿAbd al-Djabbār employs a previously unknown account of the Passion, in which the individual crucified is not explicitly identified as Jesus, as the factual basis for his argument that ʿĪsā was not killed on the cross (*K. Tathbīt dalāʾil al-nubuwwa*, ed. ʿA.-K. ʿUthmān, Beirut 1966, 137 ff.; see S.M. Stern, *Quotations from apocryphal gospels in ʿAbd al-Jabbār*, in *Journal of Theological Studies*, N.S. xviii [1967], 34-57).

Attempts were made by Christians who wrote in Arabic to explain the significance of the crucifixion, but with little if any success (see M. Swanson, *The Cross of Christ in the earliest Arabic Melkite apologies*, in *Christian Arabic apologetics during the Abbasid period*, ed. J. Nielsen and K. Samir, Leiden 1994, 115-45, and the bibliography cited there). In more recent times, Christian teaching about the cross has received close attention from some Muslims, notably K. Hussein, *Ḳarya ẓālima*, Cairo 1954, tr. K. Cragg, *City of Wrong*, Amsterdam 1959 [see ʿĪSĀ. xv], and M.M. Ayoub, *Towards an Islamic Christology. II. the death of Jesus, reality or delusion*, in *MW*, lxx (1980), 91-121.

It was popularly thought among Muslims that the cross was actually worshipped by Christians; the caliph al-Mahdī suggests this in the course of his dialogue with the Nestorian patriarch Timothy I, which took place some time after 164/781 (see A. Mingana, *Timothy's apology for Christianity*, in *Woodbrooke Studies*, ii [1928], 39-40); the correspondence attributed to the caliph ʿUmar b. ʿAbd al-ʿAzīz and the emperor Leo III, though probably late 3rd/9th century, includes a discussion of it (see D. Sourdel, *Un pamphlet musulman anonyme d'époque ʿabbāside contre les Chrétiens*, in *REI*, xxxiv [1966], 29; see more fully, J.M. Gaudeul, *The correspondence between Leo and ʿUmar: ʿUmar's letter re-discovered?*, in *Islamochristiana*, x [1984], 109-57); ʿAbd Allāh al-Hāshimī, the supposed opponent of ʿAbd al-Masīḥ al-Kindī [*q.v.*] mentions it among the practices he invites the Christian to renounce (*Risālat al-Kindī*, ed. A. Tien, London 1880, 21); it arises in the course of the reported debate between Christians and Muslims before al-Maʾmūn (see A. Guillaume, *A debate between Christian and Moslem doctors, Centenary Supplement to JRAS*, London 1924, 242; Swanson, *art. cit.*, 120-1, discusses dating).

Christians habitually defended the veneration of the cross (see A.-T. Khoury, *Apologétique byzantine contre l'Islam (VIII^e-XIII^e S.)*, Altenberge 1982, 121 ff.). And it is no surprise that the 3rd/9th century Christian apologist Abū Rāʾiṭa found it necessary to insist that the cross was not itself the object of worship but marked the direction of worship (see S. Griffith, *Ḥabīb ibn Ḥidmah Abū Rāʾiṭah, a Christian* mutakallim *of the first Abbāsid century*, in *Oriens Christianus*, lxiv [1980], 200), or that Arab lexicographers came to call the cross the *ḳibla* of the Christians.

(A.J. WENSINCK-[D. THOMAS])

SALĪḤ, an Arab tribe that the genealogists affiliate with the large tribal group, Ḳuḍāʿa [*q.v.*]. Around A.D. 400, it entered the Byzantine political orbit and became the dominant federate ally of Byzantium in the 5th century, its *foederati*.

It is practically certain that Salīḥ penetrated the Byzantine frontier from the region of Wādī Sirḥān. Ptolemy in his *Geography* speaks of a toponym, Ζαγμαΐς, in northern Arabia, identifiable with the Arabic Salīḥid name, Ḍudjʿum/Ḍadjʿum, and one of the affluents of Wādī Sirḥān is called Ḥidridj/Ḥidradj, also identifiable with another Salīḥid figure, al-Ḥidridjān. Precisely where in Byzantine Oriens/Bilād al-Shām they settled as *foederati* is not known, but it was in the southern half of it, mainly in the *provincia* Arabia, and in the two Palestines, Secunda and Tertia.

Within federate tribal Salīḥ, the Ḍadjāʿima (pl. of Ḍadjʿum) were the royal house. The eponym Ḍudjʿum/Dadjʿum is attested in the Greek source, Sozomen, as Ζόκομος, the tribal chief who converted to Christianity after a monk cured his wife of her sterility. Most of the historical figures among the Ḍadjāʿima/Zokomids, mentioned by the genealogists, are shadowy figures with the exception of two: Dāwūd and Ziyād, both with the same patronymic, Ibn al-Habūla. The first was the Salīḥid king whose name is associated with Dayr Dāwūd. Tradition says that his involvement in Christianity and the religious life weakened his warlike spirit and he was finally killed in the Gōlān in an encounter with a tribal coalition that formed against him. The second, Ziyād, is best known as the Salīḥid figure who fought the Kinda under the leadership of their king Ḥudjr, but was vanquished by them at the battle of Yawm al-Baradān (see below).

As the principal *foederati* of Byzantium in the 5th century, their main assignment was the protection of the Roman frontier facing the Arabian Peninsula from the raids of the pastoralists, the Saracens [*q.v.*] of the Greek and Latin sources. Legally, they were not Roman citizens but allies, whose relationship with Rome-Byzantium was governed by the *foedus*, the treaty. In return for their services as watchmen over the frontier, they were granted the privilege of settling on Roman territory and received the usual subsidies, either in money or in kind. Their chiefs were called phylarchs, and the term became technical in the Byzantine military system, meaning Arab chiefs in treaty relationship to Byzantium. In addition to protecting the Roman frontier, they took part in the two Persian Wars of the reign of Theodosius II, in 421-2

and 440-2, and possibly in the Vandal War of the Emperor Leo, who in 468 dispatched an expeditionary force against the Vandals of Africa. The Byzantines lost the battle of Cape Bon against the Vandals, and the Salīḥids probably lost heavily in that battle, which thus must have contributed to their eventual downfall in the Orient. Participation in the Persian and Vandal Wars relieves Salīḥid history of its marginality in fighting only the pastoralists of the Arabian Peninsula.

The conversion of their eponym, Ḍudj^c^um/Zokomos, to Christianity set the tone of their involvement in religion, especially monastic Christianity. The one structure that is definitely associated with them is a monastery, Dayr Dāwūd, in present-day al-Turkumāniyya in northern Syria. It was built by the Salīḥid King Dāwūd, whose name, David, speaks for itself. He was nicknamed al-Lat̲h̲iḳ "the bedraggled" because he insisted on carrying water and mortar on his own back while building his monastery, as an act of piety.

More is known about their important contribution to poetry in Bilād al-S̲h̲ām in the 5th century. While Epinician odes were composed in Arabic for the victories of the Arab Queen Mavia over the Byzantine Emperor Valens, the poets of these victory odes have remained anonymous. But in the case of the Salīḥids, their court poet is known by name, ^c^Abd al-^c^Āṣ, of the tribe of Iyād, who became the court poet of the Salīḥid king Dāwūd. The poet-laureateship of ^c^Abd al-^c^Āṣ makes certain that the tradition of court poetry in Bilād al-S̲h̲ām started some hundred years before it was attested for the G̲h̲assānids, the Arab allies of Byzantium in the 6th century. Attractive is the fact that not only did Dāwūd have a court poet but also that he had a daughter, left anonymous in the sources who, too, was a poetess. Of her poetry, one solitary verse has survived in which she laments the death of her father Dāwūd at the hands of two tribesmen. The verse is redolent of contempt for the two "wolves" who killed the king of Salīḥ and the two regicides are not left anonymous: Ibn ^c^Āmir and Mas̲h̲dja^c^a, from the tribes of Kalb and al-Namir respectively. The Yawm, the battle day, on which Dāwūd fell apparently occasioned the composition of some poetry, since a triplet has survived composed by one of the two regicides in which he prides himself and his tribe on their dispatch of Dāwūd, while the verse of his daughter, the Salīḥid princess, suggests that it was an answer to the triplet, perhaps belonging to a flyting poem.

Around A.D. 500, the star of the Salīḥids began to set, as more powerful tribal groups were approaching the Roman *limes*, Kinda and Ghassān [*q.vv.*]. They first vanquished the Salīḥids under the leadership of Ziyād b. al-Hābula at Yawm al-Baradān, but it was the latter that finally overturned them and superseded them as the dominant *foederati* of Byzantium in the 6th century, and thereby hangs a tale. The Salīḥid tax-collector, Sabīṭ, refused the sword of the G̲h̲assānid D̲j̲id̲h̲^c^as pawn, whereupon the G̲h̲assānid unsheathed his sword and cut off Sabīṭ's head, a circumstance that gave rise to the saying "Take from D̲j̲id̲h̲^c^ what D̲j̲id̲h̲^c^ chooses to give you", *k̲h̲ud̲h̲ min D̲j̲id̲h̲^c^in mā a^c^ṭāka*.

Throughout this century, the Salīḥids lived in partial eclipse outshone by the G̲h̲assānids, who dominated the scene of Arab-Byzantine relations. But one of their phylarchs, who had the same name as the eponym, Ζώγυμος appears in 586 in the Byzantine army, fighting the Persians at the siege of Mārdīn, after the suspension of the G̲h̲assānid phylarchate for some five years in the eighties of the 6th century. The Salīḥids clearly remained federates of Byzantium, since they appear in the period of the conquest of Bilād al-S̲h̲ām, fighting the Muslim Arabs with other federate tribes at Dūmat al-D̲j̲andal and in Zīzā^ᵓ^ in Trans-Jordan. After being worsted in the southern part of Oriens by the Muslim armies, they apparently moved to the north of Syria where ^c^Abu ^c^Ubayda found them with the Tanūk̲h̲ in the *ḥāḍir* (military encampment) of Ḳinnasrīn. When asked to accept Islam, they refused conversion and remained Christians.

Unlike the Tanūk̲h̲ and the G̲h̲assānids, these *foederati* of the 5th century did not prosper in Islamic times, presumably because they remained staunchly Christian and, so, isolated within the new Islamic order, with the exception of one Salīḥid, namely, Usāma b. Zayd. This scion of the old tribe served four Umayyad caliphs: al-Walīd and Sulaymān, who put him over the *k̲h̲arād̲j̲* of Egypt, and Yazīd b. ^c^Abd al-Malik and His̲h̲ām, whose *kātib* Usāma was.

In addition to political and social obscurity in the Muslim period, the Salīḥids were dispersed physically in various parts of the Fertile Crescent and in Egypt. They are represented in the 20th century best in Trans-Jordan, where traces of them have survived in a village called al-Salīḥī, which lies some 20 km/12 miles to the northwest of ^c^Ammān, in a spring called ^c^Ayn al-Salīḥī, and in a valley called Wādī al-Salīḥī. And not far from these toponyms still live the al-Salīḥāt (Sleihat), almost certainly, because of the rarity of the name, the descendants of the ancient Salīḥids.

(Irfān S̲h̲ahîd)

ṢĀLIḤ (a.), an adjective generally meaning "righteous", "virtuous", "incorrupt", used in the science of *ḥadīt̲h̲* [*q.v.*] criticism as a technical term indicating a transmitter who, although otherwise praised for his upright conduct, is known to have brought into circulation one or more traditions spuriously ascribed to the Prophet Muḥammad. It is the contents of such traditions, as well as their underlying meaning, that characterise their recognised inventor as *ṣāliḥ* rather than as *waḍḍā^c^*, i.e. "forger", or *kad̲h̲d̲h̲āb*, "liar". Transmitters labelled *ṣāliḥ*, or its presumably slightly denigrating dimin-

utive *ṣuwayliḥ*, are those who are held responsible for certain traditions of an, on the whole, pleasing tenor, as long as they are harmless and do not give rise to confusion, *fitna* [*q.v.*], among the believers. Scores of *ṣāliḥ* transmitters are found in the lexicons of *ridjāl* [*q.v.*] detailing the merits or demerits of *ḥadīth* transmitters. Not unfrequently they are at the same time accused of *kadhib*, i.e. "mendacity", for having fabricated traditions of a weightier substance, such as controversial ones dealing with *ḥalāl wa-ḥarām* [see SHARĪʿA] or others that are found ludicrous or otherwise objectionable, for example because of gross exaggeration. This accusation results in the qualifier *kadhdhāb*.

In the *ridjāl* dictionaries, numerous transmitters are assessed by means of strings of qualifications that seem at first glance mutually contradictory, such as the one attributed to ʿAbd al-Raḥmān b. Mahdī (d. 198/814) quoted in al-Khaṭīb al-Baghdādī's *Kifāya*, 22, - 6 f., where he describes someone's traditions as: ... *fīhi ḍuʿf wa-huwa radjul ṣadūk fa-yakūlu radjul ṣāliḥ al-ḥadīth*, or that of the *isnād* critic Yaʿkūb b. Shayba (d. 262/876) depicting a transmitter as ... *radjul ṣāliḥ ṣadūk thika ḍaʿīf djiddan* (cf. Ibn Ḥadjar, *Tahdhīb*, iii, 248). Examples of such strings of seemingly contradictory qualifications are legion and make it clear that *ṣāliḥ* and its near-equivalent *ṣadūk*, lit. "veracious", can be combined with *ḍuʿf* as well as *thika*. This last-mentioned qualification, lit. "reliable person", is, like *ṣāliḥ* and *ṣadūk*, not to be taken at face value, for it is more often than not merely a non-committal term conveying, if anything, the ignorance of the user as to the true merits or demerits of the transmitter scrutinised. This can amply be substantiated in multi-volume *thikāt* collections, e.g. the *Kitāb al-Thikāt* of Ibn Ḥibbān al-Bustī (d. 354/965 [*q.v.*]), in which countless transmitters thus qualified are at the same time *madjhūl*, i.e. "anonymous".

Transmitters who are labelled *ṣāliḥ* are commonly described as overly pious through the observation of various, mostly supererogatory, ritual practices. Other, quasi-technical, terms for this class of transmitters are: *nāsik*, *ʿābid*, *zāhid*, and the like. Their godly behaviour, as well as the generally pleasing and edifying contents of the *ṣāliḥ* material transmitted by them, earns them the qualification *ṣāliḥ*. The contents of traditions deserving the label *ṣāliḥ*, rather than *mawḍūʿ*, "fabricated", "forged", can be summarised as falling under the headings of *targhīb wa-tarhīb*, "arousing desire and inspiring awe", *mawāʿiẓ*, "pious harangues", and *rikāk* or *rakāʾik*, "subtle, elegant, ornate sayings". These tradition rubrics are replete with descriptions of the Day of Judgement, Heaven and Hell, the rewards or punishment therein, how to attain the one by performing salutary acts (*ṣāliḥāt*) and how, by eschewing crimes and sins, to avoid being cast into the other, as well as numerous traditions of a general nature, e.g. those listing human actions which are believed to be particularly pleasing to God, the so-called *faḍāʾil al-aʿmāl* genre. Among this last genre all those traditions enumerating the rewards for people reciting a particular *sūra* of the Ḳurʾān are prominent. *Ṣāliḥ* traditions are moulded either in the form of prophetic dicta or implied in descriptions of the Prophet's alleged behaviour. Before the reputation of the early Islamic storyteller (*kāṣṣ* [*q.v.*]) worsened in the course of the second half of the 2nd/8th century, it was he who was often identified as purveyor of *ṣāliḥ* material. Although *ṣāliḥ* traditions can theoretically be found among those labelled *ṣaḥīḥ* [*q.v.*], the majority fall under the categories of *ḥasan* "fair" (a genuine euphemism for mostly poorly authenticated traditions) or *ḍaʿīf* "weak", traditions without any claim to reliability.

The acceptability of *ṣāliḥ* traditions from transmitters labelled *ṣāliḥ* varies with early *ḥadīth* experts. Mālik b. Anas (d. 179/795 [*q.v.*]) professed that he had no use for them (cf. al-Khaṭīb, *Kifāya*, 160) and, consequently, his *Muwaṭṭaʾ* is relatively free from them, but such collections as the *Musnad* of Aḥmad Ibn Ḥanbal (d. 241/856 [*q.v.*]) and also the Six Books are riddled with *ṣāliḥ* traditions, the latter especially in chapters entitled *zuhd, fitan, rikāk, ṣifat al-djanna, ṣifat al-nār, ādāb*, etc.

Throughout the centuries-long period of *ḥadīth* collecting, the gathering of *ṣāliḥ* traditions was widely encouraged, not, however, in order to distill from them juridical or doctrinal arguments (in Arabic, *li'l-iḥtidjādj*) but only for the sake of comparison or consideration (in Arabic, *li'l-iʿtibār*). This is the reason why Muslim tradition literature has preserved such masses of *ṣāliḥ* traditions. *Ṣāliḥ* traditions were even brought together in special collections, the one entitled *al-Targhīb wa 'l-tarhīb* by al-Mundhirī (d. 656/1258) being particularly popular (cf. Juynboll, *Muslim tradition*, 189-90).

To sum up, the statement attributed to the early Muslim *ḥadīth* expert Yaḥyā b. Saʿīd al-Ḳaṭṭān (d. 198/813) from Baṣra speaks volumes in the present context: "In nothing did we find *al-ṣāliḥūn* more mendacious (*akdhab*) than in (inventing) traditions" (cf. Muslim b. al-Ḥadjdjadj's introduction to his *Ṣaḥīḥ*, cited in *JSAI*, v [1984], 281). Furthermore, for Medina we have the assessment of the *fakīh* Abu 'l-Zinād (d. 133/751) who is reported to have said (cf. al-Khaṭīb, *Kifāya*, 159): "In Medina I made the acquaintance of some hundred *shaykhs*, all of them *thikas*, but their *ḥadīths* should be well left alone." And the Kūfan Sufyān al-Thawrī (d. 161/778 [*q.v.*]) is recorded to have said (Ibn Radjab, 103), when confronted with the fact that, although wary, he did transmit traditions from Muḥammad b. al-Sāʾib al-Kalbī (d. 146/763 [see AL-KALBĪ, at IV, 495a]): "But I know his *ṣidk* from his *kadhib*!" Observations such as these three are indeed numerous in Muslim *ḥadīth* studies.

Bibliography: The most extensive early theoretical survey of different classes of *muḥaddithūn*, whose role in bringing spurious traditions into circulation was generally recognised, is that of Ibn Ḥibbān al-Bustī (d. 354/965), *Kitāb al-Madjrūḥīn*, Ḥaydarābād 1970, i, 48-74. Furthermore, Ibn Abī Ḥātim al-Rāzī, *Kitāb al-Djarḥ wa 'l-taʿdīl*, Ḥaydarābād 1952, i/1, 37 f.; idem, *Takdimat al-maʿrifa li-kitāb al-djarḥ wa 'l-taʿdīl*, Ḥaydarābād 1952, 10; al-Khaṭīb al-Baghdādī, *Kitāb al-kifāya fī ʿilm al-riwāya*, Ḥaydarābād 1357, 133-4, 158-61; Ibn Radjab, *Sharḥ ʿilal al-Tirmidhī*, ed. W. Marçais (using the term "fraudes pieuses" for traditions of *ṣāliḥūn*) in *JA*, 9e séries, xvii (1901), 121-5; Djalāl al-Dīn al-Suyūṭī, *Tadrīb al-rāwī fī sharḥ takrīb al-Nawawī*, ed. ʿAbd al-Wahhāb ʿAbd al-Laṭīf, Cairo 1966, i, 274-90. For the contemporary Muslim view, see e.g. Nūr al-Dīn ʿIṭr, *Manhadj al-nakd fī ʿulūm al-ḥadīth*, Damascus 1972, 254, 284-5; idem, *Muʿdjam al-muṣṭalaḥāt al-ḥadīthiyya*, Damascus 1977, 55; Ṣubḥī al-Ṣāliḥ, *ʿUlūm al-ḥadīth wa-muṣṭalaḥuhu*, Damascus 1959, 289-90. For a survey of *ṣāliḥ* against the

background of other technical *ḥadīth* terms, see G.H.A. Juynboll, *Muslim tradition. Studies in chronology, provenance and authorship of early* ḥadīth, Cambridge 1983, 184-90. (G.H.A. JUYNBOLL)

ṢĀLIḤ, a prophet who, according to the Ḳurʾān, was sent to the people Thamūd [*q.v.*]. He is mentioned by name nine times in the Ḳurʾān, with the fullest versions of the story being told in VII, 73-9, XI, 61-8, XXVI, 141-59, and XXVII, 45-53; nineteen additional references to Thamūd by name, including extensive passages in LIV, 23-32 and XCI, 11-5, provide parallel accounts and specific details without mentioning the name Ṣāliḥ.

The story of Ṣāliḥ follows the standard Ḳurʾānic pattern of commission, mission, rejection and punishment (see ḲURʾĀN. 6.d; J. Wansbrough, *Quranic studies*, Oxford 1977, 21-5). Sent as a "sign" and a "warning", the prophet demanded that his people turn to him and pray to God alone, from whom they had received blessings. The people rejected Ṣāliḥ abruptly, calling him "bewitched" (*musaḥḥar*), a man like themselves, one whose claim to revelation was false; they would not give up the religion of their fathers and they doubted the idea of a day of judgement.

The focal point and distinctive element of the story of Ṣāliḥ comes in the account of the camel (*nāḳa*) sent as a "sign" (*āya*, VII, 73, XI, 64, XXVI, 154), "test" (*fitna*, LIV, 27) or "proof" (*mubṣira*, XVII, 59) by God. Ṣāliḥ told his people that the camel must be left alone to feed unharmed and drink unhindered. However, the people (or one person according to LIV, 29) hamstrung it and killed it. They then contemptuously asked Ṣāliḥ to bring about the punishment which he had threatened. He told them to stay in their houses for three days; then a storm broke out (LI, 44, LXIX, 5), perhaps an earthquake (VII, 78), and on the following morning they lay dead in their houses.

Thamūd, as a name of a historical people, is known from other sources, and thus the story of Ṣāliḥ is often thought to have a basis in history. The dwellings which the Thamūdic people had hewn out of the rocks according to the Ḳurʾān (VII, 74, XXVI, 149, LXXXIX, 9), the remains of which were still visible (XXIX, 38), are connected in folk-lore with the tombs at al-Ḥidjr [*q.v.*] = Madāʾin Ṣāliḥ, but this connection is unclear, these rock tombs are, in fact, essentially Nabataean [see NABAṬ], although the tomb inscription of Raḳāshi bt. ᶜAbd al-Manāt is written in Nabataean, with strong Arabic influence, and in Thamudic.

Muslim legend developed the story of Ṣāliḥ in its typical manner, providing stories of miraculous occurrences during his conception and birth, and his being called to prophethood at the age of forty. He was given a genealogy which traced him back to Noah through Shem, probably because of the frequent association of Noah and Thamūd in the Ḳurʾān (e.g. XIV, 9, "Has the story not reached you of those who were before you, the people of Noah, ᶜĀd and Thamūd and those after them?"; also IX, 70, XXII, 42, XXV, 37-8, XL, 31, L, 12) who are linked thematically through the total destruction of their respective communities. Likewise, the period in which Ṣāliḥ lived was pictured as preceeding that of Abraham and coming after Hūd, because of the way the stories were structured sequentially in Ḳurʾān, VII, 65-84, for example. Muslims were aware that no Biblical prophet could be identified with Ṣāliḥ, but it was claimed that prophets such as Ṣāliḥ and Hūd were just as famous among the Arabs as were Abraham and his descendants.

The name itself Ṣāliḥ may well be a formation from the time of Muḥammad himself, from the root *ṣ-l-ḥ* with the connotation of "to be pious, upright". Its only appearance in pre-Islamic North Arabian may be in the form *Ṣ.l.ḥ* (vowelling unknown) twice attested in Safaitic [*q.v.*] inscriptions (F.V. Winnett and G. Lankester Harding, *Inscriptions from fifty Safaitic cairns*, Toronto 1978, nos. 2048, 2095; it is also found very occasionally in Sabaic and Ḥaḍramī), and it was clearly a very rare name, not attested in e.g. Nabataean, Palmyrene or Hatran. The story of the camel cannot be conclusively connected with any known past story either, although J.M. Rodwell, in his Ḳurʾān translation, suggested in it a possible reminiscence of the story of the milch-camel of al-Basūs [*q.v.*], the killing of which sparked off the famous pre-Islamic war in Arabia (*The Koran*, London 1909, 300-1).

(A. RIPPIN)

ṢĀLIḤ B. ᶜABD AL-ḲUDDŪS b. ᶜAbd Allāh b. ᶜAbd al-Ḳuddūs al-Baṣrī, Abu 'l-Faḍl, a famous poet of the 2nd/8th century, and one of the first victims of the official inquisition inaugurated by the ᶜAbbāsid Caliph al-Mahdī, died in 167/783. In this year Bashshār b. Burd [*q.v.*] and Ṣāliḥ were accused of *zandaḳa* [*q.v.*] and executed.

References to Ṣāliḥ's poetry abound in the literature, but little concrete detail is known about his life. He was a *mawlā* of Asad or al-Azd. His father ᶜAbd al-Ḳuddūs, son of a convert, probably of Persian origin, is supposed to have composed poems. He himself seems to have been a secretary to al-Manṣūr and a colleague of Ibn al-Muḳaffaᶜ. Some traditions make him a *ḳāṣṣ* in Baṣra. He lived to become old, and according to one of his poems, he became blind.

His fame is due above all to the extensive use of gnomic expressions in his poems. He refers to an old book (Persian?) from which he borrowed his *ḥikam* or didactic sentences. A *Kitāb al-Shukūk* is attributed to him, perhaps to enhance the possibility that he was a sceptic. A study of his surviving poems shows that his title *ṣāḥib al-falsafa*—others call him *mutakallim*—is akin to truth, though no trace of *zandaḳa* or dualist thinking is visible in them. They leave no anti-Islamic impression, making his alleged death as a heretic suspicious. He considered poverty as worse than unbelief, and a life without external influence worthless. It is better to die, he says, than being a person for whose help no hope is harboured when something happens and for whose kindness and benefactions one has no hope. He was a moralist and publicised his ideas on religion through the medium of wise sayings, viewing religion as moral teaching, not as a rational or juristic system. Goldziher conjectured this as the reason behind Ṣāliḥ's inclusion among the *zindīḳs*.

Bibliography: Cheikho, in *Mashriḳ*, xxii (1924), 819 ff.; Goldziher, *Ṣāliḥ b. ᶜAbd al-Ḳuddūs und das Zindīḳthum während der Regierung des Chaliphen al-Mahdi*, in *Transactions of the 9th Intern. Congr. of Orientalists*, London 1892, ii, 104-29; J. van Ess, *Die*

Most of the surviving material on Ṣāliḥ has been collected and uncritically put together by ʿAbd Allāh Khaṭīb in *Ṣāliḥ b. ʿAbdalḳuddūs al-Baṣrī*, Baṣra 1967.

(Mohsen Zakeri)

ṢĀLIḤ b. ʿALĪ b. ʿAbd Allāh b. al-ʿAbbās, member of the ʿAbbāsid family (92-152/711-69) who played an important part in the success of the ʿAbbāsid revolution in Syria, assisting his brother ʿAbd Allāh in the assault on Damascus and, with Abū ʿAwn ʿAbd al-Malik b. Yazīd al-ʿAtakī leading the pursuit of the last Umayyad caliph, Marwān b. Muḥammad to Egypt.

He was appointed governor of Egypt on 1 Muḥarram, 133/9 August 750 and remained there for a year, establishing ʿAbbāsid power. On 1 Shaʿbān 1, 133/4 March 751 he was moved to Palestine and in the same year sent Saʿīd b. ʿAbd Allāh to lead the first *ṣāʾifa* [*q.v.*] or summer raid of ʿAbbāsid times against the Byzantines. After another short spell as governor of Egypt (5 Rabīʿ II 136/8 October/753 to 4 Ramaḍān 137/21 February 755), he spent the rest of his career in Syria and Palestine and on the Byzantine frontier. He seems to have enjoyed the confidence of his great-nephews, the caliphs al-Saffāḥ and al-Manṣūr, and, after the rebellion of his brother ʿAbd Allāh in 137/754, which he shrewdly refused to support, he was the senior ʿAbbāsid in Syria. He took over most of the Umayyad properties in the area, including the famed Dār al-Ṣabbāghīn at Ramla, at Aleppo and Salamiya, where his family were still living in al-Balādhurī's time. He played an important role in strengthening the defences of the Byzantine frontier with the rebuilding of Malaṭya, Marʿash and al-Maṣṣīṣa. He died in Syria in 152/769, but his sons al-Faḍl and ʿAbd al-Malik remained powerful in Syria until the end of al-Rashīd's reign.

ṢĀLIḤ b. MIRDĀS [see mirdās, banū].

ṢĀLIḤ b. ṬARĪF, a personage mentioned for the first time in the 4th/10th century in the text of Ibn Ḥawḳal, *Ṣūrat al-arḍ*, as having lived 200 years before and having been the alleged prophet of the Barghawāta, a Berber confederation of the Maṣmūda group, installed in the region of Tasmana, between Salé and Azemmour in Morocco.

Ṣāliḥ's father, Ṭarīf b. Shamaʿūn b. Yaʿḳūb b. Isḥāḳ, perhaps of Jewish origin, had been a companion of Maysara al-Matgharī, who had led a rising in 122/740 in northern Morocco at the time of the Khāridjite revolt; Ṭarīf was then recognised as the chief of the Tamasna tribe. His son Ṣāliḥ succeeded him *ca.* 131/748-9. According to the narrative of the "Great Prayer Leader", *ṣāḥib ṣalātihim*, Abū Ṣāliḥ Zammūr al-Barghawāṭī, sent as an ambassador to Cordova in 352/963, whom al-Bakrī (*Masālik*, mid-5th/11th century) mentions, Ṣāliḥ had taken part in the wars led by Maysara together with his father, and then is said to have taught his people a religious doctrine revealed to him and to have proclaimed himself a prophet. He is then said to have left for the East, instructing his son al-Yasaʿ/Ilyasaʿ, who succeeded in *ca.* 178/794-5, to keep this new religion secret. He himself would return in the time of his seventh successor. According to several sources, Ṣāliḥ allegedly lived, like his son also, as a good Muslim, and it was his grandson, Yūnus, who proclaimed that his grandfather was a prophet, Ṣāliḥ al-Muʾminīn, and to have proclaimed publicly the secret doctrine, with a Ḳurʾān in Berber. There are various obscurities regarding Ṣāliḥ b. Ṭarīf. Did he really leave for the East, or was it just Yūnus who took the road, as Ibn ʿIdhārī (*Bayān*, i) seems to assert, together with another tradition given by al-Bakrī? Yūnus allegedly invented, for his own purposes, by declaring himself a prophet, this new "Berber" religion suffused with Ṣufrī Khāridjism, by attributing it to his grandfather, who was supposed to have charged him with the task of revealing it; this latter explanation seems more plausible.

(Chantal de La Veronne)

ṢĀLIḤ b. YAḤYĀ b. Ṣāliḥ b. Ḥusayn b. Khaḍir (d. 839/1436), *amīr* of the Druze family of the Banū Buḥtur whose family divided up, amongst brothers and cousins, the coastal region and mountain of the Shūf in present-day Lebanon, the area lying between Beirut and Sidon, with its chef-lieu as the little town of ʿAbay, from the 5th/11th century to the end of the 9th/15th one.

Ṣāliḥ b. Yaḥyā is above all known for having written a history of his family, published for the first time, from the B.N. unicum (fonds arabe 1670), in the journal *al-Machriq* (1898-9), and then issued in book form at Beirut by the Imprimerie Catholique in 1902 and 1928. A new edition, taking into account the critical remarks of J. Sauvaget (*BEO*, vii-viii [1937-8], 65-81) and respecting better the text's integralness, also preserving its dialectical style, has been published by F. Hours S.J. and Kamal Salibi as *Tārīḫ Bayrūt. Récits des anciens de la famille de Buḥtur b. ʿAlī, émir du Gharb de Beyrouth*, Beirut 1969 (Coll. Recherches, Dar el-Machreq).

Written in a distinctly unclassical language, it begins with topographical and historico-archaeological aspects of the town of Beirut, and then passes, for the greater part of the work, to the complete chronicle of members of the family, from the ancestor Buḥtur (6th/12th century) up to the author's own time, setting forth its subject in three chronological divisions (*ṭabaḳāt*), the third one revolving round Nāṣir al-Dīn al-Ḥusayn (d. 751/1350), the author's great-grandfather and most remarkable of the *amīrs* of the Gharb.

The work's considerable interest lies in the fact that it is one of the rare documents which allow us to penetrate within the daily life of a small rural fiefdom, administratively attached to Damascus in Ayyūbid and Mamlūk times. It gives, by means of personalised accounts and archival documents, a very lively idea of the life of the peoples living to the south of Beirut and their relations with *inter alios* the Mamlūk occupiers.

The Druze historian Ḥamza b. Aḥmad b. ʿUmar b.

Ṣāliḥ, called Ibn Asbāṭ al-Gharbī (d. 926/1520) made use of Ṣāliḥ b. Yaḥyā's text in his *Taʾrīkh*, and this was in turn made use of by the *amīr* Ḥaydar al-Shihābī (d. 1250/1835) in his *al-Ghurar al-ḥisān fī taʾrīkh ḥawādith al-zamān* (éd. Naʿīm Mughabghab, Cairo 1900).

Bibliography: Given in the article, to which should be added Brockelmann, II, 36 and II², 47, and Ziriklī, *Aʿlām*, ii, 276, iii, 198.

(L. Pouzet)

al-Malik al-**ṢĀLIḤ**, the regnal title of four Mamlūk sultans:

1. ʿImād al-Dīn Ismāʿīl, *regn.* 743-46/1342-45;
2. Ṣalāḥ al-Dīn Ṣāliḥ, *regn.* 752-55/1351-54;
3. Ṣalāḥ al-Dīn Ḥādjdjī, *regn.* 783-84/1381-82, 791-92/1389-90; and
4. Nāṣir al-Dīn Muḥammad b. al-Ẓāhir Ṭaṭar, *regn.* 824-5/1421-2.

1. al-Ṣāliḥ ʿImād al-Dīn Ismāʿīl, son of al-Nāṣir Muḥammad b. Ḳalāwūn [*q.v.*], was raised to the sultanate by his father's senior *amīrs* on 22 Muḥarram 743/28 June 1342 to succeed his brother al-Malik al-Nāṣir Aḥmad who had absconded, with all the royal treasures, to al-Karak. When, upon al-Nāṣir Muḥammad's death, none of the *amīrs* proved powerful enough to go it alone, they resorted to factional coalitions enabling two or more of them to rule jointly in the name of the Ḳalāwūnī sultan. Al-Ṣāliḥ Ismāʿīl's rule was upheld first by Arghūn al-ʿAlāʾī, his step-father, and Āḳsunḳur al-Salārī, who held the offices of *raʾs nawba* and *nāʾib al-salṭana* respectively. With Āḳsunḳur's subsequent elimination, Arghūn al-ʿAlāʾī held the reins of power while al-Ḥādjdj Āl Malik became *nāʾib al-salṭana*.

As the Ḳalāwūnī sultans' rule was nominal only, the *amīrs* never cut off, and even encouraged their connections with the harem which al-Nāṣir Muḥammad had left behind. Before long, the influence the harem exerted was enormous. During Ismāʿīl's reign e.g. the involvement in government affairs of harem women and servants increased to such extent that *iḳṭāʿāt* and land allowances could be obtained only through them. Owing to the influence of the chief eunuch, ʿAnbar al-Sakhartī, who had been Ismāʿīl's tutor, servants and eunuchs attained a status of such importance that they freely appropriated Mamlūk ways, while Al-Sakhartī surrounded himself with the ceremonial usually reserved for senior *amīrs*. Servants and eunuchs, moreover, were involved in an abortive attempt in 744/1343 of a group of *amīrs* to re-install Aḥmad in the sultanate. For all his piety and modesty, Ismāʿīl soon indulged himself in the pleasures of the harem and married Ittifāḳ, a slave-girl singer, lavishing on her expensive gifts from the royal treasures. Soon the sultan's household expenditures (*ḥawāʾidj-khāna*) exceeded his father's already extravagant practices. Even when in Muḥarram 745/May 1344 the sultanate was beset by a deep economic crisis (an annual budget deficit standing at 30 million *dirhams* with revenues at only 15 million *dirhams*), mere cosmetic measures were taken to diminish expenditure.

A particularly heavy burden on the treasury during Ismāʿīl's rule were the costly campaigns of the ruling *amīrs* against Aḥmad, still entrenched at al-Karak—after seven abortive campaigns they were forced to borrow money from merchants to finance a final attempt. Even then the city fell only when the Bedouin who had sided with Aḥmad deserted him for the reward of *iḳṭāʿāt* and lands. Aḥmad was subsequently executed (745/1344). Taking advantage of the government's obvious weakness, the Bedouin both in Egypt and Syria revolted. The rivalry between the Āl Muhannā and the Āl Faḍl over the leadership of the Bedouin in Syria on behalf of the government, *imrat al-ʿarab*, erupted into an open conflict. Other tribes in Syria, *al-ʿashīr*, soon took the law into their own hands. Internecine wars between the Bedouin tribes of Lower and Upper Egypt disrupted travel on the roads, damaged the irrigation system and prevented officials from levying taxes in their districts; expeditions despatched to subdue the Bedouin proved inadequate.

To this chaotic situation, the market reacted with increasing inflation and sharp monetary devaluation. Some relief came when in 745/1345 al-Ṣāliḥ Ismāʿīl granted the Venetians commercial privileges. Thereafter, Europeans were increasingly offered such commercial concessions as the revenues for the government from taxation on foreign trade offset the dwindling revenues from agriculture and local commerce. That commercial ties between the Mamlūk sultanate and Europe could be renewed stemmed from changes outside the sultanate. The Papal trade embargo against the sultanate which had been in force since the fall of Acre in 690/1291 was revoked because of pressure exerted by the European trading powers, who wanted to shift their trade back to the Levant after political changes hampered trade in the Black Sea region. After only a short reign, al-Ṣāliḥ Ismāʿīl died in Rabīʿ I 746/July 1345, from illness. Anxious to remain in power, Arghūn al-ʿAlāʾī, through a will Ismāʿīl had made under his guidance, guaranteed the succession of Shaʿbān [*q.v.*], Ismāʿīl's brother.

Bibliography: Maḳrīzī, *K. al-Sulūk*, i/3, Cairo 1939, 619-80; idem, *K. al-Muḳaffā*, ii, Beirut 1991, 66-9; Shams al-Dīn al-Shudjāʿī, *Taʾrīkh al-Malik al-Nāṣir Muḥammad*, i, Wiesbaden 1977, 230-77; Ibn Taghrī Birdī, *Nudjūm*, x, Cairo 1963, 78-98; idem, *Manhal*, ii, Cairo 1984, 425-27; R. 2. al-Ṣāliḥ Ṣalāḥ al-Dīn Ṣāliḥ (lived 738-61/1337-60) was the son of al-Nāṣir Muḥammad b. Ḳalāwūn [*q.v.*] by Ḳutlūmalik, the daughter of the *amīr* Tankiz al-Ḥusāmī, al-Nāṣir's *nāʾib* in Syria. Al-Ṣāliḥ was installed on the throne on 28 Djumādā II 752/2 August 1351 after the senior *amīrs* of his father's Mamlūk household who held power at the time had deposed his brother al-Nāṣir Ḥasan [*q.v.*]. Four days later, an open power struggle broke out between them and a triumvirate, of *Amīrs* Shaykhū (or Shaykhūn), Ṣarghatmush and Ṭāz, came out victorious. Wanting to avoid concentration of power in one hand, the three carefully separated control over the treasury from that over the army. Thus Shaykhū held the sultan's treasury (*al-khāṣṣ*) while Ṣarghatmush was responsible for the distribution of *iḳṭāʿ*s and the Mamlūks' promotion in the army. Suspicions, however, simmered and in Rabīʿ I 753/May-June 1352 Ṭāz accused Ṣarghatmush of attempting to restore al-Nāṣir Ḥasan. Later in Radjab/October, disgruntled erstwhile associates such as Baybughā Urūs, the *nāʾib* of Ḥamāt, his brother Mandjak al-Yūsufī and others, led an abortive coup in Syria. The rebels, together with Turkman and Bedouin tribes, looted Damascus and its suburbs before the Mamlūk army, nominally commanded by al-Ṣāliḥ Ṣāliḥ, defeated them. When Shaykhū and Ṣarghatmush learned that Ṭāz was plotting against them with al-Ṣāliḥ Ṣāliḥ, they did away with him, and on 2 Shawwāl 755/20 October 1354, deposed al-Ṣāliḥ Ṣāliḥ and restored al-Nāṣir Ḥasan to the throne.

With the ruling *amīrs* preoccupied with power

struggles, the Bedouin who had been under the patronage of al-Nāṣir Muḥammad and had accumulated power during his rule and after his death, took the law into their own hands. Internecine wars between the Āl Muhannā and Āl Faḍl over the *imrat al-ʿarab* again rendered highways in Syria unsafe, compelling the government in 753/1352 to award the *imra* to both of them jointly. As in 752/1351, Upper Egypt was under the *de facto* control of Muḥammad b. Wāṣil al-Aḥdab, chief of the ʿArak tribe. Attacks on the Bedouin throughout Egypt in 754/1353 ended a period of some fifteen years during which the country's resources had been consistently depleted by the destruction which the Bedouin wrought on commerce and agriculture and by the enormous government expenditure on efforts to contain them.

It was during al-Ṣāliḥ Ṣāliḥ's reign that the impact on the sultanate's economy of the Black Death, which had ravaged Egypt during 748-50/1347-9, became most obvious. The Mamlūk army was decimated, and *ḥalḳa* soldiers who had survived the epidemic were reduced to such miserable conditions that they resorted to leasing their *iḳṭāʿāt* to civilians, which in turn led to the further decline of the army. Shortage in manpower caused large parts of the cultivated lands in Egypt to lie waste sharply reducing the treasury's revenues from agriculture. The state's deficit now reached such proportions that no one could be found willing to take responsibility for the treasury. Even the vizierate was an office no longer much desired. In order to reduce the deficit, the salaries of almost all officials in the sultan's household and governmental administration were cut down by half or two-thirds. The ruling *amīrs* further increased revenues by compelling the population to purchase products which the government owned or manufactured (*ṭarḥ*) or through the confiscation of property (*muṣādara* [*q.v.*]), notably of rich officials. In 755/1354 new attacks against Coptic scribes erupted throughout Egypt. Yielding to the rioting mob's demands, al-Ṣāliḥ Ṣāliḥ allowed them to destroy churches, while 25,000 *faddāns* of land belonging to the church as *awḳāf* were confiscated and redistributed mainly as *iḳṭāʿāt* to Mamlūks. Under pressure from the *ʿulamāʾ* and the masses, al-Ṣāliḥ Ṣāliḥ re-enacted the discriminating laws against the *dhimmīs* [*q.v.*] and decreed that no *dhimmī* could be employed anywhere in Egypt. With their church's source of revenues destroyed and the way for personal advancement blocked, the Copts reacted with massive waves of conversion to Islam, thereby hastening Egypt's religious transformation.

Bibliography: Maḳrīzī, *K. al-Sulūk*, ii/3, Cairo 1939, 843-930; Ibn Taghrī Birdī, *Nudjūm*, x, Cairo 1963, 254-87; idem, *Manhal*, vi, Cairo 1990, 330-3; Ibn Duḳmāḳ, *al-Djawhar al-thamīn*, Beirut 1985, 199-206; R. Irwin, *The Middle East in the Middle Ages*, London 1986, 125-51; D.P. Little, *Coptic conversion to Islam under the Bahri Mamluks*, in *BSOAS*, xxxix, 567-69.

3. AL-ṢĀLIḤ ṢALĀḤ AL-DĪN ḤĀDJDJĪ, son of al-Ashraf Shaʿbān [*q.v.*] and great-grandson of al-Nāṣir Muḥammad b. Ḳalāwūn [*q.v.*], was placed on the throne at the age of ten, on 24 Ṣafar 783/21 May 1381, after the death of his brother, al-Manṣūr ʿAlī. Since Rabīʿ I 782/June 1380, the *amīr* Barḳūḳ al-ʿUthmānī al-Yalbughāwī [*q.v.*] had become *atābak al-ʿasākir* [*q.v.*], gaining the title of *amīr kabīr*, and was sultan in all but name. Barḳūḳ used his position to his advantage and bought large numbers of Mamlūks whom he lodged in Cairo's Citadel. Not having to rely on an alliance of *amīrs*, he freely bestowed amīrates upon his own Mamlūks and appointed trusted followers to key positions in government. Barḳūḳ's rule won such wide support that he became the first *amīr kabīr* to mint coins bearing his emblem, *rank* [*q.v.*], as sultans customarily did on their ascent to power. With his supremacy acknowledged, Barḳūḳ moved to bring Ḳalāwūnī rule to an end and, on 19 Ramaḍān 784/27 November 1382, deposed al-Ṣāliḥ Ḥādjdjī, a date conventionally considered as the beginning of the Circassian Mamlūk sultanate.

Symptoms of the decline of the Mamlūk economy, evident as early as the 1340s, were common during al-Ṣāliḥ Ḥādjdjī's brief reign. Decline in revenues pushed the government in 783-4/1381-2 to increase confiscation of office-holders' property and even of *awḳāf*. The outbreak of the plague in 783/1381 and a monetary crisis following Barḳūḳ's attempt to issue copper coins of heavy weight and rate to replace the silver *dirham* further worsened the economy.

Ḥādjdjī was briefly restored to the throne when in 6 Djumādā II 791/2 June 1389 Barḳūḳ's rivals, the *amīrs* Timurbughā al-Afḍalī, called Minṭāsh, and Yalbughā al-Nāṣirī, led a revolt against him and succeeded in temporarily exiling him from Egypt. According to one version, Ḥādjdjī was again put on the throne simply because he had been overthrown by Barḳūḳ. Ascending a second time, he took the regnal title of al-Malik al-Manṣūr (Ibn al-Furāt, ix, 94); but as with most Ḳalāwūnī princes, Ḥādjdjī was sultan in name only and his authority was severely restricted.

On 16 Shaʿbān/10 August civil strife broke out between the two partners of the coalition behind Ḥādjdjī's rule. Minṭāsh came out the winner, and as *amīr kabīr* he became the real holder of power. Despite Minṭāsh's claim that with his struggle against Yalbughā he had, among other things, aimed at reintroducing independent sultanic rule, al-Manṣūr Ḥādjdjī was again put under harsh restrictions. His nominal reign came to an end when opposition to Minṭāsh's ruling faction lent its support to Barḳūḳ and thus enabled him to re-enter Cairo triumphantly on 14 Ṣafar 792/1 February 1390. Once again removed to confinement in the Citadel, al-Manṣūr Ḥādjdjī spent the last 22 years of his life in the harem. He died on 19 Shawwāl 814/4 February 1412.

4. AL-ṢĀLIḤ NĀṢIR AL-DĪN MUḤAMMAD B. AL-ẒĀHIR ṬAṬAR was the ten-year old son and ephemeral successor in 824/1421 of Sayf al-Dīn Ṭaṭar, but was himself replaced by al-Malik al-Ashraf Barsbay [*q.v.*] after a five-months' reign.

Bibliography: P.M. Holt, *The age of the Crusades. The Near East from the eleventh century to 1517*, London 1986, 184. (AMALIA LEVANONI)

AL-MALIK **AL-ṢĀLIḤ ʿIMĀD AL-DĪN** Ismāʿīl b. al-Malik al-ʿĀdil, an Ayyūbid prince, who was twice sultan of Damascus for short periods.

One of the many sons of al-ʿĀdil Abū Bakr [*q.v.*], he was probably born just before *ca.* 600/1203-4, although no precise date has been recorded. His father assigned him Boṣrā and al-Sawād (the area east of Lake Tiberias) as an *iḳṭāʿ*. He continued to hold these lands under his brother al-Muʿaẓẓam ʿĪsā [*q.v.*], although in 622/1225 he was brought to Damascus, temporarily under a cloud, because of his possible involvement in a plot by a local magnate, Ibn al-Kaʿkī, to give him control of the city. After al-Muʿaẓẓam's

death in 624/1227 he maintained his position subject to al-Nāṣir Dāwūd [*q.v.*]. When Ismāʿīl's brothers al-Kāmil [*q.v.*] and al-Ashraf Mūsā, had jointly deprived al-Nāṣir of Damascus, Ismāʿīl was confirmed in his area of control in Radjab 626/May-June 1229. With other Ayyūbid princes, Ismāʿīl was in this same year sent by al-Kāmil to recover Ḥama for al-Muẓaffar Maḥmūd, and he commanded the *ʿaskar* of Damascus which gained Baalbek for al-Ashraf. Sibṭ Ibn al-Djawzī [see IBN AL-DJAWZĪ, ... SIBṬ] mentions Ismāʿīl as lieutenant of al-Ashraf Mūsa in Damascus in Ramaḍān 627/July-August 1231, and he took part in al-Kāmil's campaign against the Saldjūks of Rūm in 631/1233-4.

In Muḥarram 635/August 1237 he became ruler of Damascus after the death of al-Ashraf Mūsā, who had no sons and had designated Ismāʿīl as his successor. He also took over Baalbek, and was recognised as suzerain by al-Mudjāhid Shīrkūh of Ḥimṣ and by the ruler in Aleppo. In Djumāda II 635/February 1238 Ismāʿīl surrendered Damascus to the greater power of al-Kāmil, but was allowed to retain Baalbek and al-Biḳāʿ, Boṣrā and al-Sawād. However, al-Kāmil soon died (Radjab 635/March 1238), and in complicated circumstances Ismāʿīl seized Damascus in Ṣafar 637/September 1239 (for these and subsequent events, see AL-ṢĀLIḤ NADJM AL-DĪN AYYŪB). To attempt to maintain his position against al-Ṣāliḥ Ayyūb, now sultan of Egypt, Ismāʿīl sought many alliances, with Aleppo, with al-Nāṣir Dāwūd in Transjordan, with the Saldjūḳ sultan of Rūm (dirhams struck in 640/1242-3 name Kaykhusraw II as overlord), with elements of the Khʷārazmiyya, and with the Franks, to whom he was willing to surrender Jerusalem and other conquests of Ṣalāḥ al-Dīn such as Sidon and Beaufort, but not without arousing strong religious opposition. An attempted peace settlement with Ayyūb in 641/1243-4 (Damascus dirhams of this year name him as overlord) almost immediately broke down through lack of trust, probably justified.

The next year Ismāʿīl formed a Syrian coalition, including the Franks, which was defeated by the Egyptian army and Ayyūb's Khʷārazmian mercenaries between Gaza and Ascalon (Djumāda I 642/October 1244). Damascus was besieged and surrendered to Ayyūb's forces in Djumada I 643/October 1245. Later in 644/1246 Baalbek and Boṣrā were also taken from Ismāʿīl. He himself fled to Aleppo, whose ruler al-Nāṣir Yūsuf [*q.v.*] gave him protection and refused to hand him over to Ayyūb.

After the murder of al-Muʿaẓẓam Tūrānshāh [*q.v.*] and the tentative establishment of the Mamluk régime in Egypt, Ismāʿīl took part in the expedition which planned to restore Ayyūbid control there. Led by al-Nāṣir Yūsuf, the Syrian Ayyūbids were defeated at Kurāʿ in Dhu 'l-Ḳaʿda 648/February 1251. Ismāʿīl was one of many princes captured. After a short confinement in the Citadel at Cairo, on the eve of Sunday 27 Dhu 'l-Ḳaʿda/19 February he was taken out towards the Ḳarāfa Cemetery, strangled and buried unceremoniously.

Bibliography: For the primary sources, see the article AL-ṢĀLIḤ NADJM AL-DĪN AYYŪB. The fullest account of the period is in R.S. Humphreys, *From Saladin to the Mongols: the Ayyubids of Damascus, 1193-1260*, Albany 1977 (see the bibl. cited therein). For epigraphic references, see *RCEA*, xi, nos. 4054, 4155, 4186, 4197, 4246(?), 4247, and for the numismatic evidence, P. Balog, *The coinage of the Ayyubids*, London 1980, 242-8.

(D.S. RICHARDS)

AL-MALIK AL-**ṢĀLIḤ ISMĀʿĪL** B. BADR AL-DĪN LUʾLUʾ, Rukn al-Dīn, ephemeral ruler in Mawṣil [*q.v.*] after his father. Luʾluʾ [*q.v.*] had submitted to the Mongols, and Ismāʿīl, his eldest son, had journeyed to the Great Khān's ordo at Ḳaraḳorum in order to give his father's homage. When Luʾluʾ died in 657/1258, Ismāʿīl succeeded him, but now switched sides and opposed the Mongols. He joined forces with the Mamlūk Baybars [*q.v.*], but was killed, together with his young son, when the Mongols captured and sacked Mawṣil, so that the brief line of the Luʾluʾid Atabegs came to an end.

Bibliography: M. van Berchem, *Monuments et inscriptions de l'atabek Luʾluʾ de Mossoul*, in *Orientalische Studien ... Th. See also the *Bibl.* to LUʾLUʾ, BADR AL-DĪN.

(ED.)

AL-MALIK AL-**ṢĀLIḤ NADJM** AL-**DĪN AYYŪB** b. al-Kāmil Muḥammad, the last major sultan of the Ayyūbids [*q.v.*], born in Cairo in 603/1206-7 and died Shaʿbān 647/November 1249. Much of his life was spent in struggling for the paramount position which his father, al-Malik al-Kāmil [*q.v.*], had held, but he achieved it only at the end of his life and without re-establishing the dynasty's cohesion and cooperation. He was the creator of the Baḥriyya *mamlūk* corps which played a leading role in the formation of the succeeding régime.

As the eldest son, he was groomed for the succession and in Shaʿbān 625/August 1228 was proclaimed joint-sultan with the title al-Malik al-Ṣāliḥ and left as *nāʾib* in Egypt, with Fakhr al-Dīn b. Shaykh al-Shuyūkh as his adviser. He lost al-Kāmil's favour (aspirations to independence and the purchase of a 1000-strong *mamlūk* following are mentioned) and in 627/1229-30 he was sent to the Djazīra with no command or governorship, while his younger brother, al-ʿĀdil II [*q.v.*], replaced him as heir-apparent. In 630/1232-3 al-Kāmil gave him Ḥiṣn Kayfā and its dependencies. After lands lost to the Saldjūḳs of Rūm in 631-2/1233-5 were recovered early in 633/1236, Ayyūb was established as "independent sultan" in Āmid, Ḥarrān, Edessa, Nisibis, Khābūr, etc. As early as 634/1237 Ayyūb enrolled elements of the Khʷārazm-Shāh Djalāl al-Dīn's [*q.v.*] freebooting army and soon had experience of their unreliability and their mercenariness when in conflict with Badr al-Dīn Luʾluʾ [*q.v.*].

His opportunity to re-enter the mainstream of Ayyūbid politics occurred after the death of al-Kāmil (in Radjab 635/March 1238) when a cousin, al-Djawād Yūnus, conscious of the weakness of his position in Damascus, proposed an exchange of lands. Ayyūb arrived to take over Damascus in Djumāda II 636/January 1239, leaving his son, Tūrānshāh [*q.v.*], to rule in Ḥiṣn Kayfā. He planned an invasion of Egypt to unseat al-ʿĀdil II, whose counter moves were weakened by desertions of troops and plots in favour of Ayyūb. Al-Nāṣir Dāwūd [*q.v.*] proposed joint action with Ayyūb to win Egypt, but only if he himself were immediately given the former lands of his father al-Muʿaẓẓam ʿĪsā [*q.v.*], including Damascus. Unsuccessful in this, al-Nāṣir joined al-ʿĀdil in Egypt, again hoping to gain Damascus. Ayyūb moved to Nābulūs (Shawwāl 636/May 1239) and there awaited the concentration of his Syrian allies. A peace settlement brokered by the caliph's envoys was all but agreed, when al-Ṣāliḥ Ismāʿīl [*q.v.*] and al-Mudjāhid Shīrkūh of Ḥimṣ, who had been treacherously delaying their assistance, descended on an undefended Damascus.

They entered the city on 26 Ṣafar 637/27 September 1239 and imprisoned Ayyūb's son, al-Mughīth ʿUmar. Deserted by most of his troops, Ayyūb was taken to al-Karak by al-Nāṣir Dāwūd, already dissatisfied with his alliance with al-ʿĀdil, and held there for six months (from Rabīʿ I to Ramaḍān 637/October 1239-April 1240). Although both al-ʿĀdil and Ismāʿīl demanded the person of Ayyūb, al-Nāṣir released him on the basis of promises that Ayyūb later claimed were forced, and they planned joint action. As both al-ʿĀdil and Ismāʿīl moved to crush Ayyūb between them, in Dhu 'l-Ḳaʿda 637/May-June 1240 al-ʿĀdil was deposed at Bilbays by his emirs who then invited Ayyūb to become sultan in Egypt.

Ayyūb entered the Cairo citadel on Sunday 25 Dhu 'l-Ḳaʿda 637/17 June 1240. Material for the internal affairs of Egypt in this period is exceedingly sparse and little is known about his government. For the next few years, he strengthened his position by purging the Egyptian army, increasing and promoting his own *mamlūks*, and building a fortified residence for himself and the so-called Baḥriyya [*q.v.*] on the island of Rawḍa [*q.v.*] (work began Shaʿbān 638/February 1241).

A general Ayyūbid settlement, again at the expense of al-Nāṣir, was all but concluded in 641/1243. Ismāʿīl in Damascus recognised Ayyūb as suzerain (in Rabīʿ I/September), and was to release al-Mughīth ʿUmar. However, intercepted letters to Ayyūb's Khwārazmian allies and general lack of trust once more brought about a collapse. Al-Mughīth died in prison (Rabīʿ I 642/August 1244) and Ismāʿīl was suspected of his murder. Ayyūb was subsequently faced by an alliance of Syrian princes and Franks, the latter recruited by significant concessions of land. In response Ayyūb's troops, joined by the Khwārazmiyya, inflicted a major defeat on the Syrian coalition at the village of La Forbie or Farbiyā (Yāḳūt, iii, s.v.) between Ascalon and Gaza (12 Djumāda I 642/17 October 1244). Damascus was besieged, and surrendered in Djumāda I 643/October 1245. To Ayyūb's fury in Egypt, the terms made allowed Ismāʿīl his other possessions, but he then joined the Khwārazmiyya, who had changed sides, to attack Damascus. However, the power of the Khwārazmiyya was broken in Muḥarram 644/May 1246 by the armies of Aleppo and Ḥimṣ, part of a new grouping formed to curtail their depredations. Ayyūb's forces then took the rest of Ismāʿīl's lands, and Ayyūb himself, now at the peak of his power, came to Damascus in Dhu 'l-Ḳaʿda 644/March 1247 to organise his new possessions. Ismāʿīl had taken refuge with al-Nāṣir Yūsuf [*q.v.*] at Aleppo.

During 645-6/1247-9 there were gains from the Franks (Ascalon and Tiberias), arrests of former associates of Ismāʿīl, including the lord of Ṣalkhad ʿIzz al-Dīn Aybak, and anxieties about Aleppo's intentions. In 646/1248 al-Nāṣir Yūsuf took Ḥimṣ, but caliphal envoys, as ever worried by the Mongol threat, made a peace and both sides retired. Ayyūb's last success was to acquire al-Karak and the remnants of al-Nāṣir Dāwūd's principality in Djumāda II 647/September 1249.

In Muḥarram 647/April 1249 Ayyūb had returned to Egypt, carried in a litter as he was ill, and troubled by news of the crusade of Louis IX. After the early loss of Damietta (Ṣafar/June), a total collapse threatened to follow Ayyūb's death at the age of 49. This took place in camp at al-Manṣūra on the eve of Sunday, 14 Shaʿbān 647/21 November 1249. Shadjar al-Durr [*q.v.*] and the senior *amīrs* tried to conceal his death and managed affairs while summoning Tūrānshāh, for whom Ayyūb had written his political testament (see Cl. Cahen and I. Chabbouh, *Le testament d'al-Malik aṣ-Ṣāliḥ Ayyūb*, in *BÉt.Or.*, xxix, 97-114). The nature of Ayyūb's fatal complaint has been discussed by F. Klein-Franke (*What was the fatal disease of Al-Malik al-Ṣāliḥ ...*, in *Studies in Islamic history and civilization in honour of Professor David Ayalon*, ed. M. Sharon, Jerusalem 1986, 153-7).

Ibn Wāṣil [*q.v.*] gives a penetrating pen-portrait, stressing Ayyūb's mixture of forbidding authority and diffident and introspective solitariness. He was taciturn and clean-living. Unlike his father, he had no special taste for reading and scholarship. Even his hours of relaxation with his few special companions, in his *madjlis al-sharāb*, were sombre and undemonstrative.

Building was a passion. In addition to the residence on Rawḍa Island, he built palaces on the Nile bank at al-Lūḳ, the pavilions known as *Manāẓir al-Kabsh* (see M.G. Salmon, *Études sur la topographie du Caire*, in *MIFAO*, Cairo 1902, vii/2, 77-95), and the new town development, called after him al-Ṣāliḥiyya. Very important was the *madrasa* which he founded in Bayn al-Ḳaṣrayn for the four orthodox *madhāhib*. Site clearing started in Dhu 'l-Ḥidjdja 639/June 1242 and teaching began in 641/1243-4 (al-Maḳrīzī, *Khiṭaṭ*, ii, 374). His mausoleum near the *madrasa*, to which his corpse was transferred in Radjab 648/October 1250 (idem, *al-Sulūk*, i/2, 371), was restored in 1993 by the German Archaeological Institute in Cairo, which is now (1994) working on the surviving *īwān* of the *madrasa*.

Bibliography: The contemporary narrative sources are Ibn Wāṣil, *Mufarridj al-kurūb fī akhbār dawlat Banī Ayyūb*, ed. H.M. Rabie and S. ʿAshur, iv-v, Cairo 1972-7, and for post-645/1248, Paris, B.N. mss. 1702-3; Sibṭ Ibn al-Djawzī, *Mirʾāt al-zamān*, facs. ed. J.R. Jewett, Chicago 1907, and ed. Ḥaydarābād 1952, viii/2; Abū Shāma, *Dhayl ʿalā kitāb al-rawḍatayn*, ed. M. al-Kawthari, Cairo 1947. See also the standard later chronicles. The fullest account of this period is R.S. Humphreys, *From Saladin to the Mongols: the Ayyubids of Damascus, 1193-1260*, Albany 1977 (see the sources and bibl. cited therein). For epigraphic references, see *RCEA*, xi, nos. 4136, 4198, 4217-20 (*madrasa*), 4223, 4278, 4282, 4298-4301 (mausoleum), 4302-3, 4305, and for the numismatic evidence, P. Balog, *The coinage of the Ayyubids*, London 1980, 181-94. For the buildings of Ayyub, see K.A.C. Creswell, *The Muslim architecture of Egypt: II. Ayyubids and early Bahrite Mamluks, A.D. 1171-1326*, Oxford 1959, 84-7 (Rawḍa citadel and palace), 94-100 (*madrasa*), 100-3 (mausoleum). (D.S. RICHARDS)

AL-MALIK AL-**ṢĀLIḤ NŪR** AL-**DĪN** [see NŪR AL-DĪN MAḤMŪD B. ZANKĪ].

AL-MALIK AL-**ṢĀLIḤ SHAMS** AL-**DĪN** [see TŪRĀNSHĀH].

AL-**ṢĀLIḤIYYA**, the name of various places in the Middle East. These include:

1. A settlement of Diyār Muḍar in al-Djazīra, placed by Yāḳūt in the district of al-Ruhā [*q.v.*] or Edessa and said to have been laid out by the ʿAbbāsid governor of Syria ʿAbd al-Malik b. Ṣāliḥ. He also quotes a (now lost) history of Mawṣil by the Khālidiyyān[i] [*q.v.*] that the caliph al-Mahdī began the work of fortification there.

Bibliography: Yāḳūt, *Buldān*, ed. Beirut, iii, 389-90.

2. A settlement to the north of the old city of Damascus, on the slopes of Mount Ḳāsiyūn [*q.v.*]. Yāḳūt describes it as a large village with markets and

a Friday mosque, containing many saints' tombs and residences of holy men. Most of the inhabitants were immigrants from Jerusalem and were Ḥanbalī in *madhhab*. From the 6th/12th century, it became one of the strongholds of this school [see ḤANĀBILA, at III, 161]. It is now a well-to-do suburb of the modern conurbation of Damascus.

Bibliography: Yāḳūt, *Buldān*, ed. Beirut, iii, 390; Le Strange, *Palestine under the Moslems*, 529; Hachette World Guides, *The Middle East*, Paris 1966, 301. See also DIMASHḲ, at II, 283a.

(ED.)

ṢĀLIḤIYYA, a Ṣūfī *ṭarīḳa* [*q.v.*] from within the tradition established by the Moroccan Ṣūfī and teacher Aḥmad b. Idrīs (d. 1837 [*q.v.*]). The exact origin and, indeed, the reason for the name of the Ṣāliḥiyya is unclear. It appears to be an offshoot of the Rashīdiyya, the name given to *ṭarīḳa* founded by the Sudanese Ibrāhīm al-Rashīd al-Duwayḥī (d. 1874, [*q.v.* in Suppl.], a student of Ibn Idrīs. After his death in Mecca, Ibrāhīm al-Rashīd's *zāwiya* there was taken over by his nephew Shaykh b. Muḥammad b. Ṣāliḥ (d. 1919), who moved there from the Sudan. Sometime in about 1887, the Meccan-based branch became known as the Ṣāliḥiyya, while the Sudanese branch continued to be known as the Rashīdiyya. It is, in fact, very difficult to disentangle the various Ṣūfī traditions associated with the Rashīdiyya, Idrīsiyya, Ṣāliḥiyya and Dandarāwiyya [*q.v.* in Suppl.]. The Shaykh was succeeded as head of the order by his three sons in turn, al-Rashīd, Aḥmad and Ibrāhīm, the last of whom died in 1976.

The Ṣāliḥiyya was taken to Somalia and other regions of eastern Africa by pilgrims from the region who were initiated by the Shaykh or his sons in the Ḥidjāz. Communities (Somali, *jamaaʿa*), dedicated to prayer and agriculture, were established throughout Somalia; by the 1930s, Cerulli estimated that there were 53 Ṣāliḥiyya *jamaaʿas* there. These communities attracted ex-slaves or other marginal groups and opened up hitherto unutilised land.

The most famous Ṣāliḥiyya leader in Somalia, and his people's greatest poet, was Muḥammad b. ʿAbd Allāh (Somali, Maḥammad ʿAbdille) Ḥassān (1864-1920 [*q.v.*]), who was to lead the resistance to the Ethiopians, British and Italians for over two decades. Muḥammad was initiated by the Shaykh in Mecca in 1894. The following year he returned to Somalia and thereafter worked to spread the order, attacking the use of tobacco and the prevalence of saint-worship among his fellow countrymen. Four years later, in 1899, he began his *djihād* against imperialist encroachment.

Bibliography: E. Cerulli, *Somalia. Scritti vari editi ed inediti*, 3 vols., Rome 1957-64 (various articles); Said S. Samatar, *Oral poetry and Somali nationalism. The case of Sayyid Maḥammad ʿAbdille Ḥasan*, Cambridge 1982. There is a brief manuscript *manāḳib* of Shaykh b. Muḥammad b. Ṣāliḥ in the I.M. Lewis Collection of Arabic materials from Somalia, the Library, London School of Economics and Political Science; R.S. O'Fahey, *Enigmatic saint. Aḥmad ibn Idrīs and the Idrīsī tradition*, London 1990; Ali Salih Karrar, *The Sufi brotherhoods in the Sudan*, London 1992. (R.S. O'FAHEY)

AL-**ṢĀLIḤŪN** (A., pl. of *ṣāliḥ*) "the virtuous, upright ones", cited in the Ḳurʾān at VII, 168, XXI, 105 and LXXII, 11, and 30 other times as *ṣāliḥīn*.

The *ṣāliḥ* is associated by Ibn Taymiyya [*q.v.*] with the *ṣiddīḳs*, those asserting the truth, the *shahīds*, martyrs and the *abdāl*, substitutes, as all representing the *firḳa nādjiya*, the sect which alone will be saved out of the 73 into which, according to a *ḥadīth*, the *umma* or community will be divided (see H. Laoust, *La profession de foi de Ibn Baṭṭa*, Damascus 1958, 17 n.). This *ḥadīth* is to be set by the side of Ḳurʾān, LXXII, 11, "And that some of us are upright, and some of us not so; we have become [groups following] diverse ways".

Bibliography: Given in the article. (S. ORY)

SĀLIM (A.), intact, sound, i.e. free of damage or blemish, thus "well" as opposed to "ill," and therefore a synonym of *ṣaḥīḥ*. The word is used as a technical term in various fields: 1. Applied to money, *sālim* means unclipped coins of full weight, or a sum of money free from charges and deductions. 2. In grammar, it denotes two things: in *ṣarf* (morphology) a "sound" root, i.e., one in which none of the radicals is a "weak" letter (*ḥarf ʿilla*, see ḤURŪF AL-HIDJĀʾ), nor a *hamza*, nor a geminate; in *naḥw* (syntax) a word with a "sound" ending, no matter whether the preceding radicals are weak or not. Thus the root *n-ṣ-r* is *sālim*, while the root *r-m-y* is not, both for the *ṣarfiyyūn* and the *naḥwiyyūn*; however, *b-y-ʿ* is *sālim* only for the *naḥwiyyūn*, whereas *islanḳā* is *sālim* only for the *ṣarfiyyūn*, the latter because the root is *s-l-ḳ*, thus sound, and only the ending *-ā*, which is part of the pattern *ifʿanlā* is "weak" (al-Sharīf al-Djurdjānī, *al-Taʿrīfāt*, ed. ʿAbd al-Raḥmān ʿUmayra, Beirut 1408/1987, 154 [read *islanḳā* for *istalḳā*]).—The term *sālim* is also used to denote the "sound" plural (*al-djamʿ al-sālim*) as opposed to the "broken" plural (*al-djamʿ al-mukassar*) [see DJAMʿ]. 3. In prosody, the term denotes a regular foot, which has not undergone any of the changes called *ziḥāfāt* or *ʿilal* [see ʿARŪḌ], or a line of poetry consisting of such feet. It is, therefore, particularly common in Persian prosody, where *ziḥāfāt* may not change from one line to the next as they do in Arabic. The lines will thus be *sālim* throughout the whole poem.

Bibliography: Tahānawī, *Kashshāf iṣṭilāḥāt al-funūn*, ed. A. Sprenger *et alii*, Calcutta 1862, i, 695-6; Khwārazmī, *Mafātīḥ al-ʿulūm*, ed. G. van Vloten, Leiden 1895, 87 (prosody); L.P. Elwell-Sutton, *The Persian metres*, Cambridge 1976, index.

(W. BJÖRKMAN-[W.P. HEINRICHS])

SĀLIM, nom-de-plume (*makhlaṣ*) of Mirzā-zāde Meḥmed Emīn (1099-1156/1688-1743), an Ottoman author of a published biography of poets, a *dīwān*, several texts dealing with war, grammar and mysticism, a dictionary and an Ottoman translation of a Persian history, all of which are in manuscript form. Many of the details concerning his life are to be found in an autobiography included in his *tedhkire-yi shuʿarāʾ* which is the work that qualifies him for inclusion in this encyclopaedia.

The seventh child of Shaykh al-Islām Mirzā Muṣṭafā Efendi, Sālim was born in Istanbul in Djumādā II 1099/June 1688. His father's professional pursuits became his own: he had a career in the *ʿilmiyye* class in which the highest rank he reached was that of *ḳāḍī ʿasker* of Rumeli. There is some disagreement on the date of his death. While all sources that mention it cite the month of Muḥarrem, some give the year as 1152/1739 and others as 1156/1743. The place where it occurred is also debated; it could have been either in Istanbul where he was buried near his father, or in Mafraḳ outside Damascus, (see Rāmiz, *Tedhkire-yi shuʿarāʾ*, ms. Millet Kütüphanesi: Ali Emiri, Tarih, no. 762, fol. 135; Thüreyyā, iii, 3; Müstaḳīmzāde, 454).

In his autobiography (*Tedhkire-yi Sālim*, ms., B.L. Or. 7068, fols. 95a-97a; *ibid.*, ed. Aḥmed Djewdet, 337-44), Sālim provides rather detailed information about his own life, education and career up to the year

1133/1720. He began his studies when he was about seven years old with Yeñi-Bāghčeli Čelebi Efendi who, later, handed him over to tutors whom he personally selected for his young charge. Sālim was also coached by his father in all the accepted studies of his time, but received special training in the *Ḥadīth* from a certain Muḥammad b. Salām al-Iskandarānī. Sālim continues to describe his climb up the ladder of the Ottoman learned hierarchy by informing his readers that under the aegis of Pashmaḳdjīzāde al-Seyyid ʿAlī Efendi he became *mülāzim* to Abū Saʿīd-zāde Feyḍullāh Efendi in 1104/1692. Two years later he was appointed *mudarris* at the *madrasa* of Siyāwush Pasha in Eyyūb, and then served in the same capacity in other *madrasas* until, in the year 1125/1713, he reached the *Dār al-Ḥadīth* at the Süleymāniyye. Before the end of that year, he was given his first assignment as *ḳāḍī* of Salonika. He was back in Istanbul in 1126/1714 as *ḳāḍī* of Ghalaṭa. Upon his dismissal from this post he was sent into exile. He and his father, who was then Shaykh al-Islām, spent the next few years in Trabzon. When they were pardoned, they took up residence in their sea-side home in Istanbul. In 1134/1721, Sālim completed his *tedhkire* and presented it to the Grand Vizier of the time, Dāmād Ibrāhīm Pasha (?1073-1143/1662-1730) in the same year. He was, in fact, emulating a contemporary and rival biographer of poets, Ṣafāʾī (d. 1138/1725), who had done the same thing two years earlier and whose work Sālim evaluated rather negatively (Sālim, 429-30, 250, 262). Ibrāhīm Pasha must have appreciated the *tedhkire* since he thanked its author by appointing him *ḳāḍī* of Istanbul the following year. A decade after, Sālim became *ḳāḍī ʿasker* of Anadolu and two years after that *ḳāḍī ʿasker* of Rumeli, but he never became Shaykh al-Islām like his father.

Mirzā-zāde Meḥmed Emīn's principal contribution to the Ottoman literary arts is his *Tedhkire-yi shuʿarāʾ*, which contains details, as known to and described by the author, concerning the lives and works of over 400 Ottoman poets who were alive and active sometime between the years 1099/1688 and 1134/1722.

Sālim may be regarded as an innovator in the art of compiling biographies of poets: his type of biography does not seem to be intended to simply praise the poets. He appears to have been very much aware of the uninterrupted flow in the production of this literary genre that had been initiated in Ottoman society in the 10th/16th century. We must assume that he knew that he was operating within a well-established tradition, but this did not stop him from making adjustments in the way in which each poet and poem were treated. This is reflected in the very critical approach he adopted in his appraisal of both the poets and their poems. His attitude could be the result of the changed way of assessing literature that began to develop among some Ottomans in the early decades of the 11th/18th century with Nedīm's (d. 1143/1730 [*q.v.*]) successful efforts to relate his art more closely to local developments and everyday life. There was, at the same time, growing interest in European literatures that must have had some impact on the Ottoman litterateurs. In this respect, one may consider Sālim's *tedhkire* to be a valuable contribution, not only to the genre but also to Ottoman literature in general. His *tedhkire* is in two parts. The first is devoted to the usual eulogies which are in this case addressed to the reigning Sultan Aḥmed III (1115-43/1703-30), followed by Sultan Muṣṭafā I (1106-15/1695-1703) who preceded him, the Grand Vizier Dāmād Ibrāhīm Pasha and the Shaykh al-Islām. Then follow the author's introductory remarks in which he reviews previous *tedhkires* leading up to his own and then expresses his thoughts on the state of literature in his own day. The rest of the work is made up of the biographies of the poets. Each biography ends with samples of the poet's poems, some in their entirety, others in the form of a verse or two. The work finishes with a *temmet* ("It is completed") in which the author asks to be excused for his errors, but does not apologise for the tediously verbose and ornate style he uses. The *tedhkire* carries a date in the form of a chronogram which adds up to 1134/1722.

SĀLIM b. MUḤAMMAD, ʿIzz al-Dīn Abu 'l-Nadjā al-Sanhūrī al-Miṣrī, a Mālikī jurisconsult and *ḥadīth* expert. He came to head the Mālikī school of Cairo, whither he migrated from Sanhūr at the age of twenty-one (probably around 966/1558-9). He is particularly known for his mastery of *ḥadīth*, having dictated the "Six Books", and attracted numerous well-known scholars from Syria and the Hidjāz. He is said to have written several works. The best known of these are his commentary on the *Mukhtaṣar* of al-Khalīl on *fiḳh* (extant) and, oddly, an epistle reportedly entitled *Faḍāʾil laylat al-niṣf min shaʿbān* (Kaḥḥāla, iv, 204). He died on Tuesday, 3 Djumādā II 1015/7 October 1606, reportedly at around the age of seventy, which would place his birth date *ca.* 945/1538.

(S.A. Jackson)

SALĪM, MUḤAMMAD ḲULĪ, an Indo-Persian poet of the 11th/17th century, died 1057/1647-8.

He originated from the Shāmlū tribe of the Turks and was a native of Tehran, but details regarding his life are scanty. In Persia he served under Mīrzā ʿAbd Allāh Khān, governor of Lāhīdjān [*q.v.*] in Gīlān. During this time he married and had a son. Among the eminent personalities to whom he addressed his poems in the beginning were the Ṣafawid rulers Shāh ʿAbbās I (r. 996-1038/1588-1629) and his successor Shāh Ṣafī I (r. 1038-52/1629-42). Perhaps his failure to find the desired patronage in his country led him to try his fortune in India. He set out by sea, reaching Gudjarāt around 1041/1631, coinciding with the early period of Shāh Djahān's reign (1037-68/1628-59). It is likely that he sought access to the imperial court but was unsucessful; Wālih Dāghistānī, author of the *Riyāḍ al-shuʿarāʾ*, reports that the poet-laureate Kalīm [see kalīm, abū ṭālib], when asked by Shāh Djahān to give his opinion about the poet, told the emperor that Salīm was poetically ill-provided since one of his *mathnawīs*, which he said was written in praise of Kashmīr, had been composed by him originally in praise of Gīlān and he had merely changed its title. This accusation supposedly prevented Salīm from

winning royal patronage. Thereupon he attached himself to Mīr ʿAbd al-Salām Mas͟hhadī, called Islām K͟hān, a prominent nobleman of the period, who successively held important government positions, ending as governor of the Deccan. Salīm stayed in his service until the latter's death on 14 S͟hawwāl 1057/12 November 1647. In the same year the poet also passed away, and his body was laid to rest in Kas͟hmīr.

In his character, Salīm has been described as a gross person indulging in improper jokes. He would display his wit indiscriminately without regard for the social status of the individual towards whom it was directed. On a certain occasion, while being entertained by the governor of Fārs, Imām Ḳulī K͟hān (d. 1032/1622-3), the poet came out with an improvised couplet, displeasing to the host, who felt slighted by the allusion in it regarding his fatness.

Salīm's *dīwān* comprises poems representing *ḳaṣīda, g͟hazal, ḳiṭʿa, rubāʿī* and *mat͟hnawī*. Estimates vary regarding the total number of verses in the *dīwān*, but D͟habīḥ Allāh Ṣafā places the total around 9,000 couplets. Salīm's poetry is praised by writers in general. Though he is accused of borrowing ideas from other poets—a practice in which he was certainly not alone—nevertheless it is accepted that his output contained many unique themes. Probably because he was not well educated in the formal sense of the term, his language sometimes bordered on the popular idiom. He was the author of several *mat͟hnawīs*, which occupy a special place in his collection. They include, in addition to his poem on Kas͟hmīr mentioned earlier, such pieces as *Ḳaḍā wa ḳadar* ("Fate and destiny"), *Dar taʿrīf-i asp* ("In praise of a horse"), *Dar taʿrīf-i bahār* ("In praise of spring"), *Dar taʿrīf-i sarmā* ("In praise of winter"), *K͟har-i dallāl* ("The broker's donkey"), and *Dar s͟hikāyat-i rūzgār* ("Complaint against the world"). In his *g͟hazals*, Salīm displays an easy communication despite a tendency towards innovative and strange conceits. He is known for his expert use of similes and the figure of speech called *īhām* ("ambiguity").

(MUNIBUR RAHMAN)

SALĪM B. K͟HALĪL AL-**NAḲḲĀS͟H**, Syrian Maronite journalist, historian, and pioneer of Arab theatre. Born 1850 in Beirut, he died in Alexandria on 25 November 1884. He studied Arabic, French and Italian. He worked on his uncle Nīḳūlā's *al-Miṣbāḥ* newspaper in Beirut and wrote for *al-Nadjāḥ* and *al-Zahra*. He was employed in the customs in Beirut in 1876. In the family tradition he became involved with the theatre with an adaptation, *Mayy wa-Hūrās* (Beirut 1875 written 1868), of Corneille's tragedy *Horace*, to which he had added poetry and songs. Seeking material support for a theatrical venture, he went to Egypt. The Khedive Ismāʿīl [*q.v.*] agreed to grant him use of a theatre, scenery, and costumes and financial support. Salīm began rehearsing his troupe in the summer of 1875, writing for it several plays in the literary language in prose and verse. Despite vehement criticism, he included women actresses in his troupe. They rehearsed his version of *ʿĀʾida* (Beirut 1875), to which he had added popular Arab airs. He performed his uncle Mārūn's [*q.v.*] *al-Bak͟hīl* and *Abu 'l-Ḥasan al-Mug͟haffal aw Hārūn al-Ras͟hīd*, and his own *Mayy wa-Hūrās* in Beirut. Though cholera initially prevented them from travelling, in 1876 he led the first Lebanese troupe to Egypt.

Joined by the Damascene Adīb Isḥāḳ [*q.v.*], the troupe, *al-Tiyātrū al-ʿArabī*, performed at the Zizinia theatre in Alexandria Mārūn's *Abu 'l-Ḥasan al-Mug͟haffal* and *al-Ḥasūd al-Salīṭ*, and Salīm's *Mayy wa-Hūrās, al-Kad͟hūb* and *al-Ẓalūm*, in a season extending from December 1876 to February 1877. The répertoire is said to have also included *al-Bak͟hīl*, an adaptation of Racine's *Phèdre*, and his *Mithridate*, Meyerbeer's opera *L'Africaine*, *ʿĀʾida*, and *G͟harāʾib al-Ṣudaf aw Salīm wa-Asmā* (in versions all attributed to Salīm), Racine's *Andromaque*, *al-Bārīsiyya al-ḥasnāʾ* (*La Belle Parisienne* by the Comtesse Dash), and *Charlemagne* (from the highly successful play of Henri de Bornier) (all adapted by Adīb), and *Zénobie* of l'abbé d'Aubignac. *Al-Kad͟hūb* (Alexandria 1913) was an adaptation of Corneille's comedy *Le Menteur* made by Ḥabīb Musk and revised by Salīm. The tragicomedy *Ḥifẓ al-Wudād aw al-Ẓalūm* (Alexandria 1891), said to be a translation, is about intrigue and romance in an Arab court. Its performance later purportedly led to the expulsion of Yūsuf al-K͟hayyāṭ's troupe in 1879, because the Khedive thought it alluded to him and his government disparagingly. *G͟harāʾib al-Ṣudaf* (Alexandria n.d.) is a story of love and anti-colonial struggles in India. An anthology of Salīm's plays, *al-Masraḥ al-ʿArabī—dirāsāt wa-nuṣūṣ. 5. Salīm al-Naḳḳāsh*, ed. Muḥammad Yūsuf Nadjm, Beirut 1965, includes *ʿĀʾida, Mayy wa-Hūrās, al-Kad͟hūb, G͟harāʾib al-Ṣudaf* and *al-Ẓalūm*. Though audience response had been very supportive, and Salīm did his utmost to keep his company alive, he eventually ceded control to one of the actors, Yūsuf al-K͟hayyāṭ (1877-95); some of its members were later to form the core of Sulaymān Ḳardāḥī's troupe (1882-1909).

It is claimed that it was Djamāl al-Dīn al-Afg͟hānī [*q.v.*], who persuaded Salīm and Adīb to leave the theatre for the press; they had become members of his circle in Egypt. When the weekly *Miṣr*, founded in July 1877 in Cairo by Adīb, moved to Alexandria, Salīm helped edit it. The pair of them founded a daily *al-Tidjāra* in May 1878 in Alexandria; some of the best writers, al-Afg͟hānī, Muḥammad ʿAbduh [*q.v.*], ʿAbd Allāh Nadīm [*q.v.*], Ibrāhīm al-Laḳḳānī and Amīn S͟humayyil, were to write for it. Both papers, strongly

nationalist, were suspended in November 1879 for their criticism of the government of Riyāḍ Pasha and of foreign interference in Egyptian affairs. Salīm is said to have been a member of the radical nationalist *Miṣr al-Fatāt*/Jeune Egypte. After Adīb travelled to Paris, Salīm started publishing a daily *al-Maḥrūsa* and a weekly *al-ʿAṣr al-Djadīd* in Alexandria in January 1880; Salīm followed a more moderate line with these papers. When in 1881 Salīm was ill, ʿAbd Allāh Nadīm took over the running of both papers. With the return of Adīb and the reissue by him of *Miṣr* in December 1881, *al-ʿAṣr al-Djadīd* ceased to appear. *Al-Maḥrūsa*, opposing the nationalist policies of Colonel ʿUrābī, was suspended in June 1882 for its loyalty to the Khedive. After the riots of 11 June, Salīm was forced to flee; his press was destroyed. Salīm tried to restart *al-Maḥrūsa* in September 1882, but it was not till the beginning of 1884 that he got compensation for the destruction of his press, and *al-Maḥrūsa* reappeared as a weekly till his death.

The first three volumes of his lengthy *Miṣr li 'l-Miṣriyyīn aw ḥawādith al-fitna al-ʿUrābiyya*, Alexandria 1884-6, describing Egypt from the time of Muḥammad ʿAlī to Ismāʿīl, are said to have been printed, but then destroyed on government orders; volume iv covers Tawfīḳ's early reign; v, ʿUrābī; vi, the British occupation; and vii-ix, the ʿUrābist trials. *Riwāyat al-intiḳām aw al-hudjra al-sābiʿa* (Alexandria 1878) is a free translation by him and Adīb of the novel *Le dernier rendez-vouz* by the French writer Pierre Zaccone.

(P.C. Sadgrove)

al-**SĀLIMĪ**, Abū Muḥammad ʿAbd Allāh b. Ḥumayd b. Sullūm al-Sālimī, Nūr al-Dīn (*ca.* 1286-1332/*ca.* 1869-1914), generally known in the West as an ʿUmānī historian, but it was as *raʾīs al-nahḍa*, responsible for restoring the Imāmate in interior ʿUmān from 1913 to 1955, that his true role should be judged.

Born at al-Ḥawḳayn near al-Rustāḳ [*q.v.*], he went blind aged 12. His early studies were with the *ʿulamāʾ* of the region who had been active in securing the election of the only 19th-century Imām, ʿAzzān b. Ḳays (1868-71). But after the Sultanate was restored, with Ghāfirī tribal support and British connivance, the centre of Ibāḍī resistance shifted from al-Rustāḳ, the stronghold of the Ḳays branch of the Āl Bū Saʿīd [*q.v.*], to the Sharḳiyya, and in about 1890 al-Sālimī moved to study with its leader, Ṣāliḥ b. ʿAlī al-Ḥārithī (1834-96) [*q.v.*], making a permanent home at al-Ḳābil. However, ʿĪsā b. Ṣāliḥ (1874-1946), who succeeded his father as *tamīma* of the Sharḳiyya Hināwīs, seems to have developed a personal antipathy to al-Sālimī and failed to support his attempts to reactivate the Imāmate after 1905. So he was forced into a somewhat cynical alliance with Ḥimyar b. Nāṣir al-Nabhānī (1874-1920), then consolidating his position as *tamīma* of the Ghāfirī Banū Riyām confederation of the Djabal al-Akhḍar, to sponsor, as Imām, Sālim b. Rāshid (1301/1884-1920), a former pupil and one of the *shaykhs* of the Banū Kharūṣ, a tribe closely allied to the Banū Riyām but also with a long historical association with the Imāmate. Immediately after Sālim's *bayʿa* at Ḥimyar's capital Tanūf (12 Djumādā II 1331/20 May 1913), al-Sālimī returned to the Sharḳiyya with a delegation to espouse his cause there. After Izkī fell to the Imām, ʿĪsā reluctantly gave his allegiance, thus assuring the Imāmate of the loyalty of the main Hināwī tribes of central ʿUmān.

But al-Sālimī never saw the real success of his mission. To help finance the movement, he ordered the appropriation of all *waḳf* property that had been bequeathed for visiting graves and for reading the Ḳurʾān for the dead. This judgement led him into major dispute with his former teacher, Mādjid b. Khamīs al-ʿAbrī (*ca.* 1837-1927), who in ʿAzzān's time had also similarly opposed such dubious financial precedents, and so impassioned did the issue become that early in 1914 al-Sālimī went to see him at al-Ḥamrāʾ. On the way, he was killed when his donkey stumbled; he was buried at Tanūf.

It is against this background that the nature of his history of the Imāmate, *Tuḥfat al-aʿyān bi-sīrat ahl ʿUmān*, should be viewed. Finished *ca.* 1910, the story is continued down to the death in 1954 of the Imām Muḥammad b. ʿAbd Allāh al-Khalīlī by his son, Muḥammad (Shayba), in the *Nahḍat al-aʿyān bi-ḥurriyyat ʿUmān* (Cairo n.d.); this contains a lengthy biography of his father which is the main source for this article. Amongst twenty-two works of his listed in it, attention should be drawn to such studies of major Ibāḍī scholarship as his edition of al-Rabīʿ b. Ḥabīb al-Farāhīdī's *ḥadīth* with a three-volume *Sharḥ*, and also to his close cooperation with the great Mzābi scholar and activist, Muḥammad b. Yūsuf Aṭfayyish (1236-1332/1820-1914). It was Muḥammad's son Abū Isḥāḳ Ibrāhīm Aṭfayyish, who edited for publication the *Tuḥfa* (first ed. 2 vols., Cairo 1347 and 1350), as also another remarkable work of his, the *Djawhar al-niẓām fi ʿilmay 'l-adyān wa 'l-aḥkām*, a distillation in an *urdjūza* of guidelines and judgements written as a sort of aide-memoire for *ḳāḍīs*. His *Talḳīn al-ṣibyān* became the standard book of instruction for Ibāḍī children.

Bibliography: Given in the article.

(J.C. Wilkinson)

SĀLIMIYYA, the name of a mystical-theological school in Baṣra, based on the teachings of Muḥammad b. Aḥmad b. Sālim (d. 297/909) and his son Aḥmad b. Muḥammad b. Aḥmad b. Sālim (d. 356/967). In the sources, father and son are often confused. Both were pupils of the famous mystic Sahl b. ʿAbd Allāh al-Tustarī (d. 282/896 [*q.v.*]), Muḥammad b. Aḥmad for as long as 60 years; he therefore is to be considered as the main pupil of al-Tustarī.

While Muḥammad b. Aḥmad has a separate entry in the Ṣūfī lexica and handbooks (such as those by Abū Nuʿaym al-Iṣfahānī [*q.v.*], ʿAbd Allāh al-Anṣārī [see al-anṣārī al-harawī] and Abū ʿAbd al-Raḥmān al-Sulamī (d. 1021) [*q.v.*]), this is not the case for his son Aḥmad. The latter's most famous pupil was Abū Ṭālib al-Makkī (d. 386/996 [*q.v.*]), the author of the *Ḳūt al-ḳulūb*, the main model for the *Iḥyāʾ ʿulūm al-dīn* of Abū Ḥāmid al-Ghazālī [*q.v.*]. Since no actual works of Muḥammad b. Sālim or of Aḥmad b. Sālim

are known, even by title, the *Ḳūt al-ḳulūb* of al-Makkī must be considered as the main source for the doctrine of the Sālimiyya. The compilation of Sahl al-Tustarī's commentary on the Ḳurʾān does not stem from the Sālimiyya but from other pupils of al-Tustarī.

The existence of a tradition of the Sālimī school and doctrine in the 4th/10th century is attested by the Ṣūfī Ibn Khafīf al-Shīrāzī (d. 371/982 [*q.v.*]), whose work against it, the *al-Radd ʿalā Ibn Sālim* (i.e. Aḥmad b. Muḥammad), has not been preserved. The geographer al-Muḳaddasī [*q.v.*], who finished his description of the Islamic empire in 375/985, associated in Baṣra with adherents of the school. He relates that at that time they were Mālikīs, but that their founder had been a Ḥanafī, that they studied theology (*kalām*), for which they had their own books, and that their main concern was renunciation of the world (*zuhd*). None of the early sources mentions them explicitly as Ṣūfīs. Abū Naṣr al-Sarrādj (d. 378/989 [*q.v.*]), the author of the Ṣūfī handbook *al-Lumaʿ*, records a discussion with Aḥmad b. Sālim in Baṣra about mystical sayings of Abū Yazīd al-Bisṭāmī [*q.v.*], considered as heretical by Aḥmad. Aḥmad b. Sālim is also otherwise often mentioned in the *Lumaʿ*.

It was probably on account of Ibn Khafīf's lost work that a catalogue of alleged heretical views of the Sālimiyya came into being among the Ḥanbalīs. Reference to these views is first found in the works of Ibn al-Farrāʾ (d. 458/1066 [*q.v.*]); parts of them are repeated by later authors. There is no trace of such doctrines in the proper tradition of the Sālimiyya, i.e. in the *Ḳūt al-ḳulūb*. The catalogue deals with unfounded misrepresentations by opponents of the school, which should not be taken as authentic doctrines of the Sālimiyya. The real doctrine of the school is to be sought in al-Makkī's work, which is now being studied in a critical way. It shows a thoroughly orthodox and quite ascetic piety.

(L. Massignon-[B. Radtke])

SĀLIYĀNE (transliterated also sālyāne), a technical term in Ottoman administrative usage derived from the Persian *sāl* (year) meaning "yearly", "yearly allowance" or "stipend".

The term is applied especially to the yearly income allotted to some categories of provincial rulers and governors (16th-19th centuries). These were the members of the Girāy [*q.v.*] dynasty, some governors of maritime districts and other *sandjaḳ-begis* and *beglerbegis* whose income did not derive from *khāṣṣ* [*q.v.*] domains but consisted of a yearly allowance fixed at the time of their appointment. Their governments were termed as being "with *sāliyāne*" [see eyālet]. In those *sandjaḳs* and *eyālets* which were lying at great distances from the central seat of government, the *timār* [*q.v.*] régime was not instituted. All revenues there were controlled directly by the office of the *defterdār* [see daftardār] in the capital. The provincial treasuries in this case provided salaries in cash to the governors, the Janissary commanders and other military and administrative personnel, as well as the means for all local expenditure. The remainder of the revenue had to be transferred to the central treasury (see khazīne and irsāliyye]. In the 17th and 18th centuries there were nine *sāliyāne* provinces: Egypt [see miṣr], Baghdād [*q.v.*], Baṣra [*q.v.*], Ḥabesh [*q.v.*], Yemen [see yaman], al-Aḥsā [see al-ḥasā], the *odjaḳs* of the West, Algiers [see djazāʾir-i gharb], Tunis (*Tūnus* [*q.v.*]) and Tripoli [see ṭarābulus-gharb]. In the province of Kefe [*q.v.*], Crete (Ottoman Girid [see iḳrīṭish]), *Djazāʾir-i Baḥr-i Safīd* [*q.v.*], in the *sandjaḳs* of Chios [see saḳiz], Naxos [see naḳshe] and al-Mahdiyya (Tunisia) [*q.v.*], in the Cypriot *sandjaḳs* of Kerynia (Ott. Girne), Paphos (Ott. Bāf) and Famagusta (Ott. Maghōsha [*q.v.*]), and Aleppo [see ḥalab], some governors had *sāliyāne* status. There all tax revenues went to the state treasury. The local *defterdārs* collected the taxes and paid the governor, the Janissaries and other regional officials their appointed yearly salaries and transferred any surplus to Istanbul. Such a surplus (*irsāliyye* [*q.v.*]) came regularly only from the provinces of Egypt, Baghdād and Baṣra. The bureaux of the *defterdār*'s office concerned were the *sāliyāne muḳāṭaʿasī ḳalemi* and the *taʾrīkhči ḳalemi* (see M. Sertoğlu, *Muhteva bakımından Başvekalet Arşivi*, Ankara 1955, 66).

(A.H. de Groot)

ṢALKHAD or Ṣarkhad, the Biblical Salka, already in Classical Antiquity one of the major settlements of the Auranitis or Ḥawrān [*q.v.*], the basalt region in southern Syria, now a small provincial town (population 1981: 6,476 inhabitants) on the southern flank of the Djabal al-Durūz, near the Jordanian border. In the Islamic era it was of prime importance as the southernmost advance post of Syria towards the desert lands of Arabia and on the junction of important trade routes, connecting the main north-south axis via Damascus with the road from the Mediterranean towards east to Baghdād and beyond. It was strongly fortified by a mighty castle, which formed a defensive line with the citadel of Buṣrā [see boṣrā], about 23 km/14 miles further west.

Today, its historic importance is only shown by the impressive ruins of the castle, built in solid black basalt masonry on the top of a steep volcanic eminence, and the isolated hexagonal Ayyūbid minaret in the city centre. Despite the poor state of preservation, the glorious past can be deduced in some detail from the chronicles or geographic manuals, and especially from a remarkable number of Arabic inscriptions re-used in recent constructions of

the Druze population, who have resettled the completely abandoned ancient site since 1860. With the continuous removal in recent times of most of the traditional fabric, the excavation and clearing of the citadel has been undertaken by the Syrian Antiquities Organisation since 1991.

The history of Ṣalkhad, as a defensive bastion for Damascus, closely mirrors the fate of the Syrian capital, and its history has been similar to that of the neighbouring town of Buṣrā.

The Fāṭimid, Saldjūḳ, Būrid and Zangid periods. The citadel of Ṣalkhad was evidently founded or enlarged in 466/1073-4 by the chief of the Banū Kalb Bedouins, Ḥassān b. Mismār, as a base for attacks against Damascus, then belonging to the empire of the Fātimid caliph al-Mustanṣir. After the expulsion of the Fāṭimids from Syria in 468/1076 and the subsequent foundation of a new Saldjūḳ dynasty by Tādj al-Daula Tutush [see SALDJŪḲIDS. III. 4, and TUTUSH], the new master of Syria invested his sons Fallūs and Takīn as commanders at the castles at Ṣalkhad and Buṣrā. Shortly after, when power in 497/1104 passed to Ẓahīr al-Dīn Ṭughtakīn, the former *atābak* of the Saldjūḳ prince Duḳāḳ b. Tutush and founder of the Būrid dynasty [*q.v.*], he bestowed both cities on the general Gümüshtakīn al-Tādjī in 503/1110, who in turn bequeathed it to his *mamlūk* Altuntāsh (541-2/1146-7). Though the city of Buṣrā was improved greatly in this period, and consequently the same should be assumed for Ṣalkhad, not a single piece of building has been identified so far. This is also the case for the rule of Muʿīn al-Dīn Ūnūr, *atābak* of the last Būrid Mudjīr al-Dīn Abaḳ, who invested Mudjāhid al-Dīn Būzān al-Kurdī (542-55/1147-60) as commander of the citadel, to be succeeded briefly by his son Muḥammad (555/1160). The Zangid ruler Nūr al-Dīn Maḥmūd [*q.v.*], master of Damascus since 549/1154, bestowed Ṣalkhad and Buṣrā on Ṣadīḳ b. Djawlī (555-71/1160-76), followed eventually by a nephew. Again, as attested for Buṣrā, Ṣalkhad may also have further expanded, though the contemporary sources give no information.

The Ayyūbid period. Due to the continuous threat from the Crusaders, Ṣalkhad, like many of the Syrian cities and strongholds, attracted the attention of the Ayyūbid rulers. In 583/1187, the founder of the Ayyūbid dynasty, al-Malik al-Nāṣir Ṣalāḥ al-Dīn Yūsuf, when decisively defeating the Crusaders at the battle of Ḥaṭṭīn [*q.v.*], brought Ṣalkhad and Buṣrā into his possession. When dividing his empire among his family in 588/1186, both towns were bestowed on his son al-Malik al-Afḍal ʿAlī, the acting governor of the Damascus province since 582/1186. It seems that the citadel of Ṣalkhad, strengthened by additional fortifications before 589/1193 and in 591/1194-95, was deemed strategically more important than that of Buṣrā, where the rebuilding programme only started about a decade later in 599/1202-3. Consequently, when deposed as ruler of Damascus, al-Afḍal ʿAlī decided to take up his residence at Ṣalkhad in 592/1196, until five years later he bestowed Ṣalkhad on the *amīr* Zayn al-Dīn Ḳarādjā al-Ṣāliḥī, confirmed in this also by the current ruler of Damascus, al-ʿĀdil Abū Bakr, as is evident from the construction of an additional tower of the citadel in 601/1204-5 in the name of both personalities. In 604/1208 it was bequeathed to his son Nāṣir al-Dīn Yaʿḳūb, who held Ṣalkhad till 611/1214.

A peak of prosperity was reached under the Ayyūbid prince al-Muʿaẓẓam ʿĪsā, who invested his major-domo ʿIzz al-Dīn Aybak al-Muʿaẓẓamī with the fief of Ṣalkhad (611-44/1214-47), Aybak sponsored an extensive building programme: besides enlarging the citadel decisively (as attested by inscriptions), two caravanserails were constructed (in 611/1214-5 and 634/1236-7); the congregational mosque was extended by an additional aisle and by the singular hexagonal minaret (630/1233); and simultaneously also an ancient mosque repaired (630/1232-3). After the improvement of Ṣalkhad, Aybak turned his attention to other places of his fief, said to have included up to hundred villages. His activities ranged from the foundation of a caravanserail and a mosque at Sāla (632/1234-5), 17 km/10 miles further to the northeast, a castle (*ḳaṣr*) at the oasis of al-Azrak (634/1236-7), about 70 km/43 miles to the south (now in Jordan), the restoration of a caravanserail at Zurʿa/Ezraʿ (636/1238), *ca.* 60 km/37 miles to the northwest, the reactivation and extension of an open cistern at ʿInāk (636/1238-9 and 637/1239-40), 20 km/12 miles to the southeast, and the building of a mosque at al-ʿAyn (638/1240-1), 6 km/4 miles to the northwest. Except for the epigraphic texts, almost nothing has survived from these building enterprises. But the available data clearly testify to the systematic improvement of the region, evidently resulting in an increase of the rural population.

Following the deposition of Aybak al-Muʿaẓẓamī, the fief of Ṣalkhad henceforth was administered directly by members of the Ayyūbid family: al-Malik al-Ṣāliḥ Nadjm al-Dīn Ayyūb (644-7/1247-9), al-Muʿaẓẓam Tūrān Shāh (647-8/1249-50), al-ʿAzīz Muḥammad (648-58/1250-60), and al-Ẓāhir Ghāzī (658/1260). Despite a final extension of the citadel in 647/1249, the town had to suffer the military might of the victorious Mongol army in 658/1260.

The Mamlūk period. In the aftermath of the Mongol conquest, al-Ẓāhir Baybars [*q.v.*], who successfully expelled the Mongols from Syria and decisively reduced the Crusader dominions, systematically reorganised the Syrian provinces. The citadel of Ṣalkhad was immediately reactivated and soon extensively repaired and strengthened in 668/1270 and 669/1271 under the supervision of the *amīr* Balabān al-Afram, as testified by several inscriptions and a series of stone carvings with representations of the lion, the blazon [see RANK] of sultan Baybars, now dispersed throughout the region. Shortly thereafter, al-Manṣūr Ḳalāwūn in 679/1280-1 invested the *amīr* Sayf al-Dīn Basitī as governor of the city, and a certain ʿIzz al-Dīn as commander of the citadel, ordering the restoration of the fortification (inscription of 669/1271).

The later steady decline in Ṣalkhad's strategic importance, as also that of Buṣrā, is attested by its use as a place for disgraced Mamlūk officials. This first occurred when the former sultan al-ʿĀdil Kitbughā nominally acted as governor of Ṣalkhad after his forced resignation in 696/1297. This also occurred with the dismissed governor of Damascus, ʿIzz al-Dīn Aybak al-Ḥamawī, as well as for the powerful *amīrs* Aḳḳūsh al-Afram and Ḳarasunḳur al-Manṣūrī (both fleeing to the Mongol court in 711/1312), and finally also for Aḳḳūsh al-Ashrafī. Throughout this period, Ṣalkhad still flourished as regional centre, even maintaining a bath complex (*ḥammām*), registered in the inventory of the viceroy of Syria and governor of Damascus, Tankiz, compiled on the occasion of his dismissal in 740/1340.

Because of its heavily fortified citadel, Ṣalkhad retained some importance in the later Mamlūk period. In 824/1421 it served as retreat of the governor of Damascus Djaḳmaḳ al-Dawādār, after an unsuccessful revolt following the death of the sultan al-

Mu'ayyad Shaykh. The latest historical datum marks the appointment in 842/1438-9 of the low-ranking official Khalīl al-Ẓāhirī (who was later in his career to compile the well-known manual of the Mamlūk state, see *Bibl.*) as commander of the citadel. In the wake of the Ottoman conquest of Syria (922/1516), resulting in a shift of importance to the northern provinces, Ṣalkhad was soon depopulated and deserted, only to be again resettled and rebuilt by Druze refugees immigrating from the Lebanon from the later 19th century onwards.

SALLĀM AL-**TARDJUMĀN** [see YĀDJŪDJ WA-MĀDJŪDJ].

SALLĀMA AL-**ZARḲĀ'** (the "blue" Sallāma) was the star among the slave singing-girls (*ḳayna* [*q.v.*]) of Kūfa in the last years of the Umayyads and in the caliphate of al-Saffāḥ.

She belonged to the local "master of singing-girls" (*ṣāḥib ḳiyān; muḳayyin*) Ibn Rāmīn, a *mawlā* of the Marwānids, who ran an establishment offering the pleasures of musical entertainment and wine-drinking. His house was frequented mainly by the *ẓurafā'* (sing. *ẓarīf*) of Kūfa. Among them were the poets Ismāʿīl b. ʿAmmār and Muḥammad b. al-Ashʿath al-Zuhrī, who eulogised Sallāma in their verses, Muṭīʿ b. Iyās, Ḥammād ʿAdjrad, Ibn al-Muḳaffaʿ [*q.vv.*], and others. Sallāma had her own servants and acted like the lady of the house in receiving and entertaining the admirers of her art. She received most generous remunerations for her singing and lute-playing, not only from the above litterati and poets, but also from representatives of Kūfan society such as Rawḥ b. Ḥātim al-Muhallabī and Maʿn b. Zā'ida [*q.v.*]. Between Dhu 'l-Ḥidjdja 136 and Djumādā II 137/June-Nov. 754, Sallāma was acquired, for the amount of 80,000 *dirhams*, by Djaʿfar b. Sulaymān, a cousin of the caliphs al-Saffāḥ and al-Manṣūr, who later became governor of Medina (146-50/763-7, 161-6/778-83). Nothing is known about Sallāma's later life, except her honorific *kunya* Umm ʿUthmān. A former guest of her days at Ibn Rāmīn's who had dared to offer her a precious pearl from between his lips in exchange for a pearl-searching kiss from her was lashed to death by Djaʿfar b. Sulaymān.

Sallāma al-Zarḳā' is not to be confused (as in H.G. Farmer, *A history of Arabian Music*, London 1929, 122-4; ʿU.R. Kaḥḥāla, *Aʿlām al-nisā'*, ii, 226-8, and other sources) with her famous namesake Sallāmat al-Ḳass, and with the singing-girl al-Zarḳā' (*Aghānī*[3], xv, 67; al-Suyūṭī, *al-Mustaẓraf min akhbār al-djawārī*, Beirut 1963, 67-8).

AL-**SALLĀMĪ**, ABŪ ʿALĪ AL-ḤUSAYN b. Aḥmad al-Bayhaḳī, historian of the Sāmānid period, who flourished in the middle decades of the 4th/10th century but whose exact dates of birth and death are unknown.

According to the local historian of Bayhaḳ, Ibn Funduḳ [see AL-BAYHAḲĪ, ẒAHĪR AL-DĪN ... B. FUNDUḲ], he was a pupil of the rather shadowy *nadīm* and *adīb* Ibrahīm b. Muḥammad al-Bayhaḳī [*q.v.*], author of the *K. al-Maḥāsin wa 'l-masāwī*, and according to al-Thaʿālibī, he was in the service of the Muḥtādjid *amīrs* of Čaghāniyān [see MUḤTĀDJIDS], Abū Bakr Muḥammad and Abū ʿAlī Čaghānī, with whose fortunes in the Sāmānid state his own career was apparently link-

ed. Al-Sallāmī's fame arises from his history of the governors of Khurāsān, the *K. Wulāt Khurāsān*, which is now lost but which was used extensively (and independently of each other) by the Ghaznawid historian Gardīzī [*q.v.*] and then by Ibn al-Athīr for events in Khurāsān and Transoxania up to the death of Abū ʿAlī Čaghānī in 344/955 (this being the last event apparently taken from al-Sallāmī's work and common to the narratives of the two later historians). Al-Sallāmī's work was still known to, and cited by, the historian of the Mongols Djuwaynī [*q.v.*], but thereafter disappears from mention. There are also citations from other works of his in the sources; see Sezgin, *GAS*, i, 352.

SALLĀRIDS [see MUSĀFIRIDS].

SALM B. ʿAMR AL-KHĀSIR, early ʿAbbāsid poet (d. 186/802), born in Baṣra in a family of *mawālī*.

He was a pupil and *rāwī* of the poet Bashshār [*q.v.*], whose verse he is said to have plundered for motifs, and he befriended Abu 'l-ʿAtāhiya [*q.v.*] until they became estranged. When young, he moved to Baghdād and became a panegyrist of the caliphs al-Mahdī and al-Hādī, the Barmakids and other leading persons. He also excelled in elegies, which he sometimes seems to have prepared in advance. Notorious for his dissoluteness and libertinism (*mudjūn* [*q.v.*]) and even accused of heresy by later writers (probably unjustly), he is said to have become pious for a time but, relapsing, to have reverted to his former behaviour. This is one of the several explanations of his nickname "the Loser", among the other ones being the story that he sold a copy of the Ḳurʾān in exchange for a book of verse, or for a lute; or that he squandered a fortune inherited and earned with his poems (he is said to have left a large sum when he died). He is called a good poet with a natural talent (*maṭbūʿ mudjīd*), skilled in all poetic genres. He seems to have invented the ultra-short *radjaz* [*q.v.*] monometer (four syllables per line), employed in a poem praising al-Hādī. Ibn al-Muʿtazz, writing a century after his death, speaks of "his very numerous poems"; Ibn al-Nadīm mentions his poems as filling *ca.* 150 folios, but the *Dīwān*, still known in the 7th/13th century, is not preserved. Von Grunebaum was able to collect sixty fragments numbering 289 lines of verse, 278 being of unquestioned authenticity; a more recent collection was made by Nadjm. What remains of Salm's verse shows him to be a competent but not very original poet with an easy style.

Bibliography: G.E. von Grunebaum, *Three Arabic poets of the early Abbasid age*, in *Orientalia*, xvii (1948), 160-204, xix (1950), 53-80, xxii (1953), 262-83, repr. in his *Themes in mediaeval Arabic literature*, London 1981 (for Salm, see the second part and the beginning of the first); Muḥammad Yūsuf Nadjm, *Shuʿarāʾ ʿabbāsiyyūn*, Beirut 1959, 91-120. The Arabic sources are given in *GAS*, ii, 511-2, and see ix, 295; the chief ones being Ibn al-Muʿtazz, *Ṭabaḳāt al-shuʿarāʾ*, Cairo 1968, 99-106, *al-Aghānī*³, xix, 260-87, *Taʾrīkh Baghdād*, ix, 136-40. A monograph is by Nāyif Maḥmūd Maʿrūf, *Salm al-Khāsir, shāʿir al-khulafāʾ wa 'l-umarāʾ fi 'l-ʿaṣr al-ʿabbāsī*, Beirut n.d. [1985?].

(G.J.H. van Gelder)

SALM B. ZIYĀD B. ABĪHI, Abū Ḥarb, Umayyad commander and governor, the third of the many sons of Abū Sufyān's bastard son Ziyād b. Abīhi [*q.v.*], d. 73/692.

The family of Ziyād already had a firm grip on the East in the later years of Muʿāwiya's caliphate, and when Yazīd I came to the throne, he appointed Salm as governor of Khurāsān (61/681), and the latter nominated another of his brothers, Yazid b. Ziyād, as his deputy in Sīstān. Salm proved himself a highly popular governor with the Arab troops in Khurāsān, largely on account of his military successes. He led raids across the Oxus against the Soghdian princes of Transoxania and to Samarḳand, and is said to have been the first Arab governor actually to winter across the river; he also raided Khʷārazm. His lieutenants were, however, less successful in eastern Afghānistān against the Zunbīls, the local rulers of Zamīndāwar and Zābulistān [*q.vv.*], and the Kābul-Shāhs; his brothers Yazīd and Abū ʿUbayda were respectively killed and captured leading expeditions thither.

When Yazīd b. Muʿāwiya died, the Arab army in Khurāsān agreed with Salm to continue giving allegiance to him until the situation in the central lands of the caliphate should be clarified (63/683), but they soon renounced this allegiance; Salm was forced to return to Baṣra, and the East came to be dominated over the next years by the leader of the Ḳays party there [see ḲAYS and YAMAN], ʿAbd Allāh b. Khāzim al-Sulamī [*q.v.*], whom Salm had nominated as his successor over Khurāsān. In the prevailing uncertainty, Salm seems to have had the idea of giving allegiance to ʿAbd Allāh b. al-Zubayr [*q.v.*], but was arrested in Baṣra by the latter, who had just set himself up as anti-caliph in Arabia and the East. Salm was imprisoned at Mecca and mulcted of four million dirhams which he had gained from his two years' governorship. He subsequently contrived to escape when al-Ḥadjdjādj [*q.v.*] came to Mecca and the caliph ʿAbd al-Malik appointed him to the East once more, but he died at Baṣra in 73/692 before he could reach Khurāsān.

SALMĀ [see ADJAʾ].

SALMĀN AL-FĀRISĪ [see Suppl.].

SALMĀN PĀK [see Suppl., *s.v.* SALMĀN AL-FĀRISĪ].

SALMĀN-I SĀWADJĪ, i.e. Djamāl al-Dīn Salmān b. Muḥammad-i Sāwadjī, Persian poet, panegyrist of the Djalāyirids [*q.v.*].

Salmān was born at the beginning of the 8th/14th century, probably in 709/1309 in Sāwa [*q.v.*]. His father held a post in the financial administration of the Ilkhānids [*q.v.*]. Among the first patrons of the young poet was the vizier Ghiyāth al-Dīn Muḥammad b. Rashīd al-Dīn Faḍl Allāh. It is likely that it was Dilshād Khātūn (d. before 753/1352), the widow of the Ilkhān Abū Saʿīd [*q.v.*], who encouraged Salmān to move to Baghdād and join the court of her new husband, Ḥasan-i Buzurg (d. 757/1356), founder of the

Djalāyirid dynasty. From 744/1343 on, Salmān was in the service of the Djalāyirids, and in time he was the teacher of Ḥasan-i Buzurg's son Uways (r. 757-76/1356-74). Most of Salmān's panegyrical *ḳaṣīdas* [*q.v.*] are in praise of the sultans Ḥasan and Uways and, notably, of Dilshād Khātūn. The service of the Djalāyirid house made Salmān a comparatively wealthy man, but frequent travel in the court's entourage seems to have damaged his health, for in a number of poems the poet complains of malaria, ailing feet and sore eyes and expresses his desire to lead a stationary and secluded life away from the court. In the last year of his life, under Uways's successor, Ḥusayn (r. 776-84/1374-82), Salmān fell from favour because of his apparent siding with Ḥusayn's rival Shāh Shudjāʿ. The most probable date of Salmān's death is Monday, 12 Ṣafar 778/30 June 1376.

Salmān's poetic work comprises about 21,000 *bayts*; it consists of his *dīwān* (*ḳaṣīdas*, *tarkībāt*, *tardjīʿāt*, *ḳiṭʿas* [*q.v.*], *ghazals* [*q.v.*], and *rubāʿīs* [*q.v.*]), a *Sāḳī-nāma*, a short *mathnawī* [*q.v.*], entitled *Firāḳ-nāma*, and a longer *mathnawī*, *Djamshīd u Khwarshīd*, the latter being a romantic epic interspersed with lyrical *ghazals*. In his *ḳaṣīdas*, Salmān continues the tradition of the great classical masters such as Anwarī and Kamāl al-Dīn Ismāʿīl [*q.vv.*], and in his *ghazals* he is in some instances on a par with his contemporary Ḥāfiẓ [*q.v.*]. Like Ḥāfiẓ, Salmān was taken as a model by following generations of Persian and Turkish poets. His *mathnawī Djamshīd u Khwarshīd* was adapted in an Anatolian Turkish version by Aḥmedī (d. 815/1412 [see AḤMADĪ]). At the moment, there is no truly critical edition of Salmān's *dīwān*, nor has his poetry so far been subjected to a critical study.

(M. GLÜNZ)

SALMĀNIYYA, the name applied to a sect of Shīʿī extremists (*ghulāt* [*q.v.*]) who paid special reverence to the *ṣaḥābī* Salmān al-Fārisī [*q.v.*] and are said to have regarded him as a prophet or even as a divine emanation superior to Muḥammad and ʿAlī b. Abī Ṭālib. The only two references to the sect originate from Rayy and its environs: the Salmāniyya are mentioned by the Ismāʿīlī author Abū Ḥātim al-Rāzī (d. 322/933-4) in his book *Kitāb al-Zīna* in the chapter on the Shīʿī sects (not yet printed; cf. Massignon, *Opera minora*, i, 475-6); in about 220/835 a certain ʿAlī b. al-ʿAbbās al-Kharādhīnī al-Rāzī (from the village of Kharādhīn near Rayy) is said to have written a refutation of the sect, entitled *K. al-Radd ʿalā 'l-Salmāniyya* (al-Nadjāshī, *Ridjāl*, lith. Bombay 1899, 180; ed. Muḥ. Djawād al-Nāʾīnī, Beirut 1988, ii, 78-9). The Salmāniyya were probably identical with the *aṣḥāb al-Sīn*, criticised by pseudo-Djābir al-Azdī, *K. al-Mādjid* (ms. Paris, B.N. ar. 5909); cf. Massignon, *op. cit.*, 477-8. As the sect is mentioned neither by Sunnī nor by Twelver Shīʿī heresiographers, it seems not to have played a major role and to have soon disappeared; hence the details of its doctrines are wrapped in obscurity.

Bibliography: L. Massignon, *Salmân Pâk et les prémices spirituelles de l'Islam iranien*, Soc. d'Et. Iraniennes, cahier vii, 1934, 47-52 (= *Opera minora*, Beirut 1963, i, 475-8).

(H. HALM)

SALMĀS, the name of a district, and of its mediaeval urban centre, in the western part of the Persian province of Ādharbāydjān. The district comprises a fertile plain near the northwestern corner of Lake Urmiya, bounded on the west by the Harāwīl mountain range with the pass of Khānasūr (2,408 m/7,900 feet) leading into Turkey, and on the south by the Kūh-i Awghān. The modern town of Salmās, Shābūr or Dīlmān (lat. 38° 13′ N., long. 44° 50′ E.), lies 48 km/30 miles to the south-south-west of Khōy [see KHOI] on the Zala Čay river. The region of Salmās has been inhabited since earliest known times, as shown by the remains there from the Urartian culture onwards. In classical Antiquity it came within the province of Persarmenia, and Constantine Porphyrogenitus mentions Salamas along with Chert (i.e. Khōy).

Salmās seems to have been conquered by Arab troops from Diyār Rabīʿa [*q.v.*], since al-Balādhurī states that the taxation of Salmās had long been transmitted to Mawṣil. In the 4th/10th century it came within the principality of the western branch of the Daylamī Musāfirids [*q.v.*] under Marzubān b. Muḥammad b. Musāfir. In 332/943-4 Marzubān fought off a Ḥamdānid raid on Salmās, and in 344/955-6 the Kurdish adventurer Daysam attacked it. Al-Iṣṭakhrī and Ibn Ḥawḳal describe Salmās as a small town of Ādharbāydjān, with a strong wall, in a fertile region. Al-Muḳaddasī describes it as a Kurdish town (these Kurds would be from the Hadhbānī tribe) and considered it as being administratively part of Armenia. In 456/1064 the inhabitants of Salmās joined the Saldjūḳ sultan Alp Arslan's expedition against the Byzantines, Armenians and Georgians. By Yāḳūt's time, however, the town was in ruins; yet in the mid-8th/14th century Ḥamd Allāh Mustawfī says that it was once more flourishing, with its wall, 8,000 paces in circumference, rebuilt in the time of the Il-Khān Ghazan by the vizier Khwādja Tādj al-Dīn ʿAlī Shāh Tabrīzī; the revenues of Salmās (presumably the whole district) amounted to the substantial sum of 39,000 dīnārs (see Abū Dulaf, *Second Risāla*, ed. and tr. V. Minorsky, Cairo 1955, tr. 37, comm. 76; *Ḥudūd al-ʿālam*, tr. Minorsky, § 36.11, tr. 143; Le Strange, *Lands of the Eastern Caliphate*, 166; Schwarz, *Iran im Mittelalter*, 962, 1108-11). This mediaeval town of Salmās then gradually declined, and today must be marked by the village in the northwest of the Salmās district called in the early 20th century Kuhna Shahr ("old town") on the road from Albaḳ and Ḳaṭūr.

The modern chef-lieu of the district, in the 20th century known as Shāhpūr and before that as Dīlmān (which latter name seems to indicate a connection with the Daylamīs who at times controlled the region, e.g. the Musāfirids) lies in the centre of the plain (lat. 38° 13′ N., long. 44° 50′ E., alt. 1,430 m/4,690 ft.). In 1930 the town had some 8,000 inhabitants, almost all Shīʿī Muslims, but the surrounding villages included a good number with Christian populations, both Nestorian Assyrians and Catholic Chaldaeans, these last converted in the 18th century and having a bishop at Khosrawa; as early as 1281 there had been a Nestorian bishop of Salmās present at the consecration (*cheirotonia*) of the Patriarch Mar Yaballāhā in Baghdād (Assemani, ii, 456). It was in Urdī-Bihisht 1309/April-May 1930 that the town was largely destroyed by an earthquake, but rebuilt on Riḍā Shāh Pahlavī's orders. The region as a whole had suffered badly from the Russo-Turkish fighting in the First World War, and in the post-War period had occurred massacres of the Christian population by the Muslim Kurds; it was in 1918 that the Nestorian Patriarch Mār Shimʿūn Benjamin was murdered at Kuhna Shahr by the Kurdish bandit chief Ismāʿīl (Simko) b. ʿAlī Khān (see NASṬŪRIYYŪN and J.F. Coakley, *The*

Church of the East and the Church of England. A history of the Archbishop of Canterbury's Assyrian mission, Oxford 1992, 339-40). In *ca.* 1950 S͟hāhpūr and its rural environs had a population of 11,000, which had risen by 1991 to 60,570 (*Preliminary results of the 1991 census*, Statistical Centre of Iran, Population Division); administratively, it now falls within the *bak͟hs͟h* of the same name in the *s͟hahrastān of* K͟hōy in the province (*ustān*) of Ād͟harbāyd͟jān.

Worthy of note in the Salmās region is the Kurdish mountain fortress of Čahrīḳ, on a rock in the gorge of the Zala Čay (illustr. in E.G. Browne (ed.), *Kitáb-i Nuqṭatu 'l-Káf*, Leiden 1910), where in 1264/1848 the Bāb, Sayyid ʿAlī Muḥammad S͟hīrāzī, was imprisoned by the governor there, Yaḥyā K͟hān, brother-in-law of Muḥammad S͟hāh Ḳād͟jār [see BĀB].

The Salmās district is rich in antiquities from the Urartian period onwards, including an early Sāsānid bas-relief probably depicting Ardas͟hīr I and his son S͟hāhpūr (I) receiving the homage of the defeated Armenians (see A. Gabriel, *Die Erforschung Persiens*, Vienna 1952, 169; Sylvia A. Matheson, *Persia: an archaeological guide*², London 1976, 88-9). At Kuhna S͟hahr is the brick tower from *ca* 700/1300-1 erected by Mīrī K͟hātūn, daughter of Arg͟hun Āḳā, governor of K͟hurāsān under the Il-K͟hānids Hülegü and Abaḳa (C.F. Lehmann-Haupt, *Materialen zur ältesten Geschichte Armeniens*, in *Abh. GW Göttingen*, N.S., ix, 158-9; illustr. in idem, *Armenien einst und jetzt*, Berlin 1910, 320).

Bibliography (in addition to references given in the article): Ritter, *Erdkunde*, ix/2, 956-62; O. Blau, *Vom Urmiah-See nach dem Wan-See*, in *Petermanns Mitteilungen* (1863), 201-10; Razmara, *Farhang-i d͟jug͟hrāfiyā-yi Īrān-zamīn*, iv, 291-3.

(C.E. BOSWORTH)

SALOMON [see SULAYMĀN].

SALONIKA [see SELĀNĪK].

SALSABĪL (A.), the name of a fountain in paradise. It is mentioned only once in the Ḳurʾān, in LXXVI, 18: the righteous who are in paradise in the hereafter "will be given there a cup to drink in which has been mixed ginger (*zand͟jabīl*), (from) a fountain therein named Salsabīl".

Exegetes approached the word from two directions: etymology linked to meaning, and grammar. The word was postulated to have been derived from *salla, salisa*, or *salsala* and all these roots were connected with the idea of being "easy to swallow" or "delightful in taste", attributes considered appropriate to liquids consumed in paradise. The presence of the letter *bāʾ* in the word was, according to some, simply to be understood as non-radical (*zāʾida*). More imaginative was the approach which saw the word composed of the imperative of the verb *saʾila* plus *sabīl*: "ask for a way!", according to Ibn Ḳutayba, *Tafsīr g͟harīb al-Ḳurʾān*, Cairo 1978, 4, some have said that the word suggests that the fountain is calling, "Ask me for a path to it (the fountain), O Muḥammad!" General opinion (including Ibn Ḳutayba's) did not seem to favour this type of interpretation, however.

The grammatical issue, not unrelated to the suggestions regarding etymology and meaning, focused on the presence of the *tanwīn* at the end of the word (the absence of variant readings suggests that it was never read otherwise). If the word was a proper name, then, it was generally argued, it would normally not be fully declined, but rather should take a single *fatḥa* as a termination. If, however, it was understood as a description (*ṣifa*) of the water coming out of the fountain (as some of the meanings of the word suggested also), then a full declension with *tanwīn* was appropriate. Since the Ḳurʾān said the fountain was "named" Salsabīl, this then led to a possible conclusion that the fountain had been named for its attribute (and that the verb "to name" here actually meant "to be described as": see al-Ṭabarī, *D͟jāmiʿ al-bayān*, Cairo 1905, xxix, 135). On the other hand, it was observed by most grammarians starting with al-Farrāʾ, *Maʿānī al-Ḳurʾān*, Cairo 1972, iii, 217-18, that employing diptotes as triptotes was done in poetry and thus the presence of the phenomenon in the Ḳurʾān was not problematic (and was also to be found in other passages, for example, LXVII, 4 and 15). Other grammarians, including al-Zad͟jd͟jād͟j, *Maʿānī al-Ḳurʾān*, Beirut 1988, v, 261, simply observed that the *tanwīn* was required for the rhyme in the *sūra*.

In popular thought, Salsabīl was understood to be the name of the fountain and was sometimes taken as the name of one of the four rivers of paradise (see D͟JANNA, B. 1).

Bibliography: *Tafsīr* tradition on Ḳurʾān, LXXVI, 18. (A. RIPPIN)

AL-**SALṬ** or AL-SALT, a town in modern Jordan, approximately 28 km/17 miles west of ʿAmmān (30° 03′ N, 35° 42′ E.) at an elevation of about 840 m/2,755 feet. It is the seat of the governorate of the Balḳāʾ [*q.v.*], and in 1993 its population was estimated at 60,740. It is situated in a rather mountainous, oak-covered area, with several springs that allow cultivation of the valley floors, notably with figs and pomegranates; Arab geographers and 19th-century European travellers mention the export of its grapes, raisins, wheat and lentils to Palestine.

The town was called Gadara during the Greco-Roman period, and the name al-Salṭ likely derives from the Roman administrative designation Regis Saltus, a crown domain within the province of Palaestina Prima that was probably granted by the Emperor Septimius Severus (A.D. 192-211). The tomb complex and adjacent reservoir and olive press discovered in 1978 on the outskirts of the city may have belonged to a family entrusted with this crown domain.

The first reference to the name al-Salṭ occurs in 512/1118, following the death of Baldwin I of Jerusalam, when his successor Baldwin II sent an envoy to the *atabeg* of Damascus Ẓahīr al-Dīn Ṭug͟htigin [see BŪRIDS] requesting an extension of the truce. Ṭug͟htigin responded positively on condition that the revenues from D͟jabal ʿAwf, Ḥannāna, al-Salṭ, al-G͟hawr and al-D͟jawlān should be collected exclusively for the Muslims. Baldwin II refused this stipulation, and it seems that the earlier arrangement was terminated after Ṣalāḥ al-Dīn's victory at Ḥiṭṭīn in 583/1187, when the Muslims established their control over these lands, and in 588/1192 al-Salṭ was assigned to the sultan's brother and successor al-ʿĀdil. In 617/1220, al-ʿĀdil's son S͟haraf al-Dīn ʿĪsā erected a citadel on a mountain known as Raʾs al-Amīr, in response to an attack on a caravan by a group from the Banū Raḥmān from the nearby village of Kafr Yahūda. This citadel later served as a place of banishment, as when in 637/1239 the family of al-Malik al-Ṣāliḥ, his treasury and his horses were sent there.

In 644/1246 some K͟hʷārazmian refugees settled at al-Salṭ, but were forced to flee to Karak when the town was attacked and burned by a certain Fak͟hr al-Dīn Ibn al-S͟hayk͟h. The Mongols reached al-Salṭ in 659/1260, where they were opposed by Badr al-Dīn Muḥammad al-Atābekī; he surrendered the town, but the Mongols retained him in authority there.

The Mamluk sultan al-Ẓāhir Baybars al-Bunduḳdārī (d. 676/1277) repaired and expanded the

citadel at al-Salṭ, and stationed troops there. He also renovated the town's mosque. Mamlūk period sources describe al-Salṭ as being prosperous and noted for its orchards. It came within the *wilāya* of al-Balḳā', the sixth *wilāya* of the southern *ṣafka* of Damascus. The administrative status of al-Salṭ varied, but towards the end of the Mamlūk period it had eclipsed both Ḥiṣbān (Esbous) and ʿAmmān. Its residents probably followed the Shāfiʿī *madhhab*, for it is known that the town had a Shāfiʿī *ḳāḍī*, and that the *amīr* Sayf al-Din Begtimur al-Ḥusāmī (d. 729/1328) founded a Shāfiʿī *madrasa* there. A number of learned men with the name of al-Salṭī are listed in the biographical dictionaries of this time.

The Ottoman *tapu defters* provide significant information about al-Salṭ. In 954/1538 it was the seat of a *nāḥiya* comprising two *maḥallas*: Awāmla east of the citadel and Maḥallat Akrād west of the citadel; between them there were 168 households, ten bachelors, four imāms, ten Christians, and six soldiers who manned the citadel. An order by the sultan of 959/1551 states that al-Salṭ was in a ruinous state, which corroborates the population decline recorded in the *tapu defter* of 1005/1596. Both *defters* detail the sum of 12,000 *aḳčes* in dues that were collected from al-Salṭ as part of the allowances of the *mīr liwā* of ʿAdjlūn. Christians paid the poll tax at the rate of 80 *aḳčes* per head. At the time, al-Salṭ was a market place for the district, while Ḥiṣbān is reported as having been derelict.

The citadel at al-Salṭ continued to be well maintained. In 1033/1623, Fakhr al-Dīn al-Maʿnī II visited al-Salṭ and installed a garrison of fifty men there. It is claimed that the citadel was destroyed by Ibrāhīm Pasha [*q.v.*] during his presence in Syria between 1247/1831 and 1256/1840, and only ruins survive today, including trenches that give the neighbourhood the name of Khandaḳ.

Little data is available about al-Salṭ during the 17th, 18th, and early 19th centuries, but there is plentiful information from the second half of the 19th century in connection with the measures taken by the Ottomans to rejuvenate the region during the *Tanẓīmāt* period. Al-Salṭ's importance increased, but it remained administratively dependent upon either the Ḥawrān, Karak or Nābulus. Thus in 1313/1895, it was a seat of a *ḳaḍā'* within the *liwā* of Karak, that included its own *nāḥiya* and the *nāḥiyas* of ʿAmmān, Djīza and Mādaba. *Sāl-nāmes* and other sources report about 300 villages belonging to this *ḳaḍā'*, but it is difficult to accept this figure unless derelict sites are included.

Al-Salṭ had a *ḳā'immaḳām*, Islamic and civil courts, and special courts for non-Muslims. In addition, it had departments for education, health, land registry, taxation, postal and telegraph services, and religious endowments. The various villages, quarters, tribes and Christian communities each had its own *mukhtār*. The town attracted people from the regions of Damascus, Ḥamā and Palestine, and particularly from Nābulus, and these new settlers were responsible for the flourishing of business and increased construction of houses, shops, baths, and other buildings; Christians, many from Palestine, also came to settle in the city, and were the pioneers in business; along with others, they came to dominate land ownership in the neighbouring villages. A number of missionary groups came to al-Salṭ, and it had several churches, among them Greek Orthodox, Roman Catholic, Greek Catholic and Protestant. A Chamber of Commerce was instituted in 1301/1884, and a Municipal Council in 1305/1888. The town enjoyed security, and through its military garrison maintained control over the region, especially the Abad, ʿAdwān, and Banū Ṣakhr tribes. This security attracted the influx of capital, which is reflected in the town's Ottoman-style mansions, many of which survive today.

Al-Salṭ was ahead of the rest of the country in education because of the number of both state and missionary schools that were established there. The first secondary school in Jordan was established there in 1344/1925, and it accordingly had an important early role in building the modern state of Jordan.

(M.A. AL-BAKHIT)

SALṬANA (A.) "sovereignty, ruling power", from the verb *salṭana* "become ruler, exercise power", with *salāṭa* meaning "force" (*ḳahr*), thence by extension the holder of power. *Sulṭān* is found in the Ḳur'ān; see for a detailed discussion of the Islamic origins of the term and its later developments, SULṬĀN. The Arabic papyri from the first century of Islam have such expressions as *kharādj al-sulṭān* or *bayt māl al-sulṭān*, with the sense of "authority of the government, or of the governor, *wālī* or *ḥākim*". In the standard Arabic dictionaries (Ibn Durayd, *Djamhara*, iii, 27; Ibn Sīduh, *Mukhaṣṣaṣ*, iii, 133 ff.; Ibn Fāris, *Muʿdjam maḳāyīs al-lugha*, iii, 95; *LʿA*, iii, 2065-6; al-Fīrūzābādī, *Ḳāmūs*, ii, 365-6; *TʿA*, v, 158-60; Buṭrus al-Bustānī, *Muḥīṭ al-muḥīṭ*, i, 680), *sultān* is invariably connected with the idea of constraint. In popular Arabic usage, *salīt* means "oil", in Yemen, "sesame oil", and *sulṭān* is thus connected with *salīt* because oil, it is asserted, serves to make things clear, just like political authority. Hence *amīrs* are described as *sulṭāns* because the latter term is the divine proof which is used to put the proof into practice.

The term was employed in the *fiḳh* works and in *adab* ones, whence the title of the first chapter of Ibn Ḳutayba's *ʿUyūn al-akhbār: kitāb al-sulṭān* (in which the author defines the role and attributes of the *sulṭān*). For the subsequent development in practice of *sulṭān* as a personal title, see SULṬĀN, in addition to which it should be noted that al-Ḳalḳashandī, speaking of the evolution of power in Egypt, states that, under the Fāṭimids, authority (*salṭana*) was acquired by the "vizierate of delegation" (*ṣārat salṭanatuhā wizārat al-tafwīḍ* (*Ṣubḥ*, ix, 403).

Salṭana is found in combination with many terms: *dār al-salṭana, dast al-salṭana, takht al-salṭana, sarīr al-salṭana, nimdjat al-salṭana* and *nāʾib al-salṭana*.

(MOUNIRA CHAPOUTOT-REMADI)

SALTUḲ OGHULLARÏ, a Türkmen dynasty that ruled a principality centred on Erzurum [*q.v.*] from *ca.* 465/1072 to 598/1202.

The information on this dynasty from all sources is rather sparse and somewhat confused. It was apparently founded by one Saltuḳ, who was among the Türkmen *beys* under Alp Arslan whom he sent to conquer Anatolia after the battle of Malāzgird [*q.v.*]. Ibn al-Athīr (d. 630/1233) says the founder was a certain Abu 'l-Ḳāsim, who may have been the same person. The Saltuḳ-oghullarï seem to have established the first Türkmen principality in Anatolia after Malāzgird. In addition to their capital at Erzurum, it included Bāybūrt, Shābīn Ḳarā Ḥiṣār, Terdjān, İspir, Oltu, Midjingerd, and sometimes Ḳars. In 496/1103, the ruler, with the title *malik*, was one ʿAlī, who was allied with the Saldjūḳ sultan Muḥammad Tapar in his struggle against Berk-yaruḳ. In 516/1123, the ʿAbbāsid caliph al-Mustarshid asked the Saltuḳ-oghullarï, among others, for military assistance against Dubays b. Ṣadaḳa, the Mazyadid ruler of Ḥilla [*q.v.*]. The next known Saltuḳid ruler was ʿAlī's brother, Ḍiyāʾ al-Dīn Ghāzī (d. 526/1131-2).

Meanwhile, taking advantage of the confusion caused by the Crusades and Saldjūḳ domestic strife, the Georgians began to attack eastern Anatolia. In 514/1120, David the Builder (1089-1125), assisted by the Ḳipčaḳs [*q.v.*], defeated a coalition of Turkish forces, which no doubt included the Saltuḳ-oghullarï, near Tiflīs (Tbilisi). A few years later, Ḍiyāʾ al-Dīn concluded a marriage alliance with the Artuḳids [*q.v.*]. He was succeeded by ʿAlī's son ʿIzz al-Dīn Saltuḳ (d. 563/1168). In 549/1154, the Georgians under Dimitri I (1125-55) defeated and captured ʿIzz al-Dīn near Ānī. He was ransomed by the Artuḳids and Suḳmān, the Shāh-i Arman [*q.v.*] at Akhlāṭ. The latter was married to one of his daughters. ʿIzz al-Dīn was among the coalition of Turkish forces that besieged the Georgians at Ānī in 556/1161, only to meet defeat again. Shortly thereafter, ʿIzz al-Dīn sent another daughter to marry Ḳïlïdj Arslān II [*q.v.*], the Saldjūḳ sultan of Rūm. She was intercepted en route, however, by the Dānishmendid Yaghï-basan, who married her off to his nephew, the ruler of Ḳayṣariyya (Kayseri). This provoked a war between the Saldjūḳs and Dānishmendids. ʿIzz al-Dīn was succeeded by his son Nāṣir al-Dīn Muḥammad. Sometime during his reign, the Georgians attacked Erzurum for the first and last time.

It was presumably after this event that there occurred the curious incident in which Nāṣir al-Dīn's son Muẓaffar al-Dīn offered to convert to Christianity and marry the queen of Georgia, the famed Tʿamar (1184-1213). Muẓaffar al-Dīn went to Tiflīs with much pomp and expensive gifts, but the queen ultimately declined his offer. The subsequent fate of both Nāṣir al-Dīn and his son is unknown. Between at least 587/1191 and 597/1200-1, Nāṣir al-Dīn's sister Māmā Khātūn appeared as *malika* of Erzurum. She was allied with the Ayyūbid ruler of Mayyāfāriḳīn against the Shāh-i Arman. In 597/1200-1, she asked the Ayyūbid sultan al-Malik al-ʿĀdil in Cairo to arrange a husband for her. At that point, she seems to have been overthrown by Muẓaffar al-Dīn's brother Malik Shāh. These events probably disturbed the Saldjūḳ sultan of Rum, Sulaymān II, who was hostile to Ayyūbid ambitions in eastern Anatolia. Consequently, when he marched through Erzurum in 598/1202 on a campaign to Georgia, he imprisoned Malik-Shāh and annexed his territory, putting an end to the Saltuḳid dynasty. Under the Saltuḳ-oghullarï, Erzurum was a flourishing emporium and acquired a number of monumental buildings. Ḍiyāʾ al-Dīn built the Tepsi Minare and Kale Camii, and Nāṣir al-Dīn built or completed the Ulu Cami. Also noteworthy is the *türbe* of Māmā Khātūn in Terdjān.

Sümer, *Doğu anadolu'da türk beylikleri*, Ankara 1990, 17-45, which is a revised version of his article *Saltuklular* in *Selçuklu Araştırmaları Dergisi*, iii (1971), 391-434 (Sümer takes issue with Turan on many important points).

(G. LEISER)

SALTUḲIDS [see SALTUḲ OGHULLARÏ].

SALŪḲĪ, the name given by the Arabs to a member of the gazehound family, so-called because it pursues its quarry by sight and not by scent. The *salūḳī* stands about 25-6 ins. in height at the shoulder. The *salūḳī* has often been mistaken for the greyhound by travellers to the Middle East, but the ears are long and pendulous, while the greyhound's are short and pricked, and the greyhound is wider in the body and more heavily built. Whereas the greyhound is a sprinter, the *salūḳī* is possessed of great stamina.

Abundant evidence exists in Arabic literature that the *salūḳī* hunted oryx in the Djāhiliyya (see the *Muʿallaḳa* of Labīd (ll. 49-52); the *ḳaṣīda* of al-Nābigha (in C.J. Lyall (ed.), *A commentary on ten ancient Arabic poems*, Calcutta 1894, 154 ll. 13-18); and ʿAbda b. al-Ṭabīb (ll. 29-39) and Abū Dhuʾayb (ll. 36-48) both in the *Mufaḍḍaliyyāt*). The huntsman, armed with bow

and arrows, would use a whole pack of *salūḳīs* and the latter would hunt down and exhaust the quarry which, when turned and fighting back with its long, straight horns, would be dispatched by the huntsman's bow, the huntsman being at this time unaffected by the strict prescriptions on the killing of prey which would come in Islamic times. Although such hunting is not mentioned in the extremely stereotyped pre-Islamic poetry, the hunting of the gazelle and the hare by *salūḳīs* must have taken place even before Islam.

The *salūḳī* has been a favourite hunter of the gazelle and the hare right through mediaeval times in the Middle East to the present day in Saudi Arabia and the Gulf. The former was hunted until fairly recent times by both *salūḳīs* and saker falcons (see Smith, *A new translation*, 254). The sakers would bind to the head of the gazelle to confuse and delay it, while the *salūḳīs* followed on and dragged the gazelle down for the huntsman to slaughter according to the prescriptions of Islam (see Allen and Smith, *Hunting techniques*, 114-15). The hare has always been, and continues to this day to be, coursed by the *salūḳī*. The latter will probably survive, despite the stronger interest now in birds of prey for hunting, because of the danger presented to the bird of prey when she tries to cope with the swift, jinking desert hare.

The origin of the word *salūḳī* is not easily arrived at. The word must have been used in pre-Islamic times, though its occurrence in the poetry of the period is rare (e.g. *Mufaḍḍaliyyāt*, 61, *banāt salūḳiyyayn* "the offspring of two *salūḳīs*"). The Arab geographers (listed in detail in Allen and Smith, *op. cit.*, 139, n. 25) suggest the name is the *nisba* of a place called Salūḳ in the Yemen near Taʿizz, or alternatively in the area of al-Lān to the west of the Caspian Sea, also called Salūḳ (*ibid.*, map 121). Viré in his article (*REI*, xli/2, 231-40) opts for the latter which he calls the "patrie d'origine de ces lévriers". There is no reason, either, why *salūḳī* should not be the *nisba* of one of the many Salūḳiyyas, towns founded by the ancient Seleucids and called after the dynasty. The most likely answer is that, for some reason, the Arabs regarded their prize hounds as being "Seleucid" (*salūḳī*), in some way connected with the dynasty which had controlled vast areas of the Middle East before Islam (see Smith, *The Arabian hound*, 457-64).

(G.R. SMITH)

SALŪL, the name of two tribal groups in northern Arabia: a branch of K̲h̲uzāʿa [*q.v.*] and a branch of the so-called Northern Arabian federation Ḳays ʿAylān [*q.v.*], more precisely, the Hawāzin [*q.v.*].

1. The lineage of the Salūl who were a branch of K̲h̲uzāʿa was: Salūl b. Kaʿb b. ʿAmr b. Rabīʿa b. Ḥārit̲h̲a. The genealogists list, beside Salūl himself, the following descendants of his as eponyms of tribal groups (the term employed is *baṭn*): Ḳumayr b. Ḥabs̲h̲iya (variants: Ḥabs̲h̲iyya, Ḥabas̲h̲iyya, Ḥubs̲h̲iyya), Ḥulayl b. Ḥabs̲h̲iya, including the descendants of Abū G̲h̲ubs̲h̲ān, who were numerous and formed many tribal groups, Ḍāṭir b. Ḥabs̲h̲iya, Kulayb b. Ḥabs̲h̲iya, al-Ḥizmir (variants: al-Ḥirmiz, al-Ḥurmuz) b. Salūl, ʿAdī b. Salūl, Ḥabtar b. ʿAdī and Hanīʾa b. ʿAdī (see also Ibn Durayd, *al-Is̲h̲tiḳāḳ*, ed. ʿAbd al-Salām Hārūn, Cairo 1378/1958, 468-73; cf. Caskel, *Ğamharat an-nasab*, i, 198, 199; Ibn ʿAbd Rabbihi, *al-ʿIḳd al-farīd*, ed. Aḥmad Amīn *et alii*, Cairo 1384/1965; iii, 383; Hanīʾa's mother is said to have been the daughter of Salūl b. Ṣaʿṣaʿa (Ibn al-Kalbī, *Nasab Maʿadd wa 'l-Yaman al-kabīr*, ed. Nād̲j̲ī Ḥasan, Beirut 1408/1988, ii, 446), which points to a link between the two tribal groups called Salūl).

There are two indications, both related to blood-revenge, that before Islam the Ḳumayr were the leading group among the Salūl, and possibly among the Kaʿb b. ʿAmr as a whole. First, one of the Ḳumayr, ʿAmr b. K̲h̲ālid, vowed that he would not let the blood of a Kaʿbī go unavenged (*Nasab Maʿadd*, ii, 441). Second, when al-Walīd b. al-Mug̲h̲īra of the Ḳuras̲h̲ī Banū Mak̲h̲zūm [*q.v.*] died of an injury caused by a K̲h̲uzāʿī (who was either of the Ḳumayr or of the Hanīʾa), it was again a member of the Ḳumayr, Busr b. Sufyān, who intervened in the ensuing crisis. Busr guaranteed the payment of the blood-money agreed upon—a compromise was struck; K̲h̲uzāʿa did not admit responsibility for al-Walīd's death. Busr even brought a son of his to Ḳurays̲h̲ [*q.v.*] as hostage. But K̲h̲ālid b. al-Walīd [*q.v.*], who was the son of the slain man, sent the boy back (*Nasab Maʿadd*, ii, 447; Ibn Ḥad̲j̲ar, *Iṣāba*, ed. ʿAlī Muḥammad al-Bid̲j̲āwī, Cairo 1392/1972, i, 293; Muḥammad b. Ḥabīb, *al-Munammaḳ fī ak̲h̲bār Ḳurays̲h̲*, ed. K̲h̲ūrs̲h̲īd Aḥmad Fāriḳ, Beirut 1405/1985, 191-9; Ibn His̲h̲ām, *al-Sīra al-nabawiyya*, ed. al-Saḳḳā *et alii*, Beirut 1391/1971, ii, 52-4).

The crisis over al-Walīd's blood-money is illuminating with regard to Mecca's internal politics on the eve of Islam. One assumes that in the dispute, the Banū Hās̲h̲im supported K̲h̲uzāʿa: the Kaʿb b. ʿAmr of K̲h̲uzāʿa, to whom the Salūl belonged, had an alliance with ʿAbd al-Muṭṭalib b. Hās̲h̲im (Ibn Ḥabīb, *al-Munammaḳ*, 192-2). In this alliance, ʿAbd al-Muṭṭalib was the most important figure on the Ḳuras̲h̲ī side. On the K̲h̲uzāʿī side we find, among others, representatives of the following Salūl subdivisions: Ḳumayr, Ḍāṭir and Ḥabtar. As usual in tribal alliances, marriage links were agreed upon: ʿAbd al-Muṭṭalib married on that day the daughters of two of the K̲h̲uzāʿī leaders who were party to the alliance, i.e. the representatives of Ḍāṭir and Ḥabtar. The former bore him the famous Abū Lahab [*q.v.*] (and see U. Rubin, *Abū Lahab and sūra cxi*, in *BSOAS*, xlii [1979], 16), while the latter bore him al-G̲h̲aydāḳ (M.J. Kister, *On strangers and allies in Mecca*, in *JSAI*, xiii [1990], 140; M. Lecker, *The Banū Sulaym: a contribution to the study of early Islam*, Jerusalem 1989, 129). In other words, two of the Prophet's paternal uncles were born by Salūlī women (Ḥassān b. T̲h̲ābit, *Dīwān*, ed. W. ʿArafat, London 1971, ii, 16-7; al-Balād̲h̲urī, *Ansāb al-as̲h̲rāf*, i, ed. Muḥammad Ḥamīdullāh, Cairo 1959, 71-2; art. K̲H̲UZĀʿA, at V, 78a-b; Kister, *op. cit.*, 151). The Mak̲h̲zūmī position in the dispute over al-Walīd's blood-money was supported by the *Aḥābīs̲h̲* [see ḤABAS̲H̲, ḤABAS̲H̲A, at the end] who at some stage were called upon by the Mak̲h̲zūm to intervene (Ibn Ḥabīb, *Munammaḳ*, 195-6).

The most important role played by the Salūl before Islam was the one associated with Mecca in general and the Kaᶜba in particular. Their eponym Salūl is said to have been a custodian (*ḥādjib*) of the Kaᶜba, and the same is said about his son Ḥabshiya b. Salūl and his grandson Ḥulayl b. Ḥabshiya, who was, according to some, the last Khuzāᶜī custodian of the Kaᶜba. According to others, the last custodian was Ḥulayl's son al-Muḥtarish, better known by his *kunya* Abū Ghubshān.

There are several versions concerning the transference of the authority over the Kaᶜba, and over the affairs of Mecca in general, from Khuzāᶜa to Ḳuraysh, more specifically to Ḳuṣayy b. Kilāb [*q.v.*] (and see KHUZĀᶜA, at V, 77b-78a; Kister, *Mecca and the tribes of Arabia*, in *Studies in Islamic history and civilization in honour of David Ayalon*, ed. M. Sharon, Jerusalem and Leiden 1986, 50, repr. in idem, *Society and religion from Djāhiliyya to Islam*, Variorum Reprints, Aldershot 1990, no. II). For example, it is reported that Abū Ghubshān sold Ḳuṣayy his rights. The alleged sale is at the background of the popular saying "Incurring more loss than Abū Ghubshān's deal" (*akhsar min ṣafḳat Abī Ghubshān*; see KHUZĀᶜA, at V, 78a). This version of the story was promulgated by people fanatically hostile to the so-called Southern tribes (*fa-yaqūlu 'l-mutaᶜaṣṣibūna ᶜalā 'l-Yamāniya inna Ḳuṣayy^an shtarā 'l-miftāḥ*, etc.; al-Wazīr al-Maghribī, *al-Īnās fī ᶜilm al-ansāb*, ed. Ḥamad al-Djāsir, Riyāḍ 1400/1980, 114; obviously, the Khuzāᶜa figure here as a Southern tribe). The Khuzāᶜa could not remain indifferent to the way in which this crucial chapter of their pre-Islamic history was recorded: al-Wāḳidī concludes one of the variants of this version with a statement that it was denied by the elders of Khuzāᶜa (*ḳāla 'l-Wāḳidī: wa-ḳad raʾaytu mashyakhata Khuzāᶜa tunkiru hādhā*; al-Fāsī, *Shifāʾ al-gharām bi-akhbār al-balad al-ḥarām*, ed. ᶜUmar ᶜAbd al-Salām Tadmurī, Beirut 1405/1985, ii, 87). The Khuzāᶜīs stated that Ḥulayl b. Ḥabshiya bequeathed to his son-in-law Ḳuṣayy the authority over the Kaᶜba and Mecca. Their version is attested, for instance, in an autobiographical report going back to the Companion Khirāsh b. Umayya of the Salūl (*Shifāʾ al-gharām*, ii, 114). Ibn Isḥāḳ quotes the Khuzāᶜī claim, adding that he did not hear this from non-Khuzāᶜī sources, "and God knows best" (Ibn Hishām, *Sīra*, i, 124). The dispute over this matter no doubt dates back to the earliest stage of Islamic historiography and could even be pre-Islamic.

A prominent feature of the Salūl, and one concerning which there was continuity from the pre-Islamic period to at least the 2nd century A.H., was the *ḳiyāfa* [*q.v.*], i.e. the science of physiognomancy and the examination of traces on the ground. It was a Salūlī, Kurz b. ᶜAlḳama, who allegedly tracked the Prophet and Abū Bakr when they left Mecca for the Hidjra. Upon viewing the Prophet's footprint, Kurz recognised it as being similar to that of Abraham, found at the *maḳām Ibrāhīm*; according to the science of *ḳiyāfa*, this similarity indicated that the Prophet descended from Abraham [see MAḲĀM IBRĀHĪM, at VI, esp. 105b]. Later, at the time of Muᶜāwiya, Kurz reinstated the marks indicating the boundaries of the sacred territory of Mecca (*maᶜālim al-ḥaram*, or *anṣāb al-ḥaram*; Ibn Saᶜd, v, 338; Ibn Ḥadjar, *Iṣāba*, v, 583-4; Caskel, ii, 374). The continuity from pre-Islamic times is also reflected in Ibn al-Kalbī's remark that in his own time, Kurz's descendants were still trackers in Mecca (*Nasab Maᶜadd*, ii, 444).

Since the Salūl, and the Banū Kaᶜb b. ᶜAmr in general, inhabited the vicinity of Mecca (the placenames ᶜUsfān, al-Ẓahrān, Ḳudayd and Arāk are mentioned), their role in the struggle between the Prophet and Mecca was important. Indeed Muᶜattib b. ᶜAwf of the Salūl, more precisely of the Kulayb subdivision, participated in the Battle of Badr [*q.v.*], but this does not indicate the beginning of his tribe's involvement in the struggle: he was the client (*ḥalīf*) of the Makhzūm (Ibn Saᶜd, iii/1, 189; al-Wāḳidī, *al-Maghāzī*, ed. J.M.B. Jones, London 1966, i, 155, 341; Ibn Hishām, *Sīra*, ii, 339), i.e. of one of the Prophet's Makhzūmī Companions, perhaps Abū Salama b. ᶜAbd al-Asad.

Khirāsh b. Umayya of the Kulayb subdivision was also a client (*ḥalīf*) of the Makhzūm. He provides a valuable lead with regard to Salūl's role in the expedition of Muraysīᶜ which took place more than a year, or, according to others, several months, before the expedition of Ḥudaybiya (cf. Jones, *The chronology of the maghāzī—a textual survey*, in *BSOAS*, xix [1957], 250-1, 254). The story of a small episode during the Muraysīᶜ expedition reveals that Khirāsh was there, probably together with other Salūlīs. The party attacked by the Muslims at al-Muraysīᶜ was of the Muṣṭaliḳ who were, like the Salūl themselves, a subdivision of the Khuzāᶜa (see KHUZĀᶜA, at V, 78b; on the territory of the Muṣṭaliḳ, cf. Lecker, *The Banū Sulaym*, 101n.). A member of the Muṣṭaliḳ, ᶜĀmir b. Abī Ḍirār, who was the brother of their leader al-Ḥārith b. Abī Ḍirār, hit one of the Anṣār with an arrow (and probably killed him). Khirāsh threw himself on ᶜĀmir in a display of Khuzāᶜī solidarity so as to protect him from the Anṣār, who wanted to kill him (Ibn al-Athīr, *Usd al-ghāba*, Cairo 1280 A.H., ii, 108, quoting Ibn al-Kalbī; Ibn Ḥadjar, *Iṣāba*, ii, 269-70). This episode points to military co-operation between the Salūl and the Prophet some time before Ḥudaybiya. In other words, the Prophet was presumably playing one branch of Khuzāᶜa against the other. In order to place this expedition in its correct historical context it has to be borne in mind that the Muṣṭaliḳ (and their brother clan Ḥayā) belonged to the *Aḥābīsh* (*Nasab Maᶜadd*, ii, 455; Muḥammad b. Ḥabīb, *al-Muḥabbar*, ed. I. Lichtenstaedter, Ḥaydarābād 1361/1942, 246, 267; on the role of ᶜAbd Manāf in this alliance see also idem, *Munammaḳ*, 230-1; for more sources see KHUZĀᶜA, at V, 78a). This perfectly conforms to the statement that the Muṣṭaliḳ and the Ḥayā were the only groups of Khuzāᶜa who did not have an alliance with the Prophet (Ḥassān b. Thābit, *Dīwān*, ii, 15-6).

From the expedition of Ḥudaybiya in 6/628 onwards (see AL-ḤUDAYBIYA; and Lecker, *The Ḥudaybiyya-treaty and the expedition against Khaybar*, in *JSAI*, v [1984], 1-11) the Salūl, or in any case many of them, were clearly on the Prophet's side. At Ḥudaybiya the above-mentioned Khirāsh b. Umayya was in the Prophet's camp. He was sent to Mecca as an envoy and was nearly killed by ᶜIkrima b. Abī Djahl of the Makhzūm (al-Wāḳidī, ii, 600); then he participated in the expedition of Khaybar and in later expeditions, including the conquest of Mecca (Ibn Ḥadjar, *Iṣāba*, ii, 270; al-Wāḳidī, ii, 600, 843-5). But a more prominent role at Ḥudaybiya was played by the above-mentioned Busr b. Sufyān. Busr's status as a tribal leader meant that when he threw in his lot with the Prophet some time before Ḥudaybiya, he had the backing of a considerable force.

With regard to the conquest of Mecca by the Prophet in 8/630, it is reported that Busr, who was of the Ḳumayr subdivision, and Budayl b. Umm Aṣram of the Ḥabtar subdivision (whose grandmother was of the Ḳurashī Banū Hāshim) were sent to the Kaᶜb in order to summon them to the expedition (Ibn al-

Athīr, *Usd*, i, 169; cf. Yāḳūt, s.v. *al-Watīr*; Abū ʿUbayd al-Bakrī, *Muʿdjam mā staʿdjam*, ed. Muṣṭafā al-Saḳḳā, Cairo 1364-71/1945-51, s.vv. *Fāthūr* and *al-Watīr*; al-ʿIṣāmī, *Simṭ al-nudjūm al-ʿawālī*, Cairo 1380, ii, 173-4). They were presumably sent to the Ḥabtar and Ḳumayr subdivisions, respectively. A large troop of the Kaʿb, divided into three tribal units, joined the Prophet at Ḳudayd, while other Kaʿbīs set out from Medina, where they had arrived some time before the expedition (see KHUZĀʿA, at V, 79a; Lecker, *The Banū Sulaym*, 143-4; al-Wāḳidī, ii, 800-1, 819, 896 [Ḥunayn], 990 [Tabūk]). However, not all of the Salūlīs were on the Prophet's side: while Busr b. Sufyān is said to have embraced Islam in 6/627-8 (i.e. before Ḥudaybiya) and to have spied for the Prophet in Mecca, the above-mentioned Kurz b. ʿAlḳama is said to have embraced Islam "on the day Mecca was conquered", i.e. he was not among the Salūlīs who helped the Prophet conquer Mecca.

Busr b. Sufyān is mentioned as the recipient, or one of the recipients, of a letter from the Prophet (see Ḥamīdullāh, *Madjmūʿat al-wathāʾiḳ al-siyāsiyya li'l-ʿahd al-nabawī wa'l-khilāfa al-rāshida*, 5Beirut 1405/1985, 275-7; Ibn Ḥadjar, *Iṣāba*, i, 292; W.M. Watt, *Muhammad at Medina*, Oxford 1956, 355; cf. Lecker, *On the preservation of the letters of the Prophet Muḥammad*, forthcoming). In 9/630-1 the Prophet appointed Busr as a tax collector and sent him to his own tribal group, the Banū Kaʿb b. ʿAmr (see KHUZĀʿA, *loc. cit.*; Ibn Saʿd, ii/1, 115; cf. al-Wāḳidī, iii, 973-4).

In the Islamic period, some of the Kaʿb b. ʿAmr settled in Medina (Ibn Shabba, *Taʾrīkh al-Madīna al-munawwara*, ed. Fahīm Muḥammad Shaltūt, Mecca 1399/1979, i, 268; al-Samhūdī, *Wafāʾ al-wafā*, *ed.* ʿAbd al-Ḥamīd, Cairo 1374/1955, ii, 765). They included members of the Salūl: Ḳabīṣa b. Dhuʾayb, who was a high-ranking official in the court of the Umayyad caliph ʿAbd al-Malik b. Marwān [*q.v.*] (see e.g. al-Djahshiyārī, *al-Wuzarāʾ wa 'l-kuttāb*, ed. al-Saḳḳā *et al.*, Cairo 1401/1980, 34), was originally from Medina (Ibn ʿAsākir, *Taʾrīkh madīnat Dimashḳ*, facs. ed. ʿAmmān n.d., xiv, 392, l. 13; see also Caskel, ii, 454; his father, who died at the time of Muʿāwiya [*q.v.*], still inhabited Ḳudayd; Ibn Ḥadjar, *Iṣāba*, ii, 422). Ḳabīṣa was of the Ḳumayr subdivision. Another Salūlī whose descendants lived in Medina was Khirāsh b. Umayya of the Kulayb subdivision (*Nasab Maʿadd*, ii, 445; for a well in Mecca dug in the Islamic period by Khirāsh, or by another member of the Kaʿb, see al-Fākihī, *Akhbār Makka*, ed. ʿAbd al-Malik b. ʿAbd Allāh b. Duhaysh, Mecca 1407/1987, iv, 115, 116, 221; v, map no. 3; cf. the land near the Kaʿba granted by the Prophet to ʿUtba b. Farḳad al-Sulamī; Lecker, *The Banū Sulaym,* 132).

At the time of ʿUmar b. al-Khaṭṭāb, Ḳudayd and ʿUsfān north-west of Mecca were still at the heart of the territory of Khuzāʿa (cf. al-Balādhurī, *Futūḥ*, 452; KHUZĀʿA, at V, 79b), and this was probably true for the Salūl as well.

After the conquests, some of the Salūl settled in ʿIrāḳ (*Nasab Maʿadd*, ii, 445, where a member the Ḥizmir subdivision who was a *sharīf* in ʿIrāḳ and a government official is mentioned; *Khuzāʿat al-Ḥidjāz* and *Khuzāʿat al-ʿIrāḳ* are mentioned, with reference to the time of ʿAbd al-Malik, in al-Wazīr al-Maghribī, *Adab al-khawāṣṣ*, ed. al-Djāsir, Riyāḍ 1400/1980, 134). Others settled in Khurāsān: Mālik b. al-Haytham of the Ḳumayr was one of the *nuḳabāʾ* [see NAḲĪB] of the ʿAbbāsid *daʿwa*, and two of his sons were in charge of the *shurṭa* in the early ʿAbbāsid period (*Nasab Maʿadd,* ii, 442; Ibn Ḥazm, *Djamharat ansāb al-ʿarab*, ed. Hārūn, Cairo 1382/1962, 236; *Akhbār al-dawla al-ʿAbbāsiyya*, ed. ʿAbd al-ʿAzīz al-Dūrī and ʿAbd al-Djabbār al-Muṭṭalibī, Beirut 1971, 216; Sharon, *Black banners from the East*, Jerusalem 1983, 192; al-Ṭabarī, index; the prominent role played by Khuzāʿa and their *mawālī* in the *daʿwa* indicates that studying the history of this tribe after the conquests will further our understanding of the *daʿwa*; cf. Caskel, ii, 41). Mālik's brother, ʿAwf, was one of the *ḳuwwād* of the *daʿwa* and a mosque in Cairo (*miṣr*) was called after him (*Nasab Maʿadd*, ii, 442). The above-mentioned Kurz b. ʿAlḳama is said to have inhabited ʿAsḳalān (Ibn Ḥadjar, *Iṣāba*, v, 584). However, many Salūlīs probably never left Arabia: al-Ḳalḳashandī (d. 821/1418) reported that Barza near ʿUsfān was inhabited, among others, by the Salūl (see on this place, Lecker, *The Banū Sulaym*, xiii [map], 148).

2. The Salūl of the Hawāzin was either a man or a woman: Salūl was either the nickname of Murra, son of Ṣaʿṣaʿa b. Muʿāwiya b. Bakr b. Hawāzin; or the name of Murra's wife, a slave girl (*umm walad*) after whom her children were called (see e.g. Ibn al-Kalbī, *Nasab Maʿadd*, ii, 446; Aḥmad b. Muḥammad al-Ḳurṭubī, *al-Taʿrīf fī 'l-ansāb wa 'l-tanwīh li-dhawī 'l-aḥsāb*, ed. Saʿd ʿAbd al-Maḳṣūd Ẓalām, Cairo [1407/1986], 81; al-Baghdādī, *Khizānat al-adab*, ed. Hārūn, Cairo 1387-1406/1967-86, iv, 442; cf. Caskel, ii, 509); or the name of a daughter of Dhuhl b. Shaybān b. Thaʿlaba (i.e. the eponym of the Banū Dhuhl of the Bakr b. Wāʾil [*q.v.*]); she was married to Murra b. Ṣaʿṣaʿa b. Muʿāwiya b. Bakr b. Hawāzin and bore him all his sons, hence the Banū Murra were called after her Banū Salūl (Ibn al-Kalbī, *Djamharat al-nasab*, ed. Nādjī Ḥasan, Beirut 1407/1986, 379; Ibn Ḥazm, *Djamhara*, 271-2; cf. Caskel, i, 114, ii, 509). According to another version, only some of the Banū Murra were called Banū Salūl: Salūl bint Dhuhl b. Shaybān was the mother of the Banū Djandal b. Murra b. Ṣaʿṣaʿa (al-Ḥāzimī, *ʿUdjālat al-mubtadī wa-fuḍālat al-muntahī fī 'l-nasab*, ed. ʿAbd Allāh Kannūn, Cairo 1384/1965, 74; al-Wazīr al-Maghribī, *Īnās*, 186 n.). In other words, according to this version, the Banū Salūl were the descendants of Djandal b. Murra. The genealogists list the following as eponyms of tribal groups: Djandal b. Murra, ʿAmmāra b. Zābin, Ḥawza b. ʿAmr and Tamīma b. ʿAmr. The Salūl were not among the most prestigious tribes (al-Thaʿālibī, *Thimār al-ḳulūb fī 'l-muḍāf wa 'l-mansūb*, ed. Muḥammad Abu 'l-Faḍl Ibrāhīm, Cairo 1384/1965, 352; al-Dhahabī, *Siyar aʿlām al-nubalāʾ*, ed. Shuʿayb al-Arnāwūṭ *et al.*, Beirut 1401-9/1981-8, iv, 411; al-Djāḥiẓ, *al-Bayān wa 'l-tabyīn*, ed. Hārūn, Cairo 1395/1975, iv, 36).

The Salūl still inhabit their old territory south of Ṭāʾif, especially Wādī Bīsha (Ḥamad al-Djāsir, *al-Shāʿir ʿAbd Allāh b. Hammām al-Salūlī*, in *Madjallat al-ʿArab* [Riyāḍ], i [1386-7/1966-7], 37-43; C.J. Lyall, *The Dīwāns of ʿAbīd ibn al-Abraṣ and ʿĀmir ibn aṭ-Ṭufail*, Leiden and London 1913, 113-14; Yāḳūt, s.v. *Bīsha*).

Ḳarada b. Nufātha of the Salūl is said to have come to the Prophet in a delegation together with other Salūlīs. They embraced Islam and the Prophet declared him their leader (Ibn Ḥadjar, *Iṣāba*, v, 430-1; for another Salūlī, Nahīk b. Ḳuṣayy, said to have come to the Prophet, see *ibid.*, vi, 477). Abū Maryam Mālik b. Rabīʿa al-Salūlī reportedly gave the Prophet the pledge of allegiance at Ḥudaybiyya (*ibid.*, v, 724-5).

After the conquests, some of the Salūl settled in Kūfa (for Abū Maryam, see Ibn Saʿd, vi, 37; Ibn Mākūlā, *al-Ikmāl*, i, 227; see also Yāḳūt, s.v. *Djabbāna*; al-Balādhurī, *Futūḥ*, 285; ʿAbd Allāh b. Hammām al-Salūlī was in Kūfa at the time of Muʿāwiya;

see e.g. *Aghānī*[1], xiv, 120). Ibn al-Kalbī mentions several Salūlī supporters of ʿAlī b. Abī Ṭālib (see also Ibrāhīm b. Muḥammad al-Thaḳafī, *al-Ghārāt*, ed. Djalāl al-Dīn al-Muḥaddith, Tehran 1395/1975, index, s.v. ʿĀṣim b. Ḍamra and Hind b. ʿĀṣim; Ibn Ḥadjar, *Iṣāba*, ii, 13-4, s.v. Ḥubshī b. Djunāda). There were also Salūlīs in Mawṣil (cf. N. Abbott, *A new papyrus and a review of the administration of ʿUbaid Allāh b. al-Ḥabḥāb*, in *Arabic and Islamic Studies in Honor of Hamilton A.R. Gibb*, ed. G. Makdisi, Leiden 1965, 25; ʿUbayd Allāh was the ancestor of the Ḥabāḥiba who lived in Mawṣil, or of some of them; al-Azdī, *Taʾrīkh al-Mawṣil*, Cairo 1387/1967, 27). Other members of the Salūl settled in al-Andalus (Ibn Ḥazm, *Djamhara*, 272).

In the Islamic period, the Salūl, or some of them, were probably incorporated in the famous ʿĀmir b. Ṣaʿṣaʿa [*q.v.*], possibly as a result of conditions in the garrison cities. This development is reflected in the lineage of one of them, referred to as al-ʿĀmirī al-Salūlī, where ʿĀmir is inserted between Murra and Ṣaʿṣaʿa: ... Murra b. ʿĀmir b. Ṣaʿṣaʿa (Ibn Ḥadjar, *Iṣāba*, vi, 477, quoting Ibn al-Kalbī; Ibn al-Athīr, *Usd*, v, 44-5, s.v. Nahīk b. Ḳuṣayy ... b. Murra b. ʿĀmir b. Ṣaʿṣaʿa al-ʿĀmirī al-Salūlī).

Bibliography: Given in the article.

(M. Lecker)

SALUR, one of the Oghuz (Türkmen) tribes. They are first mentioned in Maḥmūd al-Kāshgharī's [*q.v.*] *Dīwān lughāt al-turk* (written 464/1072, tr. R. Dankoff and J. Kelly as *Compendium of the Turkic dialects*, Cambridge, Mass. 1982-5, i, 101) as one of the 22 branches of the Oghuz. They may, in fact, have been the chief branch of that confederation. In the 4th/10th century, the Oghuz were spread across a wide area from the Issïḳ-Kul west to the Caspian Sea (P. Golden, *The migrations of the Oğuz*, in *Archivum ottomanicum*, iv [1972], 45-84). According to Rashīd al-Dīn [*q.v.*], in his semi-legendary "*Oghuz-nāma*," i.e. the *Taʾrīkh-i Turkān wa Oghuz wa ḥikāyat-i djihangīrī-i ū* section of his *Djāmiʿ al-tawārīkh* (written *ca.* 710/1310), the name Salur, as derived from the verb *salmak*, meant "ready to attack, warrior." He adds that the Salur tribe traced its descent from Dagh Khān, one of the six sons of Oghuz Khān, and was among a subgroup of tribes known as the *üčok* (an analysis of this source is in F. Sümer, *Oğuzlar'a ait destanı mahiyetde eserler*, in *AÜDTCFD*, xvii [1959], 359-87; see also A.Z.V. Togan, *Oğuz destanı, Reşideddin oğuznamesi, tercüme ve tahlili*, Istanbul 1972, 51, 53-5, 138-42). In the Turkish epic *Dede Korkut* [*q.v.*], the earliest surviving version of which dates from 732/1332 but which appears to reflect certain events of the 4th-5th/10th-11th centuries, one Salur Kazan, who is the son-in-law and chief *bey* of Bayïndïr Khān, the king of the Oghuz, is the main protagonist. He struggles primarily against the Pečenegs (Sümer, *op. cit.*, 395-451).

By the 5th/11th century, most of the Oghuz had been converted, at least nominally, to Islam, and many of them had moved as far west as Khurāsān. Most of the Salur appear to have participated in this westward migration. They eventually travelled across northern Persia and through Ādharbāydjān, perhaps reaching eastern Anatolia in the late 5th/11th or early 6th/12th century as part of the general Saldjūḳ invasion. They are one of only six Oghuz tribes that can be identified in the Saldjūḳ realm before the Mongol invasion in the 7th/13th century (Cl. Cahen, *Pre-Ottoman Turkey*, London 1968, 35). After the founding of the Great Saldjūḳ Empire, some of the Salur established the Salghurid [*q.v.*] dynasty in Fārs (543-668/1148-1270) (M.F. Köprülü, *Osmanlı imparatorluğu'nun etnik menşei mes'eleleri*, in *Belleten*, vii [1943], 252, n. 1). Others moved into eastern, southern, and central Anatolia and were to be found around Amasya, Tokat, Sīwās, İsparta, Adana, and even Ṭarābulus (Tripoli) in Syria. They no doubt played an important military and political role in the Saldjūḳ sultanate of Rūm and may have been involved in the great uprising of the Türkmen known as the Bābāʾī [*q.v.*] revolt (638/1240). In the late 7th/13th century, one Salur Bey was a leader of "white-hatted" Türkmen who resisted the Mongols and their Saldjūḳ allies (O. Turan, *Selçuklular zamanında türkiye tarihi*, Istanbul 1984, 514-7).

The Salur were definitely an element in the rise of several *beyliks*. Some Salur served in the army of Bahrām Shāh (*ca.* 555-617/1160-1220) of the Mengüčekids [*q.v.*] of Erzindjān. They were with him when he joined a campaign against Georgia in 598/1202 led by the Saldjūḳ sultan of Rūm, Sulaymān II. In the view of Köprülü, the Ḳaramān-oghullarï [*q.v.*] were descended from the Ḳaramān branch of the Salur (his fundamental *Oghuz etnolozhisine dāʾir notlar*, in *TM*, i [1925], 193, n. 1). They also appeared in the *ulus* of Dhu 'l-Ḳadr [*q.v.*] around Elbistān (8th/14th century). The Salur who lived near Ṭarābulus migrated to the Čukur-Ova plain around Adana (7th/13th century) and became part of the *ulus* of the Ramaḍān-oghullarï [*q.v.*] (Sümer, *Çukur-Ova tarihine dair araştırmalar*, in *Tarih Araştırmaları Dergisi*, i [1963], 9, 23, 26-27, 29, 76; idem, *Osmanlı devrinde anadoluda yaşayan bazı üçoklu oğuz boylarına mensup teşekküller*, in *İstanbul Üniversitesi İktisat Fakültesi Mecmuasï*, xi [1952], 453-9, 486-92). The writer Fakhr al-Dīn Muḥammad b. Khʷādja Ḥasan al-Salghūrī al-Diwrīghī (b. 631/1236), who gained fame in both Turkish and Persian letters, was from this tribe (Turan, *Doğu anadolu türk devletleri tarihi*, Istanbul 1980, 69) as were the poet and statesman Ḳāḍī Burhān al-Dīn (d. *ca.* 800/1398 [*q.v.*]), who put an end to the government of Eretna [*q.v.*], and the poet Muṣṭafā b. Yūsuf (Ḳādī Ḍarīr) of Erzurum (d. second half of 8th/14th century) (Togan, *Umumi türk tarihine giriş*, Istanbul 1946, repr. 1981, 272). A Salur Khān also appears in the genealogy of Uzun Ḥasan (861-82/1457-78) of the Aḳ-Ḳoyunlu (J.E. Woods, *The Aqquyunlu*, Minneapolis 1976, 187). The Salur were still found around Sīwās and Adana in the early 10th/16th century, according to the Ottoman *defters* for those regions. In the former, they were called the Aḳ-Salur. By the first half of the 11th/17th century, the Salur were all settled and had lost their tribal organisation (Sümer, *Osmanlı devrinde ... teşekküller*, 453-9). There are many villages with the name Salur in Anatolia, even in western Anatolia, but it is difficult to determine when they were so named.

As for the Salur who remained in Khurāsān, mainly around Marw and Sarakhs, some migrated to China in the late 8th/14th century to become the present-day Salars [*q.v.*]. According to Abu 'l-Ghāzī Bahādur Khān's [*q.v.*] semi-legendary *Shadjara-i tarākima* (written 1070/1659), others migrated to Mangïshlaḳ or as far as ʿIrāḳ (Sümer, *Oğuzlar'a ait ... eserler*, 389-95, for analysis), perhaps in the 9th/15th century. Those who went to Mangïshlaḳ were led by the Ersarï [*q.v.* in Suppl.] who were at the head of the "outer Salur" in contrast to the "inner Salur", who included the Salur proper as well as the Tekke, Sarïḳ, and Yomut. These movements significantly reduced the number and power of the Salur in Khurāsān. Nevertheless, between 1525-35, the Salur of Khurāsān clashed with Ṣufyān Khān, the Özbeg ruler

of Gurgāndj or Urgandj. They also joined other Türkmen in the struggle against the Shīʿī Ṣafawids. In 1597, they raided the area of Astarābād, but submitted the next year to Shāh ʿAbbās. This pacification was no doubt temporary. In 1843, the Salur and Tekke captured Marw and around 1838 they rose to support a revolt in Sarakhs led by a former governor of Khurāsān. The Persians crushed this revolt with great difficulty. The Salur subsequently lost their importance. Before the Russians began their occupation of Türkmenistan in 1869, the Salur lived primarily in the region between Sarakhs and the Murghāb River. In the early 20th century, they were still concentrated around Sarakhs and along the Harī Rūd River in Türkmenistan. In the 13th/19th century, travellers estimated their population to be anywhere between 2,000 and 20,000 families divided among three branches of the tribe: Yalawač, Ḳaramān, and Ana-Böleghi (Kiči-Agha). Since the coming of the Russians, they have maintained their identity under the leadership of the Tekke. They are now completely sedentary and have lost their tribal distinction.

(G. Leiser)

SALWĀ (a.), a noun with a generic sense (*nomen unitatis, salwāʾ*, pl. *salāwā*, denotes first of all the quail (*Coturnix coturnix*), of the order of Galliformae, family of Phasianidae), from Latin *quaquila*, with the synonym *sumānā, sumānāʾ*, pl. *sumānayāt*. The two Semitic roots *s-l-w* and *s-m-n* evoke the idea of fatness; the same sense is found in the Hebrew *ślāw*, pl. *śalwīm*, and in the Syriac *salwai*.

It is under this name that the quail is mentioned in the Bible (Exod. xvi, 11-13; Num. xi, 31-2; Ps. lxxvii, 27; Ps. civ, 40; Wisdom of Solomon, xvi, 2) with regard to the exodus of the Israelites from Egypt to the Promised Land. Lacking provisions on their journey through the desert of Sin, between Elim and Sinai, they began to complain, and Moses had to call upon the Most High, who sent down to them a "rain" of quails and manna which covered the ground. In the following spring, weary of manna, they demanded more meat, and there came fresh clouds of quails from beyond the sea which came down upon their camp; there were so many that the Israelites were able to dry them, in the fashion of the Egyptians at that time, and thus live off them for over a month. These massive clouds of quails may be explained by the intense annual migrations and comings-and-goings of these birds who, like swallows and many other species, go to spend the winter, after nesting, in warm countries and then return for the summer to more temperate lands.

Having drawn this information from the Biblical texts, the Ḳurʾān evokes these occurrences in three places (II, 54/56; VII, 159/160; and XX, 79/82) without changing the terms of the story.

Some exegetes put forward the idea that *salwā* could possibly designate the grasshopper, the flying-fish, the grouse, the Casarka duck or the crane, etc., but such suggestions can be justified neither linguistically nor etologically, since most of these creatures are inedible and are unknown in the regions in question. It is on the other hand well-known that the quail is one of the most delicate game birds, much sought after by gourmets and assiduously hunted wherever it may pass by. Its nocturnal flights, sometimes in groups of hundreds, regularly reach the peripheries of the Mediterranean. Thus on the island of Capri, in September, the ground is covered by these birds arriving, to such an extent that, according to Tristram, the bishop, who drew a certain amount of revenue from them, bore the name "bishop of the quails".

In addition to the two names *salwā* and *sumānā*, the quail bears other appellations, in various regions and in the different local Arabic dialects. In the Near East there is *murayʿī, murʿat al-barr, summāna/simmāna, firr* and *firrī*, and in the Maghrib, *sammān, summīna, mallāḥa* and *darrādj*. An ancient belief held that the quail would be inevitably struck down by stormy weather, whence its name *ḳatīl al-raʿd* "the victim of thunder". In Berber, the names *tasemmant, tamryoust* and *tiberdfelt* are known for it. Corresponding to *salwā*, the Turkish name *bïldïrdjïn* is from the same root as the Persian *baldarčīn/bildirčīn/buldurčīn*, to which may be added local names like *badbada, būdana, gilča, karak, kardjafūk, karkarak, lārda, lārūda, waladj, wartadj, wartak, watak* and *wushm*.

As well as having succulent meat, the quail, according to al-Damīrī, has several specific qualities. Thus its head, buried in a dovecote, will make all parasites flee away, and, burnt and used to fumigate the wood, will free it from all woodworm. If a person whose eyes are affected by rheum carries one of its eyes on his person, he will be cured of his condition. Mixed with saffron, its gall is an excellent unguent for scurfy skin, and its dried and pounded-up dung placed on ulcers will make them disappear. Finally, in falconry, a sick goshawk can be cured by feeding to it quail's liver.

The partridge and quail have always been for hunters some of the most sought-after game birds. They were constantly the prey of falconry, from the wrist with the sparrow-hawk and merlin [see bayzara]. Other methods of capturing quail were and still are very varied. Since it constantly runs along the ground, only flying when forced and hemmed in, lurking in dense herbage and thickets, it is caught by means of a quail-call (*ṣaffāra*) which imitates the call of the male, reproduced in French by the onomatopoeic "paye-tes-dettes". In the Maghrib, hunters use their flowing burnouses as a net by spreading them over the bushes where quail rest when they arrive after their lengthy migration. They are, at that time, very vulnerable and the episodes related in the Bible set in the time of the exodus of the Israelites through the desert, are easily understandable. At the present time, shooting quail with pointer hounds reduces considerably the numbers of the species each year, but very recently, this has been modified by the commercial rearing of quails.

As well as being the main term for "quail", *salwā* is at the same time used for a land-hugging member of the Rallidae family (*tifliḳī*), the corncrake or landrail (*Crex crex, Crex pratensis*), whose mode of life is quite similar to that of the quail, since it frequents similar habitats, keeping to the ground, hiding in thickets, long grass and crops, migrating more or less at the same times and towards the same latitudes; it is everywhere the "companion" of the quail and, moreover, its meat is enjoyed. For all these reasons and, being double the size of the quail, it has acquired the name in French of *roi de cailles*, likewise in German with *Wachtelkönig*, in Italian with *Re di quaglie* and in Spanish with *Guion de codornices* = "quails' guidon".

In the Maghrib, it is the "quails' mule" (*baghl al-sammān*) and the "slow, lazy one" (*abu 'l-rakhwa*) because of its clumsy flight, whilst in Berber it is the "quails' donkey" (*aryūl en-tsekkūrīn*). In al-Damīrī, it is mentioned under *ṣifrid*, being considered as very cowardly, whence the saying *adjban min ṣiffrid* "more cowardly that a corncrake". Finally, it is remarkable that al-Ḳazwīnī mentions neither the *salwā* nor the *ṣifrid*.

SĀM, a term originally referring to the Biblical personage, in modern times used also with linguistic reference.

1. The Biblical personage.

Here, Sām denotes in Arabic lore and tradition Shem, the son of Noah [see NUḤ]. The Ḳurʾān does not mention any of the sons of Noah by name but alludes to them in VII, 64, X, 73, XI, 40, XXIII, 27 and XXVI, 119.

The Islamic tradition develops many details regarding Shem. His mother was ʿAmzūrah (cf. Jubilees, iv, 33) and he was born 98 years before the flood. He and his wife Ṣalīb were saved from the Deluge by entering the ark. They had four, five or six sons. After the incident of his father's accidental exposure of his genitals in which Shem (and Japheth [see YĀFITH]) covered them up while Ham [see ḤĀM] laughed, Shem was promised by Noah that God will shield Shem's descendants as Shem shielded Noah's private parts (al-Kisāʾī, *Ḳiṣaṣ al-anbiyāʾ*, ed. J. Eisenberg, Leiden 1922, 98-9; al-Ṭabarī, i, 212, Eng. tr. W. Brinner, *The history of al-Ṭabarī. Prophets and patriarchs*, Albany 1987, 11-2). Shem was then given "the middle of the earth" as his inheritance (cf. Ḳurʾān, XXXVII, 77), making him the ancestor of the Arabs and the Persians as well as the Byzantines according to some traditions (cf. Genesis, x, 21-31).

Reference to Shem is made on two other occasions in the Islamic tradition. According to al-Kisāʾī, the well into which Joseph [see YŪSUF] was thrown by his brothers was dug by Shem and had a sign on it which read, "This is the Well of Sorrows" (Kisāʾī, *Ḳiṣaṣ*, 159). More widespread is a story connected to Ḳurʾān, III, 49 (cf. V, 110) which concerns the ability of Jesus [see ʿĪSĀ] to raise the dead. Shem is frequently counted as one of the four persons revived by Jesus. Those who demanded this miracle of Jesus said, "Here is the tomb of Shem: raise him!", and Jesus complied. Shem's hair was white but he explained that it had only just turned that colour as a result of his fear that he was being raised for the final judgement. (Muḳātil b. Sulaymān, *Tafsīr*, Cairo 1979, i, 277; Abu 'l-Layth al-Samarḳandī, *Tafsīr*, Baghdād 1985, ii, 68-9; al-Kisāʾī, *Ḳiṣaṣ*, 307; al-Ḳurṭubī, *al-Djāmiʿ li-aḥkām al-Ḳurʾān*, Beirut 1967, iv, 94-5). The same story is told by al-Ṭabarī (i, 187; Eng. tr. F. Rosenthal, *The history of al-Ṭabarī. General introduction and From the creation to the flood*, Albany 1989, 357; al-Ṭabarī, *Djāmiʿ al-bayān*, Cairo 1905, xii, 22), concerning Ḳurʾān, XI, 39, with Ham as the character involved; the difference in identification is probably the result of an understanding that Ham would be the son properly afraid of the final judgement, rather than Shem.

Bibliography: Given in the article.

(A. Rippin)

2. With reference to the Semitic languages.

The relative adjective *sāmī* is used in modern Arabic as a rendition of "Semitic", "sémitique", etc., thus *al-lughāt al-sāmiyya* "the Semitic languages." Important for the introduction of this notion into the Arabic-speaking world was the Christian Arab novelist and historian Djirdjī Zaydān (1861-1914 [*q.v.*]) in his *al-Alfāẓ al-ʿarabiyya wa 'l-falsafa al-lughawiyya* (Beirut 1886, 3-5), where a classification of the Semitic languages is also offered. His source for these matters was his teacher at the American College of Beirut, Cornelis van Dijk (1818-95; see on him Kaḥḥāla viii, 142-3), to whom Zaydān's book is also dedicated. In his later work *Taʾrīkh al-lugha al-ʿarabiyya* (1st ed. Cairo 1904; ed. ʿIṣām Nūr al-Dīn, Beirut 1980, 37-8) he speaks of the various *al-lughāt al-sāmiyya*, but he also uses the singular *al-lugha al-sāmiyya* to denote the "mother" of all Semitic languages, as well as the noun *al-sāmiyyūn* for the people who spoke it. This usage seems to be well established at this time, as contemporary dictionaries of the Islamic languages show.

(a) *Precursors in the Islamic world.*

Some Muslim historians, starting with al-Masʿūdī (d. 345/956 [*q.v.*]), have a system of seven ancient nations (*umam*). They are defined first and foremost linguistically, but also in terms of once having been a single realm with an advanced state of civilisation. In al-Masʿūdī the Seven Nations include the Persians, the Chaldaeans, the Greeks (and other Europeans), the Libyans (i.e. Africans, including the ancient Egyptians), the Turks, the Indians, and the Chinese (*al-Tanbīh wa 'l-ishrāf*, ed. M.J. de Goeje, Leiden 1894, 77 ff.; cf. Tarif Khalidi, *Islamic historiography. The histories of Masʿūdī*, Albany 1975, 81-113). Al-Masʿūdī's "Chaldaeans" (*kaldāniyyūn*) consist of several smaller nations whose common kingdom, in the Fertile Crescent and the Arabian Peninsula, preceded that of the Persians and whose common language was Syriac. They included the Babylonians, Ninivites, Assyrians, Arameans (plus more recent

descendants), the Hebrews, and the ancient Arabs. The author also comments on the close relationship between Arabic, Hebrew, and Syriac. I. Yu. Kračkovskii, therefore, did not hesitate to ascribe to al-Masʿūdī the conception of a "Semitic" race (*Taʾrīkh al-adab al-djughrāfī*, Cairo 1963-5, 182-3; Khalidi, *op. cit.*, 93 and n. 2).

Notions about the relatedness of the several Semitic languages are, however, very sparse, as far as Muslim and Christian authors are concerned, although it stands to reason that, e.g., translators from Syriac into Arabic and specialists on the *materia medica*, who had to identify the names of drugs in various languages, would be aware of similarities. One of the few Arab grammarians who was interested in languages other than Arabic, Abū Ḥayyān al-Gharnāṭī (d. 745/1344 [*q.v.*]) wrote a work on the language of the Abyssinians (*ḥabash*), probably meaning Ethiopic, which has, however, not been preserved (Brockelmann, S II, 136). It is to the credit of the Jewish grammarians in the Islamic realm, who were steeped in all three languages, Hebrew, Aramaic and Arabic, that the foundation of Semitic studies—though not under that name—has to be placed. The first to propose explicit comparisons, mainly for exegetical purposes, was Yahūdā b. Ḳuraysh (*ca.* 900). For further names and literature, see JUDAEO-ARABIC, here at IV, 305.

(b) *The development of the notion "Semitic" in the West.* The term "Semitic" for a family of related languages was coined by the historian, Biblical scholar, and influential Slavicist August Ludwig (von) Schlözer (1735-1809) who took his inspiration from the Biblical genealogy of *Genesis*, x (see *Repertorium für biblische und morgenländische Literatur*, viii [1781], 161; note, however, that Johann Christoph Adelung, *Mithridates*, i, 300, says, without reference, that Johann Gottfried Eichhorn (1752-1827) was the first to use this term). However, the fact that these languages were related had been recognised much earlier in the West (and in the East even before, see above). Guillaume Postel (Guilelmus Postellus) (1510-81), author of the first Western grammar of Classical Arabic (1538 or 1539), wrote comprehensive works on Hebrew, Syriac, Chaldaean, and Arabic, including speculations of a rather mystical nature about their common origin (cf. Fück, *Arabische Studien*, 39, 42-3). In the following two-and-a-half centuries, more than three dozen polyglot grammars, dictionaries, and chrestomathies were published, often covering all of the known Semitic languages (cf., e.g., the title of Bonifazio Finetti, *Trattato della lingua Ebraica e sue affine Rabbinica, Caldaica, Syra, Samaritana, Fenice e Punica, Arabica, Aethiopica ed Amharica*, Venice 1756) but not infrequently including also other Oriental languages, such as Armenian and Persian (bibliographies in Eichhorn, 403-4, 409-11, 484-5, and Adelung, 303-6). Important for comparative purposes were the four polyglot Bible editions. While all these collections were no doubt in tune with the polymathic *Zeitgeist* which produced collectanea, encyclopaedias, and other cumulative works in all and sundry fields, the relatedness of the Semitic languages and, in particular, the relationship between Hebrew and Arabic was more and more considered to be important for Biblical exegesis. Typical for this approach is the work of the Leyden Professor Albert Schultens (1686-1750), starting with his *Dissertatio theologico-philologica de utilitate linguae arabicae in interpretanda sacra lingua* (1706). Thanks to its indigenous lexicographers, Arabic had, of course, the richest attested vocabulary and was thus the language of choice in the endeavours of elucidating Biblical cruxes with recourse to cognates in related languages. However, it created a problem for the philologists in the 18th century, who still believed Hebrew to be the First Language, since Arabic with its case and mood inflection seemed to be rather more archaic. This dilemma was solved in 1788 by Johann Gottfried Hasse, who assumed, like others, that originally Arabic did not have the desinential inflections and that the latter were introduced into the language by Arab grammarians on the basis of Greek models (*sic*, see Gruntfest, in *Bibl.*).

Toward the end of the 18th century and ever-increasingly in the 19th century, Arabic and Semitic studies ceased to be *ancillae theologiae*. The great advances made in Indo-European comparative linguistics stimulated comparative Semitics. At the same time, the term "Semitic" was hypostasised to give birth to the term "Semites" which was used to designate not only the Proto-Semites, *Ursemiten*, before they broke up into the various Semitic peoples, but also the totality of the Semitic-speaking tribes and nations. With the growing interest in racial theories, a corollary of the rise of nationalism, the "Semites" became a race with a specific physical, but quite importantly also a mental make-up, most often contrasted with the Indo-European race. The first comparative grammar of the Semitic languages, Ernest Renan's (1833-92) *Histoire général et système comparé des langues sémitiques* (1853) was an embodiment of both tendencies. His negative characterising of the "Semites" (who have a knack for monotheism, but a lack of almost all other cultural achievements) was very influential, but did not go unchallenged. Suffice it to mention two works: Daniel (David) Chwolson, *Die semitischen Völker, Versuch einer Charakteristik* (Berlin 1872), and Theodor Nöldeke, *Zur Charakteristik der Semiten*, in *Orientalische Skizzen* (Berlin 1892). The more scholarly linguistic work was carried out by the founding fathers of modern Semitic studies: Franz Praetorius (1847-1927), Theodor Nöldeke (1836-1930), Ignazio Guidi (1844-1935) and William Wright (1830-89). Nöldeke and Wright produced comprehensive works on the Semitic languages (see *Bibl.*). The full harvest of all their work was brought in by Carl Brockelmann (1868-1956) in his monumental *Grundriss der vergleichenden Grammatik der semitischen Sprachen*, 2 vols., Berlin 1907-13. Though partly dated due to new discoveries and new methodologies, it has not yet been superseded.

Changes in the notion of "Semitic" in recent decades have to do with the clear recognition of the language family as being part of the larger Afroasiatic phylum. See below, section (c).

(c) *The Semitic languages. An overview.* The Semitic family of languages has a longer recorded history than any other linguistic group. The main languages and language groups of the family are

reviewed below in the order of their first appearance. Thereafter, the genetic subgrouping of the family and the interrelationships of the various languages are considered.

The first attested Semitic languages are Akkadian and Eblaite, both of which were usually written on clay tablets in the cuneiform script originally developed for the writing of the non-Semitic Sumerian language in southern ʿIrāḳ. Mesopotamia Akkadian, the language of the Semitic Assyrians and Babylonians of Mesopotamia, is known from tens of thousands of documents in a wide variety of genres, such as myths and epics, letters, royal inscriptions, legal contracts, economic receipts, omens, and mathematical, medical and school texts. Akkadian begins to appear as early as the 26th century B.C., and the scattered documents of the earliest period are collectively referred to simply as Old Akkadian. From the beginning of the second millennium, two principal dialects are recorded: Assyrian, especially in texts from sites along or near the Tigris north of the Little Zāb; and Babylonian, in texts from sites along, near, and between the Euphrates and Tigris, mostly to the south of later Ba<u>gh</u>dād. Scholars further sub-divide both of these dialects chronologically, at roughly 500-year intervals, into Old (2000-1500), Middle (1500-1000), and Neo-Assyrian and Babylonian (1000-600); Assyrian came to an end with the fall of the Assyrian empire near the end of the 7th century, whereas Babylonian continued to be written until the 1st century A.D. (Late Babylonian; the language had, however, probably ceased to be spoken and been replaced by Aramaic in most of the area long before). For much of the second millennium, Akkadian served as a lingua franca, and Akkadian texts from that period have been recovered from sites across most of the Near East, including Iran, Turkey, Syria, Lebanon, Israel, and Egypt. Eblaite is recorded on clay tablets dated to the 24th-23rd centuries B.C. found recently at the site of Tell Mardi<u>kh</u> in Syria (about 60 km/38 miles south of Aleppo); although the writing system is similar to that used for writing Akkadian, there are enough differences in spelling and sign usage that the language remains poorly understood; it appears, however, to be a close relative, or possibly even a dialect, of Akkadian.

Texts in Ugaritic, the language of the important ancient city of Ugarit (modern Ras Shamra near Latakia), date from the 14th-13th centuries B.C. Like Akkadian, Ugaritic was written on clay tablets in cuneiform, but whereas Akkadian cuneiform signs depict whole words (logograms) or syllables (i.e., comprise a syllabary), Ugaritic cuneiform is alphabetic, with one sign for each of the 27 consonants, plus three extras added at the end, two for *aleph* (*hamza*) with the vowels *i* and *u* (the original *aleph*, at the beginning of the alphabet, being used only for /ʾa/ and /ʾā/) and another to write certain words with /s/. The order of the Ugaritic alphabet, which is generally considered to be the original order, from which the Phoenician-Hebrew-Aramaic and, ultimately, the Arabic, are derived, is as follows: *ʾ b g ḫ d h w z ḥ ṭ y k ś l m ḏ n ẓ s ʿ p ṣ q r ṯ ġ t* (*ʾi ʾu s̀*). Some 1300 Ugaritic texts have been published thus far; most are administrative lists, but there are also many myths, rituals, omen texts, and letters.

The Canaanite group of languages, which includes Phoenician, Hebrew, and several poorly-attested dialects, begins to appear with the first identifiably Phoenician texts in about 1000 B.C., although short inscriptions that are less easily classified linguistically, in pictographic precursors to the Phoenician alphabet, are attested for perhaps five or six centuries before that date (in graffiti in Egyptian copper mines in the Sinai and in names on bronze arrowheads). Phoenician texts, especially royal inscriptions, are known from the ancient city-states of Byblos, Tyre and Sidon, as well as other sites. The Phoenician dialect of texts from the North African Tyrian colony of Carthage (Phoenician *qartḥadašt* "new-town"), and from Carthage's own colonies all around the Mediterranean, is referred to as Punic. The 22-letter Phoenician alphabet was borrowed and adapted for the writing of numerous other languages, including Hebrew, Aramaic (and thence for Arabic), and Greek (and thence for Etruscan and Latin). Hebrew is first attested archaeologically in inscriptions of the 10th century B.C., but it is likely that parts of the Hebrew Bible derive from a century or two earlier. Besides the biblical texts and numerous inscriptions from the biblical period, Hebrew was used for a vast literature in the centuries immediately thereafter, including texts such as the Dead Sea Scrolls (partly in Aramaic) and the Mishna, and in the Mediaeval period as well. Having died out as a spoken language, probably at some time around the turn of the era, Hebrew was revived in the last century and is thriving as the national language of modern Israel. Other Canaanite dialects, known only from a few inscriptions dating from the 9th to the 6th centuries B.C., include Moabite, Ammonite, and Edomite (all from sites in modern Jordan and southern Israel).

Aramaic is first attested in inscriptions found in Syria, Iraq, and Israel dating to the 9th and 8th centuries B.C. During the Persian empire, Aramaic served as an official language, a factor that helped both to standardise the language and to spread its common use: texts from this period are found as far afield as Elephantine in Egypt. The Aramaic of the biblical book of Ezra is also representative of this Imperial dialect. After the Achaemenid period the use of Aramaic continued to be very widespread, but dialectal differences became more and more apparent. The period of Middle Aramaic, from the 3rd century B.C. to the 2nd century A.D., comprises texts in the Ḥatran, Nabataean, Palmyrene and Old Syriac dialects, as well as the earliest Jewish Aramaic targums (translations) of the Bible and other writings. In Late Aramaic (from the 3rd century A.D.), dialectal distinctions become still more pronounced; in addition to Syriac, with its vast Christian literature, scholars generally recognise Late Eastern Aramaic, consisting of Babylonian Jewish Aramaic (the language of the Babylonian Talmud) and Mandaic, and Late Western Aramaic, consisting of three geographical/religious dialects: Galilean or Jewish Palestinian Aramaic (the language of the Palestinian Talmud and Midrashim), Samaritan Aramaic, and Judaean or Christian Palestinian Aramaic (Palestinian Syriac). Although largely displaced by the spread of Arabic, Aramaic has continued to be spoken until the present day, by Muslims and Christians in three small towns northeast of Damascus (Maʿlūlā [*q.v.*], <u>Dj</u>ubbʿadīn, and Ba<u>kh</u>ʿa), and by Jacobite Christians in a dialect cluster in southeastern Turkey (Ṭuroyo), by mostly Nestorian Christians and Jews in the Kurdistan area (Northeastern Neo-Aramaic or "Neo-Syriac"), and by the gnostic Mandaeans in western Iran (Neo-Mandaic); many speakers of Neo-Aramaic dialects have emigrated from the Middle East.

From the 6th century B.C. until the 5th century A.D., there are attested thousands of inscriptions in

several dialects referred to collectively as Old (or, Epigraphic) South Arabian. As the name implies, most of these inscriptions have been discovered in the southern Arabian peninsula. The best-attested dialect is Sabaic; the others are Minaic, Qatabanian and Ḥaḍramitic. The texts are written in an alphabet whose letter shapes and order differ significantly from those of the Phoenician alphabet and its descendants and which served as the basis of the Ethiopian script. The alphabet preserves all of the consonants of Common Semitic, one more than does Arabic (an additional /s/. Although the Old South Arabian dialects share a number of linguistic features with Arabic, such as the use of broken plurals (and this to an even greater extent than classical Arabic), they also clearly have a number of important traits in common with the Ethiopian Semitic languages.

The closest linguistic relatives of classical Arabic are a group of inscriptional dialects subsumed under the term Old (or, Early) North Arabic, including Thamudic, Dedānite, Liḥyānite, Ḥasaean and Ṣafāʾitic, attested from about the 6th century B.C. to the 4th century A.D. Written in scripts derived from the Old South Arabian alphabet, these texts are found especially in central and northern Arabia as well as in southern Syria. It is out of the linguistic milieu of these and related dialects that classical Arabic emerged, although the written medium was no longer the Old South Arabian alphabet but rather a modified version of the Nabataean Aramaic script.

Ethiopian Semitic is first attested in inscriptions from the 4th century A.D. The earliest attested language is Geʿez, originally the language of Aksum, but ultimately the classical language of the Ethiopian Christian church, studied and promulgated as a literary language much like Arabic among Muslims and Latin in mediaeval Christian Europe. Early inscriptions were written in the Old South Arabian alphabet, the letters of which were later modified with the addition of diacritical marks for the vowels, so that a syllabary evolved. Closely related to classical Geʿez are two modern languages: Tigrinya, spoken by some three million people, mostly Christians, in Tigrai province of Eritrea; and Tigre, the language of some hundred thousand individuals, for the most part Muslims, of the northern hills, the plains, and the coastal areas of Eritrea. Geʿez, Tigrinya, and Tigre comprise northern Ethiopic. Southern Ethiopic consists of many modern languages and dialects, the most prominent among them being the following: Amharic (written since the 16th century), with over seven million speakers the second-most prominent modern Semitic language, after Arabic; Harari, the language of the Muslim city of Harar, unlike other Ethiopian Semitic languages usually written in Arabic script rather than the indigenous syllabary; and several varieties of Gurage, a linguistically and religiously mixed group of tribes that includes both Muslims and Christians.

Finally, there is a group of Semitic languages that has no written tradition, namely, the Modern South Arabian languages spoken by Muslims in eastern Yemen and western Oman. The most prominent of these is Mehri (including the dialects of Ḥarsūsi and Baṭḥari); others are Djibbāli (also called Śheri or, improperly, Shkhawri), Hōbyōt, and Soḳoṭrī (on the island of Soḳoṭra [*q.v.*]). In sum, these languages probably have fewer than 100,000 speakers. Although proximity to Arabic (and the bilingualism of many of the speakers) has resulted in many Arabic loanwords and expressions in these languages, they are nevertheless quite distinct in their phonology and morphology.

The Semitic languages are generally held to constitute one branch of a larger linguistic entity now usually called Afroasiatic, although the earlier term Hamito-Semitic is still preferred by some scholars. Within Afroasiatic the language groups most closely related to Semitic are Egyptian and Berber. Classical Egyptian, attested from about 3300 B.C. until the 5th century A.D., was written in hieroglyphic, hieratic, and demotic scripts; it was continued in dialects of Coptic, which were written in a modified form of the Greek alphabet and probably spoken until the 15th century A.D. (and still in use as the liturgical language of the Coptic Christian church). The modern Berber languages, such as Tashelḥit, Tamazight, Kabyle and Tuareg, are spoken by Muslims; they exist as linguistic islands in a sea of Arabic across north Africa from Egypt to Mauritania [see BERBERS. V]. Other branches of the Afroasiatic phylum are the Cushitic languages of Ethiopia, Somalia and Kenya, such as Oromo, Somali, Sidamo, Agaw and Beja (the last perhaps a separate branch of Afroasiatic); the Omotic languages of western Ethiopia; and the very large group of Chadic languages of western Africa, the most prominent member of which is Hausa [*q.v.*].

The internal classification of the Semitic languages is much debated. It is generally agreed that there are two main branches, East Semitic and West Semitic. East Semitic comprises only Akkadian (and Eblaite), and differs from the rest of the family in that the primary form of the perfective verb is a prefix-conjugation, as in *taḳbir* "you (ms) buried"; *iṭrudū* (< **yaṭrudū*) "they (m) drove away" (cf. Arabic *lam taḳbir, lam yaṭrudū*). The imperfective form, corresponding to Arabic *yafʿalu*, has a bisyllabic base with a geminated medial radical: *taḳabbir* "you (will) bury", *iṭarradū* "they (will) drive away". There is a suffix conjugation corresponding formally to the Arabic perfect, but it is essentially a predicate adjective, as in *ḳabrāta* <**ḳabir-āta* "you (ms) are/were buried" (*ḳab*(*i*)*r* "buried"), *ṭardū* (< **ṭarid-ū*) "they (m) are/were driven away" (*ṭar*(*i*)*d* "driven away"), vs. Arabic *ḳabarta* "you buried" and *ṭaradū* "they drove away". It is the innovative development of the suffix-conjugation into an active perfective verb, and the concommitant relegation of the apocopate prefix-conjugation (*yafʿal*) to secondary usage, that set the rest of the languages (West Semitic) apart from Akkadian.

Among the West Semitic languages, it has been traditional to group Arabic, the Old and Modern South Arabian languages, and Ethiopian Semitic together as South Semitic, primarily on the basis of their common usage of pattern replacement for noun plurals. Some examples: Sabaic (Old South Arabian) *ḥrbt* "battle", pl. *ḥryb; ʿr* "mountain", pl. *ʾʿrr*; Mehri (Modern South Arabian) *bədēn* "body", pl. *bədawnət; śəlēṯ* "one-third", pl. *śəlwōṯ*; Geʿez (Ethiopian) *kalb* "dog", pl. *ʾakləbt, ʾaklāb*, or *kalabāt; kokab* "star", pl. *kawākəbt*. In contrast, the Canaanite and Aramaic dialects, as well as Ugaritic, in which external plurals are the norm (as in Hebrew *sûs* "horse", pl. *sûsîm*; Aramaic *yom* "day", pl. *yomin*), are grouped together as Northwest Semitic. Since, however, the Northwest Semitic languages exhibit vestiges of broken plurals (as in Hebrew *mélek̲* > **malk* "king", pl. *məlāk̲îm* < **malakīm*), and since it is possible that the common use of broken plurals in Arabic, South Arabian, and Ethiopic reflects not a shared innovation (in a common intermediate ancestor) but a feature inherited from Common Semitic, some Semitists have more recently looked to the verbal system for evidence of the genetic classification of the languages. It is noted,

for example, that Ethiopic and the Modern South Arabian languages share the bisyllabic base of the imperfective verb with Akkadian, as in Geʿez *təkabbər* and Mehri *təkawbər* "you (ms) will bury", whereas Arabic shares with the Northwest Semitic languages the loss of that form and the development of a new form in its place, as in Arabic *taḳbiru* (a form that is obscured in Hebrew and Aramaic by the loss of short final vowels; compare, however, Hebrew *yāḳûm* < **yaḳūmu* "he will arise" and *yāḳōm* < **yaḳum* "may he arise", *yaʿale* < **yaʿliyu* "he ascends" and *yaʿal* < **yaʿli(y)* "may he ascend"). By this criterion, one may classify Modern South Arabian and Ethiopic together as South Semitic and Arabic, Aramaic, and Canaanite together as Central Semitic. Thus it is the position of Arabic within the Semitic family that is least certain. (The position of the Old South Arabian languages in the more recent classification is also unclear; a recent study showing that the imperfective verb was probably not bisyllabic suggests that they belong in Central Semitic; see Nebes in *Bibl.*)

SĀM, legendary ruler of Sīstān [*q.v.*] and vassal of the Kayānids, the epic kings of Īrān, was, according to al-Thaʿālibī and Firdawsī, the son of Narīmān, the father of Zāl-Dastān and the grandfather of Rustam [*q.v.*]. This pedigree is the outcome of a long development spanning the entire history of the Iranian epic. In the Avesta, Sāma is the name of a clan to which Thrīta, "the third man who pressed the Haoma", belonged as well as his sons Urvākhshaya and Kərəsāspa (Yasna 9. 10). Kərəsāspa (Persian Karshāsp or Garshāsp), a formidable fighter against dragons and other evil powers, armed with a mace, is often described as *nairi.manah* ("of manly spirit"). The name of the clan became interchangeable with his personal name, while the epithet was interpreted as the name of his father (in Persian Narīmān, or Nīram). Traces of this stage can still be found in genealogies mentioned by Islamic writers (see e.g. al-Bīrūnī, *al-Āthār al-bāḳiya*, 104, "*wa-Karshāsp wa-huwa Sām b. Narīmān...*"; cf. Masʿūdī, *Murūdj*, ed. Ch. Pellat, i, 273; "*Kursāf b. Narīmān...*"). However, in Sāsānid times, Karshāsp and Sām already began to be taken as the names of separate persons. Together with Thrīta or Athrat (Arabicised to Athraṭ) and Narīmān, they were fitted into a pedigree which is mentioned with many variations in Zoroastrian and Islamic sources (cf. Christensen, *Kayanides*, 130-1).

In the Pahlawi books, notably in *Bundahishn* and *Mēnōg ī khrad*, the original identity of Karshāsp and Sām is still evident. Like the former, Sām plays a part in eschatological events: he is said not to have died but to rest in a hidden place, guarded by 99,999 spirits (*fravāshīs*), until the day when he will be summoned to fight the demon Azhi Dahāka (in Persian Ḍaḥḥāk), who near the end of Time will escape from his captivity in the mountain Damāwand [*q.v.*]. Further analogies are the fights against several monsters attributed to Sām (Christensen, *op. cit.* 59-60, 101).

In the historical and epic sources of the Islamic period, Garshāsp and Sām (the form Sahm used by al-Ṭabarī is merely an orthographic error due to the ambiguity of the Pahlavi script) are usually kept apart, although they mostly belong to the same lineage, viz. the house of the vassal kings of Sīstān and Zābulistān who act as *djihān-pahlawān* ("chief champion") to the kings of Īrān. They are sometimes contemporaries, e.g. when they are named in the *Shāh-nāma* among the principal warriors of the army of Īrān (i, Farīdūn 692, 792). More often, however, Garshāsp is a remote ancestor of Sām's. According to the 6th/12th century chronicle *Mudjmal al-tawārīkh*, the career of Sām began during the reign of Farīdūn. After the death of his father Narīmān, he was sent out on expeditions to several parts of the world (cf. Spiegel, 248-50). In the *Shāh-nāma*, the story of his family completely fills the account of Manūčihr's reign. As the principal warrior of the realm, Sām replies to the speech delivered by this king at his accession to the throne (i, Manūčihr, 30 ff.), and restores order in the empire after the succession of the unjust king Nawdhar (i, Nawdhar, 22 ff.). On the whole, he is less prominent in Firdawsī's story than his son and grandson, being away most of the time on a campaign against the Gurgsārān (the "wolf-like people", living in a country by the same name) and rebellious warriors (*gurdān*) in Māzandarān. He becomes a full epic character only in the account of the birth of Zāl. Sām is portrayed as a proud nobleman who chooses to sacrifice his son rather than face the scorn of his peers when the child is born with grey hair. However, he equally shows the courage of repentance after he learns of the care bestowed on the abandoned child by the miraculous bird Sīmurgh [*q.v.*] (i, Manūčihr, 41 ff.). He supports his son in the matter of Zāl's courtship with Rūdāba, the daughter of the king of Kābul, in spite of his disapproval of a union with a descendant of Ḍaḥḥāk. An echo of the Avestan legend of Kərəsāspa can be heard in a letter written by Sām to the king of Īrān, relating his struggle with a dragon who had emerged from the river Kashaf (i, Manūčihr, 982 ff.). A parallel story, situated in Māzandarān, is told by Ibn Isfandiyār. Sām was still alive when Rustam was born (i, Manūčihr, 1514). His death, mentioned in the reign of king Nawdhar (i, Nawdhar, 127), incited the Tūranians to invade Īrān and Sīstān. The famous mace of Sām, with which he won the nickname *yak-zakhmī* ("with one stroke"), was inherited by Rustam.

In the *Garshāsp-nāma*, Asadī Ṭūsī [*q.v.*] tells about the birth of Sām as a descendant of Garshāsp, shortly before the latter's death, and the prediction of his future greatness. From a latter, but not precisely definable period, dates a *mathnawī* called *Sām-nāma*,

which is preserved in redactions of varying lengths. The poem relates the adventures of Sām, son of Narīmān, in China, where he pretends to the hand of Parīdukht, the daughter of the king Faghfūr. Actually, the poem is a forgery based almost entirely on the romance *Humāy wa Humāyūn* by Khwādjū [*q.v.*] Kamāl al-Dīn Kirmānī (689-753/1290-1352), for which not only the entire plot of the latter poem was copied but also its lines stolen. The anonymous plagiarist merely changed the names of the protagonists and added some episodes of a fairy-tale nature.

(J.T.P. de Bruijn)

SĀM MĪRZĀ, Abū Naṣr, Persian poet and biographer of poets, with the poetical name *Sāmī* (923-74/1517-66), known for his *tadhkira* of contemporary poets, the *Tuḥfa-yi Sāmī*. He was the third son of Shāh Ismāʿīl I [*q.v.*].

1. Biography.

Shāh Ismāʿīl (906-31/1501-24) and his eldest son and successor Ṭahmāsp I (931-84/1524-76) followed the practice of preparing the princes of the ruling family, already at an early age, for the direction of state affairs by appointing them to the post of governor under the guidance of an experienced *amīr* of the Ḳizil Bash (*lala*) (see Röhrborn, *Provinzen*, 38-9). Accordingly, Sām Mīrzā passed the greater part of his youth as nominal governor of Khurāsān at Harāt [*q.v.*], first (927-36/1521-30) under Durmish Khān, later under Ḥusayn Khān, and then from 939-41/1533-5 under Aghuzīvar Khān, all three of them from the Shamlu tribe.

Thus he was able on the one hand to experience the reverberation of a peak of Persian culture at the court of Ḥusayn Mīrzā Bayḳara (873-911/1469-1506), but on the other hand he became involved in the power struggle of the Ḳizil Bash through his *lalas*. It is even said that he was supported as a rival king against Ṭahmāsp by Ḥusayn Khān (Savory, *Studies*, no. V, 70). When Ḥusayn Khān was murdered soon afterwards (940/1534), Sām Mīrzā permitted himself to be seduced to insubordination. Without the king's permission he misused the Ḳizil Bash, put under his leadership for protecting Harat against the Özbegs, for a campaign against Ḳandahār, which failed miserably. It cost the life of his *lala* Aghuzīvar and of many other Ḳizil Bash, forced Sām Mīrzā to flee to Ṭabas by way of Sīstān, but above all attracted the lurking Özbegs into defenceless Harāt, where they excrcised a reign of terror during fourteen months (*Tārīkh-i ʿĀlam-ārā*, 62-5). Ṭahmāsp had to take action in Khurāsān himself in order to restore order in Harāt around 943/1537. On the way, he became reconciled with Sām Mīrzā, who already earlier had shown repentence (*Aḥsan al-tawārīkh*, 343, 357-8). But his political career had come to an end.

After then he lived in the shadow of the court, apparently as a presentable and worthy member of the royal family. He acted as such at the state reception of Sultan Ḥumāyūn in 951/1544, at which he excelled, like an ancient Persian knight, in the sportsman's-like *hunar numūdan* (*T.-i ʿĀlam-ārā*, 99). He had nothing to do with the devastating revolt of his elder brother Alḳās Mīrzā (953-5/1547-9 [*q.v.*]). He apparently lived for his literary studies, being occupied with his *Tuḥfa* at least since 957/1550. It was finished at the latest in 968/1560-1 (see Humāyūn-Farrukh, *Introd.* to the *Tuḥfa*, 17 ff.). In 969/1561-2 Sām Mīrzā fell into disgrace for a second time. He apparently came under suspicion of political intrigues, for he was interned with two sons of his brother Alḳās Mīrzā in the fortress of Ḳahḳaha, the place of confinement of political delinquents. He remained there until his death in an earthquake in 974/1566-7 (Tarbiyat, *Dānishmandan*, 173 *bis*; the date is confirmed by the chronogram *dawlat-ī Ṭahmāsp shud bāḳī*).

2. Literary work.

Sām Mīrzā has immortalised himself in literary history with his *Tuḥfa-yi Sāmī*, the summa of his involvement over many years with contemporary Persian poetry and its poets, contained in 714 short biographies of all those who had distinguished themselves in this field since Shāh Ismāʿīl I's coming to power. However, the *curricula vitae* themselves are only dealt with in very rare cases. The biographies rather give information about a series of points, viz.: name - origin - working place - function - education - training - (human and artistic) qualifications - specialisation - works - career - eventually, end of life, and paradigmatic quotation of at least one verse. They are, however, rarely all dealt with; occasionally one or the other is missing. Not even the works or the favourite genres of poetry are noted down regularly, and a qualification is often also left out. Occasionally, a small scene illustrates a point and the author shows a preference for the piquant and the subtle. But two points are never missing, origin (scene of activity) and quotation of verses, the latter being often reduced to one single verse, which then is almost always the *maṭlaʿ* of a *ghazal* [*q.v.*]. This is not by accident, for the author considers poetry as the fruit of love (*Tuḥfa-yi Sāmī*, 2). In the separate chapters the place of origin often serves for an associative classification (cf. *Tuḥfa-yi Sāmī*, Introd., 19). For Sām Mīrzā does not think in a centralistic way but along lines of political integration; every place in the realm of the Ṣafawids counts, and the real image of Persian poetry emerges only from the totality of all the places where it is practised. In this context, still another point must be observed. It is remarkable how often the author mentions the occupation or profession of a poet or of his father. The more simple trades, such as those of a craftsman or a trader, attract his particular interest. He is apparently concerned with the spread and

embedding of poetry in all social levels, from the craftsmen to the princess (cf. Humāyūn-Farrukh, *Tuḥfa-yi Sāmī*, Introd., 6-7).

The arrangement of the work seems to confirm this. It consists of seven chapters (*ṣaḥīfa*), in which the poets with a main occupation and those with an additional function are classified as follows. The first chapter is reserved for the princes of the period. It starts with Shāh Ismāʿīl and his descendants, but place is also devoted to the sworn enemies of the dynasty, even for the Özbeg ʿUbayd Allāh Khān, with whom the author was in hostile contact at Harāt itself. The second chapter deals with the most prominent *sādāt* and *ʿulamāʾ*, the offspring of the Prophet and the predecessors of the Shīʿī clergy. In the third chapter are found the viziers and other dignitaries of the class of scribes. The fourth chapter treats the great men who held court in one town or another and were occasionally active in poetry. Only in the fifth chapter are the real main figures, the poets, allowed to speak, the great among them in the first section, the less important, called "the rest", in the second one. The sixth chapter deals with Turkish-speaking poets who tried their hand at Persian verses too. The seventh and last chapter is devoted to the poetasters; it turns out to be particularly amusing and instructive (Humāyūn-Farrukh, Introd., 22-B).

Sām Mīrzā was prompted to compose his *Tuḥfa* by ʿAlī Shīr Nawāʾī's *Madjālis al-nafāʾis* [see MĪR ʿALĪ SHĪR NAWĀʾĪ], which he must have come to know at Harāt during the first period of his governorship. At that time his first *lala*, Durmīsh Khān, had the work translated into Persian (*Laṭāʾif-nāma*, 3). Not only the form of the selective and accentuated short biographies may have been inspired by this work, but also the motivation. Like his predecessor, Sām Mīrzā wants to save the many poets of his time from oblivion. However, the distinction from Nawāʾī is that Sām Mīrzā not only equals their delicacy of expression with that of the ancestors—as does Nawāʾī—but appreciates it even more highly (*Tuḥfa*, 3-4). While Nawāʾī exults in the idea according to which Khurāsān, with its capital Harāt, had reached the highest blossoming of Persian culture under its lord Ḥusayn Bayḳara, and concentrates his observation on the Khurāsānian poets, Sām Mīrzā's point is rather the overall picture of Ṣafawid poetry. Besides—and this also in contrast with Nawāʾī—, he only rarely mentions his relations with the subjects of his biographies, though he must have owed the great majority of his informations to personal relations (for the question of his sources, see M.I. Kazi, *Sam Mirza*, 86-7). Ultimately, the high value of his book lies in this point. Without it, we would not even know the names of many of the poets.

About the presentation itself it can be remarked that the length of a biography does not depend only on the number of the points treated and on the eventual inserted stories, or on the quotations of verses, but above all on the linguistic presentation. This goes from a concise, pragmatic turn of phrase to a highly-developed, manneristic one with rhyming prose and metaphorical expressions. Sām Mīrzā likes imaginative turns of phrase in particular when mentioning the end of life. He permits himself sporadically to be carried away by the name of a poet to a *metaphora continuata* in other accounts, as for instance in the case of Badr al-Dīn Hilālī [*q.v.*], who often visited the gifted prince at Harāt (*Tuḥfa*, no. 266). In general, a personal engagement with somebody, or also the latter's high standing incited him to a more intensive use of images.

Numerous statements of a literary-critical character are spread throughout the entire book; their critical clouds gather in the seventh *ṣaḥīfa*. In their totality, they point to the unusually trained and sharpened feeling of the author for stylistic nuances and quality. This is not only expressed in critical remarks on singular verses, which go as far as to suggest corrections (e.g. no. 429), but above all in the choice of the quotations of verses. Sām Mīrzā is less carried away by the refined, poetical play of ingenuity of the Tīmūrid period than by the art of subtly bending known motifs in order to give them a permanent garment in a *sahl-i mumtaniʿ* (inimitably beautiful elegance). In this respect, too, he distinguishes himself from Nawāʾī. Nothing might show this more clearly than the fact that the Tīmūrid high tightrope of exquisite poetical acrobatics of thoughts, the logogriph (*muʿammā*), is substantially less frequent in the *Tuḥfa* than it is in the *Madjālis*. Unfortunately, Sām Mīrzā's terminological palette does not correspond with the fullness and differentiation of his aesthetic formation. Qualifications like *matīn* (firm), *pur zūr* (powerful), *rangīn* (colourful), *āb-dār* (brilliant), *ba-čāshnī* (with good taste), *pur sūz u dard* (passionate), etc. might perhaps be better understood and described if all the verses thus estimated were gathered and those which are equally qualified were compared with one another. This would be all the more a desideratum since Sām Mīrzā, instead of a characterisation, often satisfies himself with a quotation of a verse and leaves it to the reader to formulate a judgement.

It is the more regrettable that Sām Mīrzā's *Dīwān*, of which Tarbiyat says that he once saw a manuscript with *ca.* 6,000 verses without any further indication, however, has not yet been published. Besides a *ghazal*, quoted by Tarbiyat (*Dānishmandān*, 173 *bis* f.) from an historical work (*Takmilat al-akhbār*), we possess only the quotations from his own work by the author himself at the end of the *Tuḥfa* (377-80), a *manḳabat ḳaṣīda* on ʿAlī with an introductory description of spring, a *rubāʿī* and four isolated verses (*maṭāliʿ*). The latter, in particular, correspond, in elegance and pointedness, to the ideal of the *sahl-i mumtaniʿ* to which Sām Mīrzā adhered, while the *ḳaṣīda* in its turn is completely free of any complexity of thoughts.

Bibliography: 1. Biography. (a) Sources. Not much specific material can be derived from the *tadhkiras*. More is found in the historical works of Khwāndamīr; Ḥasan Beg Rumlu, *Aḥsan al-tawārīkh*, ed. SAMĀʾ (A.), literally "the upper part of anything, the sky, the heavens".

1. As a cosmological and theological term. According to Arabic lexicography (see Lane, s.v.), the word *samāʾ* is derived from the root *s-m-w* (= being or becoming high, elevated). As a noun, it may be used for anything that is "the higher or the highest" part of any physical or metaphysical reality, but it generally denotes the cosmological and theological entity which in English, with equal vagueness, is described as "heaven" or "sky". Fittingly, *samāʾ* is predominantly masculine, but it can be masculine or feminine; it is used as a singular or as a plural, as in the Ḳurʾān, II, 27, for the seven heavens; however, even then numerical plurality is not necessarily implied since the plural can be understood as a *pluralis amplitudinis* emphasising the overwhelming greatness of heaven. But *samāʾ* can also be expanded into the plural form *samāwāt*.

For the ancient Arabs, as also for the people of the surrounding countries, *samāʾ*, in the most common meaning of "heaven", was not primarily associated with the stars, but it was first the location for the "high-flying clouds". In poetical language it even appears to have been identified with the clouds, the providers of rain, or even rain itself. Thus the Arabs could think of themselves as the Banū māʾ al-samāʾ (= "The sons of the water of heaven"). Hence "heaven" from early on did not only represent a physical and cosmological entity but was linked to the ultimate hopes of mankind for a continued and happy existence on earth as it knew it. Physical highness in the cosmological world view corresponds to the metaphysical loftiness of spiritual aspiration, and the human mind may even be tempted by the identification of heaven with God Almighty. Considering the far-reaching spectrum of aspects which the term "heaven" displays before us, its dictionary meaning alone cannot sufficiently disclose the underlying cosmological and theological conceptions; and for the Arabic dictionary this resigned observation imposes itself especially also in view of the profound changes which these conceptions underwent in the course of Islam's dynamic cultural expansion, when the intellectual heritage of earlier cultures in the Middle East and in North Africa was adopted.

As the foreign vocabulary employed in the Ḳurʾān demonstrates (in our context the word *Firdaws* for the heavenly garden or Paradise may be explicitly mentioned), the exchange of ideas and theories about heaven and earth must have pre-dated the mission of the Prophet. But with the Ḳurʾānic texts a new beginning was made; above all, in place of particularistic and of merely local idolatry, the monotheistic sovereignty of God over the whole universe as the *Rabb al-ʿĀlamīn* (I, 2) became the centre of the new orientation. As in almost all other provinces of the human mind, the cosmological and theological views of heaven and earth proposed by the revealed book became the formative world model for Muslim culture up to our days. This world view no doubt has been modified in the minds of later generations along the lines of their expanding scientific horizons. But with the unceasing recitation of the Ḳurʾānic texts the physical as well as the spiritual notions of heaven and earth were constantly impressed on the minds of the faithful.

It started with the story of revelation itself, the prophetic call experienced in a cosmic vision that filled the whole space between heaven and earth: "This is naught but a revelation revealed, taught him by one terrible power, very strong; he stood poised, being on the higher horizon, then drew near and suspended hung, two bows'-length away, or nearer, then revealed to his servant that he revealed." (LIII, 5). "Higher horizon" is here the translation of *al-ufuḳ al-aʿlā*, which may be understood as a synonym of heaven joining the earth; hence a heaven that does not remain far removed from the world, the abode of mankind, but which approaches man in a divine communication. Such dividing lines between heaven(s) and earth(s) as the horizon may appear to be sharply drawn in the Arabic speech, but they are never absolutes. It is the bi-polar consequence of the Ḳurʾānic theology of creation that the division of heaven and earth is God's work, and thus also their ultimate union: "... the heavens and the earth were a mass all sewn up, and then then We unstitched them and of water fashioned every living thing." (XXI, 31).

Heaven, in the singular as well as in the plural, occurs over 300 times in the Ḳurʾān. But its description is surprisingly meagre; the communication neither of astronomical nor of apocryphal knowledge is intended, although heaven is also associated with the signs of the Zodiac (LXXXV, 1), the stars, the planets, and although the heavenly journey of the Prophet (XVII, 1) could have been the best occasion for a detailed description, as can be observed in later traditions. In most cases, however, heaven merely serves as reference point for God's greatness, which is above all beings in heaven and earth. Thus the central message is that God has created the heavens and the earths (LXV, 12: "It is God who created seven heavens, and of earths their like"), that He knows whatever exists in whatever form, and that all beings in heaven as well as on earth belong to Him—hence absolute monotheism expanded over the whole cosmos. The cosmological models which may have been alluded to in the revealed texts would then be mere figures of speech, in which the prophetic message of God's absolute rule found its adequate expression.

But the theological interpretation of creation did not extinguish human curiosity about the physical nature of the universe. The Ḳurʾānic texts about heaven and earth were not easily understood; they provided only a fragmentary view of the universe. As far as we can gather from the earliest sources preserved, Ḳurʾān readers with much curiosity, and some exposure to pre-Islamic literatures, soon offered explanations of the enigmatic and fragmentary texts on the cosmos. Similarly, the earliest commentators from whom we have at least some fragmentary explanations of Ḳurʾānic texts, often give brief answers to essentially physical questions about the heavens and whatever moves in them. Thus even such questions as the dynamic cause of the star movements in their spheres were discussed, and the answers came surprisingly close to what in later scholasticism was described as the theory of "impetus". But, in spite of such rare elements of primitive astrophysical teachings, heaven for the traditional scholar of Islam remained closely associated with rain, wind, ice, snow, and primarily with vegetation. It is a treasure or storage for such meteorological phenomena (LXIII, 7); it keeps them enclosed behind strong dams and safe doors.

Mudjāhid b. Djabr (d. 104/722) was one of those early commentators. In an unpublished cosmographical manuscript (Heidelberg Cod. Or. 317, fol. 100a-b), two remarkable diagrams of the various

heavens and earths are preserved (which may, however, be only later additions), possibly illustrating his cosmological model of seven earths under a dome-like structure of seven heavens.

In several other sources, a systematic arrangement of these fourteen stages, neatly separated by an equal number of interspaces measuring 500 "years", underscores their physical nature, which otherwise might be too easily transposed into the psychological realm of types and archetypes, if not into that of ancient mythology. For the traditionalists no doubt delved deeply into the heritage of Near Eastern mythology. Thus the most mysterious arrangement of cosmic levels, and precisely for this reason certainly not a mere invention, starts with God's throne being supported by eight huge ibexes (*awʿāl*) of the cosmic dimension of 500 years; they stand on a sea as deep as the distance from earth to heaven; and only below these mysterious cosmic beings the seven heavens are spanned out, one below the other one. Finally, below all those heavens, and sometimes clearly separated from them by a celestial ocean, there follows a structure of seven earths. These are the main features of the traditional cosmology of Islam, which is further modified from one source to the other; the celestial ocean e.g. which is usually located in heavenly regions, may even be placed under the lowest earth. Common to all these models seems to be that the heavens are vaulted over the earths like a dome-structure, while the earths are arranged in horizontal levels, like a block with different storeys, as the above diagrams indicate. Heavens and earths cannot be clearly separated, as C. Houtman already noticed in his thorough investigation on *Der Himmel im Alten Testament* (see *Bibl.*). The theological or mythological roots become evident when we see that the seven earths in the older traditional texts are serving as the gradual stages of hell, in particular the store-houses of the various torture instruments: destructive winds, *d̲j̲inn*, brimstones of hell-fire, scorpions, vipers, and eventually the devils. This rather mythological structure—and that is its unexpected historical function—was in later texts apparently used to illustrate the geographical division of our globe.

Between the heavens and the earths, there is moreover not the clear-cut division that had been axiomatically postulated in pre-Islamic, Hellenistic philosophy, where the supra-lunar world was thought to remain eternally unchanged and having circular movements only. Even the heavens in traditional cosmology are described as being of material nature. Thus most commonly the lowest one is identified with the firmly-enclosed water of the celestial ocean, and the higher ones consist of different substances, such as white marble, iron, copper, silver, gold and ruby, while the space above them is filled with "deserts of light". The traditional authority Salmān al-Fārisī even had names for the seven heavens and associated precious stones and metals with them.

In this form, the cosmology of the seven heavens was especially developed by *The Book of Secrets of Enoch*, which may have originated within an Islamic milieu. In the estimation of R.H. Charles, this book is "the most elaborate account of the seven heavens that exists in any writing or in any language." When he interprets this account as an example of "growing ethical consciousness" within apocryphal literature (p. XXXIX), he gives us the decisive clue for a valid evaluation: not the teaching of any objective cosmological knowledge is intended, but man's ethical and religious concerns are to be extended to the highest and most remote reaches of creation.

Since this whole cosmological system of seven heavens and seven earths had entered such authoritative texts as the Ḳurʾān and *Ḥadīt̲h̲*, it could never henceforth be totally discarded. When the Hellenistic models of the cosmos had become known through numerous translations, a synthesis of the traditional and the translated cosmological notions was tried by some authors. As a result "the heavens" often were simply identified with "the spheres" (= *aflāk*) [see FALAK]. But there were important differences. Thus in the world-model of the traditional sources, all the stars were connected with the lowest heaven, while in the later models the fixed stars were invariably distinguished from the planets, for which at least one sphere each was reserved; or the sun, in traditional cosmology, was not linked to its sphere, but was said to pass through all heavens as it completed its (yearly?) course, and finally would reach the foundations of God's throne.

The brief and humble explanations of the Ḳurʾānic text by the early commentators were soon followed by penetrating speculations of the systematic theologians. The often enigmatic references to such cosmological and theological entities as heaven (or the heavens), the stars, meteorological phenomena, and the earth as being blessed by such heavenly gifts as light, clouds, winds and rain, stimulated their highly speculative minds and drove them to remarkable attempts at finding satisfactory answers to such questions as God's place in the universe: Did He really and physically reside in the heavens, or one particular heaven, or was He so far removed from all His creations that He could have no real relationship to His creatures? But if His transcendence was emphatically enunciated beyond all limits, how could this God still have revealed His will and His wisdom to the Prophet and all mankind, how could His creatures still hope to have access to Him and in prayer attract His attention when they were in need? Among the numerous cosmological theories discussed by the *mutakallimūn* and the free-minded intellectuals in the early Muslim community, we may concentrate on the thorny problem of God's physical presence in this universe. Was He sitting on His throne in highest heaven, or keeping infinitely above all heavens and all regions on and below earth, or was His presence in His creation so universal that no real distinction could be affirmed (cf. pantheistic monism)? Well before Aristotle's speculations about the "Unmoved Mover (or Movers)" became known in Arabic philosophical circles, the heretic thinker D̲j̲ahm b. Ṣafwān (executed in 129/746 [*q.v.*]) was accused by traditional scholars of having deviated from the explicit teachings of the Ḳurʾān by denying God's sitting on His throne. D̲j̲ahm and his followers were apparently especially eager to emphasise the infinity and ubiquity of the Eternal, without allowing His image to be tarnished by anthropomorphic conceptions. But the defenders of orthodoxy were concerned that such a rationalist commixture of the Creator with His creatures might eliminate all distinctions and obscure the personal presence of God Almighty in the universe; thus they insisted that the Ḳurʾānic texts should be understood literally, and the physical reality of the throne maintained.

Throne (*al-ʿars̲h̲*) and footstool (*al-kursī*) are closely connected with God's place in the universe, and they are essential conceptions for the "theology of the Ḳurʾān" (as far as there is one); God is emphatically called "the Lord of the Mighty Throne" (IX, 129), and this "Throne comprises the heavens and earth; the preserving of them oppresses Him not; He is the

All-High, the All-Glorious" (II, 255). These texts, certainly in the circles of victorious traditional orthodoxy, were generally understood quite concretely, not merely as metaphorical assertions about God's universal rule. Throne and footstool were placed above the heavens and the earths, but they were, however, of the same concrete reality. Thus they can be measured together with them, and they are conceived as being in physical contact with each other and with the lower, physical parts of the world. As all reality was fashioned out of the four elements water, wind, light, and darkness, the throne was created out of God's own light; or it is said to have been made of a red hyacinth (Saʿīd al-Ṭāʾī), or again of a green emerald (Ḥammād). The footstool is said to be attached to God's throne, or to be standing in front of it. The curious fact that a certain creaking sound, which the Prophet was able to hear (see al-Ṭabarī, *Tafsīr*, on XXI, 21), is ascribed to it as elsewhere to heaven (*al-samāʾ*) indicates that it sometimes was identified with *al-samāʾ*, i.e. that it had an equal extension as heaven. But usually it is distinguished from the heavens, as the whole universe is described as a structure composed of a number of horizontal levels: uppermost, the throne—below it the footstool—then the seven heavens—and the seven earths, one on top of the other. Since the *kursī* is hollow and contains the whole world of heavens and earths in its cavity, the earthly observer—true to his daily experience—finds himself in a dome-like hemisphere. For the Muslim cosmologist and theologian, the Ḳurʾānic text (XXI, 34: "It is He who created the night and the day, the sun and the moon, each swimming in a sky") further emphasised the physical substance of the heavens and imposed on him a critical attitude that made it difficult for him to simply adopt the common Greek notions that the stars or their spheres are living beings, having souls, which are moving by their own will.

It may be said, then, that it was due to throne, footstool, the seven heavens and earths being mentioned in the Ḳurʾān that Muslim scholars of all disciplines continued to be attracted by the various branches of cosmology. When Greek science had been introduced into the Islamic world, throne and footstool were often identified with the ninth and eighth spheres respectively, exemplified in such an influential theological book as al-Īdjī's (d. 756/1356 [*q.v.*]) *Mawāḳif*. However, even an open-minded author like al-Ḳazwīnī (d. 682/1283 [*q.v.*]) was much more cautious, and explicitly opted for leaving it to God's knowledge whether this identification could be made (*ʿAdjāʾib al-makhlūḳāt*, i, 54). Similarly, the seven earths were identified with the Hellenistic scheme of seven climatic zones [see IḲLĪM], although this may have caused some problems since the traditional texts had handed over these earthly parts to the devils in hell and their torture instruments.

The early commentators and traditionists of Islam already adopted ideas and cosmological models from earlier cultures of the neighbouring countries. As this scientific heritage became richer through the numerous translations made between the 2nd and the 4th centuries A.H., the cosmological models were further developed along the lines of such authorities as Ptolemy, Hipparchus, etc. But the earlier theories were not simply forgotten or thrown away into the waste-paper baskets of history, as we might expect in accordance with the experiences of other cultures. Even an al-Bīrūnī [*q.v.*] remembered them; he naturally criticised them as outdated in his time, but the fact that he bothered about them at all demonstrates the influence—of whatever nature that may have been—which they still must have exerted on some of his contemporaries. Thus his discussion with Ibn Sīnā on the possibility of other worlds than ours may well be inspired by the traditional texts. The same may hold true for al-Bīrūnī's distinction between mathematical hypotheses, equally allowing a heliocentric as well as a geocentric universe, and an eventual decisive proof based on physical reasoning. Or the fact that Muslim scholars showed more extensive interests in the physical configuration of the universe than their Hellenistic masters (which is clearly evidenced not only by the use they made of Ptolemy's *Planetary hypotheses* but also by the numerous treatises with such titles as *Tarkīb al-aflāk*), was most likely the fruit of the Ḳurʾānic and traditional texts on the seven heavens. Similarly, Muslim authors showed a surprising critical spirit when the number of the spheres was discussed; some of them accepted the eight or nine spheres of Greek cosmology only under the condition that the highest were identified with the footstool and the throne respectively which the Ḳurʾān had added to the seven heavens.

Such foreign influences raised much suspicion and fear among the more traditionally-minded scholars. Hence a reaction set in against the almost completely Hellenised world view that had been spread in Muslim literature. Thus already two centuries after al-Bīrūnī, a scholar like Fakhr al-Dīn ar-Rāzī (d. 606/1209 [*q.v.*]), who proves to be widely read in all sorts of literatures available after the synthesis with the Hellenistic heritage had been achieved, still states categorically that all valid knowledge about the cosmos is to be reaped from the traditional, "inspired" sources of Islam and not from the scientific sources of ancient cultures ("there is no way to the knowledge of the heavens save through a traditional report") (*Mafātīḥ al-ghayb*, vi, 149). In other words, the inner scientific value of the works inherited from pre-Islamic scholars was well known, but the knowledge derived from Islamic tradition still carried a functionality for the faithful which, outside the realm of faith, might not be understood.

But the heavens are not solely physical and astronomical entities, which for such speculative reasons as defining God's place in the universe were of interest also to the theologians; they have a special significance also for the simple worshipper and for the mystical experiences of the spiritually-elevated faithful. Thus when we examine such mystical writings as the *Futūḥāt al-Makkiyya* by Ibn ʿArabī (d. 638/1240 [*q.v.*]), one is surprised to find long passages, expounding esoteric teachings, which seem to follow the cosmological models of the seven heavens and the seven earths. But it soon becomes evident that the cosmological stages have hardly any other function than to serve as "coordinate systems" giving structure to the inner experiences and psychological states of the mystic.

Similarly, in sectarian circles, and principally in the literature of the Ismāʿīlī community, the symbolic significance of the seven heavens was stressed to the point that any physical or metaphysical reality which they had in the writings of the commentators, the *mutakallimūn* or the cosmologists, appears to have been suppressed. The fact that the various strata of interaction within an essentially political hierarchy were described in cosmological terms indicates, however, that the cosmology of the seven heavens had been widely accepted in Islamic literature as common language.

In both cases, mysticism as well as sectarian exchange, the decisive inspiration did not really come from the Ḳurʾānic world view of the seven heaver

but rather from Neoplatonic teachings. A scheme was needed that would allow a graduated classification of spiritual descent from, and elevation to, the highest reality without a transgression beyond all frontiers to be feared. It is not surprising that both the spiritual and the political authorities turned to the cosmology of the seven heavens in search of this scheme; but the numerous ramifications of both these experiential and ideological traditions go far beyond the limits of the present discussion.

Bibliography: Note that most sources on the heavens and the earths in accordance with the traditional world view, even more so than those of the sciences inherited from the ancient authorities, are still unpublished manuscripts. 1. 2. As an astronomical term, see MAKKA. 4; MINṬAḲAT AL-BURŪDJ.

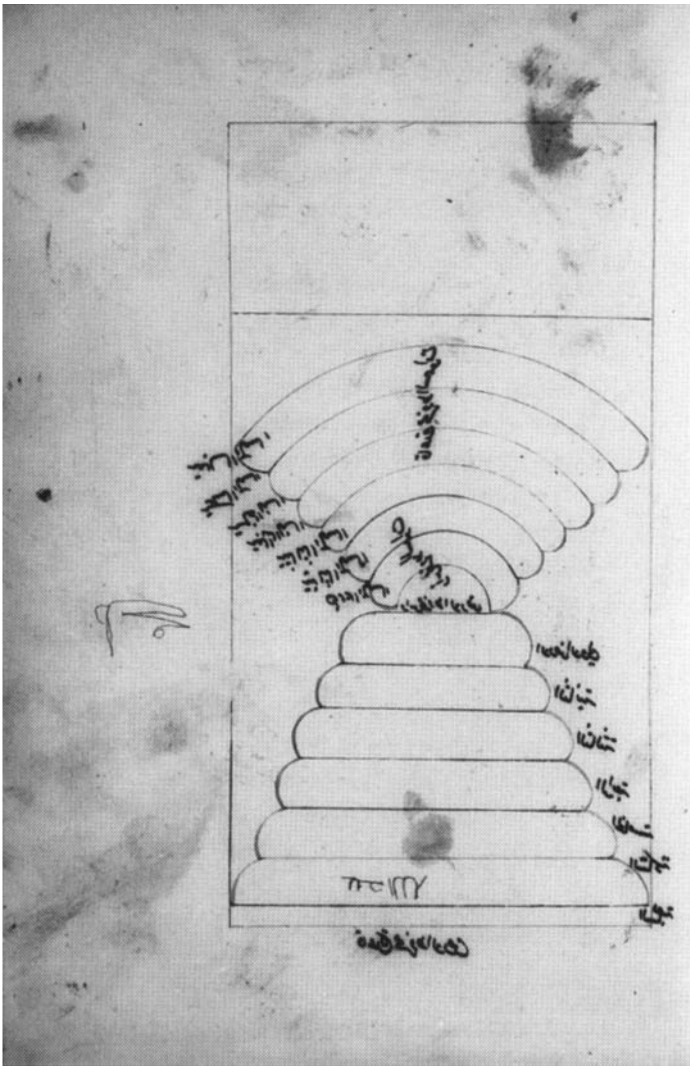
SAMĀʿ, verbal noun from the root *s-m-ʿ* (like *samʿ* and *simʿ*), signifying "hearing"; by extension, it often denotes "that which is heard", such as music, for example. The same applies to *istimāʿ* "listening" (Lane, *Lexicon*, 1427b, 1429b; *LʿA*, s.v.)

1. In music and mysticism.

The term is not found in the Ḳurʾān, but it exists in ancient Arabic, even in the sense of song or of musical performance (Lane, 1617b, s.v. *mushār*). In lexicology and in grammar, it signifies "that which is founded on authority", as opposed to *ḳiyāsī* "founded on analogy" (de Sacy, *Grammaire*, i, 347, and Lane, 1429b). In theology, it is opposed to *ʿaḳl*, "reason" (Goldziher, *Richtungen*, 136-7, 166). But it presents a specific sense in Ṣūfism, where it generally denote the hearing of music, the concert, and in its particular sense, the Ṣūfī tradition of spiritual concert, in a more or less ritualised form. *Samāʿ* is then considered to be the "nourishment of the soul", in other words, a devotional practice which, according to Ṣūfī authors, can induce intense emotional transports (*tawādjud*), states of grace (*aḥwāl*), of trance or of ecstasy (*wadj*, *wudjūd*) and even revelations. These manifestations are often accompanied by movements, physical agitation or dance which are of set form or otherwise, individual or collective, of which Persian miniatures have left numerous testimonies and of which certain forms are still in use.

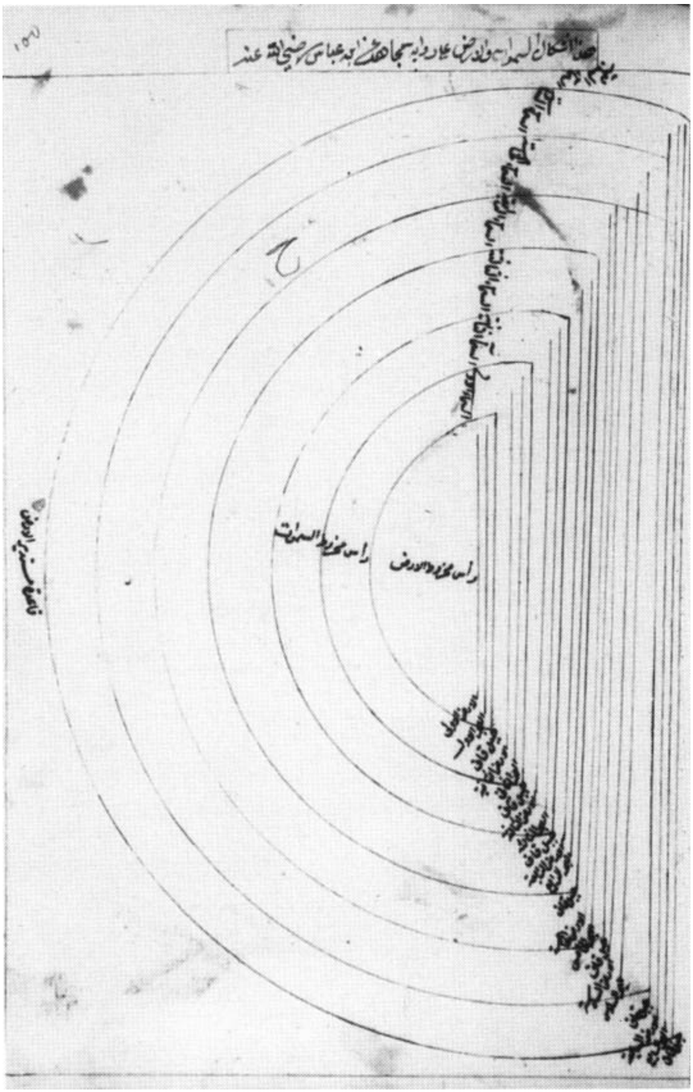
The very sense of the term *samāʿ*, which has been widely discussed, suggests that it is actually *listening* which is spiritual, since music or poetry do not necessarily have a sacred nature. "Hearing", on the other hand, can be applied to any sound, natural, artificial or artistic, as well as to the "subtle" sounds of the hidden world or of the cosmos.

In its predominant sense, hearing is a synonym of "understanding", in other words, comprehension, acceptance and application of the Revelation, and the practice of *samāʿ*, beyond ecstacy or rapture, can be an unveiling of mysteries, a means of attaining higher knowledge (Rūzbihān, Gīsū Derāz).



Samāʿ does not seem to appear until the mid-3rd/9th century among the Ṣūfīs of Baghdād, but while the association of music with ecstatic rites or practices is attested prior to Islam in the Religions of the Book (Molé), no solution has been found to the question of continuity between the latter and the Ṣūfī practice of *samāʿ*, in spite of numerous similarities. It could take the form of an extension of the hearing of the Ḳurʾān to that of religious *ghazal*s and *ḳaṣīda*s, or furthermore, of sacralisation of the secular concert and a sublimation of *ṭarab*, that new custom which spread very quickly to Iṣfahān, Shīrāz and in Khurāsān (Purdjawādī, 18). *Samāʿ* is thus initially an "oriental" phenomenon, promulgated in particular by the Persian disciples of Nūrī and of Djunayd. By the same token, all of the early authors dealing with *samāʿ* were Persians, with the exception of Abū Ṭālib Muḥammad al-Makkī (d. 386/996 [*q.v.*]). Subsequently, *samāʿ* spread to all areas, but found most favour in Persian, Turkish and Indian Islam. The first writings, composed a century after the inauguration of the custom of *samāʿ*, coincided with the first attacks on the part of traditionalists who sought to condemn music (such as Ibn Abi 'l-Dunyā (208-81/823-94 [*q.v.*]), the author of the *Dhamm al-malāhī*, cf. Robson), and constituted a reply to them. According to Purdjavādī (*ibid.*, 22), these writings may be arranged in three groups and periods:

(1) *4th/10th century*: ʿAbd al-Raḥmān al-Sulamī (d. 412/941 [*q.v.*]), whose *K. al-Samāʿ* is the first monograph devoted specifically to *samāʿ*; al-Makkī; al-Sarrādj (d. 378/988 [*q.v.*]); al-Kalābādhī (d. 380/990 [*q.v.*]); and Abū Manṣūr. They base their arguments on *ḥadīth*s and on the logia of the ancient mystics (Dhu 'l-Nūn al-Miṣrī), being concerned above all to defend *samāʿ* from its detractors.



(2) *5th/11th century*: al-Bukhārī; Abu 'l-Ḳāsim al-Ḳushayrī (d. 466/1074 [*q.v.*]); al-Ghazālī (d. 505/1111 [*q.v.*]). In these authors, too, the defensive aspect is featured, but the Ṣūfīs seem to rely on them more on account of their social and even political status.

(3) *7th-8th/13th-14th centuries*: Nadjm al-Dīn Kubrā [*q.v.*], Rūzbihān Baḳlī Shīrāzī (d. 606/1209); Aḥmad-i Djam; Nadjm al-Dīn Baghdādī; ʿAbd al-Razzāḳ Kāshānī; Aḥmad Ṭūsī (8th/14th century); etc. They take into account the social and ritual aspect and argue more rationally. After this period, *samāʿ* was included in its entirety among the customs of the mystics and was no longer the object of judicial debates. Writers confined themselves to extolling its qualities and its symbolic meanings, some going so far as to consider it an obligation for adepts (Aḥmad Ṭūsī, whose *Bawāriḳ* has been erroneously attributed to Aḥmad al-Ghazālī (cf. Mojahed, 1980). After the 9th-10th/15th-16th centuries, the question of *samāʿ* seems to have been filed away or exhausted, and setting aside the orders which retained its practice and its theory (Mawlawīs, Čishtīs), did not give rise to any more original literature (Gīsū Derāz).

The function of *samāʿ*, as well as its conditions of performance, have evolved in a sense which al-Hudjwīrī was the first to deplore, and which the aphorisms of the earliest Ṣūfīs (al-Ḥallādj, Dhu 'l-Nūn) had anticipated in their warnings. It became for some a form of delectation or a sensual pleasure, all the more so in that the rite now included dancing and was concluded with a meal. Furthermore, the proletariat indulged in profane *samāʿ*s, in other words concerts with a religious pretext (Pouzet), not to mention rites of trance inherited from paganism and superficially Islamised (berated by Ibn Taymiyya). In order to restrain the adepts and counter the criticisms of the jurists, the majority of authors established conditions (al-Ghazālī) and rules of propriety (al-Nasafī), and distinguished between the types of concert (*samāʿ*) in terms of the nature of the hearing: some listen according to their ego (*samāʿ al-nafs*, or their nature, *ṭabʿ*), others according to the heart, others through the

A simple representation of the seven heavens spanning the seven earths. For both zones the shape of a cone is assumed, but the opposition of the two is emphasized by the choice of curved lines for the heavens and horizontal ones for the earths.

The cosmos described as a cone. Like a seven-fold dome, the seven heavens span the cone of the seven earths. The latter are part of a schematic "geography" based on a seven-fold division consisting of alternating earths, seas, and the Ḳāf mountains.

spirit. While for the first category, music (or *samāʿ*) is not to be permitted, as for the adepts, not all the *shaykhs* were unanimous as to the advantages which could be drawn from *samāʿ*. The contention was that *samāʿ* is dangerous for beginners and useless for the more advanced. Some maintained that it should be limited to the hearing of Ḳurʾānic psalmody (Ibn ʿArabī), others did not approve of it, but none explicitly discouraged it, with the exception of Aḥmad Sirhindī [*q.v.*].

It is remarkable that the conditions of admissibility of *samāʿ* have had practically no effect on the musical form itself, except that instruments with profane or dubious connotations are proscribed (al-Ghazālī). This is why certain instruments, such as the tambourine (*daff, bendir, mazhar*) and the *nāy* were more widespread, while certain orders were content with song. Similarly, romantic poems were adopted at a very early stage in Persia, on condition that they were to be interpreted by the adepts in a metaphorical sense—sometimes very subtle—relating to a spiritual object or to the person of the Prophet.

Faced with the diversity of attitudes, *samāʿ* has taken on extremely varied forms, especially in combining with or associating with collective *dhikr*, the ritualisation of an ecstatic technique, which probably appeared a few centuries later. At the present day, it is most often in the context of a ceremony of *dhikr* that *samāʿ* is performed, in the form of chant sometimes accompanied by instruments, whether in the course of one of the phases of the ritual, or in association with the metrical shape of the *dhikr*. Thus the distinction drawn by anthropologists between *samāʿ* and *dhikr*, on the basis of the participation of subjects, "set to music" in one case and "making music" in the other, is not applicable, all the more so in that even silent listening is generally accompanied by interior *dhikr* (*khafī*), as among the Mawlawīs, often being transformed into audible *dhikr* (*djahrī, djalī*). In its primary definition, *samāʿ* as hearing without acoustic participation of the adepts hardly survives except among the Mawlawīs, the Bektāshī-ʿAlawīs, the Indo-Pakistani Ḳawwālīs, and in the rites of marginal groups such as the Yazīdīs, the Ismāʿīlīs, the *māled* shamans of Balūčistān (types *damālī, ḳalandarī*). On the other hand, in many rituals (*ḥadra, ḥizb, dhikr*), it survives as the introductory part (Ḳādirīs of Kurdistān) or concluding part (Ṣūfī brotherhoods of the Maghrib). In all these cases, the hymns or the instrumental pieces constitute specific repertoires generally distinguished from the music of the secular environment by means of their rhythms, their structures and their texts. Faced with the diversity of musical techniques put into practice, it is difficult to identify in purely formal terms a notion of "music of *samāʿ*", except at the level of the force of expression, drawn from the *dhikr* as a form and as a mode of concentration. The difficulty in identifying a global specificity is due perhaps to the paradoxes underlined by certain *shaykhs* (al-Suhrawardī), according to which it is not *samāʿ* and dance which induce ecstasy, but ecstasy which arouses the dance, or furthermore, that *samāʿ* is only a revealing instrument and that it only supplies that which is brought to it by the hearer.

2. As a term in education.

Here, *samāʿ* (pl. *samāʿāt*) means [certificate of] hearing, audition; authorisation, licence.

With the rise of the large *madrasas* [*q.v.*], founded by rulers who were important personalities such as Niẓām al-Mulk (d. 485/1092 [*q.v.*]) or Nūr al-Dīn Ibn Zangī (d. 569/1174 [*q.v.*]), habits, followed so far in instruction and teaching, especially those in *ḥadīth*, took on an official character. It was the period in which places of education and training spread towards remote villages and distant provinces. The principles developed and represented by al-Khaṭīb al-Baghdādī (d. 463/1071 [*q.v.*]), the great, critical systematiser of *ḥadīth* methodology, became dominant. The process accelerated when *ex officio* teaching posts and librarianships were established on a large scale, and scholarships were extended in view of the growing influx of students (*ṭullāb*). The result of this spreading praxis was that, beyond the purely idealistic point of view, the question was asked: Who, "under whom",

"when" and "where", had assisted as auditor (*sāmiʿ*) at a lecture on a certain work; who could show a certificate, an *idjāza* [*q.v.*] or, more exactly, an *idjāzat al-samāʿ*, in short a *samāʿ*. It is true that an author, or an adequately authorised *shaykh*, had always read his or another's work with his pupil (*ṭālib*), e.g. in a mosque, and had attested this for the latter with a corresponding *ḳirāʾa* note; but those who had joined the two without being involved and had only listened, had not been able to deduce for themselves any practical privilege from it. A new development grew up among jurists in the second half of the 4th/10th century, sc. of upgrading the auditor (*sāmiʿ*) vis-à-vis the reader (*ḳāriʾ*). When teaching and learning were institutionalised in centres, a link-up was made with this provision.

Samāʿāt can be shown to have existed generally from the 5th/11th century onwards. They reach their prime during the next two centuries, first in ʿIrāḳ and then in Syria. After the Mongol storm, the centre of gravity shifted to Egypt. The *samāʿāt* can be found at the end of manuscripts and/or on their title- and fly leaves and/or between parts and chapters. In these certificates, the composition of a *madjlis* is reflected, in the field of knowlege of tradition, including law, in the first place, and then in the fields of biographies and history, grammar and lexicography, *adab* in the widest sense of the word, but also of medicine, philosophy, etc.

The *samāʿāt* of the lectures are quite variable in their outer form and organisation. The lectures are presided over by a *shaykh* (rarely a *shaykha*) as *musmiʿ* (teacher); the reader (*ḳāriʾ*) sits before him, while a third person, the recorder (*kātib*), keeps the protocol, which, in small gatherings can also be kept by the *musmiʿ* or the *ḳāriʾ*. In an ideal case, the three of them—including the *musmiʿ*—are mentioned one after the other under their full names, titles, etc. in connection with the introductory formula *ḳaraʾa ʿalayya*: the *shaykh* (with *isnād* [*q.v.*] if he is not the author himself) and the title of the work (equally with additions like autograph, *riwāya* [*q.v.*], owner, etc.); then the reader, and finally the recorder with a statement of the place (such as *madrasa, masdjid, dār, zāwiya, bayt, ribāṭ, dayr, khān*, etc.), date and duration of the lecture; a list of auditors (*sāmiʿūn*) is also added: men, young males, women, young females, children (often with an exact indication of their age), and slaves accompanying higher-placed personalities. After an auditor's (*sāmiʿ*) name in the list, there may be a remark that he was only present at certain parts (occasionally confirmed in his own hand in a gloss, but also in the work itself). At the end, the *musmiʿ* usually confirms the entire note of *samāʿ*, as he also may do in other places about the correctness of a statement. In more sizeable works, whose lecture (*ḳirāʾa*) extends over a longer period of time, the *musmiʿ*, as well as the *ḳāriʾ* or the *kātib*, can be replaced by someone else. Not rarely a new *idjāza* is found after separate parts (*adjzāʾ*). The number of auditors amounts in general to between ten and twenty, but they may also be less or more, or even so many that the recorder, who may belong to the group of auditors (*kātib al-ṭabaḳa*, pl. *ṭibāḳ*), does not know all the names. He may be assisted by a *muthbit* (confirmer), taken from among the auditors, who confirms in a gloss certain places in the *idjāzat al-samāʿ*, or from whose hand comes the list of auditors, etc. New *samāʿāt* are often added in following or later sessions or are taken over in transcripts, etc. The *shaykh* may issue a note of *samāʿ* for one single auditor personally, which is then introduced by the term *samiʿa*. Already the great al-Samʿānī (d. 562/1166 [*q.v.*]) made efforts to obtain and collect *samāʿāt/masmūʿāt* either by correspondence or through a third person. They played a role in purchases and estates. *Samāʿāt* are inexhaustibly overflowing sources of a high documentary value for the spread of a work and its manuscripts, for the completion of the extensive biographical literature, for the busy relations of the learned centres between themselves, and for the history and archaeology of individual places.

(R. SELLHEIM)

ṢAMAD [see ALLĀH; AL-ASMĀʾ AL-ḤUSNĀ].

SAMAK (A.), substantive with a generic sense (unit. *samaka*, pl. *asmāk, sumūk, simāk*), denoting fish in general, whether of fresh water or of the sea (P. *samak, māhī*, Tkish. *balık*, Tamahaḳḳ *emen*, pl. *imenān, asūlmei*, pl. *isūlmeien*). The term *samak*, which does not figure in the Ḳurʾān, is, in the work of Arab authors, often replaced by one of its two synonyms, *ḥūt* and *nūn* (pl. *nīnān, anwān*) from the Akkadian *nūnu*. However, *ḥūt* (pl. *aḥwāt, ḥītān*, in dialect, *ḥiyūta*) is applied primarily to very large fishes and to cetaceans.

1. Ichthyonomy.

It would be impossible here to list all the species which, in systematic ichthyology (*ismākiyya*), number more than a hundred thousand, and as in almost all other languages, Arabic ichthyonomy is abundant in its scale. Thus, for the Red Sea, the Arabian Gulf and the Indian Ocean, the orientalist G. Oman, of Naples, has assembled, in a recent and remarkable study (see *Bibl.*), close on eleven hundred names of fishes. For his part, Prof. A. Salonen, of Helsinki, has contributed about a thousand names drawn from Sumero-Akkadian (see *Bibl.*). The author of this article, for his part, has gathered, for the western Mediterranean basin (Egypt, Libya and the Maghrib), approximately twelve hundred terms. In this rich terminology, numerous appellations are formed from the nouns *samak* or *ḥūt* or *nūn* combined with a qualificative or a nominal complement. Within the range of the latter, this study will be limited to mentioning only those which evoke a Biblical or historical personage, authentic or legendary, in association with fishes or other aquatic creatures. First to be mentioned in this context is Jonah, Yūnus, known as *Ṣāḥib al-Ḥūt* "the man of the fish" (Ḳurʾān, XXXVII, 142; LXVIII, 48) and, with the same meaning, *Dhu 'l-Nūn* (Ḳurʾān, XXI, 87), who is said to have been swallowed by some kind of shark and not by a whale, the latter, with its filters, being capable of absorbing only plankton. Subsequently to be found are the *ḥūt Mūsā* or *samak Mūsā* "the fish of Moses", the *ḥūt Mūsā wa-Yūshaʿ* "the fish of Moses and of

Joshua" and the *ḥūt Sīdnā Sulaymān* "the fish of our master Solomon"; these three names are given to the common sole (*Solea vulgaris*). The *sulṭān Ibrāhīm* "the sultan Abraham" is the name given to the red mullet (*Mullus barbatus*). The *Ibn Yaʿḳūb* "the son of Jacob" is the common sargo (*Diplodus sargus*). The *samakat al-Iskandar* "the fish of Alexander the Great" is the hammer-head shark (*Sphyrna zygaena*). With the *ḥūt Sulaymān*, this is not a reference to the person but a phonetic adaptation of the Latin *salmo* for the common salmon (*Salmo salar*). Among the origins of the formation of Arabic names of fishes, the first to be noted are those which are drawn directly from Greco-Roman nomenclature, such as: *baramis*, the bream, from *Abramis brama; usbūr*, the sparid fish, from *Sparus; uṭrūṭ*, the trout, from *Trutta; bulbīs*, the barbel, from *Barbus; balamīda*, the pelamid, from *Pelamys*, also called *būnīt*, the bonito; *tūn, ṭūn, tunn*, the tunny fish, from *Thynnus; tunḳus*, the tench, from *Tinca; anḳalīs*, the eel, from *Anquilla; arrang, ranga, ranka*, the herring, from *Clupea harengus; rāya, radja*, the ray, from *Raia; surghūs*, the common sargo, from *Sargus vulgaris; sardīn*, the sardine, from *Clupea sardina; isfirnī, safarna, safarnāya*, the spet or barracuda, from *Sphyraena; isḳumrī*, the mackerel, from *Scomber; sillawr*, the sheat fish, from *Silurus; salmūn, ṣumūn*, the salmon, from *Salmo; ghādus*, the cod, from *Gadus; luṭṭ*, the burbot, from *Lota lota; lāṭis, lūṭis*, the Nile perch, from *Lates nilotica; lafūt*, the lophot, from *Lophotes; līmanda*, the dab, from *Limanda*. Numerous appellations are also encountered formed from the name of a terrestrial creature joined to the complement *-al-baḥr* "of the sea", such as: *sabuʿ al-baḥr* "beast of the sea" for the sea wolf (*Anarhichas lupus*); *faras al-baḥr* "horse of the sea" for the bellows fish (*Centriscus*); *ḳunfudhat al-baḥr* "hedgehog of the sea" for the sea-urchin (*Diodon*). Similarly, many terms are composed of *abū* "father of ..." or *umm* "mother of ...", with the complement of a noun marking a characteristic of the fish concerned. The following are examples: *abū ḳarn* "father of the horn" for the unicorn fish (*Naseus unicornis*); *abū miṭraḳa* "father of the hammer" for the hammer-head shark (*Sphyrna zygaena*); *abū sayf* "father of the sword" for the swordfish (*Xiphias gladius*); *abū ṣundūḳ* "father of the chest" for the coffer fish (*Ostracion nasus*); *abū minḳar* "father of the beak" for the half-beak (*Hemiramphus*); *abū minshar* "father of the saw" for the sawfish (*Pristis pristis*); *abū dhaḳan* "father of the beard" for the goat fish or mullet (*Mullus barbatus*); *umm ḳarn* "mother of the horn" for the trigger fish (*Balistes*); *umm al-shabābīṭ* "mother of the barbels" for the barbel (*Barbus sharpeyi*). Some names derive from living foreign languages, and especially from Spanish, such as *anshūyah, andjūyah* (Spanish *anchoa*), the anchovy (*Engraulis boelema*); *arrang, ranga, ranka* (Spanish *arenque*), the herring (*Clupea harengus*); *bakūra* (Spanish *albacora*), the albacore (*Germo alalunga*); *durāda* (Spanish *dorado*), the goldfish (*Sparus aurata*). The influence of English, of French and of Italian should also not be disregarded. To the Persian *parastūg* "swallow" are related *barasūdj, barastūk, ṭarastudj* for the mullet (*Mullus*), and from the Turkish *alabalık* comes the name *alābālghā* for the trout. In a process contrary to these Arabic borrowings of foreign terms, systematic science has sometimes needed recourse to an Arabic term, which is then latinised, to specify a sub-species limited to a particular region. Thus *barda* = the pink sea-bream, is encountered again with *Chrysophrys berda; ḥaffāra* = the wrasse, with *Chrysophrys haffara*; *sarb* = the grey gilthead, with *Chrysophrys sarba*; *bashīr* = polypterus Bichir, with *Polypterus Bechir*; *buhār* = the diacope, with *Diacope bohar*; *bayaḍ, bayyāḍ* = a silurus of the Nile, with *Bagrus bajad*; *ḥarīd* = the parrot fish, with *Scarus harid*; *ḥalāwī* = the guitar fish, with *Rhinobatus halavi*; *durāb* = the chirocentrus, with *Chirocentrus dorab*; *duḳmaḳ* = a silurus of the Nile, the Euphrates and the Niger, with *Bagrus docmac*; *ghubbān* = the green scarus, with *Scarus ghobban*; *safan* = the sephen skate, with *Raia sephen*; *saydjān* = the sidjan scarus, with *Scarus siganus*; *līmī* = umbra limi, with *Umbra limi*; *shalba* = a silurus of the Nile and the Niger, with *Schilbe mystus*; *ṭahmal* = a silurus, with *Pimelopterus tahmel*; *urfī* = the braize orphe, with *Pagrus orphus*; *bunnī al-Nīl* = the Nile barbel, with *Barbus bynni*; *lafūt* = the unicorn fish, with *Lophotes cepedianus*; *limma* = the limma ray, with *Raia lymma*; *abū ṣanṣūn* = the sansun kingfish, with *Caranx sansun*; *djiddāba* = the djeddaba kingfish, with *Caranx djeddaba*; *balam* = the anchovy, with *Engraulis boelema*.

2. Anatomy.

The anatomy of the fish is summarised in few words. The scales are called, according to the regions: *ḥarshaf, fiṣṣ, taflīs, ḳirāt, ḳishra, bashīr al-ḥūt* and *ashkāma* (Spanish: escamosa). For the gills and the bronchiae, organs of respiration, the only words found are: *khayshūm*, pl. *khayāshīm, khanshūsha, nakhshūsh* pl. *nakhāshīsh*. The cetaceans expel water by means of blow-holes or *naysam* pl. *nayāsim*. For the fins the terms are: *djanāḥ al-samak, ziʿnifa, djāniḥa*. The eggs laid by the fishes (*ṭūmār*) constitute the spawn, *sarʾ al-samak, sirʾ, sarwa, ṣuʿtur*, deposited in spawning-grounds or *masraʾ al-samak*, habitual sites peculiar to each species; it is there that the fry (*bulʿūṭ*) develop.

3. Halieutics.

It is known that, since prehistoric times, fish has always provided one of the principal alimentary resources for riverside and coastal populations, especially of the Mediterranean, the Arabian Gulf and the Indian Ocean. It may thus be stated that fishing (*iṣṭiyād al-samak*) engendered both coastal and oceanic navigation, and this even before the long-range voyages of migration and of commercial traffic. First of all, it is important to distinguish between two very different types of fishing, sea fishing and fresh water fishing, the species of fish belonging to these two aquatic environments not being the same, although some migrate periodically from one to the other. The halieutic vocabulary for these two modes of fishing is quite abundant. In fishing on the high seas, associated with navigation, the principal instrument used is the large pouched net known as seine or drag-net (*djarf, djārūf, djarrāfa, ḳaṭṭāʿa, baṭāna*) supported by floats of cork (*ʿawwām, ḳurṭīdj*) and terminating in a closed end (*khurṭūm*). It is towed by rowing boats and, when reckoned to be full, dragged to the shore. For tunny fishing, especially in Tunisia, the device used is a huge enclosure formed of meshed cloth with which the tunny bed is surrounded; this is the tuna net (*mazraba*). The catch is hoisted aboard the boats by means of gaffs and grapnels (*khaṣm al-ḳāḍī, muḳbulān, miḥdjān, ʿakfā, ʿukkāfa*) or dispatched directly with harpoons (*khaṭūf, khaṭṭāf, ʿaṭūf, kullāb, mudjīr, muʿīn, mughīth, musahhil*). A third method of fishing at sea consists in stretching out a long cable which is held on the surface by floats and fitted, at regular intervals, with fish-hooks (*sannāra, ṣinnāra, shiṣṣ, mikhṭāf, mukhṭāf*), baited and slightly submerged; this rope with fish-hooks is known as *balāngar, brungalī, shīrīnbak*. Finally, there is fishing by means of dragging a line fitted with gull-feathers; this is *dūzan bi 'l-rīsha* or *shalūsh*. The fishing-line, made from plaited horsehair, is called *sadjīm, shalīf, būlīs*. The bait most often used is the talitrus, a small leaping crustacean, also known as the sand-flea (*Talitrus saltator*) or *kūkra*, in addition

to the arenicol (*trīmūlīn*), a small beach worm (*Arenicola marina*).

Once ashore, the fisherman (*khannāḳ*, *ʿarakī*) delivers his catch to a fishmonger (*sammāk*, *ḥawwāt*) who maintains a shop (*khināḳa*) in the fish-market (*sūḳ al-khannāḳīn*).

Fishing in fresh water, practised in stagnant waters as well in the current of any watercourse and large river, employs diverse techniques. Where the depth allows, the fisherman enters the water directly, wherever he can find a foothold, thereby dispensing with the need for a boat. By this means he can deposit an eel-trap (*salla*, *radfūn*, *raḍfūn*, *wahhār*) with bait, which needs to be raised only once or twice daily. In the absence of such a trap, he contents himself with digging a channel in the water-bed (*ḳannūra*), in the place which he judges to be the best conduit for the aquatic fauna, and baits it copiously; eels, barbels, breams, carps and many others will soon arrive to feed there. When he sees his channel swarming with fish, he needs only a landing-net (*ghirāfa*, *ʿabb*) to draw out what he wants; eels are killed by means of a fish-gig (*bāla*, *fāla*, *ḥarba*). If the catch is particularly abundant, he may place some of the fish in buckets of water, transferring them, as a reserve, to a fish pond (*maḥḳān*, *djals*, *ikhādha*, *faḍla*, *birka*) prepared for this purpose. In the Maghrib and the Near East, a very popular and lucrative form of fishing, practised in fresh water as well as on the sea-shore, consists in the use of a stick fitted with the small bag-shaped net known as a cast net (*ṭarḥa*, *ṭarrāḥ*, *bayyāḥa*) with weights attached to its periphery in such a manner that it sinks to the bed of the water. The caster, who may stand up to waist-deep in the water, draws it slowly towards himself, thus imprisoning the creatures caught in it; everywhere, young fishermen are adept at this activity. Also to be mentioned, finally, is the virtually universal sport of angling with a fishing rod (*ḳaṣba*, *ḳannāra*, *ghawayyiṣ*) formed, usually, of numerous sections fastened together and terminating in a fine and very flexible tip (*dhabāb*) to the end of which the thread of the line is fastened, and this bears a floating bob, above the hook. The fishing rod is usually made of pieces of bamboo (*khayzurān*) or other types of wood; modern techniques use metallic or synthetic materials. This mode of fishing is of two types. The first consists in holding the cane motionless or laying it on the bank, watching for the movement of the float which shows that there has been a "nibble"; it is then necessary to "strike" at once. It is possible to fish with several rods simultaneously, and many amateur anglers come equipped with a bundle (*ṭunn*) of rods. The bait may be an earthworm (*dūda*) or a small fresh water crustacean, the water-beetle *Daphnia pulex* (*burghūth al-māʾ*) or a maggot (*duʿmūṣ*), or a crumb of bread or some boiled grain such as wheat or barley or hempseed (*shahdānidj*, *ḳunbuz*) or, finally, a small living fish, i.e. live bait. The second type of rod fishing, very popular with sporting anglers, is "casting" (*rimāya*). The line is wound on a reel (*dūlāb*) fixed to the base of the rod and instead of bait, a small metallic lure (*fitna*, *khadīʿa*) in the shape of an insect or a small fish is attached to the hook. This practice is not widely used in Arab countries, although it is very popular throughout Europe, and elsewhere.

4. Literature.

In the literary domain, there is scarcely any treatment of the subject on the part of the ancient Arab authors, the exception being Kushādjim who, in the 4th/10th century, devoted a chapter to fishing in his *Kitāb al-Maṣāyid* (see *Bibl.*). This chapter, brief though it is, is nevertheless valuable on account of the poetic extracts which it includes. Thus there are found there 12 verses by Ibn al-Rūmī (metre *kāmil*, rhyme *-aki*); two *urdjūzas* by Kushādjim himself, one of 28 hemistiches (rhyme *-ānī*) and the other of 14 hemistiches (rhyme *-āʾ*); an *urdjūza* of 24 hemistiches (rhyme *-adī*) by al-Ṣanawbarī; and, finally, an *urdjūza* of 23 hemistiches (rhyme *-dā*) of Ibn al-Wazīr al-Ghassānī. It is not until the 8th/14th century that, with Ibn Manglī and his treatise on hunting, *Uns al-malā* (see *Bibl.*), more ample details are obtained regarding fishing with the net, with the harpoon, with chemicals (*dawāʾ*), with the eel-trap, with clay (*ṭīn*), and with the lantern (*fānūs*) and the pit (*ughwiyya*).

5. Licitness.

On account of the predominant place occupied by fish in the diet of Muslim populations, it has been the object of judicial dispositions based on Ḳurʾānic law, in particular the verse (V, 95) "You are permitted the game of the sea (*ṣayd al-baḥr*) and the food which is found there". Any fish of non-cartilaginous skeleton and devoid of blood may therefore be lawfully consumed, without a requirement for ritual slaughter. However, fish found dead may not be consumed. Also forbidden are: (1) fishes of cartilaginous skeleton, in other words the selachians or squalidae (*ḳirshiyyāt*) including the shark with its various species (*ḳirsh*, *awwāl*, *kawsadj*, *ḳanya*, *ḳayna*, *ṭufaylī*, *ḳuraysh*, *lakhm*, *kalb al-baḥr*, *bunbuk*, *liyāʾ*, *ḳaṣaf*, *abū minshar*), most of these names supplied by al-Damīrī; the hammer-head (*baḳra*, *miṭrāḳ al-baḥr*, *abū miṭraḳa*, *samakat al-Iskandar*, *naḍḍār*), the spotted dogfish (*gharrāʾ*) and the ray or skate, with its multiplicity of names (*raya*, *radja*, *warank*, *farank*, *yamāmat al-baḥr*, *shifnīn al-baḥr*, *tarsa*, *samak al-turs*, *daraḳa*, *samak al-limmā*, *ḥaṣīra*, *farsh*, *ḳubaʿ*, *ḥalwā*, *waṭwāṭa*, *maṣṣūn*, *maṣṣūla*, *abū mihmāz*; (2) the marine mammals or cetaceans (*ḥūtiyyāt*) including the whale (*wāla*, *bāla*, *ballīna*, *banīna*, *būlīna*, *ḥūt Yūnus*), the humpbacked whale (*ḳubaʿ*, *djamal al-baḥr*), the sperm-whale (*ʿanbar*), the porpoise (*khinzīr al-baḥr*, *bunbuk*), the dolphin (*dulfīn*, *danfīl*, *danfīr*, *darfīl*, *dukhas*), the narwhal (*karkaddan al-baḥr*, *ḥarīsh al-baḥr*), the finback (*hirkūl*, *manāra*), the orc or grampus (*urka*, *ḳattal*) and the white whale (*ḥafshrūsī*, *kalb al-baḥr*); (3) the amphibian mammals (*ḳawāzib*, *barmāʾiyyūn*) or pinnipeds (*ziʿnufiyyāt al-aḳdām*) including the seal (*shaykh al-baḥr*, *ʿidj al-baḥr*, *fuḳma*, *fuḳḳama*, *bū mnīr*), the monk seal (*al-shaykh al-yahūdī*, *abū marīna*), the walrus (*fīl al-baḥr*, *fazz*), the sea lion (*dubb al-baḥr*, *asad al-baḥr*, *baḳrat al-baḥr*) and the elephant seal (*fīl al-baḥr*); and (4) the sirenian mammals or "sea cows" (*khaylāniyyāt*, *banāt al-māʾ*) including the manatee (*kharūf al-baḥr*, *umm zubayba*) and the dugong (*aṭūm*, *maliṣa*, *nāḳa al-baḥr*, *zālikha*, *ḥanfāʾ*). As for *Rhytina stelleri*, the sea cow (*baḳarat al-baḥr*) of the Red Sea, it has been extinct for two centuries. All of these aquatic creatures have nevertheless always been hunted, either for their abundant stocks of fat, useful for many purposes and in particular for the making of soap and the fuelling of wicked lamps, or for their thick and very resistant hide, used in the manufacture of shields and, in particular, of protective shoes for the feet of camels required to traverse stony deserts.

6. As a source of diet.

Fish has been a staple source of nourishment for humanity from the outset. It is consumed in various forms. Firstly, it may be fried immediately after catching. On the other hand, it is the object of four principal modes of preservation. The first, much used in Egypt since the time of the Pharaohs, is dessication by exposure to the sun of large and small fish (*mushammaʿ*, *ṣaraṣ*, *bushūṭa*, *kūridj*) such as the stockfish (*bāḳālāw*, *bāḳālyū*, *baḳala*, *baḳlāwa*, from the Spanish

bacallao). The next is salting and smoking (*tamlīḥ* and *tadkhīn*) for small fishes (*ṣayr*) such as the anchovy (*anshūwa, anshūyah, andjūyah, anshūba, shīha, shuṭūn, fasīkh, mulūḥa, maṭūṭ*) and the sand-smelt (*kushkush, balam, haff*); the same treatment is used for the salmon (*salāmūn, shalāmūn, ṣūmūn, ḥūt Sulaymān*). Also used is pickling or maceration with spices in brine (*salāmūra, sanamūra*). In Tunis this is the method used to preserve carp (*bunn*). Finally, there remains preservation in oil or vinegar and packing in metal containers; this applies to the sardine (*sardīn, sarda, bisāriya, absāriya, ʿaram*), the cod, the mackerel and the herring. Delicacies such as caviar (*khibyāra*) and botargo (*baṭrakh*), are not widely consumed in Arab countries.

As for culinary preparations of fish, they are most varied and many are similar to those of Europe. Well-known, among others, is the fish stew (*munazzalat al-samak, muḳbulā*) based on eel or carp. The ancient Arabic treatises on culinary art supply five recipes for fresh fish, five for salted, and three with the trigle or gurnard (*tirrīkh*) (see M. Rodinson, in *Bibl.*).

7. Fabulous marine creatures.

Arab authors naturalists and geographers, such as al-Ḳazwīnī, al-Damīrī and al-Djāḥiẓ, include in their descriptions of different seas the accounts of seafarers who encountered there enormous marine creatures, unidentifiable and very dangerous. Thus they mention the *fāṭūs* or *ḥūt al-ḥayḍ* which shatters the ships which it encounters, but which is put to flight when the sailors hang from the peripheral points of the vessel rags stained with menstrual blood (*ḥayḍ*). Also mentioned, in the Sea of China (*baḥr al-Ṣīn*), is a fish three hundred cubits in length which the inhabitants of the island of Wāḳwāḳ (Indonesian Archipelago) repel and banish by making the loudest possible noise, beating cauldrons and tomtoms. In the same sea lurks the *aṭam*, which has the head of a pig, is covered with a hairy fleece instead of scales, and shows female sexual organs; it is allegedly edible. In the Indian Ocean (*baḥr al-Hind*) there is a large fish nicknamed *kataba 'l-kitāb* "he has written the book", the juice of which produces an invisible ink legible only at night, and another large green fish with a serpent's head whose flesh, tasted only once, suppresses all appetite for several days.

8. Specific qualities.

These are numerous and for the most part beneficial. The flesh of the fish is of cold and humid texture. The best flesh is that of the sea fish, and more specifically, that of fishes with speckled back and delicate scales; but it causes thirst and may generate catarrh; it is appropriate for those with high temperatures and for young persons. It is necessary, however, to reject black or yellow fish, those of marshes which absorb mud, and in particular the bream (*abrāmīs*) and the grey mullet (*būrī*), which cause gastric disorders sometimes involving serious complications. On the other hand, Avicenna maintains that the flesh of the fish is, with honey, beneficial for the treatment of cataracts and for increasing visual acuity. According to al-Ḳazwīnī, this flesh is supposedly an aphrodisiac when consumed with fresh onions. An intoxicated person, exposed to the smell of fish, soon becomes sober and regains lucidity. The gall of fish in the form of eye-wash is a cure for watering eyes and, mixed with that of the marine turtle, it provides a golden phosphorescent ink.

9. Astronomy.

The substantives *samak* and *ḥūt* occur in astronomy for:

(1) The twelfth zodiacal constellation of *Pisces* (*burdj al-ḥūt*), with *al-samakatānⁱ* "the two fishes", the 24th star being called *al-ḥūt al-shimālī* "the northern fish". Also distinguished are the two stars *al-ḥūt al-sharḳī* "the eastern fish", and *al-ḥūt al-gharbī* "the western fish", near the ecliptic, under the Square of Pegasus.

(2) The 28th lunar house, with *baṭn al-ḥūt* "the belly of the fish" in the vicinity of Andromeda, i.e.: β (beta) *Andromedae*, mag. 2, 4 or "Merak" (*marāḳ al-marʾa 'l-musalsala*) "the lower belly of the woman enchained".

(3) The 6th boreal constellation of Andromeda, with its nickname of *al-marʾa al-musalsala wa 'l-samaka* "the woman enchained and the fish" (see above) on account of the "northern fish" which seems intent on biting Andromeda.

(4) The 14th austral constellation of the "southern fish" (*al-ḥūt al-djanūbī*), under the zodiacal *Aquarius*, with the star "Fomalhaut" (*fumm al-ḥūt*) "the mouth of the fish", i.e. α (alpha) *Piscis australis*, mag. 1,3.

SAMAKATĀN [see al-nudjūm].

SAMANDAL (var. *sanand, sandal, sabandal*, etc.), from Greek *salamandra* (in Arabic literature derived from Persian *sām* "fire" and *andarūn* "inside"), the salamander, which plays an important part in Arabic and Islamic folklore. According to an idea taken over from Greek literature (Aristotle, V, cap. 17), the animal passes through fire unharmed and even extinguishes it due to its coldness (al-Djāḥiẓ, *Ḥayawān*, v, 309, vi, 434; al-Damīrī, s.v.; al-Ḳazwīnī, *ʿAdjāʾib*, 442; Djābir b. Ḥayyān, *Das Buch der Gifte*, facs. ed. A. Siggel, 85a; in detail, al-Tawḥīdī, *Imtāʿ*, i, 182). Aristotle thought that the salamander proved that animal matter was unburnable. According to al-Ḳazwīnī and al-Damīrī, the salamander can cleanse its skin in the fire without burning, and many Arab authors agree that soft towels could be made of its fur, which can be cleaned with fire (in addition to the aforementioned works see al-Ibshīhī, *Mustaṭraf*, ii, 129). Ibn Khallikān claims to have seen such a piece himself (*Wafayāt*, no. 832; for a verse on the *samandal* by Yaʿḳūb b. Ṣābir al-Manḳanīḳī (b. 626/1288-9), see *ibid.* and in al-Damīrī, s.v. *ʿankabūt*).

In the Arabic sources there are, however, different

theories about the shape of the salamander. Many authors identify it as a bird (al-Djāḥiẓ, Ibn Khallikān, al-Ibshīhī; *Ḳāmūs* and *Tādj*, s.r.); only al-Damīrī, besides calling it a bird, describes it as a reddish-yellow coloured animal (*dābba*) with red eyes and a long tail. Al-Ḳazwīnī mentions it in the chapter on mice. According to the Arabic Physiologus, the salamander is a stone that extinguishes fire (Land, *Scholia*, 166, cap. 52; cf. *samandal* as a word for asbestos). Moreover, especially in the works of the Arab lexicographers, there are contaminations of the salamander with the phoenix (*Tahdhīb, Lisān, Tādj*), as well as with the bird that eats aconite (*bīsh*; *Ṣaḥāḥ*, s.r. *s-d-l*). The salamander is mostly thought to live in India (al-Damīrī) or in China (al-Ibshīhī).

In Arabic literature, one must distinguish the folkloristic statements on the salamander from the concrete descriptions—especially those from a medical point of view (Ibn al-Bayṭār, *Heil- und Nahrungsmittel*, tr. J. von Sontheimer, ii, 3; Ibn Sīnā, *Ḳānūn*, iii, 232; see also ʿUmarī, *Masālik*, xx, 62; for its being mentioned in Greek literature, see Dioscorides, ii, cap. 67)—to be found under the lexeme *salāmand(a)rā*. There, the salamander is described more correctly as a sort of lizard or snake, its medical effects, including its poisonousness, are stressed, and the idea of its being unburnable is explicitly rejected.

Real varieties of salamanders (family *Salamandridae*, order *Urodela* of the amphibians) are not very common in the Orient. The fire salamander (*Salamandra salamandra*) which is black and has yellow or orange spots, is to be found in Asia Minor, Syria and North Africa. In Asia Minor we also find the Anatolian Salamander (*Mertensiella luschai*), the colour of which ranges from yellow to orange, with additional shiny black spots, and in the Caucasus there is the Caucasian salamander (*Mertensiella caucasica*), which is black with light spots. They both belong to a genus of varieties with slender bodies.

SAMANDAR [see KHAZAR].

AL-**SAMʿĀNĪ**, Abu 'l-Ḳāsim Aḥmad b. Manṣūr b. Muḥammad b. ʿAbd al-Djabbār (487-23 Shawwāl 534/1094-11 June 1140), author of *Rawḥ al-arwāḥ fī sharḥ asmāʾ al-malik al-fattāḥ* (ed. N. Māyil Harawī, Tehran 1368/1989), a long (600 pp.) Persian commentary on the divine names. His father Abu 'l-Muẓaffar Manṣūr (426-89/1035-96) wrote books in *tafsīr*, *ḥadīth*, *fiḳh*, and other subjects. Aḥmad studied with his eldest brother, Abū Bakr Muḥammad, the father of ʿAbd al-Karīm al-Samʿānī [*q.v.*], author of *al-Ansāb*, as well as several other teachers. In 529/1135 he travelled with ʿAbd al-Karīm to Nīshāpūr to study *ḥadīth*. His nephew does not mention his writings but, in praising his virtues, speaks of his "elegant" (*malīḥ*) sermons and good poetry (*al-Ansāb*, ed. ʿA. al-Bārūdī, iii, Beirut 1988, 299-301). His elegance is clear in *Rawḥ al-arwāḥ*, a work of extraordinary beauty that was certainly meant to be recited aloud. The prose ranks with that of contemporary classics such as Ghazālī's *Kīmiyā-yi saʿādat*, but its main importance lies in its fresh interpretations of standard Islamic teachings on human salvation. Al-Samʿānī pays little attention to the divine names themselves; instead, he uses each name as a starting point for a series of meditations on the relationship between human beings and God. The extraordinary emphasis on love prefigures the teachings of Rūmī and reflects the same spiritual ambience as Maybudī's Ḳurʾān commentary *Kashf al-asrār wa-ʿuddat al-abrār* (begun in 520/1126).

AL-**SAMʿĀNĪ**, Abū Saʿd (incorrectly Saʿīd) ʿAbd al-Karīm b. Abī Bakr Muḥammad b. Abi 'l-Muẓaffar (al-)Manṣūr al-Tamīmī al-Marwazī al-Shafiʿī, Tādj al-Islām (al-Dīn) Ḳiwām al-Dīn, also known as Ibn al-Samʿānī (Samʿān/Simʿān, in the long, incomplete genealogy, being a branch of the tribe of Tamīm), important Arab biographer.

Born in Marw on Monday, 21 Shaʿbān 506/10 February 1113, he died there on Monday, 1 Rabīʿ I 562/26 December 1166. He was born into a learned family (for his father [466-510/1074-1116] see Ziriklī, vii, 112, and for his grandfather [426-89/1036-96] *ibid.*, vii, 303-4). His father, an authority in the fields of Shāfiʿī law (al-Samʿānī's grandfather having switched from the Ḥanafiyya to the Shāfiʿiyya), Traditions, and homiletics, took him already as a two-year-old with him to the sessions on *ḥadīth*. A little later, in 509/1115, he travelled with him and his elder brother (*Taḥbīr*, i, 503-4) to Naysābūr, for additional instruction by the traditionists of that city. Returning to Marw and having a premonition of his imminent death, he entrusted his son to his two learned brothers. Under their guidance al-Samʿānī received a comprehensive basic education in Ḳurʾān, *fiḳh*, *ʿarabiyya*, and *adab*. Not quite 20 years old, he embarked on the *ṭalab al-ʿilm*, first, still under the tutelage of his two uncles, once more to Naysābūr for a special training in the *Ṣaḥīḥ* of Muslim [*q.v.*], then also to Ṭūs and other places. From his home town he visited the centres of learning of his time on three long journeys: 529-38/1135-43, 540-6/1145-51, and—together with his son ʿAbd al-Raḥīm—549-52/1154-7. He went via Iṣfahān and Hamadān to Baghdād and its environs, to Mecca and Medina, to Damascus and Jerusalem (which at the time of his visit in 536/1141 had been in the hands of the Crusaders for 42 years), and, in the north and the east, to Khʷārazm, Samarḳand, Bukhārā, Balkh and Harāt. A number of these places with their important schools and academies he visited more than once (he also went on the Pilgrimage twice), even if that involved detours, constantly driven, as he was, by his desire for *ṭalab al-ʿilm*.

This preoccupation of his informed not only his teaching in Marw and elsewhere but also his rich literary production which centred on the Prophetic Traditions and their transmission. With admirable orderliness and fastidiousness, he constantly strove to enlarge and correct his collected materials. Many of his more than 50 works most likely became casualties of the Mongol invasion. Marw was conquered in 618/1221. As late as 615/1218 Yāḳūt [*q.v.*] had participated in a *madjlis* of al-Samʿānī's son ʿAbd al-Raḥīm (537-617/1143-1220; al-Ṣafadī, xviii, 331) (see *Muʿdjam*, i, 6); he had worked in the local libraries, *inter alia* those of the Samʿānīs (*ibid.*, iv, 509) and had excerpted some of the great scholar's books, thus e.g. his biographical *magnum opus* on the Traditionists, namely:

(1) *al-Ansāb*. Arranged alphabetically according to *nisba* [*q.v.*], it contains 5,348 entries; each starts with an exact indication of the pronunciation of the *nisba*, gives the place, the person, or the group etc. to which the relative adjective refers, followed by the full name of the scholar in question with information on teachers and disciples (*isnād*), places and times of their ac-

tivities, and the date of death; as a rule, other personalities (including women) having the same *nisba* will be joined to the entry, so that the number of the scholars mentioned exceeds by twice or three times the amount of the number of entries, not counting the many additional persons that occur in a *vita* as teachers, colleagues, or disciples of the biographers. In not a few places al-Samʿānī indicates the literature used by him; the small *Kitāb al-Ansāb* by Ibn al-Ḳaysarānī [*q.v.*], quoted by Yāḳūt, was likely also known to him. He finished the clean copy a few years before his death, but constantly added supplements. It was edited in facsimile by D.S. Margoliouth, Leiden-London 1912 (containing an introduction with a list of his works); edited by al-Muʿallimī *et alii*, 13 vols., Ḥaydarābād/Deccan 1382-1402/1952-82 (with a detailed introd.); since 1976 reprints and new editions (in part) in Damascus and Beirut complete in 5 vols., ed. ʿA.ʿU. al-Bārūdī, Beirut 1988. Abridgements with supplements: the best-known is that of the historian ʿIzz al-Dīn Ibn al-Athīr [*q.v.*], *al-Lubāb fī tahdhīb al-Ansāb*, 3 vols., Cairo 1357-69/1938-49 (repr. Beirut 1980); this was abbreviated and added to by al-Suyūṭī [*q.v.*], *Lubb al-Lubāb fī taḥrīr al-Ansāb*, ed. and annot. P.J. Veth, 2 vols., Leiden 1841-51 (repr. of vol. i, Baghdād [1963]).

(2) *al-Taḥbīr fi 'l-Muʿdjam al-kabīr*, a work of more than 1,200 biographies of contemporary scholars, men and women, whom al-Samʿānī had either encountered during his *ṭalab al-ḥadīth* at home and abroad, especially in Naysābūr and Iṣfahān, or with whom he had corresponded, or, finally, from whom he had received an *idjāza* [*q.v.*] through intermediaries. The biographies are brief but informative; they reflect diary entries. Al-Samʿānī produced the clean copy in the year before his death, which may actually have overtaken him while doing this work; for the beginning and the end are missing in the ancient *unicum* Ẓāhiriyya, *ḥadīth* 529 (al-ʿIshsh, 181). Ed. Munīra Nādjī Sālim, 2 vols., Baghdād 1395/1975; cf. eadem, in *al-Mawrid*, ii/4 (1973), 245-52 (reply to Muṭāʿ al-Ṭarābīshī, in *MMLʿA*, xlviii [1393/1973], 371-80); iii/3 (1974), 307-16; v/4 (1976), 29-58; eadem, *Tādj al-Islām Abū Saʿd al-Samʿānī wa-kitābuhu 'l-Taḥbīr fi 'l-Muʿdjam al-kabīr*, Cairo (1976); for the question whether this work is the original of the *Taḥbīr* or rather a *Tahdhīb al-Taḥbīr*, see lastly Muṭāʿ al-Ṭarābīshī, in *MMLʿA*, lv (1400/1980), 149-63.

(3) *Muntakhab Muʿdjam al-shuyūkh*, another biographical dictionary, covering al-Samʿānī's teachers; unique copy of 647/1250 in Topkapı Sarayı, Ahmet III, 2953 (Karatay 6270; cf. Yāḳūt, *Irshād*, i, 253, 6); an edition has for a long time been announced by Munīra Nādjī Sālim and Nādjī Maʿrūf. The work is possibly an excerpt from the unabridged version of no. 2.

(4) *Dhayl* to *Taʾrīkh Baghdād* of al-Khaṭīb al-Baghdādī [*q.v.*], known from quotations; excerpt: Leiden 1023 (de Goeje-Juynboll); for two other (?) excerpts see Munīra, *al-Taḥbīr*, i, 31; cf. Ibn al-Ṣābūnī, *Takmilat Ikmāl al-Ikmāl*, Baghdād 1377/1957, 241-2; M.ʿA. Mudarris, *Rayḥānat al-adab*[3], Tabrīz 1346/1967, i, 427. — As far as is presently known, the following biographical works have not been preserved, even in excerpts: *Wafayāt al-mutaʾakhkhirīn min al-ruwāt*, *Muʿdjam al-shuyūkh* (a list of the teachers of his son), his early work, *Taʾrīkh Marw*, which Yāḳūt (*Muʿdjam*, i, 751, 15) had read in the autograph, and his *Muʿdjam al-buldān*; the last two are likely to have contained biographies of scholars, as well.

(5) *Adab al-imlāʾ wa 'l-istimlāʾ*, an important handbook on dictation as a method of transmission and instruction; the unique ms., Feyzullah 1557, was copied at Marw in 546/1152 (!). Ed. by Max Weisweiler, *Die Methode des Diktatkollegs*, Leiden 1952, with an extensive German summary of the contents; cf. idem, in *Oriens*, iv (1951), 27-57; A. Spitaler, in *OLZ*, xlix (1954), 529-36; new edition Beirut 1404/1984. Al-Samʿānī mentions at the end that he has treated the topic exhaustively in his book *Ṭirāz al-dhahab fī adab al-ṭalab*. — On a ms. in Medina of his (6) *Adab al-ḳāḍī*, see O. Spies, in *ZDMG*, xc (1936), 115, on two additional ones in Cairo, Azhar, see Munīra, *al-Taḥbīr*, i, 31. — On a Cairene ms. of his (7) *Faḍāʾil al-Shaʾm*, see Brockelmann, S I, 565 no. 4 (no. 3, *al-Isfār ʿan ḥukm al-asfār* [Mawṣil 34, 53,4] should be deleted because of faulty ascription [Mawṣil[2], v, 330]; on no. 7 "Gebete des Propheten", see E. Kohlberg, *A medieval Muslim scholar at work, Ibn Ṭāwūs and his library*, Leiden 1992, 100, no. 7: *al-Adʿiya al-marwiyya min* (or *ʿan*) *al-ḥaḍra al-nabawiyya*, and 157, no. 133: *Faḍāʾil al-ṣaḥāba*).

(R. Sellheim)

SĀMĀNIDS, a Persian dynasty which ruled in Transoxania and then in Khurāsān also, at first as subordinate governors of the Ṭāhirids [*q.v.*] and then later autonomous, virtually independent rulers (204-395/819-1005).

Genealogical table of the Sāmānids

1. History, literary life and economic activity.

The early history of the Sāmānid family is obscure. They may have stemmed either from Soghdia or, perhaps more likely, from Ṭukhāristān south of the Oxus, probably from the petty landowners of the Balkh area. It was not possible to connect the Sāmānids with a noble Arab tribe, as the almost certainly originally Persian Ṭāhirids endeavoured to do, but the tradition later grew up of an aristocratic origin for the Sāmānids through descent from the Sāsānid warrior hero Bahrām Čūbīn [see BAHRĀM]; al-Bīrūnī, *al-Āthār al-bāḳiya*, ed. Sachau, 39, states that there was "universal agreement" over this claim (see C.E. Bosworth, *The heritage of rulership in early Islamic Iran and the search for dynastic connections with the past*, in *Iran, JBIPS*, xiv [1976], 58-9). All that we really know is that the *dihḳān* Sāmān-khudā apparently accepted Islam at the hands of the Umayyad governor of Khurāsān Asad b. ʿAbd Allāh al-Ḳasrī (i.e. at some point during 105-9/723-7 or 117-20/735-8), therefore naming his son after the Arab governor (see Bosworth, *Asad b. Sāmānkodā*, in *EIr*).

However, nothing is heard of the family for several decades, until, at the ʿAbbāsid caliph al-Maʾmūn's behest, his governor in Khurāsān, Ghassān b. ʿAbbād, in *ca.* 204/819 rewarded the four sons of Asad b. Sāmān-khudā for their support to the ʿAbbāsids during the rebellion in Transoxania of Rāfiʿ b. al-Layth b. Sayyār [*q.v.*]. Nūḥ was given the governorship of Samarḳand; Aḥmad, Farghāna; Yaḥyā, Shāsh; and Ilyās, Harāt. This last branch of the Sāmānids south of the Oxus did not prosper, and Ibrāhīm b. Ilyās was in 253/867 defeated and captured by the Ṣaffārid invader of Bādhghīs, Yaʿḳūb b. al-Layth [see ṢAFFĀRIDS]. The ones in Transoxania, on the other hand, had a glorious future ahead of them. After Nūḥ died in 227/841-2, the governor of Khurāsān ʿAbd Allāh b. Ṭāhir [*q.v.*] appointed the remaining two brothers in Transoxania, Yaḥyā and Aḥmad, over Samarḳand and Soghdia. Very soon the line of Aḥmad (I) replaced that of Yaḥyā, and with the Ṣaffārid dispossession of the Ṭāhirids from Nīshāpūr in 259/873 and the lapse of Khurāsān into something like anarchy for the next two decades, Naṣr (I) b. Aḥmad b. Sāmān-khudā found himself in effect autonomous ruler in Transoxania, with his capital at Samarḳand. The caliph al-Muʿtamid formally invested him as governor of Transoxania in 261/875, and from the 250s onwards Naṣr began to mint dirhams of a mixed ʿAbbāsid-Sāmānid type, with the regular minting of dirhams and then of dīnārs beginning *ca.* 279/892 with the formal accession of Ismāʿīl b. Aḥmad; their father Aḥmad (I) had already issued his own copper *fulūs* at Samarḳand from 244/858 onwards (see G.C. Miles, in *Camb. hist. of Iran*, iv, 374).

However, fratricidal strife between Naṣr and Ismāʿīl, whom Naṣr had sent to subdue Bukhārā, ended in the military triumph of Ismāʿīl, although he left Naṣr as *de jure* ruler in Samarḳand till the latter's death there in 279/892. Ismāʿīl then assumed sole power, ruling over Transoxania and Farghāna from Bukhārā, whither the Sāmānid capital was now permanently transferred.

Abū Ibrāhīm Ismāʿīl (I) (279-95/892-907 [*q.v.*]) may be regarded as the real founder of the Sāmānid amirate, his power sealed by his victory over the Ṣaffārid ʿAmr b. al-Layth [*q.v.*] in 287/900, after which the caliph al-Muʿtaḍid appointed him governor of both Transoxania and Khurāsān. This was in practice the concession of independent rule there, given the distance of the Sāmānid lands from Baghdād and the shrinkage of the direct sphere of ʿAbbāsid political authority to ʿIrāḳ, Syria and western Persia, although the Sāmānids continued till the end to pay formal respect to the caliphs, placing them in the *khuṭba* of their territories and their names on their coins, and employing for themselves no higher title than that of *amīr*. One role which Ismāʿīl inherited as ruler of Transoxania was the defence of its northern frontiers against pressure from the nomads of Inner Asia, and in 280/893 he led an expedition into the steppes against the Ḳarluḳ [*q.v.*] Turks, capturing Ṭalas and bringing back a great booty of slaves and beasts.

Sāmānid suzerainty was asserted over various local rulers in the Syr Darya valley and on both sides of the upper Oxus, such as the princes of Us̲h̲rūsana [*q.v.*], the Abū Dāwūdids or Bānid̲j̲ūrids [*q.v.* in Suppl.] of Ṭuk̲h̲āristān and K̲h̲uttal and the Muḥtād̲j̲ids [*q.v.*] of Čag̲h̲āniyān, and over the ancient kingdom of K̲h̲ʷārazm [*q.v.*]. In the west, he extended his authority over the Zaydī Imāms of the Caspian region, and in general, achieved a reputation as a capable and just ruler.

Ismāʿīl's son Abū Naṣr Aḥmad (II) (295-301/907-14) attempted to recover the Caspian provinces which had slipped from Sāmānid control, and sent two expeditions into Sīstān (298/911 and 299-300/912-13), where Ṣaffārid authority had fallen into disarray [see ṢAFFĀRIDS]. But he was murdered at Farabr by his Turkish slaves in D̲j̲umādā II 301/January 914, allegedly because of his excessive favour at court to the *ʿulamāʾ* and other members of the religious classes, thus earning for himself the posthumous title of *al-amīr al-s̲h̲ahīd* "the martyred prince". The practice of awarding posthumous *laḳabs* had already begun with Aḥmad's father Ismāʿīl, who became known as *al-amīr al-māḍī* or *al-amīr al-ʿādil* "the late/just prince", and some of the subsequent *amīrs* further assumed regnal titles, such as Nūḥ (I) b. Naṣr's one of *al-malik al-muʾayyad*, appearing on his coins, and Nūḥ (II) b. Manṣūr's *al-malik al-manṣūr*, in addition to the titles given to them after their deaths (see Bosworth, *The titulature of the early Ghaznavids*, in *Oriens*, xv [1962], 214-15).

His eight-year old son Naṣr (II) [*q.v.*] succeeded for a reign of some 30 years (301-31/914-43). He faced prolonged internal opposition from his ambitious uncle and brothers, who at various times controlled Samarḳand and parts of K̲h̲urāsān and who stirred up in the cities popular elements which included the *ʿayyārs* and *g̲h̲āzīs*. Sāmānid armies penetrated as far westwards as Rayy in northern Persia, occupied in 314/926, when al-Muḳtadir formally granted its governorship to Naṣr. Sāmānid coins were issued from there till 920/932 and at various times thereafter (see Miles, *The numismatic history of Rayy*, New York 1938, 147 ff.), although control here was disputed with local Daylamī commanders and then with the Būyid Rukn al-Dawla [*q.v.*], who secured almost permanent control of the city after Naṣr's death. The later part of Naṣr's reign was noteworthy for the appearance in Transoxania of an extensive Ismāʿīlī S̲h̲īʿī *daʿwa*, with converts made up to the highest level at court before an orthodox Sunnī reaction and purge of these heretics set in; this episode was an exception to the normally firm upholding of Sunnī orthodoxy by the *amīrs* (cf. Barthold, *Turkestan*³, 242-4).

Naṣr's reign was in many ways the apogee of Sāmānid power and glory, aided to a significant extent by the services to the *amīrs* of capable viziers like Abū ʿAbd Allāh al-D̲j̲ayhānī and his son Abū ʿAlī Muḥammad [see AL-D̲J̲AYHĀNĪ in Suppl.] and Abu 'l-Faḍl Muḥammad al-Balʿamī [*q.v.*], who were celebrated as much for their own learning and patronage of scholars as for their statesmanship. Under these and other officials, the Sāmānid administration in Buk̲h̲ārā reached a high level of specialisation and sophistication as the instrument of the *amīrs*' centralising policies. As with the administration of other provincial dynasties, the model was that of the caliphs in Bag̲h̲dād. The local historian of Buk̲h̲āra, Nars̲h̲ak̲h̲ī, describes ten *dīwāns*, beginning with those of the *wazīr*, the treasurer and the *ʿamīd al-mulk* or head of the chancery (see for these, Barthold, *op. cit.*, 229-32), and many of the bureaucratic techniques of these departments can be pieced together from the information given by the Sāmānid official Abū ʿAbd Allāh al-K̲h̲ʷārazmī [*q.v.*] in his encyclopaedia of the sciences, the *Mafātīḥ al-ʿulūm*, dedicated to the vizier Abu 'l-Ḥasan ʿUbayd Allāh al-ʿUtbī (see Bosworth, *Abū ʿAbdallāh al-Khwārazmī on the technical terms of the secretary's art*, in *JESHO*, xii [1969], 113-64). It was this efficient administrative system which brought in rich amounts of taxation from the agricultural oases of Soghdia, Farg̲h̲āna and K̲h̲urāsān, together with revenues from the slave traffic between Inner Asia and the Islamic lands further west (the *amīrs* levied customs duties at the Transoxanian frontier towns on imported Turkish slaves and at the Oxus crossings for their transit across the Sāmānid dominions), so that the 4th/10th century geographers and travellers like Ibn Ḥawḳal and al-Muḳaddasī could praise the Sāmānids for their mild rule and moderate taxation and could extol the cheapness of provisions and pleasantness of life in their lands.

The security of the realm rested, of course, on the powerful army which the Sāmānids maintained under the command of the Chief *Ḥād̲j̲ib*. The first troops of the Sāmānids must have been recruited from the free Iranians of Transoxania, long trained in the martial arts by their position on the northeastern frontiers of Islam facing the pagan steppes; but from at least the time of Ismāʿīl b. Aḥmad onwards, a Turkish slave guard around the *amīrs* comes into prominence, formed from Turks brought in from Inner Asia (see Barthold, *op. cit.*, 227-8; Bosworth, *An alleged embassy from the Emperor of China to the Amir Naṣr b. Aḥmad: a contribution to Sāmānid military history*, in M. Minovi and I. Afshar (eds.), *Yâd-nâme-ye îrânî-ye Minorsky*, Tehran 1969, 1-13; and G̲H̲ULĀM. ii. Persia). This slave guard early made itself a force in the internal affairs of the state, with its own aims and interests. As noted above, Aḥmad (II) b. Ismāʿīl was killed by his *g̲h̲ulāms*, and from the mid-4th/10th century onwards, the influence of the generals, and especially of the holders of the coveted post of Commander-in-Chief in K̲h̲urāsān, frequently resulted in the making and unmaking of Sāmānid princes, as the personal authority of the *amīrs* waned; symptomatic of the arrogance and independence of the Turkish generals was the fact that in 381/991 Abū ʿAlī Sīmd̲j̲ūrī appropriated all the state revenues in K̲h̲urāsān and assumed for himself the grandiose titles of *amīr al-umarāʾ, al-muʾayyad min al-samāʾ* "the supreme commander with heavenly backing" (see Bosworth, *The titulature of the early Ghaznavids*, 215).

After Naṣr's death, his son and successor Nūḥ (I) (331-43/943-54 [*q.v.*]) had to devote attention to the ambitions in K̲h̲urāsān of the powerful governor there, the Iranian noble Abū ʿAlī Čag̲h̲ānī, endeavouring to replace him by the Turkish commander Ibrāhīm b. Sīmd̲j̲ūr and to maintain, in alliance with the Ziyārids [*q.v.*] of Gurgān and Ṭabaristān, the position in northern Persia against the Sāmānids' rivals, the Būyids. A disturbing portent for the remaining years of Sāmānid rule was a financial crisis in the state, caused by the cost of the wars in northern Persia and the expenses of the army in general. During the next reign, that of Abu 'l-Fawāris ʿAbd al-Malik (I) b. Nūḥ (343-50/954-61), the ascendancy of the Turkish slave commander Alptigin [*q.v.*] was notable, although when ʿAbd al-Malik died, he was unable to place on the throne his own candidate, the dead *amīr*'s young son Naṣr—who would have been a puppet in the hands of the military—and was forced to flee to G̲h̲azna, on the far eastern fringes of

the Sāmānid lands. ʿAbd al-Malik's brother Manṣūr (I) b. Nūḥ now ascended the throne (350-65/961-76 [*q.v.*]). His reign was in general peaceful, although fighting continued in northern Persia, on the whole favourably for the Sāmānids, and after Alptigin's death at G̲h̲azna (352/963), his Turkish successors in eastern Afg̲h̲ānistān once more acknowledged the *amīr*'s overlordship.

The last twenty years or so of Sāmānid rule were ones of increased impotence of the *amīrs* in face of the ambitions of Turkish commanders like the Sīmd̲j̲ūrīs, Tās̲h̲, Begtuzun and Fāʾiḳ K̲h̲āṣṣa, and deepening crisis in the state as its tax base shrank. Manṣūr (I)'s vizier, Abu 'l-Ḥusayn ʿAbd Allāh al-ʿUtbī, appointed in 367/977, did what he could to halt the decline and to stem the successes of the Būyids, who were poised to invade K̲h̲urāsān when the death of ʿAḍud al-Dawla [*q.v.*] fortunately supervened in 372/983; but al-ʿUtbī was murdered in 371/982 through the machinations of Abu 'l-Ḥasan Sīmd̲j̲ūrī and Fāʾiḳ. Nūḥ (II) b. Manṣūr (365-87/976-97 [*q.v.*]) soon no longer had any authority in K̲h̲urāsān and was by the end of his reign reduced to controlling Soghdia only. He was forced to call in the assistance of Sebüktigin from G̲h̲azna against Fāʾiḳ and Abū ʿAlī Sīmd̲j̲ūrī after the latter had encouraged an invasion of the remaining Sāmānid lands from the north in 382/992 by the Turkish Ḳarak̲h̲ānids under Bug̲h̲ra K̲h̲ān Hārūn [see ILEK K̲H̲ĀNS]. Buk̲h̲ārā and Samarḳand were temporarily occupied by the Turks, but although these were recovered by Nūḥ, the position got steadily worse.

A fresh Ḳarak̲h̲ānid invasion took place in 386/996, and at this point, Sebüktigin and his son Maḥmūd [*q.v.*], who now controlled K̲h̲urāsān, came to an agreement with the Ḳarak̲h̲ānid Ilig Naṣr b. ʿAlī whereby Sebüktigin retained K̲h̲urāsān and the Ilig occupied the whole valley of the Syr Darya. Nūḥ died the next year, and the reign of the new *amīr*, his son Abu 'l-Ḥārit̲h̲ Manṣūr (II) [*q.v.*] lasted only two years (387-9/997-9) before he was deposed by Fāʾiḳ and Begtuzun and replaced by his brother Abu 'l-Fawāris ʿAbd al-Malik (II). Maḥmūd b. Sebüktigin by 398/999 secured for himself all the former Sāmānid lands south of the Oxus, and in this year the Ḳarak̲h̲ānids under the Ilig Naṣr definitively took over Buk̲h̲ārā without any serious resistance, thereby ending the dynasty's vestigial rule in Soghdia. A further brother of Manṣūr (II) and ʿAbd al-Malik, Abū Ibrāhīm Ismāʿīl (II) b. Nūḥ al-Muntaṣir [*q.v.*], attempted a revanche in the following years, but after some initial successes against the Ḳarak̲h̲ānids was killed in 395/1005, the last hope of the Sāmānids.

The downfall of the Sāmānids meant that the north-eastern part of the Iranian world, first the Trans-Oxus provinces under the Ḳarak̲h̲ānids and then, four decades later, the steppelands between the northern rim of the mountains of K̲h̲urāsān and the middle Oxus under the Sald̲j̲ūḳs, passed for the first time into Turkish control. It was after this that the gradual process of the almost complete (save for the modern Tadjikistan) Turkicisation of these regions accelerated, a process which must however have begun already in Sāmānid times with the extensive influx of Turkish slave soldiers into the state apparatus and the peaceful settlement of sedentarised and Islamised Turks along the northern fringes of Transoxania. On the documentary evidence, the old Soghdian language disappeared towards the end of the Sāmānid period under pressure from New Persian, which was probably the day-to-day language of much of the Sāmānid bureaucracy's routine business (although it may be noted that the neo-Soghdian language Yag̲h̲nōbī has survived to this day in the valley of the Yag̲h̲nōb, an affluent of the upper Zarafs̲h̲ān; see ĪRĀN. Languages, in Suppl.), and Turkish. There was, however, some counter-pressure against this trend from the *ʿulamāʾ* and religious classes and from the higher bureaucracy, who were trained in the classical Arabic sciences, in favour of the use of Arabic as the language both of scholarship and of diplomacy. According to the 8th/14th century historian Ḥamd Allāh Mustawfī, the *amīr* Aḥmad (II) b. Ismāʿīl changed the language of official business from Persian to Arabic, but the measure was unpopular and had to be rescinded. Thereafter, the two languages doubtless existed side-by-side in administrative usage. Of course, Arabic retained its primacy in the spheres of religion, learning and science. The achievements of the Sāmānid period in Arabic scholarship were very considerable, with Buk̲h̲ārā and Samarḳand as centres for literary activity under the patronage of the *amīrs* themselves, as the plethora of poets and prose stylists appearing in the fourth *ḳism* of the K̲h̲urāsānian author Abū Manṣūr ʿAbd al-Malik al-T̲h̲aʿālibī's [*q.v.*] literary anthology, the *Yatīmat al-dahr*, that on the Arabic littérateurs of K̲h̲urāsān, Transoxania and K̲h̲ʷārazm, shows (see V. Danner, in *Camb. hist. Iran*, iv, 589-93).

But the 4th/10th century is notable for the florescence under the Sāmānids of a lively New Persian literature, one whose roots lay in the preceding century and whose poetic production came to a remarkable stage of maturity and expressiveness with such authors as Rūdakī, Daḳīḳī and Abu 'l-Ḥasan Kisāʾī of Marw [*q.vv.*]. This development of New Persian literature both in the Sāmānid dominions and at the other petty courts of the East does not necessarily imply promotion of this by the *amīrs* or princes as a conscious, proto-nationalist Persian policy (although the Sāmānid amīrs were undoubtedly interested in this, see below; one of the last rulers, Manṣūr (II) b. Nūḥ, is included by ʿAwfī amongst the rulers who composed Persian poetry, examples of which he gives, see his *Lubāb al-albāb*, ed. Saʿīd Nafīsī, Tehran 1335/1956, 23-4) but reflects rather the distance of K̲h̲urāsān, Transoxania and the upper Oxus principalities from the focus of Arab-Islamic life in the central lands of the caliphate, and also the vigorousness of Persian culture in the East, always strong at the local level. Certainly, it was the *dihḳān* class there which nurtured and cherished the old Persian epic traditions; this is especially clear in the case of the lord of Ṭūs, Abū Manṣūr Muḥammad b. ʿAbd al-Razzāḳ, who in 346/957 commissioned the translation of Pahlavi texts of the national epic into New Persian, and these were utilised by Firdawsī [*q.v.*] for his *S̲h̲āh-nāma* and also, it seems, for the earlier, unfinished verse rendering (known from Firdawsī's incorporation of it within his own work) by Daḳīḳī (see V. Minorsky, *The older preface to the* Shāh-nāma, in *Studi in onore di Giorgio Levi della Vida*, Rome 1956, ii, 159-79; G. Lazard, *La langue des plus anciens monuments de la prose persane*, Paris 1963, 36-7). This New Persian literature of the Sāmānid period involved not only poetry but also prose, including prose versions of the national epic such as that of Abu 'l-Muʾayyad Balk̲h̲ī, known from fragments (written in the reign of Nūḥ (II) b. Manṣūr); Persian translations and epitomes of al-Ṭabarī's *History* (made for Manṣūr (I) b. Nūḥ by his vizier Abū ʿAlī Muḥammad Balʿamī [*q.v.*]) and of his *Ḳurʾān commentary* (also done in this reign by a group of scholars); etc. (see Lazard, *op. cit.*, 38 ff.; idem, *Les premiers poètes persans (IXᵉ-Xᵉ siècles)*, Tehran-

Paris 1342/1964; idem, in *Camb. hist. Iran*, iv, 606 ff.; J. Rypka *et alii*, *History of Iranian literature*, Dordrecht 1968, 139-71).

The economic strength of the Sāmānid state lay, as noted above, in the flourishing agriculture of the populous river valleys and oases of the region, and also in the craft industries of the towns and the commercial connections of the Sāmānid lands. These last lay at the southern end of trade routes coming from the Inner Asian steppes and, ultimately, from China, so that the Sāmānids could mediate the products of these distant lands to Baghdād and other great centres of consumption in the central lands of the caliphate. Until the later 4th/10th century, when internal strife amongst the rival Turkish commanders and their strife with the *amīrs* set in, disorders completed by the Ḳarakhānid invasions, the Sāmānid lands generally enjoyed internal peace and freedom from external attack. Local industries and crafts could flourish, such as the *ṭirāz* [*q.v.*] workshops of Bukhārā, whose embroidered textiles were used, so Narshakhī says, for payment of annual tribute to the caliphs (? in the earlier period of Ṭāhirid suzerainty over Transoxania), the famous paper production in Samarḳand, started by captured Chinese artisans [see KĀGHAD], arms and weapons from the metal industry of Farghāna, etc. Various of the imports from the steppe and forest lands to the north, i.e. western Siberia and Russia, including furs, hides, honey, wax, cattle on the hoof, etc., exchanged for the textiles, leatherwork, grain and fruits of Transoxania, are listed by al-Muḳaddasī (tr. in Barthold, *Turkestan*, 235-6). Above all, Transoxania benefited from the trade in Turkish and Ṣaḳlabī [see ṢAḲĀLIBA] slaves, brought to the slave markets in frontier towns like Isfīdjāb and Shāsh or captured in raids (see *ibid.*, 234-40).

As a result of this buoyant economic and commercial atmosphere, the revenues of the Sāmānid lands amounted to 45 million dirhams (within this, so Narshakhī records, the land tax of Bukhārā and Karmīna yielded 1,168,566 dirhams). The *amīrs* themselves took over extensive estates from the Bukhār-khudās as personal domains (*khāṣṣa*), and groups like the *sayyids* of the ʿAlids and other *ʿulamāʾ* held much land in *waḳf*. The greatest item of expenditure was on the salaries of the army and the bureaucracy, which were, according to Niẓām al-Mulk (speaking of "former kings", i.e. the Sāmānids and Ghaznawids), paid in cash. However, there are signs of the beginning of the practice of granting out lands as assignments [see IḲṬĀʿ], already known in ʿIrāḳ and western Persia, so that revenues were subtracted from the central treasury; the Čaghānīs held extensive estates on the upper Oxus, and the Sīmdjūrīs in Ḳuhistān (cf. Barthold, *op. cit.*, 238-9). It seems that the old Persian *dihḳān* class began to decline in both Khurāsān and Transoxania during the Sāmānid period, parallel to increased centralisation in the state and a movement of population from the countryside to the towns; the factors at work here were doubtless complex, but it is true that we hear little of the *dihḳāns* as a landowning class in the ensuing Ḳarakhānid and Saldjūḳ periods, and the actual word *dihḳān* [*q.v.*] begins its semantic decline into the modern Persian meaning of "peasant" (cf. Frye, in *Camb. hist. of Iran*, iv, 152-3).

Consideration of the Sāmānid financial and economic situation is also bound up with that of their coinage. The *amīrs* were fortunate to control some of the best silver-producing veins in the eastern Islamic world, sc. in Badakhshān and Farghāna, and the sheer volume of coinage minted, and especially that in silver, is impressive. G.C. Miles enumerated no fewer than 47 mint places known to have issued coins in the name of the Sāmānids, not only—as one would expect—in Transoxania and Khurāsān—but as far afield as Sīstān, Fārs, Djibāl and the Caspian region, as the result of military campaigns there or of alliances with local potentates (see *Camb. hist. Iran*, iv, 374). A vast quantity of this coinage found its way outside the Islamic world into Siberia, northern Russia, Scandinavia and the Baltic shores, and even as far as the British Isles and Iceland, apparently as a result of trading operations which seem mysteriously to have been largely discontinued in the opening years of the 5th/11th century. The whole topic of this apparent one-way drain of Sāmānid silver northwards and westwards has been much discussed by both economic historians and numismatists, but remains substantially unexplained. Amongst the extensive literature here, see e.g. J. Duplessy, *La circulation des monnaies arabes en Europe occidentale du VIII^e au XIII^e siècle*, in *Revue Numismatique*, sér. 5, vol. xviii (1956), 101-63; T. Lewicki, *Le commerce des Sāmānides avec l'Europe orientale et centrale à la lumière des trésors de monnaies coufiques*, in D.K. Kouymjian (ed.), *Near Eastern numismatics, iconography, epigraphy and history. Studies in honor of George C. Miles*, Beirut 1974, 219-33; A.E. Lieber, *Did a 'silver crisis' in Central Asia affect the flow of Islamic coins into Scandinavia and eastern Europe?*, in *Commentationes de nummis saeculorum IX-XI in Suecia repertis*, N.S. 6. *Sigtuna papers*, Stockholm 1990, 207-12.

2. Art and architecture.

Although history and literature are fairly well documented, no clear picture exists of artistic achievements under the Sāmānids. The fertile oases under their rule are on the fringes of Inner Asia, a north-eastern *limes* for the Iranian world. The early caliphs wrested the eastern part of the area from Chinese suzerainty; over the centuries these lands have remained at the crossroad of trade routes and influences.

(a) *Applied arts. Ceramics.* They are the best testimony of Sāmānid craftsmanship, as in the finds of Afrāsiyāb/Samarḳand and Nīshāpūr. Dating of the material is still not clear; the later rule of the Ḳarakhānids could be responsible for some of it. The pre-Islamic red body earthenware serves as support to white, black or russet slips and their décor under the new transparent lead glaze. When no slip is used, as in Nīshāpūr, the body takes on a buff colour under the glaze. The decoration draws on five sources. First, the new but soon assimilated Arabic calligraphy painted in near black manganese. Second, the possible influence of late T'ang bichrome, copper green with iron brown or yellow, but not the earlier three-coloured

décor; there are no shapes nor designs recalling Chinese originals. Third, strong echoes of textile designs ranging from stripes, triple dots, dotted circles and peacock-eyes to roundels containing birds, gazelles and palmettes. These designs start in pre-Islamic times and are still visible on local wall paintings and caves farther east. Strapwork patterns create original geometric overall decoration. Fourth, alien religions signal their survival by using their own symbols: in Nī<u>sh</u>āpūr, a few ceramics are painted with crosses; in Samarḳand it is the fish which is used, as in Egyptian lustreware. Communities of Nestorians and Syriacs still existed, as did also Manichaeans and Buddhists, the latter manifest in the overall pattern of a lotus base inside dishes. And fifth, paintings of figures, chiefly in Nī<u>sh</u>āpūr: hunters on horseback, seated rulers and dancers, all surrounded by fantastic animals and birds. Would they also be survivors of earlier times in a society becoming more and more Islamicised?

Thus dishes up to 45 cm wide, with a small or large cavetto, are usually covered in a white slip; they recall the new manufacturing of paper; this white ground acts as an ideal support for calligraphy. Ewers, bowls, often with a double recessed base, lamps, inkwells, even toys, all are coloured with a mixture of metal oxide and fine white clay; the mixture prevents the design from running under the transparent glaze. The use of a russet/iron colour points to the red of later Iznik pottery. When colour is required to run, no fine clay is added to the oxide. As for *sgraffito*, it appears to be an original means of decoration and is used as a visual counterpoint for the colour runs, usually green, yellow and purple in a dense patterning for large dishes and bowls. Unglazed wares consist of long-necked ewers, some with filtre, jars, gourds, cooking pots, oven shapes and moulds.

Glass. In the finds of Samarḳand, bottles are either freely blown or, when a pattern is required, mould-blown to produce a lattice or twisted pattern. The ewers are not unlike their ceramic counterparts; spoons and inkpots can be added to the list of shapes. Green and turquoise are the usual shades with the occasional blue or amber bottles, bowls, bangles and beads.

Metalwork. Since most metals were available in <u>Kh</u>urāsān and Transoxiana, the important metal industry of pre-Islamic times was carried over and adapted to the taste of the new rulers, although precise dating is still hazy. Early Arab governors of <u>Kh</u>urāsān sent gifts of silver and gold vessels to the caliph in Bag<u>h</u>dād, as well as bowls and jugs of high-tin bronze. The latter, *safīdrūy*, with its appearance of silver, was a good substitute for precious metals. Cast objects of copper such as ewers, buckets and braziers, were of daily use. In archaeological finds, household objects like lamps, jugs, flat-bottom bottles, ewers, incense burners, some in the shape of a stupa, spoons and weights, were made of bronze. Bronze was also used for more personal items like rings, tweezers, mirrors and kohl sticks. Iron was used for sword, dagger and shovel blades, as well as for arrowheads.

Textiles. Already in Sāsānid times, local silk and cotton provided the yarn for goods appreciated well beyond the area. Early after the Islamic conquest, tributes of garments were sent to Bag<u>h</u>dād from <u>Kh</u>urāsān. The *ṭirāz* [*q.v.*] factories of Nī<u>sh</u>āpūr and especially Marw produced very soft cotton fabrics as well as *ibrī<u>sh</u>im* and *ḳazz* silk. The only surviving silk from this period is the remarkable compound twill known as the shroud of Saint Josse [see ḤARĪR]. Its inscription reads *ʿizz wa-iḳbāl li 'l ḳāʾid Abū Manṣūr Ba<u>kh</u>takīn aṭāla 'llāh baḳ[āʾahu]* ("Glory and prosperity to the Ḳāʾid Abū Manṣūr Ba<u>kh</u>-takīn, may God prolong his existence"). This was not to be the case, since he was put to death by ʿAbd al-Malik b. Nūḥ in 350/961.

Only through the eyes of contemporary historians can one appreciate the wealth of textiles produced in Sāmānid lands. The most popular and expensive could have been *zandanī<u>dj</u>ī* cloth exported as far as ʿIrāḳ and India. Niẓām al-Mulk noted that the Sāmānids dressed their newly-bought slaves in *zandanī<u>dj</u>ī*. Other villages near Bu<u>kh</u>ārā produced, in particular, cloaks, hats and prayer carpets. Of all the important towns with bazaars, Samarḳand was the best-known emporium of Transoxiana for its silver-coloured and red garments, brocades, *ḳazz* silk and Chinese silks. Near by, at the village of Wa<u>dh</u>ār, an expensive cloth of cotton woven on cotton, *wa<u>dh</u>ārī*, was made into a light resistant type of yellow overcoat, very popular in winter. From <u>Sh</u>ā<u>sh</u> came special capes with neck decoration, prayer carpets and cotton yarn.

Ivory. As dry climate does not lend itself to the preservation of ivory objects, only a few of these, such as chess pieces, have survived; in Samarḳand, spoons have been found with delicately carved handles.

(b) *Architecture*. The dearth of 4th/10th-century surviving monuments underlines the attitude of later Islamic rulers to the buildings of previous dynasties. Mud brick is still the basic building material in the area. Remains of impressive walls with an outward corrugated surface, visible in Marw, suggest the importance of main towns and the need to protect them, though in the capital Bu<u>kh</u>ārā, the Rīgistān, a large square, lay outside the pre-Islamic town, surrounded by ten *dīwān*s to the west of the well-fortified citadel. Stucco remains from palaces and affluent houses still have traces of painting. Large bazaars sheltered commerce and industry. Towards the end of the Sāmānid period, the town proper, unable to absorb the growing population, had become an unpleasant maze of filthy streets. Traces of early caravanserais survive along the trade routes and by the banks of the Oxus and the Jaxartes.

After the Muslim conquest, baked brick, seemingly a Mesopotamian tradition, was preferred to mud brick for mosques, tombs and important civic buildings. Yet in such buildings as the Nuh Gunbad ("nine domes") mosque in Bal<u>kh</u>, while the structural elements including the six massive columns (1.56 m in diameter) were of baked brick, the walls were still made of mud brick. The almost square structure (20 m^2), open on one side opposite the *ḳibla* wall, is entirely plastered and decorated with carved stucco. Spacious grid systems enclose palmettes, leaves, cones and buds not unlike those in Nī<u>sh</u>āpūr, Afrāsiyāb or Sayad near Du<u>sh</u>anbe, but in a more attractive manner than in the possibly contemporary mosque of Nāʾīn [*q.v.*] in Persia. In the Deggaron mosque of Hazāra near Bu<u>kh</u>ārā two series of three domes cover the building, the *ḳibla* domes being higher than the three others. Inside, the columns are less squat and the intrados of the arches broadly pleated; the domes sit on pendentives. The great mosque in <u>Kh</u>īwa echoes the other older tradition of an hypostile hall with wooden columns and carved capitals, four of which have early inscriptions. More wooden carvings have survived in the shape of a cusped-headed *miḥrāb* from Iskodar, in the Zaraf<u>sh</u>an valley, now in the Du<u>sh</u>anbe Museum, and a capital from the mosque in Obburdan, now in Ta<u>sh</u>kent.

A small number of single-domed tombs in baked brick illustrate the possible evolution of such construc-

tions: the so-called tomb of the Sāmānids in Bukhārā, a domed square with four entrances, patterned brickwork and corner arches, and the ʿArab-Ata mausoleum in Tim, dated 367/977, with only one entrance emphasised by a complex design, with brickwork and corner arches in smoother patterns. If the inscription of the Shīr Kabīr mausoleum at Mashhad-i Miṣriyān in Dihistān allows for a late 4th/10th century dating, then part of its zone of transition with its four receeding arches could be later than its carved stucco *miḥrāb* and niche. Finally, with the restored Mīr Sayyid Bahrām mausoleum at Karmīna, between Samarḳand and Bukhārā, appears an early suggestion of a *pīshṭāḳ* [*q.v.*] or raised portal; it emphasises the doorway with a design of arches and frames. By the end of the period, baked brick with its new building possibilities, has asserted itself.

(YOLANDE CROWE)

SAMANNŪD, a town of the Delta in Egypt, in the Gharbiyya province and on the western bank of the Nile (Dimyāṭ/Damietta branch), 8 km/5 miles east of the town of al-Maḥalla al-Kubrā [*q.v.*]. It is an old town, with the name in ancient Egyptian of Zab nutir, i.e. holy place. Greek documents call it Σεβεννυτος (Sebenytos), whence the Arabic name, and in Coptic it was known as Ϫⲉⲙⲛⲟⲩϯ (Djemnuti).

Samannūd had a very ancient Christian tradition. Athanasius I states that the town had a Melkite bishop in 352 and that the town's name often figures in the old martyrological literature. We know e.g. that the martyr St. Anub passed through Samannūd when coming from Atrib, where he had found the town's churches destroyed and a temple built in their place. In the 14th century, when the *Synaxarion* had already been put together, the body of Anub was at Samannūd, and there has always been a church in the town dedicated to St. Anub.

Arabic geographers like Ibn Khurradādhbih and al-Yaʿḳūbī mention the town in the 3rd/8th century, and in the 6th/12th century al-Idrīsī describes its lively commercial activity. From the Fāṭimid period, and after Badr al-Djamalī's administrative reorganisation, an independent province called al-Samannūdiyya was set up.

In modern times, an administrative district was set up in 1826 called the *ḳism* of Samannūd, with its chef-lieu in the town, and after 1867 it was styled the *markaz* of Samannūd. In 1882 this last was, however, abolished and the district and its administration transferred to al-Maḥalla al-Kubrā. In 1928 it was re-established, and then, because of struggles between political parties, it was abolished three times in less than 7 years until it was definitively re-established in 1935, with the town of Samannūd as chef-lieu of the district.

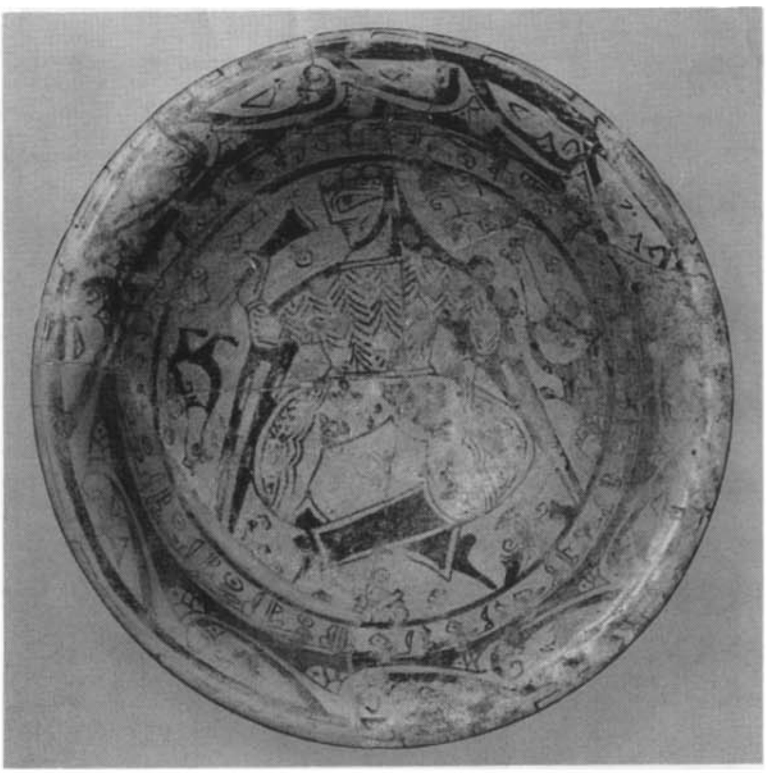
(AYMAN F. SAYYID)

SAMARITANS [see AL-SĀMIRA].



SAMARḲAND, an ancient city of Transoxania, the Arabic Māʾ warāʾ al-Nahr [*q.v.*], situated on the southern bank of the Zarafshān river or Nahr Ṣughd. In early Islamic times it was the first city of the region in extent and populousness, even when, as under the Sāmānids (3rd-4th/9th-10th centuries [*q.v.*]), Bukhārā [*q.v.*] was the administrative capital. Samarḳand's eminence arose from its position at the intersection of trade routes from India and Afghānistān via Balkh and Tirmidh [*q.vv.*] and from Persia via Marw [see MARW AL-SHĀHIDJĀN] which then led northwards and eastwards into the Turkish steppes and along the Silk Road to eastern Turkistan and China; but above all it flourished because of the great fertility of the surrounding district of Soghdia or Ṣughd [*q.v.*], the highly-irrigated basin of the Zarafshān which could support a dense agricultural population (see Barthold, *Turkestan down to the Mongol invasion*,[3] 83 ff.).

1. History.

The city—the second part of the name of which contains the Eastern Iranian word for "town", *kand*, frequent in Eastern Iranian place-names (cf.

Buddhist-Soghdian *knd-*, Christian Soghd. *kath, kanth*), while the first part has not yet been satisfactorily explained (cf. the attempts by Tomaschek, *Centralasiatische Studien*, i, *Sogdiana*, in *SB Ak. Wien*, lxxxvii [1887], 133 ff.)—is first found in the accounts of Alexander's campaigns in the east as Maracanda, Μαρακάνδα, whose site at Tepe Afrāsiyāb has yielded Hellenistic archaeological evidence (see P. Bernard, *Alexandre et l'Asie Centrale*, in *St.Ir.*, xix [1990], 29-32). Arrian (iii, 30) calls it βασίλεια τῆς Σογδιανῶν χώρας. Alexander occupied it several times during the fighting with Spitamenes and, according to Strabo (xi, ii, 4), razed it to the ground (while Arab legend makes him, as well as the Tubbaᶜ [*q.v.*] king Shamir Yurᶜish, founder of the city). Under the Diadochi—after the partition of 323 BC—as the capital of Sogdiana, it belonged to the satrapy of Bactria and was lost to the Seleucids with Bactria when Diodotos declared himself independent and the Graeco-Bactrian kingdom was founded during the reign of Antiochus II Theos; henceforth it was exposed to the attacks of the northern barbarians (cf. *PW*, xiv/2, art. *Marakanda*, cols. 1421-2). From this time up to the Muslim conquest it remained historically and economically separated from Persia, although cultural intercourse with Western lands continued. (On the settlement of Manichaeans in Samarḳand, cf. J. Marquart, *Historische Glossen zu den alttürkischen Inschriften*, in *WZKM*, xii [1898], 163; the attempts made by E. West to refer Čīn and Čīnistān in the *Bundahishn* and *Bahmanyasht* to Samarḳand are very unsatisfactory.) The only positive information is given by Chinese imperial historians and travellers (of which the former are unfortunately for the most part only available in obsolete translations). From the Han period the kingdom of K'ang-Kü is mentioned, whose chief territory, K'ang, is definitely identified in the T'ang Annals with Sa-mo-kian = Samarḳand (cf. the passages in C. Ritter, *Erdkunde*, vii,² 657 ff.). According to the Annals of the Wei, compiled in 437 AD (cf. F. Hirth, in Marquart, *Die Chronologie der alttürkischen Inschriften*, Leipzig 1898, 65-6), the Čau-wu dynasty related to the Yüe-či (Kushan) had been reigning here since before the Christian era. Hiüen-tsang visited Sa-mo-kian in 630 AD and briefly describes it (St. Julien, *Mémoires sur les contrées Occidentales*, i, Paris 1857, 18-19; S. Beal, *Si-yu-ki, Buddhist Records*, i, 1884, 32-3, with valuable bibliographical note on p. 101).

The Muslim Arabs do not appear for certain in the affairs of Samarḳand until the time of the governor of Khurāsān Ḳutayba b. Muslim [*q.v.*]; the alleged tomb at Afrāsiyāb of the *Shāh-i Zinda*, the Prophet Muḥammad's cousin Ḳutham b. al-ᶜAbbās [*q.v.*], who was supposed to have been in Samarḳand in 56/676 (cf. Barthold, *Turkestan*, 91-2), must have appeared later as part of a family cult inaugurated by the ᶜAbbāsids after they came to power in 132/750, possibly adapting a pre-Islamic cult on this site. The Iranian ruler of Samarḳand at the time of Ḳutayba was Ṭarkhūn (probably a title rather than a personal name; for this very old title amongst the Turks of Inner Asia, possibly of Chinese origin, see R.N. Frye, *Ṭarxūn-Ṭürxün and Central Asian history*, in *HJAS*, xiv [1951], 110-11; C.E. Bosworth and Sir Gerard Clauson, *Al-Xwārazmī on the peoples of Central Asia*, in *JRAS* [1975], 11-12), called *malik Ṣughd* or *malik Samarḳand* in the Arabic historical sources, and first mentioned in 85/704 in warfare with Ḳutayba at Bukhārā. In 91/710 Ḳutayba sent his brother ᶜAbd al-Raḥmān to Samarḳand in order to collect tribute, which Ṭarkhūn paid; but the anti-Arab party in the city then deposed the latter, who was either killed or committed suicide. There replaced him another Soghdian prince, Ghūrak, who ruled in Samarḳand for some 27 years until his death in 119/737 or 120/738, with an Arab garrison in his city. Gradually, the Arabs consolidated their position in Soghdia, but Ghūrak's policy towards them oscillated between conciliation and attempts to call in aid from the Chinese Emperors as nominal suzerains over Central Asia or from the Turks. In 102/721 the Türgesh appeared in Soghdia under their leader Kūr-ṣul or Köl-čur; and in 110/728 Ghūrak joined in a general rising of the Soghdians, with Turkish help, against the Arabs, so that the Arabs in Transoxania were temporarily reduced to their garrisons at Samarḳand and at Dabūsiyya. Not till the late 730s, with the strong measures of the governor Naṣr b. Sayyār [*q.v.*], was Arab authority firmly established again (see Barthold, *Turkestan*, 184-93; H.A.R. Gibb, *The Arab conquests in Central Asia*, London 1923, 36, 42-8, 55, 60-1, 65 ff., 89-90).

Although Ḳutayba had built a mosque in Samarḳand, the progress of Islamisation there, outside the Arab garrison, must have been slow. There were certainly adherents of many other faiths in the city at this time. In *ca.* 629 AD, the Chinese traveller Hiuen-tsang had found only two abandoned Buddhist monasteries there, and Buddhism had almost certainly disappeared a century or so later (Spuler, *Iran*, 218). But there was probably already a Nestorian Christian bishopric in Samarḳand during the 6th century, and in the early 8th century, it was erected into a metropolitan see; at the beginning of the 9th/15th century, Clavijo (see below) still found many Christians in Samarḳand, but the end of the community seems to have come within the reign of Ulugh Beg shortly afterwards, and nothing is thereafter heard of it (see B.R. Colless, *The Nestorian province of Samarqand*, in *Abr Nahrain*, xxiv [1986], 51-7). In the mid-4th/10th century, Ibn Ḥawḳal described a Christian community (*ᶜumr*) with monastic cells, on the hill of Shāwdhār to the south of Samarḳand, whose inhabitants included Christians from ᶜIrāḳ (Barthold, *Zur Geschichte des Christentums in Mittel-Asien bis zur mongolischen Eroberung*, Tübingen-Leipzig 1901, 22 ff., 30-1; Yule-Cordier, *Cathay and the way thither*, London 1915-16, i, 103-4, iii, 22-3; Ibn Ḥawḳal, ed. Kramers, 498, tr. Kramers-Wiet, 477-8). Not long after this time, the *Ḥudūd al-ᶜālam*, tr. 113, § 25.13, comm. 352, mentions a convent of the Manichaeans at Samarḳand (*khānagāh-i Mānawiyān*) with adherents called *nigūshāk* "auditores", doubtless the Manichaeans who had fled from ᶜIrāḳ in fear of persecution during the time of al-Muḳtadir.

In the early ᶜAbbāsid period, the Zarafshān valley was deeply affected during the caliphate of al-Mahdī (158-69/775-85) by the Neo-Mazdakite movement of the "wearers of white" led by al-Muḳannaᶜ [*q.v.*], and the governor of Samarḳand Djibrāʾīl b. Yaḥyā, helped to suppress the revolt in his area. Abū Muslim [*q.v.*] is said to have built the outer wall of the city (al-Ṭabarī, iii, 80, tr. J.A. Williams, Albany 1985, 203), and Hārūn al-Rashīd to have restored it after it had fallen into decay (al-Yaᶜḳūbī, *Buldān*, 293, tr. Wiet, 110). The rebel against the central government Rāfiᶜ b. al-Layth [*q.v.*] began his outbreak in Samarḳand in 190/806 by killing the governor there and seizing the city, holding it until he surrendered to al-Maʾmūn in 193/809 (al-Ṭabarī, iii, 707-8, tr. C.E. Bosworth, Albany 1989, 259-61). It is also from the early ᶜAbbāsid period that we have the first Islamic coins issued from Samarḳand, beginning with issues of 142-4/759-62 (E. von Zambaur, *Die Münzprägungen des Islams, zeitlich und örtlich geordnet*, i, Wiesbaden 1968, 148-9).

At the command of al-Maʾmūn, the governor of

Khurāsān Ghassān b. ʿAbbād in *ca.* 204/819 allotted to the four sons of Asad b. Sāmān-Khudā various cities of Transoxania and eastern Khurāsān as governorships, and Nūḥ received Samarḳand. On his death in 227/842, the city eventually passed under the control of his brother Aḥmad (d. 250/864), whose copper *fulūs* were struck there from 244/858 onwards. With the collapse of Ṭāhirid authority in Khurāsān under Ṣaffārid attacks, Naṣr b. Aḥmad found himself virtually independent ruler of Transoxania with his capital at Samarḳand. However, his brother and eventual vanquisher Ismāʿīl, progenitor of all the future Sāmānid *amīrs*, made Bukhārā the Sāmānid capital, although Samarḳand remained over the following centuries the commercial centre of Transoxania.

It was, for a start, one of the principal markets for Turkish slaves brought from Inner Asia, and Ibn Ḥawḳal, 494, tr. 474, states that slaves trained at Samarḳand were the best of all from Transoxania. But one of its most famous products, exported all over the Islamic world, was paper, introduced thither by the Chinese artisans captured at the battle of Ṭalas in 133/751 (al-Thaʿālibī, *Laṭāʾif al-maʿārif*, ed. al-Abyārī and al-Ṣayrafī, 218, tr. Bosworth, *The Book of Curious and Entertaining Information*, Edinburgh 1968, 140; and see KĀGHAD). It was, moreover, a centre for scholarship. The great Ḥanafī theologian al-Māturīdī (d. *ca.* 333/944 [*q.v.*]) stemmed from the Māturīd quarter of Samarḳand, his tomb in the city being still shown in the 9th/15th century, and another Ḥanafī theologian and Ḳurʾān commentator was Abu 'l-Layth al-Samarḳandī (d. towards the end of the 4th/10th century [*q.v.*]). Unfortunately, the local history written in Arabic by the famous theologian Abū Ḥafṣ ʿUmar b. Muḥammad al-Nasafī (d. 537/1142-3 [*q.v.*]), the *Kitāb al-Ḳand fī maʿrifat ʿulamāʾ Samarḳand*, which dealt with the shrines and graves of local scholars and also with some of the city's historical events, has come down to us only in an abridgement of a Persian translation (see Storey, i, 371; Storey-Bregel, ii, 1112-15; Barthold, *Turkestan*, 15-16).

It is to the heyday of the Sāmānids, the 4th/10th century, that the descriptions of Samarḳand by the geographers al-Iṣṭakhrī, Ibn Ḥawḳal, al-Muḳaddasī and the author of the *Ḥudūd al-ʿālam* refer. They show that Samarḳand had the typical tripartite formation of Iranian towns: a citadel (*kuhandiz*, arabicised *ḳuhandiz* or translated *ḳalʿa*), the town proper (*shahristān, shāristān, madīna*) and suburbs (*rabaḍ*). The three parts are here given in their order from south to north. The citadel lay south of the town on an elevated site; it contained the administrative offices (*dār al-imāra*) and the prison (*ḥabs*). The town itself, of which the houses were built of clay and wood (cf. E. Herzfeld, in *Islam*, xi, 162, and E. Diez, *Persien*, i (*Kulturen der Erde*, xx, Hagen-Darmstadt 1923), 20), was also on a hill. A deep ditch (*khandaḳ*) had been dug around it to obtain the material for the surrounding earthen wall. The whole town was supplied with running water, which was brought from the south to the central square of the town called *Raʾs al-Ṭāḳ* by an aqueduct, a lead-covered artificial channel (or system of lead pipes?), running underground. It seems to have dated from the pre-Islamic period as its supervision, as is expressly stated, was in the hands of Zoroastrians, who were exempted from the poll-tax for this duty. This aqueduct made possible the irrigation of the extensive and luxurious gardens in the town. The town had four main gates; to the east, the *Bāb al-Ṣīn*, a memorial of the ancient connection with China due to the silk trade; to the north, the *Bāb Bukhārā*; to the west, the *Bāb al-Nawbahār*, which name, as in Bukhārā and Balkh, points to a (Buddhist) monastery; and to the south, the *Bāb al-Kabīr* or *Bāb Kishsh* (*bāb* stands for the Persian *darwāza*). The lower-lying suburbs adjoin the town, stretching towards the Zarafshān and surrounded by a wall with 8 gates. In them lay the majority of the bazaars, caravanserais and warehouses, which were rare in the city itself. The government offices of the Sāmānids and the Friday mosque were in the city itself. See al-Iṣṭakhrī, 316-23; Ibn Ḥawḳal, ed. Kramers, 491-501, tr. Kramers-Wiet, 472-9; al-Muḳaddasī, 278-9; *Ḥudūd al-ʿālam, loc. cit.*; al-Thaʿālibī, *Laṭāʾif al-maʿārif*, 217-19, tr. Bosworth, 140-1; Yāḳūt, *Buldān*, ed. Beirut, iii, 246-50; al-Ḳazwīnī, *Āthār al-bilād*, 395 ff.; Le Strange, *The lands of the eastern caliphate*, 460, 463-6.

Samarḳand was, together with Bukhārā, occupied by the incoming Ḳarakhānids in 382/992, and with the defeat of the last Sāmānid, Ismāʿīl b. Nūḥ al-Muntaṣir [*q.v.*], in 394/1004, passed definitively under Turkish control. In the second quarter of the 5th/11th century it became, under ʿAlī b. Hārūn Boghra Khān, called ʿAlītigin [*q.v.*], and then under the parallel line of the descendants of the Ilig Naṣr, the eventual capital of the western khānate of the Ḳarakhānids, covering Transoxania and western Farghāna [see ILEK KHĀNS]. With such rulers as Shams al-Mulk Naṣr b. Tamghač Khān Ibrāhīm, Samarḳand became in the later 5th/11th century a splendid cultural and artistic centre. The city also became a regular mint centre for the Ḳarakhānids. But after the battle of the Ḳaṭwān Steppe in 536/1141, when the Saldjūḳ sultan Sandjar [*q.v.*] and his vassal Maḥmūd b. Muḥammad Khān were decisively defeated by the pagan Ḳara Khiṭay [*q.v.*], Samarḳand and Bukhārā became the centre of a reduced Ḳarakhānid principality under Ḳara Khiṭay overlordship. It nevertheless continued to flourish commercially, and in *ca.* 1170 the Spanish Jewish traveller Benjamin of Tudela visited Samarḳand and allegedly found there 50,000 Jews (M.N. Adler, *The itinerary of Benjamin of Tudela*, London 1907, 59. The last Ḳarakhānid in Samarḳand, ʿUthmān Khān b. Ibrāhīm, was executed by the Khwārazm-Shāh ʿAlāʾ al-Dīn Muḥammad [*q.v.*] in 608/1212, and the city occupied by the Khwārazmians. But shortly afterwards, the Mongols of Čingiz Khān [*q.v.*] reached Transoxania, and after conquering Bukhārā in 616/1220, they arrived at Samarḳand, the concentration-point for the Khwārazm-Shāh's forces, in the spring of 617/1220. The city fell after a five days' siege (Rabīʿ I 617/May 1220, or possibly Muḥarram 617/March 1220). After it had been devastated, some of the citizens were allowed by the Mongols to return after payment of a ransom of 200,000 dīnārs (Djuwaynī-Boyle, i, 115-22; Barthold, *Turkestan*, 411-14).

For the next century-and-a-half, Samarḳand was only a shadow of its former self. The Taoist hermit Ch'ang-ch'un (travelled in Western Asia 1221-4) states that there were 100,000 families in the city before the Mongol sacking, but only a quarter of these remained in *Sie-mi-se-kan* after that (E. Bretschneider, *Mediaeval researches from eastern Asiatic sources*, London 1910, i, 76-9; on the form *Sie-mi-se-kan*, cf. the Latin travellers' *Semiscant* and Clavijo's *Cimesquinte*, Yule-Cordier, *Cathay and the way thither*, iii, 39). In the mid-8th/4th century, Ibn Baṭṭūṭa found the population much reduced, and the city ruinous and without a wall (*Riḥla*, iii, 51-2, tr. Gibb, iii, 567-8).

The revival of the town's prosperity began when Tīmūr [*q.v.*] after about 771/1369 became supreme in

Transoxania and chose Samarḳand as the capital of his continually-increasing kingdom, and began to adorn in with all splendour. In 808/1405 the Spanish envoy Ruy Gonzales de Clavijo visited it in its new glory (see the Spanish-Russian edition of his itinerary by I. Sreznevskiy in the *Sbornik otd. Russk. Yaz.*, xxviii [1881], 325 ff.; Eng. tr. Le Strange, *Narrative of the Spanish embassy... 1403-1406*, London 1928). He gives Cimesquiente as the native name of the town, which he explains as *aldea gruesa* "large (lit. thick) village"; in this we have an echo of a Turkish corruption of the name of the town based on a popular etymology which connects it with *sämiz* "thick". The Bavarian soldier Johann Schiltberger seems also to have been in Samarḳand at this time (*Reisebuch*, Stuttgart 1885, 61, Eng. tr. J.B. Telfer, London 1879). Tīmūr's grandson Ulug̲h̲ Beg (d. 853/1449 [*q.v.*]) embellished the city with his palace Čihil Sutūn and built his famous astronomical observatory there; on him, see W. Barthold, *Ulugh-Beg*, in *Four studies on the history of Central Asia*, ii, Leiden 1958. A very full description of the city in Tīmūr's day, which may be justly described as classical, is given by the memoirs of Bābur (*Bābur-nāma*, ed. Ilminski, 55 ff.; ed. Beveridge, 54b ff.; French tr. Pavet de Courteille, i, 96 ff.; Eng. tr. Beveridge, 74-86; Čag̲h̲atay (in translit.) and Persian ed. and tr. W.M. Thackston, Cambridge, Mass. 1993, 90 ff.), who captured Samarḳand for the first time in 903/1497 and held it for some months. In 906/1500 it was occupied by his rival, the Özbeg S̲h̲ībānī K̲h̲ān. After his death, Bābur, in alliance with the S̲h̲ībānī Ṣafawid Ismāʿīl S̲h̲āh, succeeded in 916/1510 in once more victoriously invading Transoxania and occupying Samarḳand, but by the next year he found himself forced to withdraw completely to his Indian kingdom and leave the field to the Özbegs. Under the latter, Samarḳand was only the nominal capital and fell completely behind Buk̲h̲ārā.

During the 18th century, Samarḳand fell into severe economic decline and in the middle years of that century was virtually uninhabited. However, when the extension of Russian Imperial power into Central Asia accelerated in the later 19th century, Samarḳand was occupied by Russian troops under General K.P. Kaufmann in November 1868 and a treaty of vassalage imposed on the *amīr* of Buk̲h̲ārā, within whose territories Samarḳand had fallen. The city was now detached from Muẓaffar al-Dīn K̲h̲ān's nominally independent k̲h̲ānate of Buk̲h̲ārā and became part of the directly-ruled Russian Governorate-General of Turkestan. After 1871 a new Russian town sprang up to the west of the old city, with a station on the Trans-Caspia to Tas̲h̲kent railway. The great anti-Russian rebellion of Turkestan in 1916, when the Tsarist government attempted to conscript the non-Russian local populations for labour service, began in the Samarḳand *oblast*. Under the Soviet régime, the *oblast* became one of those making up the Turkestan Autonomous SSR in 1918, and then in 1924, part of the Uzbek SSR, of which Samarḳand was at first the capital but replaced by Tas̲h̲kent [*q.v.*] in 1930. Since 1990 it has come within the Uzbekistan Republic. The modern city (lat. 39° 40′ N., long. 66° 58′ E., altitude 710 m/2,330 feet), an important centre for the processing of foodstuffs and for industry, had in 1970 a population of 257,000 (see *BSE*², xxii, cols. 1571-7).

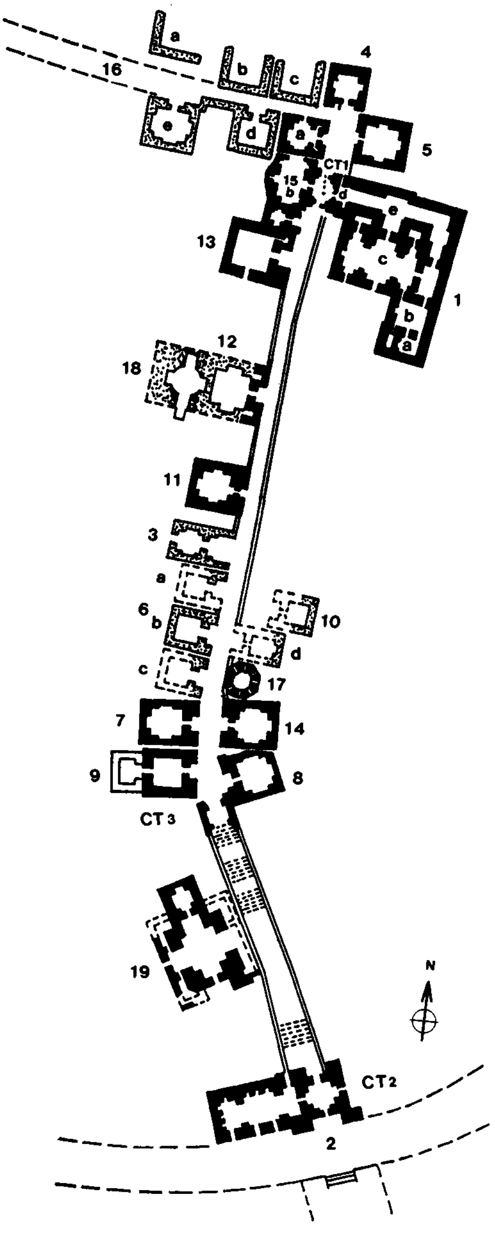
2. Architecture.

Archaeologists refer to the ruins of Samarḳand as Afrāsiyāb after the destruction of the town by Čingiz K̲h̲ān [*q.v.*] in 617/1220. A museum on the site preserves fragments of stucco ornament and ceramics [see sāmānids. 2]. Thereafter, under Tīmūr and his successors, the earlier southern suburbs of the town became the new Samarḳand with its striking ceramic revetment and typical modular architecture. The shrine of Ḳut̲h̲am b. al-ʿAbbās [*q.v.*] known as the *S̲h̲āh-i Zinda* "the living prince", had survived on the southern slopes of Afrāsiyāb. Recent excavations, particularly those directed by N.B. Nemtseva in 1962, have revealed the base of a 5th/11th-century minaret in the north-west corner of the shrine as well as an earlier mausoleum, the underground mosque and a semi-underground chamber, all reflected in the later renovations. The south-eastern corner of a *madrasa*, possibly a funerary construction, was excavated to the west and opposite the shrine, if a *waḳf* of the Ḳarak̲h̲ānid Ibrāhīm b. Naṣr Tamg̲h̲ač Bug̲h̲ra K̲h̲ān dated Rad̲j̲ab 458/June 1066, relates to it.

The *S̲h̲āh-i Zindā* ensemble. Cemeteries develop around shrines of holy men. Here mausolea are like scattered jewels with the shimmering of their blue-turquoise tile glazing enhanced with bichrome bands in white and black or turquoise. A series of tombs, with portal and domed room, lines an ancient north-south alley, while the shrine itself stands at its top northern end. Its lower section, off-centred to the east, overrides the old walls of Afrāsiyāb. The two main 9th/15th century *čahār ṭāḳs* emphasise the entrance to the shrine (CT1) and the lower southern monumental entrance (CT2) to the whole alley; a subsidiary one (CT3), late 18th century, stands at the top of steps. Its southern face (CT1) carries remains of ten-pointed star vertical panels in tile mosaic which include hexagonal terra cotta elements around the stars.



1. The shrine, entered through delicately carved wooden doors (806/1403-4), consists of (a) a mausoleum/*gūr-k̲h̲āna*, (b) a *ziyārāt-k̲h̲āna* (735/1334-5), (c) a *masd̲j̲id* (15th century), (d) a minaret (11th century), (e) an ambulatory/*miyān-k̲h̲āna*. The original mausoleum with its tiled *muḳarnas* and dome in blue and turquoise, was in (b). The *masd̲j̲id* stands over the older one, the *miḥrāb* inscription in tile mosaic, quotes surā II, 139.

2. At the southern end of the ensemble, the monumental entrance with *hazārbāf*, "a thousand weave" decoration, is dedicated to Ulug̲h̲ Beg's son, ʿAbd al-Azīz (838/1434-5), and leads into the *čahār ṭāḳ* (CT2). On its west side, a doorway opens into a contemporary mosque. The east door leads into a later *madrasa* (1227/1812-13).

3. An excavated anonymous mausoleum, 7th/13th century.

4. The mausoleum of K̲h̲ʷād̲j̲a Aḥmad (1350s) remains the only surviving building to recall the older east-west road of the ensemble; it is "The work of Faḳr [b.] ʿAlī", and a variety of deep moulded glazed tiles enhance the portal: a band of calligraphy in white against a turquoise scroll, a frame of underglaze black painted star tiles with a turquoise glaze and a *girik̲h̲*, a "knot" decoration, in turquoise and unglazed terra cotta in the tympanum.

5. A mausoleum for an anonymous lady, earlier

The Shāh-i Zinda, after Rogers.

known as ʿArab Shāh, perhaps one of Tīmūr's first wives, Kutlūgh Āḳā (13 Ṣafar 762/12 December 1361). A restored plinth and two steps under the portal lead into the mausoleum. There are similar colour harmonies and moulded glazed tiles, inside and outside tiled *muḳarnas*, as in 4.

6. a.b.c.d. Excavated mausolea dating to the 1360s.

7. The mausoleum of Shād-i Mulk Āḳā (who died on 20 Djumādā II 773/29 December 1371) was built by her mother Turkān Āḳā (died 785/1383), Tīmūr's elder sister. The calligraphy of the portal in Arabic refers to the building and the daughter, the Persian below the *muḳarnas* praises the building. The Persian around the door frame mentions the "pearl" buried within. Three craftmen have left their signatures, with unclear *nisbas*: Birr al-Dīn, Shams al-Dīn and Zayn al-Dīn. Here is to be seen the best-preserved tile decoration of the ensemble. The restored portal over the entrance was originally higher. Eight frames arise from a plinth of three square ornate panels; they are hemmed in on either side by deeply carved turquoise engaged columns. Two of the frames are larger, with calligraphic and star patterns enclosed in a risen border. Underglazed painted tiles of irregular shapes, in delicate turquoise and white on blue, fill the spandrels with leafy lotuses around a raised roundel. These tiles are also used for the large frame inscription and around the four carved and glazed panels of the inner portal containing a lotus-filled *miḥrāb* and an upper roundel. The *muḳarnas* of the portal are echoed in those of the chamber, which measures about 42 m^2 and is all glazed with lotuses and leaves, small *girikhs* and *miḥrābs*; large roundels almost fill the tiled wall panels, three aside. Eight black and white ribbed panels, each containing a "tear-drop" motif, meet at the apex of the inner dome in an eight-pointed star. A feeling of lightness emanates from the decoration despite its dense patterning.

8. Only the portal remains of the mausoleum of *Amīr* Ḥusayn/Tughlūḳ Tekīn, who died in 777/1376; he was one of Tīmūr's generals. The vault goes back to the 6th/12th century.

9. The Amīr-zāde mausoleum, 788/1386, stands east of an earlier crypt and on the south side of 7. In a similar manner, two frames filled with turquoise moulded rosettes and calligraphic *haft rang* [*q.v.*] tiles, are enclosed in risen borders, the lower part being two *haft rang* tile panels. The slightly recessed entrance is three-quarters framed by a band of square tiles with moulded square Kūfic (Muḥammad and ʿAlī) based on minute lozenges of terra cotta, possibly gold originally, with a red dot or glazed in blue with turquoise and blue infill; above it, a tympanum of hexagonal star-filled tiles encompasses two central panels in *haft rang* tiles. A ribbed inner single shell dome over a plain chamber over 38 m^2 was plastered in the 19th century.

10. An excavated mausoleum, late 8th/14th century.

11. The mausoleum is the work of Ustād ʿĀlim-i Nasafī in the 1380s, with turquoise glazed plugs in its south brick wall; there is no trace of the outer dome, only a 16-sided drum of *hazārbāf* panels in black and turquoise. The ceramic programme is a mixture of old and new techniques and designs. The vertical panels of the portal strapwork recall the design on the base of the Djām minaret [*q.v.*], sūra CIX, 1; CXII; and CXIV, 2-3. The panels and stars within also contain glazed moulded Kūfic inscriptions, mostly in white on a blue ground. Large floral *haft rang* tiles make up the inner panels and the corner engaged columns; yellow, pale green and light brown for red, now add to the general turquoise impression. A splendid turquoise *girikh* punctuates the border of the right outer wall. Rectangular panels filled with hexagonal tiles cover the walls of the shrine, and corner arches with *muḳarnas* lead to a dome covered in strapwork *girikh* filled with the same hexagonal tiles, all of which create a suffused turquoise vision.

12. The mausoleum known as that of Ulugh Sulṭān Begum, was built in the 1380s over part of the 5th/11th century *madrasa*. A roofless portal survives with *lādjward* (dark blue) tile panels, and framed and moulded turquoise glazed narrow *girikh* containing small *lādjward* tiles. A combination of calligraphic tiles in gold and white against a leafy scroll survives on the front. The red cinnabar, now visible, was originally hidden by the gold leaf décor. The use of dark blue

and gold, recalling Chinese textiles, appears here for the last time.

13. The mausoleum of "*Amīr* Burunduḳ", dated to the end of 8th/14th century, adjoins the Ṭūmān Āḳā complex to the south. Only the right side of the portal remains with its *hazārbāf* panel. Nine burials were found in the crypt, as well as some textiles.

14. "This is the tomb of the great and noble queen, Shīrīn Bika Āḳā, daughter of Ṭaraghay, 787[/1385-6]". Taraghay was the sister of Tīmūr. The mausoleum has the earliest double-shell dome with an outer bold *hazārbāf* pattern and remains of tile mosaic panels on the drum. The higher than usual portal, *ca.* 11 m, is decorated with a dense composition of calligraphic bands, arabesques and stylised flowers. Blue remains the dominant colour, with added turquoise and white, and a touch of light brown. The 36 m^2 mausoleum rises to a total height of about 18 m. The dado is tiled with hexagonal green tiles with gold cranes in flight inspired by contemporary Chinese textiles. The rest is painted plaster with elongated cartouches at the base of the sixteen-sided drum as in 19. The walls are divided into niche-shaped panels filled with vegetal or stylised leave patterns.

15. The mausoleum with two *hazārbāf* walls and a tiled double dome *ca.* 15 m high, is attributed to Ṭūmān Āḳā (808/1405-6); set next to the undated *masdjid*/*khānaḳāh* of Ṭūmān Āḳā, it contains the tomb of *Amīr* Abū Saʿīd Mahdī b. Ḥaydār dated 733/1332-3 or 833/1429-30. Tile mosaics decorate the three entrances with blue and some black ground. In the north entrance to the mosque, the ten-pointed star pattern meshes with a blue *girikh*. This *girikh* is lined in white, a well-known device of carpet designers when a motif requires enhancing. Other colours are green, light brown, turquoise and plain terra cotta. Intricate plaster *muḳarnas* lead to the painted dome.

16. a.b.c.d.e. These excavated mausolea overlook the east-west road.

17. This octagonal mausoleum, with arch openings on all sides and crude *hazārbāf* décor, is dated to around 1440. It would have had a double dome. Remains of a plaster painted inscription can still be seen on the inside of the octagon (sūra II, 256).

18. A 9th/15th-century excavated burial vault is sited west of 12.

19. The two turquoise tiled double-domed buildings of the so-called Ḳāḍī-zāde Rūmī mausoleum, built in the 1420s, stand out from afar with their larger part rising to 23 m. *Hazārbāf* patterns animate both drums, with a *ḥadīth* inscription on the larger one. More patterning would have covered the south portal. Chambers were excavated to the west and east. The zone of transition and dome of the tomb chamber, almost 10 m^2, consist of elaborate plaster *muḳarnas*; the crypt contained remains of a female in her mid-thirties. This is the only building in the ensemble with a feeling of space, partly due to unpatterned plain walls or dados of unglazed hexagonal tiles framed by blue glazed strips.

The mosque of Ḥaḍrat Khiḍr. Its name recalls the saint-protector of travellers and master of the water of life, Khiḍr [*q.v.*]. On the south slope of Afrāsiyāb, this summer mosque, with its wooden columns, overlooks the site of the Iron Gate and the road to Tashkent. Built in the 19th century with two small minarets and a squat dome on foundations going back to Soghdian times, it was restored in 1915 by ʿAbd al-Ḳādir Bakiev.

Little remains of the citadel in the western part of the town. It contained the usual administrative buildings, the treasury, the armoury, the Čihil Sutūn, the Gök Saray, and the palace with the Gök-Tash, a carved grey marble monolith which was used as a ceremonial throne.

Rūḥābād, "The abode of the soul", in mid-town. The shrine of Burhān al-Dīn Saghardjī was built in the late 8th/14th century over the tomb of the *shaykh*, whose body was brought back from China by his son Abū Saʿīd. The massive plain square tomb chamber is crowned by a dome on an octagonal zone of transition. Its dado consists of unglazed octagonal tiles separated by glazed black strips.

The mausoleum of Saray Mulk Khānum is late 8th/14th century and possibly part of a *madrasa*. Its vanished portal briefly rivalled that of Tīmūr's Masdjid-i Djāmiʿ 200 m away. The inner dome has gone; the semi-basement crypt in brick is cruciform like the main chamber. Despite its ruinous condition, a variety of tiles and paintings have survived.

The vast Masdjid-i Djāmiʿ known as Bībī Khānum (801-8/1398-1405) was started on Tīmūr's return from India; 95 elephants for the carrying of quarried stones were added to an immense task force. Its *ṣaḥn* measures 87 m by 63 m and the four L-shaped halls, with 480 columns, are linked by four portals, one of which, the entrance *pīshṭāḳ* [*q.v.*], rises to 41 m. At the opposite end of the *ṣaḥn* stands the *miḥrāb* domed chamber; in India the two lateral minor domed chambers would have been extra gateways. Built too fast, with a minaret at all four corners, the mosque soon began to deteriorate and was superseded in the 11th/17th century by the Tilla Kārī mosque on the Rigistān (see below). The 1897 earthquake hastened the collapse of the domes, but restoration work on a long-term basis was started in the 1970s.

Parts of the tile programme of the mosque were determined by its large size and recall that of the slightly earlier gateway to the Aḳ Saray in Shahr-i Sabz and the contemporary shrine of Khʷādja Aḥmad Yasawī [*q.v.*] in Turkestan. Large-scale *hazārbāf* patterns, with a dominant of turquoise, cover most parts of the surviving monument; six-sided *haft rang* tiles still fill the space of some spandrels, and complex tile shapes including twelve-sided ones, decorate part of the *miḥrāb* dome. The restored portal as well as the plinth and dados of the main entrance are of carved stone. After the earthquake of 1875, the monumental Ḳurʾān stand of carved marble was moved out into the *ṣaḥn*.

The *madrasa* and *khānaḳāh* of Muḥammad Sulṭān and the Gūr-i Mīr. The remains of the *madrasa* and *khānaḳāh*, on either side of a courtyard, were probably completed in 1401/803-4 by Muḥammad Sulṭān, Tīmūr's favourite grandson. After his death in Anatolia in 805/1403, Tīmūr had an octagonal mausoleum built for his remains, on the south side, known as the Gūr-i Mīr, "the World Master". Its turquoise melon-shaped double dome soars to a height of 37 m. A gigantic Kūfic inscription "God is eternal" runs round the drum. Tīmūr was buried here in 807/1405 as well as later Tīmūrids. Ulugh Beg added an eastern gallery to the mausoleum in 827/1424. Muḥammad b. Maḥmūd al-Bannāʾ al-Iṣfahānī signed a concluding portal in 837/1434. An unfinished 11th/17th-century *īwān* still stands on the west side. The last standing minaret collapsed in 1903.

The inner room of the mausoleum, about 100 m^2, with its high cupola, has painted pendentives with gold leaf decoration; its dado, in onyx and further gaudy restoration in blue and gold, contrast with the dark nephrite of Tīmūr's cenotaph. The stone was brought by Ulugh Beg from Inner Asia in 828/1425

and is inscribed with Tīmūr's genealogy. This and other cenotaphs are surrounded by a delicately-carved marble railing. Six cenotaphs are echoed in the cruciform crypt by simpler tombstones similarly inscribed.

The *Rigistān*. In the 8th/14th and 9th/15th centuries, six main roads converged towards this sandy area, a crossroad of cultural and commercial life. When Ulug͟h Beg reshaped the square, he erected a *k͟hānaḳāh*, a caravanserai and two mosques; only his *madrasa*, 56 m by 81 m, famous for its learned scholars, survives on the west side of the square with its *pīs͟hṭāḳ* rising to 34.7 m. The mosque stands at the opposite end of its square courtyard with four corner domed halls; it is surrounded by a series of lesser *īwāns* each with two levels of cells. Only two of the four corner minarets have survived. Two inscriptions on the *pīs͟hṭāḳ* and one on the portal of the mosque give dates between 820/1417 and 823/1421. Again, the *hazārbāf* decoration in turquoise and black covers the larger wall surfaces with details underlined in tile mosaics with or without unglazed geometric elements. The large patterns of the *pīs͟hṭāḳ* vary from enhanced square Kūfic to bursting star motifs.

On the opposite side of the square, the master-builder ʿAbd al-D̲j̲abbār built the S͟hīr Dōr *madrasa* under Imām Ḳulī of the D̲j̲ānids from 1028/1619 to 1045/1636. It is a feeble image of the Ulug͟h Beg *madrasa*, despite the lions in the spandrels of the entrance *pīs͟hṭāḳ*, the melon-shaped domes and minarets on either side, and the lavish use of tile mosaics. The whole building, without a mosque, is slightly smaller than the Ulug͟h Beg *madrasa* although the imposing courtyard is bigger and allows two levels of blind arcades with rooms around it.

To its north-eastern side stands the hexagonal Čahār Su built with bricks from the Bībī Khānum mosque at the end of the 18th century under Murād Khān of Buk͟hārā. This bazaar crossroad was famous for its hatmakers.

A short distance to the north-west of it has been resited in the 1880s the grey marble platform of the S͟hībānīd dynasty with 31 inscribed tombstones.

Between the two *madrasas* of the Rigistān stands the Tilla-kārī "adorned with gold" *madrasa* (1056-70 1646-60). It is also a D̲j̲ānid construction and combines the functions of a theological college and a *masd̲j̲id-i d̲j̲āmiʿ*. The mosque on its west side replaced the crumbling Bībī K͟hānum. The recent and lavish restoration has included the rebuilding of a new turquoise dome over the *miḥrāb*.

The observatory of Ulug͟h Beg. ʿAbd al-Razzāḳ al-Samarḳandī records under the year 823/1420 the construction of the circular building 48 m wide, decorated with glazed bricks, and sited to the north-east of the town on the side of a rocky hill. Recent excavations have revealed at the centre of the inner hexagonal shape a deep stepped trench marked in degrees which was part of the gigantic sextant used for recording the movements of the planets and the stars. Contemporary texts mention shallow inner galleries on two floors above the ground floor service area, possibly painted with maps and charts if not decorative subjects. In the central area, and perpendicular to the wall of the sextant, stood a solar clock in the shape of a concave profile wall which would show up the shadow of the sextant.

The shrine of Čupan Ata stands on the same hill as the observatory but farther to the east. It is a rather coarsely-shaped mausoleum with a tombstone in a 16 m^2 chamber without a grave below. The very high drum has chamfered sides with monumental Kūfic inscriptions in tiles. It could have been a place of popular pilgrimage in the 9th/15th century.

The mausoleum of ʿIs͟hrat k͟hāna "The house of happiness" was built by Ḥabība Sulṭān Begum, wife of Sultan Abū Saʿīd, as a mausoleum for a daughter, and is dated by its *waḳf* to 869/1464. There are about 20 tombstones in the crypt. The double dome and high drum collapsed in 1903. The middle of the 28 m-long façade is dominated by a high *pīs͟hṭāḳ* which opens into the 64 m^2 tomb chamber; on both sides of it and beyond its four corners, steps lead to the next floor and its various rooms. The western side of the ground floor contains a mosque. All ten types of vaulting are elaborate systems of arch nets with flat profiles. What survives of the *hazārbāf* decoration on the outer walls shows more restraint than earlier Tīmūrid architecture. A few *haft rang* stars and bands survive near the entrance. Inside, traces of blue and ochre painting of stylised vegetal motifs recall some of the painting in the mausoleum of Gawhar S͟hād in Harāt. No gold now remains visible. Polychrome glass from the windows was recovered in the excavations.

The ʿAbdī Dārūn "inside" ensemble was built in the 1440s to the south-east of the city near the ʿIs͟hrat k͟hāna. The mausoleum with its conical roof is set on foundations possibly going back to Sultan Sand̲j̲ar; with its adjacent chambers, it stands behind the *k͟hānaḳāh* by the north side of a large octagonal pool at the top of a long alleyway. On its eastern side was built a later wood-columned mosque as well as a *madrasa* south of it. The drum of the double-domed *k͟hānaḳāh* has a bold Kūfic inscription; some tile mosaics survive within it. Muʿizz al-Dīn b. Muḥammad Yaʿḳūb b. ʿAbdī, a descendant of the caliph ʿUt͟hmān, was supposedly a *ḳāḍī* in the Samarḳand of the 3rd/9th century.

The Aḳ Saray mausoleum. This now stands on its own to the south of the Gūr-i Mīr, an unfinished brick structure built in the 1470s, with plain walls and no outer dome. The portal rises to 19 m and leads into a cruciform dome chamber with a dado of polychrome tile mosaics with gold. Some painting with gilding survives in the vaulting. A headless skeleton was excavated in the crypt. Later Tīmūrids could have been buried in this building.

The K͟hʷād̲j̲a Aḥrār ensemble. South of the town, the outdoor tomb of the powerful leader of the Naḳs͟hbandiyya order K͟hʷād̲j̲a ʿUbayd Allāh Aḥrār, known as K͟hʷād̲j̲a Aḥrār [*q.v.* in Suppl.], who died in 896/1490, lies under a platform of grey and black marble which carries sixteen richly carved tombstones and is surrounded by a wall. A summer mosque looks over the square which lies to the west; on the north side stands the recently restored Nādir Dīwān Begi *madrasa* (1630-5), with its mosque probably built earlier. The decoration on the entrance portal with tiger and gazelle in spandrels, and the *pīs͟hṭāḳ* in front of the domed *miḥrāb* chamber, vaguely echo Tīmūrid tile mosaics and calligraphic tiles.

The Namāz-gāh mosque stands in the north-western part of Samarḳand and was built by Nādir Dīwān Begi around 1040/1630. A *pīs͟hṭāḳ* rises in front of a domed chamber between two groups of three blind arches. The baked brick surface shows no sign of surviving decoration.

Up to the building of the railway, there used to be on the left bank of the Zarafs͟hān two large brick arches set at an angle to each other. One has since collapsed. They are said to have been part of a greater structure built under the S͟hībānīds to offset the current of the river during the spring high waters.

Although no gardens survive from the Tīmūrid

period or later, many are mentioned in contemporary texts and the *Bābur-nāma*. In his *Ẓafar-nāma*, S͟haraf al-Dīn ʿAlī Yazdī describes the building of the Dilgus͟hā garden in 799/1396, east of the town. The garden of "delights" was walled on four sides with a lofty tiled gateway in the middle of each side. Each corner contained a tiled pigeon tower; at the centre stood a domed pavilion. The main pathways were lined with poplars, and the grounds were divided into triangles and hexagons with borders of specific fruit trees: quince, apple, apricot, peach, pomegranate, pear, plum, pistachio and almond besides a variety of vines. Near-by was the Bag͟h-i Dulday "perfect" garden. Amongst a number of other gardens, to the west of the town stood the "new", the "paradise" and the "north" gardens; to the north could be found the "plan of the world" and the "four" gardens, the garden "of the square", and to the south, the "plane tree" garden. Most gardens had elaborate pavilions with rich tiling and wall paintings.

(YOLANDE CROWE)

AL-**SAMARḲANDĪ** [see ABU 'L-LAYT͟H].

AL-**SAMARḲANDĪ** [see D͟JAHM B. ṢAFWĀN].

AL-**SAMARḲANDĪ** [see NIẒĀMĪ ʿARŪḌĪ].

AL-**SAMARḲANDĪ, S͟HAMS** AL-**DĪN**, Muḥammad b. As͟hraf al-Ḥusaynī, an expert in both the ancient and Islamic sciences who composed important works on theology, logic, geometry and astronomy. He is most celebrated for his epistle on the art of disputation, *al-Risāla al-Samarḳandiyya fī ādāb al-baḥt͟h* (in *Mad͟jmūʿa mus͟htamila ʿalā al-ātī bayānuhū*, ed. Maḥmūd al-Imām al-Manṣūrī, Cairo 1353, 125-32), which was the most famous treatment of disputation and which became the subject of numerous commentaries (see Ḥād͟jd͟jī K͟halīfa, *Kas͟hf al-ẓunūn*, Istanbul 1951-3, i, 39). Unlike prior authors who had limited themselves exclusively to disputation in either theology or law under the rubric of *d͟jadal, k͟hilāf* or *munāẓara* [*q.v.*], al-Samarḳandī presented the first treatise applicable to any subject area—philosophy, law, theology—and thus the first attempt at a universal theory of disputation, referred to by his successors as simply the *ādāb al-baḥt͟h*. The work is divided into three parts. The first gives definitions of technical terms such as *munāẓara, dalīl, amāra* and *naḳḍ*; the second states the procedure of debate (*tartīb al-baḥt͟h*): who starts; what counts as a question; what objections are valid and when; how to determine the end of the debate (there is no judge), etc.; the final part gives examples of debates on questions (*masāʾil*) in theology, law, and philosophy. In his *S͟harḥ al-muḳaddima al-burhāniyya* (i.e. of Burhān al-Dīn al-Nasafī, d. 687/1288 [*q.v.*]) (ms. Chester Beatty no 4396, at fol. 5b), which he completed according to I. Baghdatli in the year 690 (*Hadīyat al-ʿārifīn*, Istanbul 1951-3, ii, 106), and in which he implies that he studied with al-Nasafī, al-Samarḳandī mentions (at fol. 4a) that he treated the *ādāb al-baḥt͟h* in his *Muʿtaḳadāt* (ʿĀrif Ḥikmat no. 206, Medina), *Ḳusṭās al-afkār fī taḥḳīḳ al-asrār* and *al-Anwār* (probably his *s͟harḥ* on the *Ḳusṭās*).

Manuscripts are the best source of information on his biography; Ḥād͟jd͟jī K͟halīfa slipped in stating that al-Samarḳandī died around 600 A.H. (*Kas͟hf*, i, 105). An important Istanbul manuscript apparently in the hand of his student (Laleli no. 2432, fol. 33b) states that he died 22 S͟hawwāl 702/9 June 1303. He wrote *s͟hurūḥ* on several of his own works, including the *Ḳusṭās* (completed in 683) and his own *s͟harḥ* thereon (completed in 692 according to Istanbul, Fatih no. 3360), a standard work on Aristotelian logic, which contains, *inter alia*, a solution to the liar paradox (see L. Miller, *A brief history of the liar paradox in Islamic philosophy*, in *Of scholars, savants and their texts* (Munich 1989, 173-82), and a detailed discussion of the *ādāb al-baḥt͟h*. Both his *al-Ṣaḥāʾif al-ilāhiyya* (completed in 680 according to Laleli no. 2432, fol. 33b), ed. Aḥ ʿAbd al-Raḥmān al-S͟harīf, Kuwait 1985, and his *s͟harḥ* thereon, *al-Maʿārif fī al-ṣaḥāʾif*, were important theological works.

Other works include: *ʿAyn al-naẓar fī al-manṭiḳ fī ʿilm al-d͟jadal*, a short treatment of the logic of juristic disputation concerned with, *inter alia*, implication (*talāzum*), (Cairo, Dār al-Kutub no. 197) (*manṭiḳ wa-ādāb al-baḥt͟h*); cf. Ṣanʿāʾ, al-Maktaba al-G͟harbiyya bi 'l-D͟jāmiʿ al-Kabīr, ms. s.v. *G͟hayb al-naẓar*, obviously a misprint.

As͟hkāl al-taʾsīs (ed. M. Suwaysī, Tunis 1984), a treatise on 35 fundamental postulates in the first book of Euclid's *Elements*. See H. Dilgan, *Demonstration du Vᵉ postulate d'Euclide par Schams-ed-Din Samarqandi*, in *Rev. d'Histoire des Sciences*, xiii (1960), 191-6; A.I. Sabra, *Thabit ibn Qurra on Euclid's parallels postulate*, in *J. of the Warburg and Courtauld Inst.*, xxi (1968), 14 n. 19.

Al-Tad͟hkira fī 'l-hayʾa, a compendium on astronomy; *Aʿmāl-i taḳwīm-i kawākib-i t͟hābita* (Leiden ms. no. 1196, 3 *pers.*), an astronomical chart for the year 1275-6; an anonymous commentary on Naṣīr al-Dīn al-Ṭūsī's *s͟harḥ* on Ptolemy's *Almagest* is also attributed to al-Samarḳandī (see Sezgin, vi, 94).

Al-R. al islāmiyya (Princeton, Yahuda no. 2367), an interpretation of the *s͟hahāda*, is probably identical with Berlin ms. no. 2458, *Taḥḳīḳ kalimat al-s͟hahāda* according to Mach; cf. *Bayān mad͟hhab ahl al-sunna* and *R. fī kalimat al-tawḥīd* mentioned by Brockelmann.

(L.B. MILLER)

SĀMARRĀʾ, a town on the east bank of the middle Tigris in ʿIrāḳ, 125 km north of Baghdād, of about 35 ha in 1924, and *ca.* 120 ha in the 1970s. Between 221/836 and 279/892 it was the capital of the ʿAbbāsid caliphs, and expanded to an occupied area of 57 km², one of the largest cities of ancient times, whose remains of collapsed pisé and brick walls are still largely visible.

The district was only lightly occupied in Antiquity. Apart from the Chalcolithic Samarran Culture excavated at the rich site of Tell al-Ṣuwwān, the city of *Sur-marrati*, refounded by Sennacherib in 690 BC, according to a stele in the Walters Art Gallery, Baltimore, may somewhat doubtfully be identified with a fortified site of Assyrian date at al-Ḥuwaysh opposite to modern Sāmarrāʾ. The ancient toponyms for Sāmarrāʾ are Gk. *Souma* (Ptolemy, V. c. 19; Zosimus, III, 30), Lat. *Sumere*, a fort mentioned during the retreat of the army of Julian the Apostate in A.D. 364 (Ammianus Marcellinus, XXV, 6, 8), and Syriac *Shūmaʿrā* (Hoffmann, *Auszüge*, 188; Michael the Syrian, iii, 88), described as a village.

The region experienced an upturn in its fortunes with the excavation of the Ḳāṭūl al-Kisrawī, the northern extension of the Nahrawān canal which drew water from the Tigris in the region of Sāmarrāʾ, attributed by Yāḳūt (*Muʿdjam*, s.v. *Ḳāṭūl*) to the Sāsānid king Khusraw Anūshirvān (A.D. 531-78). To celebrate this royal project, a commemorative tower (mod. Burdj al-Ḳāʾim) was built at the southern inlet (mod. Nahr al-Ḳāʾim) south of Sāmarrāʾ, and a palace with a walled hunting park at the northern inlet (mod. Nahr al-Raṣāṣī) near to al-Dawr. A supplementary canal, the Ḳāṭūl Abi ʾl-Djund, excavated by the ʿAbbāsid caliph Hārūn al-Rashīd, was commemorated by a city in the form of a regular octagon (mod. Ḥuṣn al-Ḳādisiyya), called *al-Mubārak* and abandoned unfinished in 180/796. The plan is based upon that of the Round City of Baghdād [*q.v.*].

Probably in 220/834-5, the caliph al-Muʿtaṣim [*q.v.*] left Baghdād in search of a new capital. The sources all report that the reason was conflict between the caliph's regiment of Central Asian Turks and the population of Baghdād. The caliph apparently sought a residence for the court, and a base for the ʿAbbāsid army, outside of Baghdād, and was attracted by a region known for its hunting, but otherwise poor in natural resources.

The caliph's city was formally called Surra Man Raʾā ("he who sees it is delighted"). According to Yāḳūt (*Muʿdjam*, s.v. *Sāmarrā*), this original name was later shortened in popular usage to the present Sāmarrāʾ. It seems more probable, however, that Sāmarrāʾ is the Arabic version of the pre-Islamic toponym, and that Surra Man Raʾā, a verbal form of name unusual in Arabic which recalls earlier Akkadian and Sumerian practices, is a word-play invented at the caliph's court.

Surra Man Raʾā was laid out in 221/836 on the east bank of the Tigris around the pre-Islamic settlement, with the principal palace on the site of a monastery to the north. This palace complex, called in the sources *Dār al-Khilāfa, Dār al-Khalīfa, Dār al-Sulṭān*, and *Dār Amīr al-Muʾminīn*, had two major sub-units, the *Dār al-ʿĀmma*, the public palace where the caliph sat in audience on Monday and Thursday, and *al-Djawsaḳ al-Khāḳānī*, the residence of the caliphs and their families, where four are buried. The site of the palace (125 ha), excavated by Viollet (1910), Herzfeld (1911-3), and recently by the Iraqi Directorate-General of Antiquities, has a square building, identifiable as the *Dār al-ʿĀmma*, opening onto a garden on the Tigris, with a court behind, two basins excavated in the conglomerate for summer occupation, a polo *maydān* [*q.v.*], and a second enclosed palace, probably *al-Djawsaḳ*.

It is not easy to reconstruct the plan of the original Surra Man Raʾā, because of later rebuilding. From the palace an avenue, later referred to by al-Yaʿḳūbī as *Shāriʿ Abī Aḥmad*, extended south 3.5 km to the markets, the mosque of al-Muʿtaṣim (both now under the modern town), and beyond. To the east of this avenue lay the cantonments of the Turk Waṣīf, to the west on the Tigris bank those of the Maghāriba, a military unit apparently of Egyptian origin. The cantonment of Khāḳān ʿUrṭudj was placed north of al-Djawsaḳ, and may be identified with one of two quarters in this area. The two remaining military cantonments were located outside of Surra Man Raʾā, that of the Ushrūsaniyya, under al-Afshīn Khaydar b. Kāwūs al-Ushrūsanī [see AL-AFSHĪN] at al-Maṭīra, the village 4 km south of modern Sāmarrāʾ (mod. al-Djubayriyya), and that of the Turks under Ashnās 10 km north at Karkh Fayrūz (mod. Shaykh Walī). The area east of the city was walled as a hunting park (*al-Ḥayr*).

With the death of al-Muʿtaṣim in 227/842, came a point of decision: would Sāmarrāʾ be abandoned on the death of its founder, as many other princely sites, or would it become a more permanent ʿAbbāsid capital? Al-Wāthiḳ (227-32/842-7 [*q.v.*]) chose to stay, and the population reacted by turning what was called a camp (*ʿAskar al-Muʿtaṣim*) into a real city. According to al-Yaʿḳūbī (*Buldān*, 264-5), al-Wāthiḳ made some changes to the military disposition, but concentrated on the economic development of the city. He built a new palace called al-Hārūnī, which has been identified on the banks of the Tigris at al-Ḳuwayr, an unexcavated site partly flooded since the 1950s by the barrage at Sāmarrāʾ. Al-Hārūnī continued to be the residence of al-Mutawakkil, and was occupied during the 250s/860s by Turkish units.

The reign of al-Mutawakkil (232-47/847-61 [*q.v.*]) had a great effect on the appearance of the city, for he seems to have been a lover of architecture. In a list of his building projects which appears in several different versions, the new Congregational Mosque and up to 20 palaces are mentioned, totalling between 258 and 294 million dirhams. The new Congregational Mosque, with its spiral minaret, built between 235/849 and 237/851, formed part of an extension of the city to the east, extending into the old hunting park. Two new palaces with hunting parks were built in the south, at al-Iṣṭablāt, identified as al-ʿArūs, and al-Musharraḥāt (not yet securely identified). A further palace, Balkuwārā, excavated by Herzfeld in 1911, was built on the Tigris bank south of al-Maṭīra, surrounded by a military cantonment for a new army corps under al-Mutawakkil's second son, al-Muʿtazz.

Three courses for horse-racing were built east of the

main city. Two have an out-and-back course 80 m wide and 10.42 km long with a spectators pavilion at the start, and the fourth a pattern of four circles around a central pavilion (5.3 km).

Under al-Mutawakkil, the city centre, which developed on the site of ʿAskar al-Muʿtaṣim, seems to have reached its greatest extent, and was described in its heyday by al-Yaʿḳūbī after the death of al-Mutawakkil (*Buldān*, 260-3). There were seven parallel avenues. The avenue adjacent to the Tigris, *Sh̲āriʿ al-Kh̲alīd̲j̲*, accommodated the quays for the river transport which was the principal means of supplying the city, and the cantonments of the Mag̲h̲āriba. Although Herzfeld supposed that the alignment had disappeared, it now seems that the trace of the avenue lay inland from the river-bank, and still survives in part.

The principal avenue of al-Yaʿḳūbī, *al-Sh̲āriʿ al-Aʿẓam* or *al-Sarīd̲j̲a*, appears to be identical with the alignment of the ancient road from Bag̲h̲dād to Mawṣil, following an irregular line from al-Maṭīra to beyond the *Dār al-Kh̲ilāfa*. Later called *Darb al-Sulṭān*, the alignment can be followed to the north to al-Dawr. Towards the southern end stood the tax registry, the *Dīwān al-Kh̲arād̲j̲ al-Aʿẓam*, probably outside the limits of the city in the time of al-Muʿtaṣim, and therefore possibly a replacement of an earlier building. To the northwest in succession lay the stables of the caliph, the slave market, the *mad̲j̲lis* of the police, the great prison, and the main markets around the old congregational mosque of al-Muʿtaṣim. The avenue passed to the west of the *Dār al-Kh̲ilāfa*, and terminated with the residences of the great palace servants, which may have stood on the site of the earlier cantonments of Khāḳān ʿUrṭud̲j̲.

The second avenue, *Sh̲āriʿ Abī Aḥmad*, was the original avenue of the time of al-Muʿtaṣim, narrowed from 60 to 10 metres, and ended at the south gate of the caliphal palace, called *Bāb al-Bustān* or *Bāb Aytāk̲h̲*. Outside this gate stood the palace of al-ʿUmarī, and the residences of the leading Turks of Sāmarrāʾ: Aytāk̲h̲, Barmas̲h̲, Sīmā al-Dimas̲h̲ḳī, Bug̲h̲ā al-Kabīr, and Bug̲h̲ā al-Ṣag̲h̲īr.

The remaining avenues, *Sh̲āriʿ al-Ḥayr al-Awwal*, *Sh̲āriʿ Barg̲h̲amis̲h̲ al-Turkī*, *Sh̲āriʿ al-ʿAskar*, and *Sh̲āriʿ al-Ḥayr al-D̲j̲adīd*, parallelled the *Sh̲āriʿ Abī Aḥmad* to the east. These avenues were the quarters of military units: the S̲h̲ākiriyya, the Turks, the Farāghina, the K̲h̲azar and the K̲h̲urāsānīs.

In 245/859 al-Mutawakkil began a new project to replace Surra Man Raʾā with a new caliphal city to the north of al-Kark̲h̲, called, according to its coinage, al-Mutawakkiliyya, although written sources call it al-D̲j̲aʿfariyya (al-Yaʿḳūbī) or al-Māḥūza (al-Ṭabarī, iii, 1438). A canal was dug from a point 62 km north to supply the new city, crossing by an aqueduct over the Ḳāṭūl, and running on both sides of the avenue, but the levelling was badly calculated, and little water flowed. The main palace, al-D̲j̲aʿfarī, is located at the inlet to the Ḳāṭūl al-Kisrawī, and is modelled on the Dār al-K̲h̲ilāfa of Surra Man Raʾā. The city plan is organised around a central avenue leading south past the Abū Dulaf mosque to the cantonments of al-Kark̲h̲, thus similar to that of Surra Man Raʾā. The Sāsānid hunting park north of the Ḳāṭūl was reworked with a viewing platform at Tell al-Banāt close to modern al-Dawr. After the assassination of al-Mutawakkil in 247/861, the city was abandoned.

The reign of al-Mutawakkil was fundamental to the history of ʿAbbāsid Sāmarrāʾ. The expenditure on architecture, a high but not precisely calculable percentage of the state budget, stimulated the economic development of the city. But the drain on the treasury also played a role in the decade of troubles following al-Mutawakkil's death, which led to the making and unmaking of four caliphs, and military action in Sāmarrāʾ in three phases in 248/862-3, 251-2/865-6 and 256/870. Perhaps more significant was the isolation of the caliph with his army in Sāmarrāʾ, which left him exposed to forceful attempts by the soldiery to ameliorate their lot.

At any rate, during the decade after the accession of al-Muʿtamid in 256/870, the army was removed from Sāmarrāʾ by Abū Aḥmad al-Muwaffaḳ, although Sāmarrāʾ continued to be the official residence of the caliph until 279/892, when al-Muʿtaḍid reestablished Bag̲h̲dād as capital. Al-Muʿtamid is not known to have revisited Sāmarrāʾ after 269/884, but he was buried there in 279/892. Between 274/887-8 and 281/894-5 there are several reports of looting the city, after which Sāmarrāʾ ceases to be mentioned frequently in the chronicles; one presumes therefore that a major depopulation occurred at this time.

Nevertheless, the area round the markets continued to be occupied, together with the outlying towns of al-Maṭīra and al-Kark̲h̲. Al-Muktafī attempted to resettle Sāmarrāʾ in 290/903, but found al-D̲j̲awsaḳ a ruin.

The two S̲h̲īʿī Imāms ʿAlī al-Hādī (d. 254/868) and al-Ḥasan al-ʿAskarī (d. 260/874) had a house on the S̲h̲āriʿ Abī Aḥmad, probably adjacent to the mosque of al-Muʿtaṣim, and were buried there. The Twelfth Imām disappeared nearby in a cleft commemorated by the Sardāb al-Mahdī in 260/874. The tomb was first developed in 333/944-5 by the Ḥamdānid Nāṣir al-Dawla, and subsequently by the Būyids. According to al-S̲h̲ayk̲h̲ Muḥammad al-Samāwī, *Was̲h̲āʾid̲j̲ al-sarrāʾ fī s̲h̲aʾn Sāmarrāʾ*, a verse composition of the 13th/19th century on the history of the shrine, the double shrine continued to be rebuilt frequently, notably in 445/1053-4 by Arslān al-Basāsīrī and in 606/1209-10 by the caliph al-Nāṣir li-Dīn Allāh, whose work is commemorated by an inscription in the Sardāb. The present appearance of the shrine is to be attributed to work by the Persian Ḳād̲j̲ār ruler Nāṣir al-Dīn S̲h̲āh in 1285/1868-9 and other more recent work.

From the 4th/10th century onwards, Sāmarrāʾ became a pilgrimage town. In the 6th/12th and 7th/13th centuries, the displacement to the east of the course of the Tigris south of Sāmarrāʾ led to the transfer of the Tigris road from Bag̲h̲dād to Mawṣil to the west bank of the river, and a consequent loss of trade. Sāmarrāʾ was not apparently walled until 1834, when a wall was built out of ʿAbbāsid bricks, as a result of a charitable donation.

In the 1950s a barrage was constructed on the Tigris, in order to divert the spring flood waters down Wādī T̲h̲art̲h̲ar and to end the disastrous periodic flooding of Bag̲h̲dād. The lake formed behind the barrage drove the farming communities of the flood plain on to the steppe-land among the ʿAbbāsid ruins, and enlarged the town, which remains the market centre of its district.

(A. NORTHEDGE)

AL-**SAMĀWA** (A., "the elevated land").

1. Al-Samāwa was the name given, in the definition of al-Bakrī (*Muʿdjam mā staʿdjam*, Cairo 1364-71/1945-51, iii, 754, copied by Yāḳūt, *Buldān*, ed. Beirut, iii, 245), during mediaeval Islamic times to the desert and steppeland lying between al-Kūfa and Syria. Earlier geographers were more specific. Thus Ibn Ḥawḳal (ed. Kramers, 22, 34-5, tr. Kramers-Wiet, 21, 34, see also his map of the Arabian peninsula) defines it as the plain stretching from Dūmat al-Djandal [*q.v.*] in northwestern Arabia to ʿAyn al-Tamr [*q.v.*] in the desert on the fringes of the middle Euphrates and to the desert of Khusāf between al-Raḳḳa and Bālis [*q.vv.*], a region in general inhabited by the Banū Kalb and the Banū Fazāra [*q.vv.*]. The Samāwa was crossed by important caravan routes connecting ʿIrāḳ via Palmyra [see TADMUR] with Syria. In the early 4th/10th century, it was the locus of the Carmathian rising of Zikrawayh or Zakarūya [see ḲARMAṬĪ] which seriously affected ʿAbbāsid control over the Syrian districts to its west (see H. Halm, *Das Reich des Mahdi. Der Aufstieg der Fatimiden (875-973)*, Munich 1991, 68-9, 71, 170-1).

2. Al-Samāwa is also the name of a town in southwestern ʿIrak (lat. 31°18′N., long 45°18′E.), on the lower Euphrates, appearing in history from the 11th/17th century onwards. It was attacked by the Wahhābiyya [*q.v.*] under ʿAbd Allāh b. Suʿūd b. Suʿūd in 1806, after he had sacked al-Nadjaf, and then again in 1808 it was plundered by Suʿūd b. Suʿūd (see A. Musil, *Northern Neǧd, a topographical itinerary*, New York 1928, 263-4). Since the later Ottoman period and then those of the British Mandate and independent ʿIrāḳ, al-Samāwa has been important as a crossing-place over the Euphrates for the Baghdād-Basra road and for the bridge carrying the metre-gauge railway connecting the two cities, hence it was one of the towns besieged by the rebels during the 1920 ʿIrāḳī revolt. During the Mandate and shortly afterwards, al-Samāwa came within the governorate (*liwāʾ*) of Dīwāniyya [*q.v.*], of which al-Samāwa was a component *ḳaḍāʾ*, but in contemporary ʿIrāḳ it is now the chef-lieu of the *liwāʾ* of al-Muthannā, with a population (1985 estimate) of 33,473.

(C.E. BOSWORTH)

AL-**SAMAWʾAL** B. **ʿĀDIYĀ**, Jewish-Arab poet, who lived in the middle of the 6th century A.D. His residence was in the famous castle of al-Ablaḳ (cf. Yāḳūt, s.v.) near Taymāʾ. His genealogy is uncertain. Though mostly called al-Samawʾal b. ʿĀdiyā (or ʿĀdiyāʾ) al-Yahūdī, other genealogies such as al-Samawʾal b. Gharīḍ b. ʿĀdiyā or al-Samawʾal b. Ḥiyyā b. ʿĀdiyā are also given. Some few poems attributed to a certain Saʿya (cf. Sezgin, *GAS*, ii, 250-1), who is said to have been al-Samawʾal's brother or, more probably, his grandson and to other members of his family are also handed down.

Even in the Middle Ages, only very few poems attributed to al-Samawʾal were known. His *Dīwān*, which was collected by Nifṭawayh [*q.v.*], contains only nine poems comprising 88 verses. From these poems again only two gained greater fame because they had been included in widely-known poetic anthologies even before Nifṭawayh's comparatively late compilation of the *Dīwān*. The first is a *fakhr* poem (no. 1 in the *Dīwān*), which Abū Tammām incorporated in his *Ḥamāsa* (no. 15) and on which Ṣafī al-Dīn al-Ḥillī (8th/14th century) composed a *takhmīs* (ed. Beirut 1962, 36-41). The poem, however, is attributed with good reason to other poets than al-Samawʾal as well. A second poem (no. 2 of the *Dīwān*) found its way into al-Aṣmaʿī's poetic anthology (*al-Aṣmaʿiyyāt*, no. 23) and parts of it are quoted in different other sources, among them Ibn Sallām al-Djumaḥī's *Ṭabaḳāt*. The poem contains reflections on birth, death and the Day of Judgment which may be, as Hirschberg proposed, references to Aggadic literature, thus, contrary to poem no. 1, pointing to the Jewish religion of its poet. The authenticity of the poem was defended by Hirschberg against Nöldeke's negative verdict. Levi Della Vida drew up the very probable hypothesis that the poem was in fact created by one of al-Samawʾal's descendants, who had already converted to Islam but still was acquainted with Jewish tradition.

Yet al-Samawʾal owes his fame less to his poetry than to a story, which gave rise to the saying "more loyal than al-Samawʾal". The story is told in different versions. According to Ibn Sallām, the poet and Kinda prince Imruʾ al-Ḳays [*q.v.*] had entrusted his arms to al-Samawʾal. As the Ghassānid phylarch al-Ḥārith b. Djabala [*q.v.*] heard about that, he set out against al-Samawʾal, who entrenched himself in his fortress. Al-Ḥārith, however, took hold of al-Samawʾal's son who happened to be outside the castle and threatened to kill him if al-Samawʾal would not deliver the deposited weapons. Yet al-Samawʾal prefered to witness his son to be killed by al-Ḥārith rather than to betray the trust commited to him. The story is referred to in a poem by al-Aʿshā [*q.v.*]. In discussing this poem, Caskel concluded that the reference to Imruʾ al-Ḳays in the story is a later invention. The poem no. 6 in al-Samawʾal's *Dīwān*, where the poet refers to his loyal keeping of "the coats of mail of the Kindī", is considered as spurious by Caskel.

In western scholarship, interest in al-Samawʾal concentrated on his Jewish religion, because one hoped that his poetry could throw some light on Jewish influence on early Islam. But since there is not a single poem of which al-Samawʾal's authorship has never been questioned, discussion have focused mainly on the problem of authenticity. These discussions were stirred up anew when a hitherto unknown poem, which contains numerous references to biblical history, was discovered in the Geniza. It became clear, however, that its poet was not al-Samawʾal b. ʿĀdiyā. Following a hint in one manuscript, some scholars have started to think that its author was an otherwise unknown poet bearing also the name al-Samawʾal, who is said to have been a member of the Jewish tribe of Ḳurayẓa [*q.v.*]. Kowalski attributed poem no. 7 in al-Samawʾal's *Dīwān*, of which he could convincingly show that it was the reply to a poem of Ḳays b. al-Khaṭīm [*q.v.*] by an anonymous Jewish poet in the time of the prophet Muḥammad, to this al-Samawʾal al-Ḳuraẓī. Yet it still remains rather unlike-

ly that such a poet really existed. Whatever the case may be, al-Samawʾal's poems, though only partly or even not at all genuine in the narrow sense of the word, are still of interest to the history of Judaism in early Islamic times.

(TH. BAUER*)

SAMBAS, a town and river in the Province of Kalimantan Barat (West Kalimantan) in the Republic of Indonesia, lying just south of Sarawak at lat. 1° 20′ N. and long. 109° 15′ E. It is one of a number of Malay/Muslim-dominated estuarine settlements on the Borneo coast whose existence was based on trading relationships with non-Muslim native peoples in the interior and Chinese traders and miners. Local versions of the Islamisation of Borneo's West coast attribute the coming of Islam to Arabs from Palembang who were trading in the area from the mid-16th century.

At this time, Sambas was a tributary of the Peninsula Malay kingdom of Johor, but through a royal marriage in the 17th century came under the authority of Sukadana, another Bornean coastal settlement to the south. Descendants of Sultan Muḥammad Ṣafī al-Dīn, the first Muslim ruler of Sukadana, assumed power in Sambas and may have helped to spread Islam in the kingdom.

Sambas was not as influential as its more powerful neighbours Sukadana, Landak, Pontianak and Mempawa, and was prey to local wars and a haven for pirates. To bolster his authority, the Sultan of Sambas sent a mission to Batavia in 1818 requesting Dutch assistance, as a result of which the first Dutch Resident was installed. During the early 19th century there was an international dimension to local politics as the Dutch sought to extend their influence north of Sambas into Sarawak [*q.v.*], which they claimed was a tributary of Sambas, but to which Brunei also held claims. In 1841 when Malay chiefs rebelled against Brunei, James Brooke quelled the unrest and received the area as his from Brunei. The presence of the English "White Rajah" effectively stopped the northwards extension of Dutch authority on Borneo's West coast past Sambas. From 1846 the Dutch reorganised their Borneo possessions and in 1848 a new Dutch contract was made with Sultan Abū Bakr Tadj al-Dīn of Sambas, defining the boundaries of his kingdom.

During the 19th century, the organisation of Islam in Sambas was closely linked with the Sultan's court. There was an Imam and four Kiais, although after 1831 there were two Imams, Imam Tua and Imam Muda (Senior and Junior), probably an example of a dual appointment to resolve a local conflict. Later in the century, Kātib Djabr studied in Mecca with Shaykh Aḥmad b. Muḥammad Zayn (1856-1906) of Patani [*q.v.*], and later returned to Sambas to become Maharaja Imam.

The Imams of Sambas were in touch with events in the wider sphere, and in 1930 Shaykh Muḥammad Bashuni ʿImrān wrote to the editor of the Cairo reformist journal *al-Manār* [*q.v.*], to ask why Muslims were not as advanced as people in Europe, America and Japan.

Sambas shared in the reorganisation of Islam in Borneo carried out by the Netherlands East Indies government in 1937. This established *ḳāḍī* Courts and *ḳāḍī* Appeal Courts on the same lines as for Java and Madura. After 1945, in the independent Republic of Indonesia, the administration of Islam has been through the *Mahkamah Shariah*, under the Ministry of Religious Affairs.

SAMBHAL [see MURĀDĀBĀD].

ṢAMGH, *ṣamgh* (A., pl. *ṣumūgh*) indicates gum resins, the desiccated latexes of several plants and the mixtures of natural resins (*rātīnadj*) with gum-like substances.

To the best-known gum resins belong: ammoniac (*wushshak*), the product of the ammoniac gum tree; the so-called devil's dirt (*hiltīt*), the latex of the asafoetida (*andjudhān*) which, when exposed to the air, hardens into a dirty-yellow gum resin; wolfs' milk (*yattūʿ*), in several varieties of the class Euphorbia, with many sub-varieties; galbanum (*ḳinna*), the desiccated latex of *Ferula galbaniflua*, used as spice and medicine; myrrh (*murr*), from the bark of several varieties of thorny shrubs of *Commiphora abyssinica*; the often-described frankincense (*kundur* [see LUBĀN]) from various Boswellia varieties, indigenous in South Arabia and Somalia; sagapenum (*sakbīnadj*), the yellow, translucent resin from *Ferula Scowitziana* which causes irritation of the skin and whose smell resembles that of asafoetida; and camphor (*kāfūr*), the white, transparent mass of the camphor tree *Cinnamonum camphora* [see KĀFŪR], indigenous in East Asia. Most of the gum resins (28 in number) are enumerated and described by al-Nuwayrī, *Nihāya*, xi, 291-324; ʿUmar b. ʿAlī al-Ghassānī, *Muʿtamad*, ed. al-Saḳḳā, Beirut 1975, 287-92, has 20 gum resins; al-Bīrūnī, *Ṣaydana*, has 13 varieties (see the index of the Russian tr. by Karimov, Tashkent 1973); Ibn al-Bayṭār, *Djāmiʿ*, iii, 85,25 - 87,13 (= Leclerc, nos. 1407-16) has 9 varieties; other authors have less.

The word *ṣamgh* is usually used alone for *ṣamgh ʿarabī*, gum arabic, so called because it was exported from Arab ports and spread by the Arabs. It is the viscous secretion gained from the bark of the acacia tree (*al-ḳaraẓ*, in Morocco *al-ṭalḥ*), which represents several varieties of the acacia imported from Africa: *Acacia senegalensis*, from the steppe zones of West- and Central Africa to the right and left of Senegal, *Acacia abyssinica* and *Acacia nilotica*, from Africa and India, and many others.

In medicine, gum arabic is used as a palliative and

as an astringent for drying up putrescent ulcers. It helps the formation of new flesh in ulcers and stems the blood which flows from wounds; it also serves as cough medicine and for the preparation of collyria. The drug consists of roundish, colourless or yellowish pieces, up to a diameter of three cm, which fall easily into small pieces which shine like glass.

al-**SAMHŪDĪ**, Nūr al-Dīn Abu 'l-Ḥasan ʿAlī b. ʿAfīf al-Dīn ʿAbd Allāh, al-Shāfiʿī, noted Egyptian scholar in history, theology, law, tradition, etc. (844-91/1440-1506).

He was born at Samhūd in Upper Egypt in Ṣafar 844/July 1440, the son of a *ḳāḍī*; in his genealogy, he claimed to be a Ḥasanid *sayyid*. His biography is given in detail by al-Sakhāwī, resumed in Ibn al-ʿImād and other subsequent biographical sources. He studied in Cairo from 853/1449 onwards under its celebrated scholars, and also received the Ṣūfī *khirḳa* or cloak. He made the Pilgrimage in 860/1456 and eventually settled in Medina, where he wrote a treatise urging the rebuilding and correct reconstruction of the Prophet's Mosque there. Whilst away in Mecca on the Lesser Pilgrimage or *ʿUmra* in Ramaḍān 886/November 1481, his valuable personal library was destroyed by a fire in the Prophet's Mosque in Medina. Returning to Cairo, he was honoured by the Mamlūk sultan Ḳāʾit Bāy [*q.v.*] and given a stipend. After visiting Jerusalem, he finally settled at Medina in late 890/1485, purchasing the house of the Companion Tamīm al-Dārī [*q.v.*] and acquiring the designation of *Shaykh al-Islām* there. He died on 18 Dhu 'l-Ḳaʿda 911/12 April 1506 and was buried in the Baḳīʿ al-Gharḳad [*q.v.*] cemetery.

Al-Samhūdī was a prolific author, and over twenty of his works are extant, some printed but most of them still in manuscript. Their subjects include *fiḳh*, genealogy, *ḥadīth*, *kalām*, the *manāsik* or ceremonies and practices of the Pilgrimage, various commentaries on legal and other works and a collection of *fatwās*. But his main fame stems from his histories of Medina, his adoptive home. He originally composed a history on an extended scale as *Iktifāʾ al-wafā bi-akhbār Dār al-Muṣṭafā* (thus in Ibn al-ʿImād; in Ḥādjdjī Khalīfa, vi, 450, *al-Wafā bi-mā yadjibu li-ḥaḍrat al-Muṣṭafā*), but this was destroyed in the Medina fire. However, he had made, at the request of a patron, a shorter version, the *Wafāʾ al-wafā*, completed in 886/1481, and fortunately, he had the manuscript of this abridgement with him in Mecca (printed Cairo 1326-7/1908-9, 2 vols., and ed. Muḥ. Muḥyī 'l-Dīn ʿAbd al-Ḥamīd, Cairo 1374/1955, repr. Beirut 1393/1973, 4 parts in 2 vols.). Finally, from this last in turn was made another epitome, the *Khulāṣat al-Wafā* (printed Būlāḳ 1285/1868-9, Cairo 1316/1898-9 and Mecca 1316/1898-9; two Persian translations of this also exist in manuscript, see Storey, i, 426-7). On all these works of al-Samhūdī, see Brockelmann, II[2], 223-4, S II, 223-4.

The *Wafāʾ al-wafā* is our principal source for the history and topography of the city, with details on its buildings, graves and shrines and on the various festivals and rituals. Al-Samhūdī quotes earlier authorities, including copious ones from what must have been one of the very first histories of Medina, that by the pupil of Mālik b. Anas, Ibn Zabāla al-Makhzūmī, completed in 199/814 (see Ḥādjdjī Khalīfa, i, 190 no. 228, ii, 44 no. 2302; Sezgin, *GAS*, i, 343-4; this book was known to al-Sakhāwī but has since disappeared).

SĀMĪ, Shems ül-Dīn Frāsherī (Mod. Tkish. Şemseddin Sami Fraşeri), Ottoman Turkish author and lexicographer. He was born at Frāsher in Albania on 1 June 1850, of an old Muslim family whose ancestors had been granted this place as a fief by Sultan Meḥemmed II, and was educated in the Greek lycée at Yanina, at the same time receiving private instruction in Turkish, Persian and Arabic. He came to Istanbul in 1871 in order to take up journalism, and in 1874 was sent to Tripoli (North Africa) as the editor of *Wilāyet* newspaper. He returned to Istanbul 9 months later and founded the daily newspaper *Ṣabāḥ* in 1876. It was during these years also that he embarked on literary production, attaching himself to the new school of Ibrāhīm Shināsī and Nāmıḳ Kemāl [*q.vv.*], and producing a pioneer Turkish novel, *Taʿashshuḳ-ı Ṭalʿat we Fitnet*, which criticised the marriage system then prevalent in Turkey. Moreover, in a famous article *Lisān-i Türki-yi ʿOthmānī*, published in *Ṣabāḥ*, he asserted the purist attitude that the language of the Ottoman empire was not the "Ottoman language" but the "Turkish language", and that the over-abundant Arabic and Persian words and phrases should be replaced by old Turkish ones which had fallen into disuse; he thus anticipated the language reform of the 20th century Turkish Republic.

Later, he became the editor of *Terdjümān-ı Sharḳ* newspaper and the journals *ʿĀʾile* and *Hafta*. Meanwhile, he wrote a series of pamphlets for the *Djeyb Kütübkhānesi* series. In 1881 he was appointed as the secretary for the *Teftīsh-i ʿAskerī Ḳomisyonu*, or Army Inspection Commission, but, at the same time, began to publish his famous lexicographical works: *Ḳāmūs-i fransewī* (French-Turkish, 1882, and Turkish-French, 1885), the six-volume encyclopedia *Ḳāmūs al-aʿlām* and the *Ḳāmūs-i türkī* in two parts. In 1893 he was put under house arrest by ʿAbd ül-Ḥamīd II. He stayed in his home at Erenköy, Istanbul, and devoted the rest of his life to his works, from 1899 onwards being forbidden to receive guests; he died on 18 June 1904 in Istanbul.

Sāmī's greatest merit lies in the fields of lexicography and philology. As well as working on Turkish and Arabic, he also worked on producing an Albanian grammar, poems in this language and a book on the future of Albania. With his brother Naʿīm Frā<u>sh</u>erī (1846-1900; see on him, F. Babinger, in *Isl.*, xi [1921], 99), he was among the leaders of the group which produced a Latin-based alphabet for Albanian in the 1880s. His best-known work is his Turkish dictionary, the *Ḳāmūs-i türkī*. In this work, the order of the words is alphabetical and the arrangement of the different meanings of the words is very clear. Sāmī represented a compromise between the different views prevailing in his time on the development of Turkish, and, despite his own far-reaching Turkish purism, his dictionary is a reflection of the educated Turkish of his time. Among his unpublished materials are an unfinished Arabic dictionary, comprehensive studies on the *Ḳutadgu bilig* and the Orkhon inscriptions, as well as works on Persian and Eastern Turki.

AL-SĀMIRA (more modern form, AL-SAMARIYYŪN), sing., al-Sāmirī (not to be confused with the Ḳurʾānic al-Sāmirī [*q.v.*]), denotes the Samaritans, that part of the people of Israel which does not identify itself with Judaism ("Judaism" being associated with that part of the people of Israel which survived the Babylonian Exile, hence with the destruction of the kingdom of Israel in the north of Palestine).

1. History of the community.

Historically, the Samaritans have been linked with Judaism since several centuries before the coming of Jesus Christ. They are nevertheless different, as also in the dating of the schism regarding the Holy Scriptures connected with the Karaites [*q.v.*], taking place around the appearance of Islam. The Samaritans only believe in the first five books of the Law (the Pentateuch, with variations, whilst the Karaites accept the written Law in its entirety (sc. virtually the Old Testament) but reject the oral one, i.e. the Talmud, what is understood in Judaism as the Mishnah and the Gemarah.

The Samaritan community is still in existence and active. At the beginning of the 20th century (1909) they were considered as almost extinct (in antiquity, they had numbered between one and two millions, and in mediaeval times had several communities, from Thessalonica to Damascus and Cairo), numbering only 173 (97 men and 76 women), but their numbers have now risen to 600. They live mainly at Nābulus [*q.v.*], at the foot of Mount Gerizim, which they set up in opposition to Jerusalem, and at Holon near Jaffa.

Leaving aside the historical notices, both traditional and modern, on their origins—which belong properly to the field of Biblical Studies—we shall turn to the position of the Samaritans at the appearance of Islam. Both the people and their laws, which were well-known in the Talmud (which observes that the Samaritans were more respectful of the Law than the Jews), as also in the Code of Justinian, are further known in the *fiḳh* treatises. Islam considered them as a People of the Book, and al-Māwardī, tr. Fagnan, *Les statuts gouvernementaux*, Algiers 1915, 302, states that "the poll-tax is also leviable on the Ṣabians and Samaritans, since their beliefs are basically identical with those of the Jews and Christians, even though they differ in practices". Arabic very soon replaced the Aramaic which the Samaritans had spoken and written—Hebrew being only a liturgical language since the beginning of the common era—at the time of the advent of Islam.

The Samaritans are important for the history of Islam, and their theories are probably at the root of the problem of *taḥrīf*. Whilst in the Rabbanite Jewish Pentateuch, accepted by the Christian churches, there is mention of the altar which God commanded to be built on Mount Ebal ("... and when you have passed over the Jordan, you shall set up these stones ... on Mount Ebal" (Deut. xxvii, 4) and not on Mount Gerizim, in the Samaritan Pentateuch this is the reverse. There are several reasons for accepting the Samaritan version; it suffices to read v. 12 and the description of Deut. xi, 29, or to think of the arid nature of Mount Ebal and the richness of Mount Gerizim.

According to Muslim historians, the Samaritans in general helped the incoming Arabs in their warfare in Palestine with the Byzantines during the early 7th century A.D. The Samaritans were known to the Arabs in the classical period as physicians, as shown by Ibn Abī Uṣaybiʿa. Many writers, and especially travellers, such as al-Masʿūdī, al-Idrīsī, Yāḳūt and al-Maḳrīzī, speak of them. Westerners, however, do not seem to have known about them at that time. The Crusader chronicles—unless, as is unlikely, some new source turns up—do not mention them. It was not until the 16th century that they were discovered by the West at the time of a melancholy attempt by a scholar who wrote to them in Samaritan characters telling them that they belonged to the ten lost tribes of Israel and, above all, leading the surviving Samaritans to believe that they stemmed from the communities traditionally said to have been deported by the Crusaders. The first Samaritan Pentateuch was brought into Europe by the Italian traveller Pietro della Valle, who went there in 1616.

But Judaism, including its European communities, knew them perfectly well, and Benjamin of Tudela went to see them in the second half of the 12th century. The Samaritans continued to have some of the institutions no longer existing in Judaism: the High Priest, the Priests and the Levites. In 1624 the last High Priest, a direct descendant of Phinehas b. Eliazar b. Aaron, died, and was replaced by another priestly family, the direct descendants of Itamar b. Aaron called Ha-Kohen Ha-Levi. In the course of time, this subtle distinction was abandoned, and the term Ha-Kohen Ha-Gadol was exclusively used. Another institution of a Biblical order which continued up to the 17th century (which may, however, have possibly stopped in the 16th century) was the use made of the ashes of the red heifer (cf. Ḳurʾān, II). The Samaritans did not use phylacteries, and their calendar was calculated each year by the Priests. It was a completely theocratic community in which there

was never any distinction between Rabbi = teacher and Kohen = priest. These last lived under a régime of nazariate. Likewise, many practices were retained with regard to the field of impurity. Pietro della Valle observed the low wall inside which women remained at the time of their menstrual periods until they became ritually pure again. Comparison with the rules of the Falasha is interesting. The *Kitāb al-Kāfī*, the most extensive of their legal compendiums composed in Arabic in A.D. 1200, states (S. Noja, *Il Kitāb al-Kāfī dei Samaritani*, Naples 1970, 84): "When any of our community touches with his hand someone who is not of our religion and then sits down to food, he must rinse his hand, since anyone touching something with his hand after ablution invalidates that ablution". From this arose the Samaritans' revulsion from physical contact with those not of their community (cf. the Ḳurʾānic *lā misās*[a]) and, consequently, the ductus *n-ẓ-r* (*ibid.*, 34) concerning which Silvestre de Sacy noted: "suspecte d'infection (je lis *nāẓir* et je prend ce mot dans le sens de *nuẓira*, ex. *naẓra, deformitas, color-vitium*)". Another non-Samaritan piece of evidence from the 7th century mentions their custom current at that time of burning by fire any of their land over which a non-Samaritan had passed. This piece of evidence ends with the words *tanta illis est execratio utrisque*. Al-Shahrastānī was well aware of this when he wrote (tr. D. Gimaret and G. Monnot, *Le Livre des religions et des sectes*, Louvain 1986, 609), "they are more severe than the rest of the Jews in matters of ritual purity".

Nevertheless, much prudence is required in seeing, as has been done in the past, an imitation of Samaritan customs in many of the Islamic rules such as the positions in worship and the ritual formulae, since it may well be that the contrary is true: it was the Samaritans, with their great capacity for adaptation, who were inspired by the living practice of Islam.

Bibliography (in addition to references in the article): M.N. Adler, *The itinerary of Benjamin of Tudela*, New York 1907; A.D. Crown, *The Samaritans*, Tübingen 1989; idem and R. Pummer and A. Tal, *A companion to Samaritan studies*, Tübingen 1993.

2. Samaritan literature in Arabic.

When the Samaritans experienced the Islamic invasion, their language was Aramaic or, rather, one of the numerous forms of Aramaic with its own special characteristics. Above all, in phonology, their language was close to Palestinian Aramaic, with the disappearance of the laryngeals, a marked preference for prosthetic vowels, etc., whilst retaining some differences, such as the change *u* > *a* in closed, unstressed sylables. Their writing system was—and still is today—palaeo-Hebraic, i.e. the ancient system of writing, similar to Phoenician, which had been used all through Israel before the Babylonian Exile. On their return, the Jews, in order to distinguish themselves from the Samaritans, adopted the "square Hebrew", which has since then been permanently used by them all, including the Karaites; today, it is the writing system used in the State of Israel. After the time of the Arab conquest, the Samaritans began to speak Arabic without any break at all. In an unsystematic fashion, for writing down Arabic, they began to use the palaeo-Hebraic script equally with the Arabic script. A similar state of affairs is represented by the use or Karshūnī [*q.v.*] for writing Syriac.

The works written in Arabic (in the *Narbonne Chronicle*, there is quoted the first Samaritan who began to speak in Arabic), independent of writing system, cover all the aspects of their interests.

1. Translated works.

Translation of the Pentateuch. Several versions are involved. Five can be identified, given the fact that we still do not possess any critical edition. The Samaritans were interested above all in commentaries, and one can discern that they utilised versions of already-existing commentaries from Judaism and also—at a late date—from Arabic-speaking Christianity, naturally with adaptations.

Translations of various works. No work in this category can be considered as important.

2. Original works.

(a) *Chronicles*. At least seven of these exist. Some are short; others, like that of Abu 'l-Fatḥ, very lengthy.

The *Asāṭīr* ("stories"), very close to the Midrash.

The *Shalshala*, the "chain" of the high priests.

The *Tūlīda*, the "genealogy", also called "the Neubauer chronicle", from its editor.

The *Book of Joshua*. This book, completely in Arabic, has no connection with the relevant first historical book of the Old Testament. It is based on several sources, and was transcribed into Arabic by an anonymous author *ca.* A.D. 1300.

The "Adler-Seligsohn" chronicle, after the names of its editors.

The "Chronicle II" or "Macdonald-Cohen" one, after the names of its editors. Here it is the Arabic text which is the original, and not the Hebrew.

The *K. al-Taʾrīkh*, the Annals of Abu 'l-Fath, the longest and most complete. Dating from the 14th century, it has been brought up to the middle of the 19th century.

(b) *Commentaries on the Pentateuch*. These books, like the treatises on law, are considered by the Samaritans as their most important books, and were written originally in Arabic.

Various partial commentaries:

The *K. fī shurūḥ al-ʿashar kalimāt* "Commentary on the Decalogue" by Abu 'l-Ḥasan of Tyre.

al-Khuṭba al-djamiʿa or *Sharḥ azīnu*, on Deut. xxxii by the same author.

Commentary on Genesis (from i.2 to i.5) by Ṣadaḳa b. Munadjdjā b. Ṣadaḳa, called al-Hakīm.

The *Sharḥ al-Fātiḥa*, on the "*Fātiḥa*", i.e. on Deut. xxxii. 3-4, by Ibrāhīm al-Ḳabbāṣī, etc.

The most extensive and most popular is the commentary on the first four books of the Pentateuch written by Muslim b. Murdjān b. Ibrāhīm and his nephew Ibrāhīm b. Yaʿḳūb b. Murdjān in the last century.

(c) *Legal treatises*. These were also written in Arabic after the decline in the use of Aramaic. They include amongst others:

The *K. al-Kāfī* "The Sufficient", from A.D. 1042, by Yūsuf b. Salāma of ʿAskar, on "that which is sufficient for living according to the law of God"; in effect, a work of *fiḳh*.

K. Masāʾil al-khilāf "Book on questions of conflicting views", from A.D. 1106, by Munadjdjā b. Ṣadaḳa on the points of disagreement between the Samaritans, the Jews and the Karaites.

K. al-Tibakh "Book of the commandments", of A.D. 1030, by Abu 'l-Ḥasan of Tyre, involving polemics with the Jews.

K. al-Mīrāth "Book on inheritances", of A.D. 1170, by Abū Isḥāḳ Ibrāhīm, a physician at the court of Ṣalāḥ al-Dīn (Saladin), dealing with everything regarding successions.

K. al-Farāʾiḍ "Book on the division of inheritances", from the 14th century A.D. by Abu 'l-Faradj al-Kaththār.

K. al-ʿIrba "Book on nudity", by al-Muʿallim

Barakāt, on the basis of the teachings and *fatwās* of Abū Isḥāḳ Ibrāhīm.

(d) *Collections of* fatwās *for fixing the calendar:*

K. Ḥisāb al-sinīn "Book of the calculating of the years", of A.D. 1960, by Elazar ʿAbd al-Muʿīn b. Ṣadaḳa, which includes the information of previous astronomical works in order to determine the calendar for the year.

(e) *Works on grammar.*

K. al-Tawṭiʾa "The initiation", the first Samaritan Hebrew grammar, by Abū Isḥāḳ Ibrāhīm.

With the arrival *en masse* of Europeans in the Samaritan community in the 19th century and the development of a market for manuscripts, certain of these works, originally in Arabic, were translated and recopied into Hebrew in order to satisfy book-collectors and purchasers who did not know Arabic; the case of the work *Hilluk* is well-known. Translations have sometimes been taken for the originals by European scholars, naïve and excited, and encouraged by information from maleficent and unscrupulous dealers.

Today, still, Arabic is the sole spoken language, but one notes a certain revival of Hebrew, to the detriment of Aramaic, which remains truly a dead language.

AL-SĀMIRĪ "the Samaritan", is the name in Ḳurʾān, XX, 85, 87 and 95 of the man who tempted the Israelites to the sin of the Golden Calf. The sin itself is mentioned twice in the Ḳurʾān. In the first narrative, VII, 148-57, the story is told of the sin of Israel and Aaron as in Exodus, xxxii, but with the elaboration that the calf cast out of metal was "lowing" (*khuwār*). The second version, XX, 83-98, presents al-Sāmirī as the tempter of Israel in the same situation. At al-Sāmirī's bidding, the Israelites cast their ornaments into the fire and he made out of them the lowing calf which was worshipped by the people although Aaron advised them not to do so. When challenged by Moses, al-Sāmirī justified himself by saying that he saw what the others did not see, the footsteps of the messenger (understood in Muslim tradition to be the tracks of the hooves of Gabriel's horse). Moses then announced his punishment to him: "So long as you live, you shall call out, 'Do not touch me' (*lā misāsa*)" (XX, 97).

The Muslim tradition has had no doubt that al-Sāmirī was a Samaritan as known within the Jewish and Christian traditions. Al-Ṭabarī, *Djāmiʿ al-bayān*, Cairo 1905, xvi, 152, and al-Zamakhsharī, *al-Kashshāf*, Beirut 1967, ii, 549, for example, understand al-Sāmirī to have been a prominent Israelite of the tribe of Sāmira whose name was Mūsā b. Ẓafar; his religion is understood to have differed from that of other Jews.

Scholars have extensively debated the question of how a Samaritan became involved with the Mosaic story of the golden calf. Bernard Heller in *al-Sāmirī* in *EI*[1] and *SEI* agreed with Goldziher (in his article *Lā Misāsa*) that al-Sāmirī was a representative of the Samaritans, a group which kept apart from non-Samaritans because of a special concern over purity. In a segregation of this kind—as in the Jewish laws regarding eating (Ḳurʾān, IV, 160)—Muḥammad saw a divine punishment. What did al-Sāmirī (= the Samaritans) have to atone for, such that he would be punished in this manner? For the sin of the golden calf. What was known as a ritual practice of the Samaritans—that contact with those outside their group created impurity—is put back into earlier times and explained as a punishment of al-Sāmirī for having incited the Israelites to make and worship the calf. But other theories have been put forth. Speyer suggested a reference to the story of Zimrī (and thus al-Sāmirī) ben Sālū from Num. xxv, 14, who was guilty of defying Moses in having relations with a Moabite woman. More recently, Schwartzbaum, developing a suggestion of Yehuda, has suggested that we have a tale in which the story of King Jeroboam's calves (one of which, according to Talmudic tradition, was able to talk, thus being parallel to the Ḳurʾānic idea of the golden calf "lowing") has merged with that of Moses and the golden calf. The conflation stemmed from Jeroboam's statement "Here are your gods, Israel, that brought you up from Egypt" (I Kings, xii, 28) in reference to his two golden calves, a statement which also appears in Exod., xxxii, 4, in the mouth of Aaron. Providing the link to al-Sāmirī is the point that Jeraboam's capital was in Shechem (I Kings, xii, 25), the Samaritan sacred centre. Schwartzbaum also sees remnants of the folkloric motif of the Wandering Jew in the story of al-Sāmirī who roams the world crying, "Do not touch me!" Regardless of how the story came about, the Ḳurʾān appears to present the earliest record of this midrashic development; aspects of it which are found in Jewish sources (e.g. in *Pirḳē de Rabbi Eliezer* and *Tanḥūma*) would seem to date from after the rise of Islam.

(B. HELLER-[A. RIPPIN])

AL-ṢĀMIT, "the Silent One", as opposed to *al-*

nāṭiḳ "the Speaking One", a term used by several extremist Shīʿī sectarians (*ghulāt*) to designate a messenger of God who does not reveal a new Law (*sharīʿa*). The pair of terms is found in the notices concerning the doctrines of the Manṣūriyya and Khaṭṭābiyya [*q.vv.*] sects respectively (Saʿd b. ʿAbd Allāh al-Ḳummī, *K. al-Maḳālāt wa 'l-firaḳ*, ed. Mashkūr, 48, 51). According to the doctrine of the Khaṭṭābiyya, Muḥammad was the *nāṭiḳ* and ʿAlī the *ṣāmit*; in the same sense the two terms are used in the earliest treatises of the Ismāʿīliyya [*q.v.*]; e.g. (Pseudo-) Djaʿfar b. Manṣūr al-Yaman, *K. al-Kashf*, ed. Strothmann, 77, 99-100, 103. Here, "the Silent Imām means that he is the master of the Inner Meaning (*ṣāḥib al-bāṭin*) who does not pronounce an outward revelation (*lā yanṭuḳu bi-sharīʿatin ẓāhira*)" (*op. cit.*, 100). The term occurs in many early Ismāʿīlī writings (e.g. Djaʿfar b. Manṣūr al-Yaman, *Asrār al-nuṭaḳāʾ*, ed. M. Ghālib, Beirut 1984, 248, 257, 263, quoted by W. Ivanow, *Ismaili tradition concerning the rise of the Fatimids*, Bombay 1942, 278, 293, 303; idem, *K. al-Fatarāt*, ms. Tübingen, pp. 110-11), but soon has been replaced by the terms *waṣī* (legatee) or *asās* (foundation): according to Abū Yaʿḳūb al-Sidjistānī (d. after 386/996), *Ithbāt al-nubuwwāt*, ed. ʿĀrif Tāmir, Beirut 1966, 193, "Adam was the first *nāṭiḳ* for the first cycle, whereas Seth was his silent *asās* (*asāsuhū al-ṣāmit*)." In later Ismāʿīlī writings, the term *ṣāmit* falls into disuse.

Bibliography: Given in the article.

(H. Halm)

SAMMĀ, the name of a Rādjpūt tribe in Sind. At the time of the Muslim advent into Sind (93/711-12) the Sammās were ostensibly already a well-formed tribe, with distinctive customs and with a recognised habitat, according to the much later *Čač-nāma*, which mentions the Sammā tribal leader as a Buddhist. The same source mentions the Sammās and their allied tribes, the Lākhos and the Suhtas, as living in the territory from Lohāna (modern Sanghar, Ḥaydarābād District) down to the Arabian Sea coast.

The rival tribe of the Sumerās [*q.v.*] first find mention in the account of the Ghaznawid Sultan Maḥmūd's return march from his Sōmnāth expedition (416/1026) [see sūmanāt]. Later, the Sumerās emerged as the dominant tribe in Sind, completely eclipsing the Sammās for over three centuries. But already towards the end of the reign of Muḥammad b. Tughluḳ (d. 752/1351) the (Sammā) Djāms were linking up with the rebels (Baranī, 523-5). The first half of the 8th/14th century witnessed a reversal of roles, with the Sammā chiefs emerging as strong, assertive leaders. The circumstances of this change are not fully known. Internecine warfare among the Sumerās, along with certain adverse changes in the course of the river Indus (see the *Taʾrīkh-i Ṭāhirī*, extracts in Elliot and Dowson, i, 271), and other unclear factors, may have sapped the energy of the Sumerās.

The final stage of the shift of power from the Sumerās to the Sammās is fairly well documented. It appears from the state documents of the Dihlī Sultanate that the Sumerās, in a desperate bid to retain the power that was slipping from their hands, sought the support and the protection of the Sultanate officials in Gudjarāt, Multān and lower Sind from the opening years of Fīrūz Shāh Tughluḳ's reign (acc. 752/1351) onwards. These officials were keenly interested in keeping intact "the afflicted plant of the life of Hamīr Dodā Sumerā", the last Sumerā chief, for they needed Sumerā support against the rising Sammā tribe, who had already been giving much trouble to the Dihlī government by allying themselves with Mongol marauders, always active on the borders, and with Sindhi malcontents (*Inshāʾ-i Māhrū*, 100-3, 186-9). But Tughluḳ efforts to give the Sumerā a new lease of life proved unavailing.

It is generally agreed that the Sammās were of Rādjpūt origin. They were closely related to the Djadedja Djāms of Kāṭhīāwāṛ, with whom they shared the title of *Djām*, one of uncertain derivation. The presence of Sindhi elements in their names also indicates their indigenous origin. There is little evidence about their conversion to Islām. The first Sammā chief is generally mentioned as Djām Fīrūz Unnar, who came to power in the early 1350s at Ṭhaṭṭā [*q.v.*]. It is uncertain whether he was the same person who figures in Ibn Baṭṭūṭa's account as Wunār al-Sāmirī, a high official at Sīwistān under Sultan Muḥammad b. Tughluḳ of Dihlī, who later rebelled and rose to chiefdom as Malik Fīrūz (iii, 105-7, tr. Gibb, iii, 599-600). Most Sindhi scholars are inclined to identify Ibn Baṭṭūṭa's "Wunar al-Sāmirī" with the Sammā chief who became the first ruler of the Sammā dynasty that ruled over Sind, with their capital at Ṭhaṭṭā.

The chronology of the Sammā rulers as given in the *Taʾrīkh-i Sind* of Mīr Maʿṣūm Bhakkarī and in later chronicles which have followed him has been proved to be seriously at fault, as shown conclusively by Riazul Islam, *The rise of the Sammas in Sind* (see *Bibl.*), 1-24. The "tentative list" of the Sammā rulers and their chronology worked out by N.A. Baloch "is comparatively more authentic", see his article, in *Bibl.* For a more detailed and descriptive list, see Ḥusām al-Dīn Rāshidī's note in his edition of the *Maklī-nāma* (see *Bibl.*), 103-36.

It was during the joint reign of ʿAlāʾ al-Dīn Djām Djūnā and Ṣadr al-Dīn Bānhbīna that Tughluḳid Dihlī Sultan Fīrūz Shāh led a long campaign against Ṭhaṭṭā which began in the last months of 1365 and ended in 1367 with the intercession of the leading Suhrawardī saint of Sind, Sayyid Ḥusayn Djalāl al-Dīn, called Makhdūm-i Djahāniyan [see djalāl al-dīn ... al-bukhārī] (for details, see Riazul Islam, *op. cit.*). The two joint rulers made their submission to the sultan, and joined his return march to Dihlī. The sultan assigned the rule of Sind jointly to Djām ʿAlāʾ al-Dīn's son and to Tamāčī, son of Bānhbīna. Later, when Tamāčī showed signs of disaffection, he sent Djām ʿAlāʾ al-Dīn to take charge of the affairs at Ṭhaṭṭā (ʿAfīf, 190-247). When the Tughluḳ empire rapidly disintegrated after Fīrūz Shāh's death in 791/1388, the Sammās assumed complete independence.

The Sammā chiefs were rulers who provided Sind with a century and a half of prosperous and fairly peaceful dynastic rule. Their popularity is well reflected in folk tales and songs pertaining to the various rulers. The best ruler of the dynasty undoubtedly was Djām Niẓām al-Dīn (II) Ninda (866-914/1461-1508); his tomb is the most prominent monument at Maklī (near Ṭhaṭṭā), the necropolis of mediaeval Sind (see Mīr ʿAlī Shīr Ḳāniʿ, *Maklī-nāma*, ed. Rāshidī, especially his Note at 88-103). The Djām was a great patron of art and culture, and enjoyed wide popularity at home and high prestige among the neighbouring kingdoms. The famous scholar Djalāl al-Dīn Dawānī (d. 908/1502-3 [*q.v.*]) wanted to migrate from Shīrāz to settle in Sind under the patronage of the great Djām, but died before he could set out. However, two of his prominent disciples settled permanently at Ṭhaṭṭā (Mīr Maʿṣūm, *Taʾrīkh-i Sind*, 74).

Sammā rule came to end with the arrival in Sind of the more powerful Arghūns, who had been displaced from Ḳandahār in Afghānistān by Bābur [*q.v.*] and

their leader Shāh Beg Arghūn founded his own dynasty there after his victory over Fīrūz b. Ninda in 926/1520 [see ARGHŪN]. A branch of the Sammā tribe, known as the Djādedjā Sammās, ruled over Kāthīāwāŕ from the 7th/13th to the 9th/15th century, but never converted to Islam (see Baloch).

(RIAZUL ISLAM)

AL-**ṢAMMĀN**, in the vernacular pronounced as al-Ṣummān, a large tract of rugged, stony uplands in eastern Arabia, east of the sands of al-Dahnāʾ [*q.v.*]. Its south-eastern part is also called al-Ṣulb. Both *ṣammān* and *ṣulb* mean "hard, stony ground", while *ṣammān* has the additional connotation of "hard ground by the side of sands". In its narrow sense, limited to the north-western part, al-Ṣammān extends from al-Maʿḳalāʾ at its south-eastern extremity towards the gravel plain of al-Dibdiba in the north-east and Wādī al-Bāṭin at its north-western limit i.e. the area which lies between 45° 20′-47° E. and 28°-26° 45′ N. A broader definition of al-Ṣammān is the stretch of land between the road from al-Riyāḍ to al-Aḥsāʾ in the south to the road from al-Ḳaṣīm to al-Baṣra in the north. However, in today's usage al-Ṣammān is often understood as the entire area of hard ground running in parallel to al-Dahnāʾ from Wādī al-Bāṭin in the north towards a point at approximately 22° N., and to the east of al-Aflādj. The southern stretch, which is wedged between al-Dahnāʾ and the north-western sands of the Empty Quarter in the general area of the oasis of Yabrīn, is called Ṣammān Yabrīn. At about 22° N. the great gravel plain of Abū Baḥr protrudes southward from al-Ṣammān towards a point east of al-Sulayyil, where the sands of the Empty Quarter and the ʿUrūḳ al-Rumayla, the southern extension of al-Dahnāʾ, meet.

Philby writes that al-Ṣammān at many points consists of whitish sandy limestone overlying sandstone. Its uplands are intersected by many depressions where the rainwater collects in large pools (*khabārī*) and basins with spring wells (sing. *djaww*). Permanent water is found in numerous reservoirs in subterranean cavities (*duḥūl*). Following rains, al-Ṣammān turns into excellent grazing land, attracting Bedouins of the Muṭayr, al-ʿUdjmān, Banī Khālid, Ḳaḥṭān and Subayʿ tribes. From al-Aṣmaʿī is reported the saying, "Whoever grazes his herds during winter in al-Dahnāʾ, in spring in al-Ṣammān, and in late spring in al-Ḥimā, has completed [the cycle of] pasturing them [on the herbage that shoots up in the wake of rains]." Yāḳūt writes that in ancient times these pastures were the tribal land of the Banū Ḥanẓala. Al-Ṣammān and al-Ṣulb are mentioned by classical poets like al-Farazdaḳ, Djarīr, and especially Dhu 'l-Rumma, who also names many of their watering-places.

(M. KURPERSHOEK)

SAMMŪR [see FANAK; FARW].

AL-**SAMN** (A.), butter, made from cows', goats' and ewes' milk, heated over the fire to extract its impurities, and hence called clarified butter (as distinct from *zubd* which is butter made from churned milk). Mediaeval dietetic texts state a preference for clarified butter made from cows' milk over goats' milk. Its medicinal benefits were as an antidote against poisons and snake bites, if ingested alone or mixed with honey, and as an ointment for the cure of boils and abscesses, including haemorrhoids. *Samn* was also used in the kitchen and, according to the anonymous *Kanz al-fawāʾid*, its use (at least in the urban milieu reflected by the culinary manuals) was almost exclusively limited to the preparation of egg dishes, such as omelettes, and sweet dishes made with flour; in the latter case, *samn* was often mixed with sesame oil (*shīradj*).

Waines, Beirut-Stuttgart 1993.

(J. RUSKA-[D. WAINES])

SAMORI TURE (1830-1900), the founder of an empire in West Africa during the 19th century.

A bloody tyrant and slave-merchant in colonial historiography, and a precursor of resistance for African nationalism, Samori never ranked as an emblematical figure for Islam in the sub-Saharan region. We now discern in him the figure of an imperial leader, with undoubtedly political and military qualities, whose resistance to the French and whose Islamic orientation arose more from the conjuncture of events than from a predetermined plan.

Samori arose from the Mandinka/Mandigo world, which had in particular given birth to the mediaeval empire of Mali [*q.v.*]. His political rise unfolded completely within the upper Niger valley and its right bank affluent the Milo (in modern Mali and Guinea). He was born into an aristocratic family, substantially de-Islamised, but incarnated through his actions the aspirations of a specialised social group, the Jula (Dioula) Muslims and traders, at that time stirred up by the indirect effects of the largely Fulani *dj̲ihāds* taking place in adjoining regions (1727, Futa Djalon, in modern Guinea; 1817, Masīna, in Mali; 1852, al-Ḥādj̲dj̲ ʿUmar, in the northern part of Guinea).

Samori's beginnings were those of the leader of a Mandingo band of troops. He first exercised his calling of arms, before 1860, in the service of various clans, notably that of his maternal relatives, the Kamara. In 1878, he personally took control of all Upper Niger, and in 1881 seized Kankan, the main Islamic city of the region.

The capture of Kankan brought into his circle numerous scholars. From now onwards, Samori was assisted by a secretary who wrote his correspondence in Arabic, but, above all, he installed in his immediate entourage, for eight years, Sidiki Sherifu Haidara, a *S̲h̲arīf* of Kankan and *s̲h̲ayk̲h̲* of the Ḳādiriyya, who became his master. At a time when he was still, at the age of 20, illiterate, Samori acquired in his shadow a taste for Arabic and for Ḳurʾānic recitation.

The people of Kankan were thus the agents of a grafting process of Islam. In 1884, at the end of Ramaḍān, he who was not yet anything more than a *kèlètigi* (war chief), and then a *faama* (political chief by right of conquest), assumed the title of *almami* (*al-imām*), borrowed from the neighbouring Fulani *dj̲ihāds*. In correspondence, he was after this time described as *amīr al-muʾminīn*. In December 1886, at the end of a period of study, he proclaimed himself *namutigi* ("master of tradition"), a dignity reserved for scholars of *ḥadīth̲* and *fiḳh*, and led in person the Friday prayer. He also launched a forcible movement of Islamisation, imposing the *s̲h̲arīʿa* and the Islamic law of succession, nominating *ḳāḍīs* and making Ḳurʾānic teaching general by means of a network of paid schoolmasters (*karamoko*), forcing non-Muslims to convert. On this occasion he plunged into open conflict with Mandingo tradition and experienced the direct hostility of part of his family and his partisans. The excesses of this Islamic revolution, combined with defeats suffered at the hands of his main enemy in the region, the Senufo kingdom of Kenedugu (Sikasso), forced Samori to relax the system. This episode, which had hardly lasted four years, came to an end in 1889. There nevertheless remained of these attempts a strong Islamising tendency at the head of the empire, which at this time enjoyed its apogee with a population of about a million inhabitants and an area of not less than 200,000 km².

The threat from the French played an important role in this return to a more pragmatical attitude. The first clashes with the French, who were now reaching the river Niger (Bamako, 1 February 1883) and who marked out Samori as the enemy who was to be brought low. The history of relations between the French and Samori is one of a long series of treaties swiftly renounced (Kenyeba-Kura, 1886; Bisandugu, 1887; Nyako, 1889) and of frontal attacks which had various outcomes. Samori was forced to evacuate Upper Niger and to transfer his troops and faithful supporters further eastwards, to the north of the Ivory Coast, into lands populated by indifferent or hostile tribes. For several years, Samori's power reached a new peak. But, deprived of access to the ports of Freetown and Monrovia, which had allowed him to import rapid-firing arms, Samori was thrown back on to the defensive. He was abandoned by the Jula of Kong (in the north of the Ivory Coast), and destroyed their town (18 May 1897), whilst his son Sarankènyi-Mori massacred, against his orders, a French column near Bouna (20 August 1897). Deceived in his hopes of conciliating the British, menaced by the French who wished to avenge their dead, Samori had to relinquish territory in face of a combined offensive by the two colonial powers, mounted from the south. He tried at that point to get back, by a southerly movement, to the Upper Niger basin. It was there that he was captured by surprise, with leaves of the Ḳurʾān in his hand, by a reconnaissance party under Capt. Gouraud at Gelemu (western part of the Ivory Coast, 20 September 1898). Transferred to Saint-Louis in Senegal, and then deported with several of his supporters to Gabon, into a human and natural milieu totally different, he died there on 2 June 1900.

Bibliography: The bibl. of the Samorian movement is dominated by the monumental thesis of Yves Person, based on an extensive combing of the archives and far-reaching oral enquiries (861 informants, from 1955 to 1962). Without being basically challenged, Person's work may be criticised on certain points: the very concept of a "Jula revolution", which makes Samori the political expression of the trading minority, thereby underestimating in his approach the truly Mandingo warrior models—the essentially political vision of Samori's undertaking (erection of a sovereign power, defence of an identity), to the detriment of social aspects (notably, the extension of slavery as a result of the incessant warfare)—and a certain fascination for the author of the "genius" (a recurring term) of his hero.

Y. Person, *Samori. Une révolution Dyula*, 3 vols., Dakar 1968-75, pp. 2,377; *Cartes historiques de l'Afrique manding (fin du 19ème siècle)*. *Samori. Une révolution Dyula*, Paris, Centre de Recherches Africaines 1940, 44 maps. See also Person, *Samori, construction et chute d'un empire*, in Ch.-A. Julien *et alii* (eds.), *Les Africains*, Paris 1977, i, 249-85 (résumé of the thesis), and *Samori and Islam*, in J.R. Willis (ed.), *Studies in West African Islamic history*, i, *The cultivators of Islam*, London 1979, 259-77.

Person has clearly shown the crushing weight of the "black legend" in French historiography, polemical and repetitive. Three works are worth mentioning: Commandant Peroz, *Au Soudan Français*, Paris 1889; Capitaine L.-G. Binger, *Du Niger au Golfe de Guinée*, Paris 1892, 2 vols.; Colonel Gallieni, *Deux campagnes au Soudan Français*, Paris 1891, which contains in particular the greater part of Peroz's report on his mission to Bisandugu, Samori's capital, in 1886. These three officers were direct participants in the events, and the first two had a long period of contact with Samori.

(J.-L. Triaud)

SAMOS [see sīsām].

SAMRŪ or Sumrū, Bēgam, the originally Muslim Indian wife of the European adventurer Walter Reinhardt Sombre or Samrū, who held the *pargana* [*q.v.*] of Sardhanā [*q.v.*] in northwestern India under the later Mug̲h̲al Emperor S̲h̲āh ʿAlam II [*q.v.*]. On Reinhardt's death in 1778, Bēgam Samrū kept up what was virtually a petty principality of Sardhanā, with an army which included some 300 European and half-breed mercenaries, and in 1792 married a French soldier of fortune Levassault. Toppled from control of Sardhanā in 1793 by a son of

Reinhardt's, Ẓafar-yāb Khān, in whose putsch Levassault died by his own hand, the Bēgam was nevertheless restored by the Irish adventurer George Thomas. After the British conquest of the Doʾāb [*q.v.*] in 1803, she tendered her loyalty to the British, who allowed her to retain her estates and to keep up a reduced army.

In 1781 she had been baptised a Roman Catholic, and at Sardhanā she built churches and schools, including a cathedral for a bishop appointed to the new see, and she also contributed to Hindu and Muslim charities; her foundations are still today an important centre for Christian activity in the Doʾāb. However, she was herself proficient in Persian and Urdu, and had a lively circle of poets in these two languages at her court, who included François Gottlieb Koine (var. Cohen!) "Farāsū", nephew by marriage of Ẓafar-yāb Khān, skilled also in Hindi poetry and described by Sprenger as "the one outstanding name in the annals of Anglo-Indian [Urdu] poetry". Her new palace in Sardhanā later became a Roman Catholic school; her Dihlī palace in the "Oriental Regency" style was used as a powder factory by the insurgents during the Sepoy Mutiny of 1857-8. After the death of this remarkable woman on 27 January 1836, her estates were resumed, but her large private fortune passed to the son of the marriage between Ẓafar-yāb's daughter and the Begam's Eurasian factor Dyce, David Ochterlony Dyce-Sombre, and on his death in London in 1851, her fortune mainly passed, after prolonged litigation, to his wife, daughter of Earl St. Vincent and subsequently Lady Forrester.

A Persian *mathnawī* on the life of the Bēgam was completed in 1822, and is extant in a B.L. ms. Add. 25830 (Rieu, ii, 724a), with the Bēgam's own copy, reportedly with magnificent contemporary illustrations, in the Arabic and Persian Research Institute, Tonk, Rajasthan. See also SARDHANĀ.

(C.E. BOSWORTH and S. DIGBY)

ṢAMṢĀM AL-DAWLA, Abū Kālīdjār Marzubān, Shams al-Milla (353-88/964-98), Buyid *amir* and eldest son of ʿAḍud al-Dawla [*q.v.*].

On his father's death in Shawwāl 372/March 983, Ṣamṣām al-Dawla succeeded to power as *amīr al-umarāʾ*, but his position was immediately disputed by another brother, Sharaf al-Dawla Shīrzīl, who seized Fārs and Khūzistān. From his base in ʿIrāḳ, Ṣamṣām al-Dawla had also to combat the Kurdish chief Bādh, ancestor of the Marwānid dynasty [see MARWĀNIDS] of Diyār Bakr, who had seized various towns in al-Djazīra and who even for a while held Mawṣil. Despite his repulse of Bādh's attack on Baghdād and the recovery of Mawṣil, Ṣamṣām al-Dawla had to allow him to retain Diyār Bakr and part of Ṭūr ʿAbdīn.

From 375/985-6 onwards, Ṣamṣām al-Dawla was again involved in disputes with Sharaf al-Dawla, but with a section of the Būyid army also espousing the cause of a further younger brother, Bahāʾ al-Dawla Fīrūz [*q.v.* in Suppl.], then only 15 years old. In the end, Ṣamṣām al-Dawla had to agree to place Sharaf al-Dawla first in the *khuṭba* of ʿIrāḳ, with himself retaining only the governorship of Baghdād; but Sharaf al-Dawla was able in 376/986-7 to seize Ṣamṣām al-Dawla at Shīrāz, partially blind him and imprison him at Sīrāf. He was freed in 379/989 after Sharaf al-Dawla's death, when Bahāʾ al-Dawla had succeeded to the office of supreme *amīr*. At the outset, Bahāʾ al-Dawla recognised Ṣamṣām al-Dawla as an equal ruler controlling Fārs, Kirmān and ʿUmān. Ṣamṣām al-Dawla now expanded into Khūzistān and seized Baṣra, with his troops led by the capable commander Abū ʿAlī al-Ḥasan b. Ustādh-Hurmuz, and he successfully resisted the claims of the sons of ʿIzz al-Dawla Bakhtiyār [*q.v.*], cousin of ʿAḍud al-Dawla. In the fighting with Bahāʾ al-Dawla which went on for some eight years, Ṣamṣām al-Dawla was gaining the upper hand when, in Dhu 'l-Ḥidjdja 388/November-December 998, he was murdered near Iṣfahān by one of the sons of ʿIzz al-Dawla, Nūr al-Dawla Abū Naṣr Shāh-Fīrūz; Bahāʾ al-Dawla had him buried in state within a mausoleum at Shīrāz.

Of Ṣamṣām al-Dawla's education and cultural background we know little, but his vizier ʿAbd Allāh Ibn Saʿdān [*q.v.* in Suppl.] (373-4/983-4) was famed for his circle of littérateurs and scholars in Baghdād, including Abū Ḥayyān al-Tawḥīdī [*q.v.*], and according to the *Ṣiwān al-ḥikma*, doubtfully ascribed to Abū Sulaymān al-Sidjistānī, the historian and philosopher Miskawayh [*q.v.*] served Ṣamṣām al-Dawla in Baghdād before going on to the court of Fakhr al-Dawla [*q.v.*] at Rayy.

Bibliography: 1. Sources. Miskawayh ends his history in 369/979-80, but much material can be found in Abū Shudjāʿ al-Rūdhrāwarī's *Dhayl* (in Amedroz and Margoliouth's *Eclipse of the ʿAbbasid caliphate*, iii, tr. vi), and this can be filled out with details from the general chroniclers such as Ibn al-Djawzī, Sibṭ Ibn al-Djawzī and Ibn al-Athīr.

2. Studies. See the historical narratives of events constructed by Mafizullah Kabir, in *The Buwaihid dynasty of Baghdad (334/946-447/1055)*, Calcutta 1964, and H. Busse, *Chalif und Grosskönig. Die Buyiden im Iraq (945-1055)*, Beirut-Wiesbaden 1969, indices; also J.L. Kraemer, *Humanism in the renaissance of Islam. The cultural revival during the Buyid age*, Leiden 1986, 37, 91, 191-6, 198-9.

(C.E. BOSWORTH)

ṢAMṢĀM AL-DAWLA SHĀHNAWĀZ [see MAʾĀTHIR AL-UMARĀʾ].

ṢAMṢĀM AL-SALṬANA, Nadjaf Ḳulī Khān, a Bakhtiyārī chief born about 1846. His father was Ḥusayn Ḳulī Khān, more commonly known as Īl-khānī, the first Bakhtiyārī leader to be formally designated *Īlkhān* of all the Bakhtiyārī by the imperial government in Tehran, and who was poisoned on the orders of prince Ẓill al-Sulṭān, the famous governor-general of Iṣfahān, who feared his growing power. Ṣamṣām al-Salṭana was *Īlbeg* of the Bakhtiyārī in 1903-5 and later *Īlkhān*. He is remembered principally for the part he played as one of the leaders of the Bakhtiyārī intervention in the constitutional movement in Persia.

The Constitutional Revolution [see DUSTŪR. iv] gave the Bakhtiyārī khāns, particularly Ṣamṣām and his brother, Sardār-i Asʿad, the opportunity to transcend their traditional provincial roles and enter the national arena. Although Sardār-i Asʿad had been at

least partially converted to the constitutionalist cause, Ṣamṣām appears to have been motivated largely by the desire to further his own personal and tribal interests.

During 1908 the Iṣfāhānī constitutionalists attempted to enlist wider support, including that of the Bakhtiyārī, in their struggle against Iḳbāl al-Dawla, the new governor appointed by the reactionary Muḥammad ʿAlī Shāh [*q.v.*]. In January 1909 Ṣamṣām, with a Bakhtiyārī force, occupied Iṣfāhān and assumed the duties of governor. He asked the Shāh to confirm him in this position but the Shāh refused. Ṣamṣām convoked the provincial *andjuman* and, on 3 May, telegraphed jointly with Sardār-i Asʿad to all the foreign legations warning of their intention to march on the capital to force on the Shah the restoration of the constitutional régime. On July 13 Tehran fell to the Bakhtiyārī marching from the south and revolutionary forces led by Sipahdār-i Aʿẓam advancing from Rasht, and the Shāh was deposed. Ṣamṣām was appointed governor of Iṣfāhān.

When, in the summer of 1911, the news of the return of the ex-Shāh reached Tehran, Ṣamṣām entered the cabinet of Sipahdār as minister of war. The same day, 19 July, the Madjlis declared a state of siege and martial law, placing extraordinary powers in Ṣamṣām's hands. He advocated the Madjlis putting a price on the head of the ex-Shāh and personally offered to assassinate him. On 26 July Ṣamṣām formed a new cabinet, becoming prime minister while retaining the post of minister of war. He mobilised his Bakhtiyārī tribesmen to fight the forces of the ex-Shāh but the arrival of the Bakhtiyārī with their khāns in Tehran and their exorbitant demands for money led to several resignation threats from Morgan Shuster, the American Treasurer-General. In August and September the Bakhtiyārī, with the help of the Armenian revolutionary Yifrim Khān, defeated the supporters of Muḥammad ʿAlī. The hostility of Ṣamṣām and his cabinet to Shuster's efforts to reform Persia's finances came to a head when the latter attempted to collect taxes from prince ʿAlāʾ al-Dawla. On 2 November Russia protested at Shuster's confiscation of the property of prince *Shuʿāʿ* al-Salṭana who, although having engaged in armed rebellion, was under Russian protection. Wuthūḳ al-Dawla, minister of foreign affairs in Ṣamṣām's cabinet, apologised but Russia presented an ultimatum demanding the dismissal of Shuster. The Madjlis was inclined to resist but on 24 December Ṣamṣām and his cabinet, with the regent Nāṣir al-Mulk, forced its dissolution and accepted the Russian demands. Ṣamṣām remained prime minister until January 1913, when he resigned from the cabinet. In July 1913 Bakhtiyārī domination suffered a further setback when the newly-formed government gendarmerie expelled all armed Bakhtiyārī from Tehran.

In May 1918 Ṣamṣām again formed a government. As a repercussion of events in Russia, this cabinet, which had a nationalist character, abrogated all treaties with Russia and all concessions granted to Russians. This measure, which affected the interests of foreigners in general, accelerated the fall of Ṣamṣām's cabinet and its replacement by that of Wuthūḳ al-Dawla, which signed the Anglo-Persian agreement of 9 August 1919. In the summer of 1921 Ṣamṣām was appointed governor-general of Khurāsān to replace the military governor-general, Colonel Muḥammad Taḳī Khān Pasyān, but was prevented from taking up his post by Pasyān's resistance. Ṣamṣām died in 1930 while on a mission to mediate between the central government and rebellious Bakhtiyārī tribes.

(V. MINORSKY-[STEPHANIE CRONIN])

AL-ṢAMṢĀMA, the sword of the Arab warrior-poet ʿAmr b. Maʿdīkarib al-Zubaydī [*q.v.*], celebrated for the temper and cutting power of its blade. Like a number of the best Arab swords, its origin was traced back to Southern Arabia and a fabulous antiquity was ascribed to it. ʿAmr himself in a verse often quoted (*ʿIḳd*, ed. 1293, i, 46, ii, 70; Ibn Badrūn, 84; *Tādj al-ʿarūs*, vi, 229) says that it had once belonged to Ibn Dhī Kayfān "of the people of ʿĀd" (this member of an actual Ḥimyar clan (cf. M. Hartmann, *Die arabische Frage*, 331, 613) is identified with one of the last Ḥimyar kings of the family of Dhū Djadan; but very probably the poet only means to allude to the great age of his weapon).

The history and fortunes of al-Ṣamṣāma are rather involved; even in the poet's lifetime it came into the hands of a member of the Umayyad family, Khālid b. Saʿīd b. al-ʿĀṣ, the companion of the Prophet. The way in which he got possession of it is recorded with several variants by Ibn al-Kalbī (in al-Balādhurī), Abū ʿUbayda (in the *Aghānī*), al-Zuhrī (in Ibn Ḥubaysh; see *Bibl.*), and Sayf b. ʿUmar (in al-Ṭabarī). According to the last-named, Khālid won it in battle after routing ʿAmr b. Maʿdīkarib who was taking part in the revolt against Islam raised by the false prophet al-Aswad al-ʿAnsī [*q.v.*]; according to the three first, ʿAmr himself gave it to Khālid as a ransom for his sister (or wife) Rayḥāna, who was a prisoner of the Muslims. ʿAmr composed a poem on the occasion, of which several verses are frequently quoted in the Arab sources (Ibn Durayd, 49; *Lisān*, xv, 240, etc.). The tradition (al-Tibrīzī, in *Ḥamāsa*, ed. Freytag, 397, 12-15) which says that ʿAmr gave it to the caliph ʿUmar is quite denied by authority.

After the death of Khālid b. Saʿīd at the battle of Mardj al-Ṣuffar during the conquest of Syria (14/635), al-Ṣamṣāma passed to his nephew Saʿīd b. al-ʿĀṣ b. Saʿīd b. al-Āṣ [*q.v.*], who lost it while defending the caliph ʿUthmān when the latter was besieged in his house at Medina (35/656). It was found by a Bedouin of the tribe of Djuhayna, with whom it was discovered in the reign of Muʿāwiya. Restored to its former owner, it passed from one member to another of the family of the Banu 'l-ʿĀṣ until one of them, Ayyūb b. Abī Ayyūb, great-grandson of the son of Saʿīd, sold it to the caliph al-Mahdī (158-69/775-85) for about 80,000 dirhams. Henceforth, al-Ṣamṣāma was kept as a precious relic in the treasury of the ʿAbbāsids and its fame continued to increase; poets like Abu 'l-Hawl al-Ḥimyarī (al-Djāḥiẓ, *Ḥayawān*, v, 30) and Salm al-Khāsir sang its praises.

From different sources we learn of its existence in the caliphates of al-Hādī (169-70/785-6), Hārūn al-Rashīd (170-93/786-809), al-Wāthiḳ (227-32/842-7), and al-Mutawakkil (232-47/847-61), after which there is no longer any mention of it. The anecdotes recorded regarding the excellence of the famous sword during the period when it was in the hands of these caliphs have little chance of being authentic; a description which has a certain appearance of reality is the one given in al-Ṭabarī, iii, 1348, 4-8, in connection with the story of al-Wāthiḳ's using it to execute with his own hand in 231/845-6 Aḥmad b. Naṣr al-

Khuzāʿī, who was accused of having conspired against the caliph and of having maintained that the Ḳurʾān was not created, contrary to the view laid down by al-Maʾmūn: "It was a blade with a hilt at its end; three nails driven into it attached the blade to the hilt". It is apparent then that the famous al-Ṣamṣāma had nothing of value about it except its great age.

As to the name al-Ṣamṣāma, it is simply an epithet referring to the fine quality of the blade (the "cleaver") like *muṣammim*, which has the same significance. *Ṣamṣāma* is often used as a common noun, e.g. by al-Farazdaḳ (*Naḳāʾiḍ*, 385, 4) and by ʿAmr b. Maʿdīkarib himself (*Ḥamāsa* of al-Buḥturī, 83, ed. Cheikho, no. 237); *Amālī* of al-Ḳālī, iii, 154, 10), as well as by Muslim b. al-Walīd (ed. De Goeje, vi, 18) in a verse which Schwarzlose (see *Bibl.*) wrongly thought to refer to ʿAmr's sword, while the weapon given by Hārūn al-Rashīd to his general Yazīd b. Mazyad referred to in the verse is the sword of the Prophet, Dhu 'l-Faḳār [*q.v.*], as is evident from verse 25 of the same poem and the note by Ibn Khallikān (ed. Ihsān ʿAbbās, v, 329, tr. de Slane, 220).

(G. LEVI DELLA VIDA*)

ṢĀMSŪN (modern Turkish spelling, Samsun), a town of northern Asia Minor, in the classical Pontus. The Byzantine settlement, known as Amisus, attracted the attention of the Dānishmendids [*q.v.*]; as Sāmiya, it is mentioned in the historical epos known as the *Dānishmend-nāme*. The city passed into Turkish hands at the end of the 6th/12th century, but was temporarily retaken by the Byzantines; in 608-9/1212, Samsun formed part of the Comnene principality of Trebizond. When before 585/1189 Sultan Ḳîlîdj Arslan divided up his state among his sons, the town fell to Rukn al-Dīn. A trade route linking the port with Amasya, Çorum and Ankara, and also with eastern Anatolia, apparently was of secondary importance. However, the town was linked by sea routes to Caffa (Kefe, Feodosiya) in the Crimea [see KEFE] and the northern coast of the Black Sea. Genoese sources record the presence of a Turkish *kommerkiarios* (customs collector) about 688/1289. In the 8th/14th century the area was controlled by the Djāndār Oghlu dynasty [see ISFENDIYĀR OGHLU], one of whose members, named Isfendiyār (b.) Bāyezīd, had a coin struck in Samsun, which unfortunately bears no date. From the Ottoman chronicler Neshrī we learn that in 795/1393 the Ottoman sultan Yîldîrîm Bāyezīd I took over Kastamonu and Samsun, leaving a much reduced principality in the hands of Isfendiyār b. Bāyezīd. According to Hans Schiltberger, who was present in Anatolia at this time, Samsun was granted by Sultan Bāyezīd to the son of the former Bulgarian ruler Shishman, who had accepted Islam after the Ottoman conquest of Tîrnovo. Schiltberger also reports an invasion of land and water snakes in the countryside around Samsun; when the land snakes allegedly gained a "victory" over the water snakes, the court of Sultan Bāyezīd seems to have regarded this as a sign that the sultan, who already controlled the land, was also soon to dominate the seas.

In the 8th/14th century, Samsun had a resident Genoese population represented by a consul; after 701-2/1302 the latter was subordinate to the consul resident in Caffa, but, at least in principle, nominated by the authorities in Genoa. The Genoese lived in a separate settlement, a short distance away from the Muslim town, which the 9th/15th century chronicler ʿĀshîḳ-pasha-zāde calls Kāfir Samsun; he records that under Meḥemmed I (r. 805-24/1403-21), the Genoese abandoned their township after a fire, whereupon the inhabitants of the Muslim town, seeing their source of livelihood disappearing, voluntarily submitted to Ottoman domination. On the other hand, a Genoese citizen who had resided in Samsun for seven years claimed an indemnity for property losses suffered when the castle was burned by "the Turks" in 1422. In the following year, the *sübashî* of Samsun also exercised authority over the Genoese settlement. By the middle of the century, Simisso, as Samsun was called by the Genoese, was no longer mentioned among the latter's colonies. The Genoese also occasionally had coins of low silver content struck in the town. At certain times, notaries were present to record the business transactions of their countrymen.

According to Genoese sources, millet, barley, beans and chickpeas were exported from Samsun to the territories north of the Black Sea. From the north, Samsun received hides and edible fats, in addition to slaves. Apparently the commerce of the town was much impeded by Tīmūr's campaign in Anatolia; a Greek merchant who visited Samsun at this time complained that nothing could be bought or sold there. The Spanish envoy to the court of Tīmūr, Ruy Gonzalez de Clavijo, also visited Samsun at approximately this time.

Ottoman documentation begins with a list of taxpayers from the reign of Bāyezīd II; 463 persons were recorded in this *defter* apart from the garrison. Samsun was located in the *sandjak* of Djānik. At this time a minute Frenkpazārî quarter (6 taxpayers) housed the remaining Genoese merchants. The town (511 taxpayers in 984/1574) was heavily fortified, and in the 10th/16th century the hinterland was known for its onions, while a locally grown pear was pickled and sent to Istanbul. But the best-known local product undoubtedly was hemp, from which the ropes required by the Ottoman arsenal were manufactured. Certain lands were set aside for the growing of hemp (*kendir khāṣṣlarî*) and the *ḳāḍī* of Samsun supervised delivery and payment to the growers. *Pendjik* [*q.v.*] accounts demonstrate that slaves from the northern coast of the Black Sea continued to be imported through Samsun.

In the early 11th/17th century the town seems to have lost a good deal of population; a register from the year 1052/1642-3 records only 58 taxpayers. However, Ewliyā Čelebi, who visited the Black Sea coast in 1050/1640, comments on the large number of notables (*aʿyān*) whom he encountered in Samsun; some of them were officers manning the fortress and others ʿ*ulemā*, although Samsun by this time had lost the *medrese* which it had possessed in the 10th/16th century. Ewliyā thought that the working population of Samsun consisted of seafaring men and hempworkers, who lived in tile-covered houses and struck him by their clean and tidy clothes; he specifically comments on the absence of very poor people (ʿ*awāmm*). Thus it would appear that the depredations of the Cossacks, whose small, swift ships made the entire Black Sea coast unsafe during those years, inflicted severe but not lasting damage to the town. Ewliyā does, how-

ever, claim that Samsun was at one point occupied by the Cossacks and the fortifications seriously damaged; but by the time of his visit, the latter had been repaired.

The *Djihān-nümā*, a 11th/17th-century geographical text, contains some information on Samsun, which was probably put together not by the author Kātib Čelebi himself but by one of his collaborators. The geographer comments on the non-nucleated settlements of the Black Sea coast and the rustic character of the inhabitants. In his time, the castle of Samsun had fallen in ruins, but the town possessed one or more shop-lined streets, a mosque and a bath house. In actual fact, late 11th/17th century Samsun possessed at least four mosques: two of them went back to the Ilkhānid period, the *mesdjid* of ʿĪsā Bābā dated from the 9th/15th century, while the Ḥadjdjī Khātūn mosque had been founded in 1105-6/1694. Tournefort, who passed through Samsun in 1112-13/1701, did not observe any signs of commercial activity and paid no particular attention to the town. However, the Trabzon Armenian Minas Bīzīshkiyan, whose travel notes date from 1232-5/1817-19, paints a somewhat different picture; he regarded Samsun as an important trade centre, with a substantial number of resident Armenians. This is all the more remarkable as Samsun had been burnt to the ground in 1221/1806, when a local governor was ousted by a rival of his who enjoyed central governement support. In 1244-5/1829 the town was still recovering from this disaster. The buildings of Samsun apparently made a pleasant impression on the Prussian general Helmuth von Moltke, who in 1253-4/1838 disembarked from a steamer and began his Anatolian travels in Samsun; but although he must have spent some time in the town and even made a map of it, he does not say anything specific about buildings or people. Henry Suter, who visited Samsun in the very same year, thought that the town had a population of 450 Turkish and 150 Greek families. This traveller commented on Samsun's well-stocked bazaars, but believed them to serve the transit trade rather than local consumption. In this period, the port did not possess a quay, and afforded only limited protection in case of storms. Yet Moltke observed that a considerable amount of trade was conducted through the port, and other European travellers of the time agreed with him. Many visitors were Persian and other merchants crossing the Black Sea on Austrian steamers in order to trade in Rumelia and central Europe. A.D. Mordtmann, who visited Samsun in 1266-7/1850, also made some acerbic comments on the lack of port facilities.

In an account of Asia Minor published in 1278-9/1862, Charles Texier adds a few details to this description. By the middle of the 13th/19th century, a governor had built a government house, into which antique columns and other finds from the ruins of the ancient city had been incorporated. The town by mid-century boasted a covered market, a khān, a public bath and four saints' graves. The quarters inhabited by Greeks and Armenians were located some distance away from the Muslim town; they both possessed a church and a school. Yet in terms of population, the town remained quite small; the Ottoman traveller Ferrukhān Bey, who visited Samsun in 1263/1847 and to whom we owe a description of its physical layout, records 500 Turkish, 240 Greek, 60 Armenian and a few European households; he estimated total population at about 6,000. Cuinet records a much lower figure for 1276-7/1860, namely 3,000 persons. A disastrous fire in 1286/1869 constituted another setback. Yet in the 1890s Samsun's population had increased to 16,000. Referring to the period just before 1311/1894 Shems ül-Dīn Sāmī gives the more conservative figure of 11,000 persons; he regarded Samsun as the most active Black Sea port in Ottoman hands.

Early 14th/late 19th century growth was partly due to the spread of tobacco cultivation in the region, which was exported through Samsun; in addition, as Istanbul now depended increasingly on Anatolian grain, the grain trade grew in importance. In the aftermath of World War I, the area saw clashes between armed bands of Pontus Greek separatists and their Laz and Turkish opponents. Under the threat of British intervention, the Porte decided to send Muṣṭafā Kemāl, one of the most successful Ottoman generals of World War I, to restore order. He disembarked in Samsun on 19 May 1919, which became a Turkish national holiday after the proclamation of the Republic, and began to organise political resistance against the foreign occupation of Anatolia and eastern Thrace. However, Samsun was soon superseded as a centre of the Turkish nationalist forces.

During the Republican period, Samsun became the capital of a *wilāyet* and developed into a sizeable city (198,749 inhabitants in 1980). The railway reached Samsun in 1932; the port was modernised in 1960, and the Samsun Trade Fair, established in 1963, proved a boost to the local economy. However, agriculture, particularly tobacco cultivation, continues to be the economic mainstay of the province (involvement of 80.4% of the active population in 1975), which comprises extremely fertile areas such as the Çarşamba and Bafra plains, where two and even three harvests a year are possible. Though Samsun possesses large-scale factories producing copperware, artificial fertiliser and fodder, industry (4.9% of the active population in 1975) and services (6% of the active population in 1975) are of much less importance in the economy of the province. Small enterprises predominate; in 1980, only 20% of the active population consisted of wage and salary earners. From the 1950s onwards, mechanisation of agriculture has resulted in widespread emigration. This situation explains why, even in 1980, the percentage of persons able to read and write (61.7%) was lower than the average for Turkey as a whole. However, from 1981 onward, efforts have been made to bridge the gap, which include the establishment of a local university.

(SURAIYA FAROQHI)

AL-**SAMT** (A.), azimuth or direction, a term in frequent use in Islamic astronomy. It is usually applied to the direction of a celestial object measured on the horizon, determined by the arc of the horizon between the east- or west-points and the foot of the vertical arc through the celestial object. The Arabic plural *al-sumūt* gave rise to the term azimuth and its equivalents in numerous European languages. But whilst in mediaeval astronomy the azimuth was usually measured from the east- or west-points, in modern astronomy it is measured clockwise from the north point.

The complementary arc measured from the meridian was called *inḥirāf*, and, for example, the term *munḥarifa* was applied to a vertical sundial inclined at a specific angle to the meridian [see MIZWALA]. The direction of Mecca, called *ḳibla* [*q.v.*], was usually measured from the meridian, and so it is the *inḥirāf* (for *inḥirāf al-ḳibla*) that is tabulated in mediaeval tables displaying the *ḳibla* for different geographical localities. Yet sometimes also *samt al-ḳibla* was used when the *ḳibla* is measured from the north point.

The expression *samt al-raʾs*, literally "direction of the head", was used to denote the point of the celestial sphere directly above the observer. This, through various modifications and distortions, produced zenith and its equivalents in European languages.

Muslim astronomers invariably included in their handbooks [see ZĪDJ] a chapter on the determination of the azimuth of the sun or any star from its altitude, realising that this is mathematically equivalent to the problem of determining the time from the altitude. Ibn Yūnus [*q.v.*] at the end of the 4th/10th century compiled a table of the solar azimuth for each 1° of solar altitude and each 1° of solar longitude, for the latitude of Cairo; there are about 10,000 entries in the book appropriately entitled *Kitāb al-Samt*. These tables formed part of a corpus of tables for astronomical time-keeping that was used in Cairo until the 13th19th century (see Pl. LXVI). Other tables of the same kind were later compiled for the latitudes of Damascus, Alexandria and Damietta. The universal tables of al-Khalīlī can be used to find the azimuth of the sun or any star from its altitude and declination and the local latitude (based on the complicated accurate formula) without any calculation beyond addition or subtraction and interpolation [see MĪḲĀT. ii].

Muslim astronomers also discussed the problem of determining the *inḥirāf* of the *ḳibla* by various techniques, and compiled tables displaying the *inḥirāf* as a function of the latitude and longitude difference from Mecca [see ḲIBLA. ii]. Of more immediate practical use were lists of coordinates and their *ḳibla* values. Such lists were often included on instruments, sometimes, for example, engraved on the mater of an astrolabe [see ASṬURLĀB]. From the 3rd/9th century onwards Muslim astrolabists marked the azimuth circles (*sammata*) on the plates of astrolabes. With such curves they could, for example, tell at a glance the altitude of the sun when it was in the *ḳibla*. That altitude was also tabulated for all solar longitudes for specific localities such as Cairo, Marāgha and Damascus, or represented graphically on the backs of various Ṣafawid astrolabes (see Pl. LXVII).

Various instruments were devised for demonstrating the azimuth of the *ḳibla* of different localities, usually in the form of charts or maps, mainly representing geographical reality (as defined by mediaeval coordinates) only crudely. In 1979, however, a device from Iṣfāhān *ca.* 1122/1710 became available for study. This is a map of the world centred on Mecca, so conceived that for any locality between Spain and China the direction and distance of Mecca are given correctly within the limits of mediaeval geographical coordinates (see Pl. LXVIII). The maker and engraver were—on the grounds of the distinctive calligraphy—most probably ʿAbd al-ʿAlī and his brother Muḥammad Bāḳir, who made for Shāh Ḥusayn in 1124/1712-13 the splendid astrolabe now in the British Museum. The grid serves both functions admirably for places between the Maghrib and Sind, but because the latitude curves are drawn as arcs of circles slight errors occur for localities in al-Andalus in the west and India and China in the east. This remarkable object escaped notice in the articles ḲIBLA. ii and MAKKA. iv. It is a mathematical device or a cartographic projection or a nomogram, depending on how one defines either expression, which enables the user to lay the non-uniform scale of a diametrical rule over a given locality and then simply read off the *ḳibla* on the outer scale and the distance to Mecca (in *farsakhs* [*q.v.*]) on the scale of the rule.

The positions of the *ca.* 150 localities are related to the coordinates in a set of geographical tables derived from a mysterious *Kitāb al-Aṭwāl wa 'l-ʿurūḍ li'l-Furs*, which seems to go back at least to the 5th/11th century, with certain positions modified from later *zīdjs* in the same tradition such as the *Zīdj-i Īlkhānī* of Naṣīr al-Dīn al-Ṭūsī [*q.v.*] and the *Zīdj-i Sulṭānī* of Ulugh Begh [*q.v.*].

Now the mathematics underlying the principle of the grid, which is not trivial, was known already in the 3rd/9th and 4th/10th centuries, and in fact the instrument reflects a genius and innovative spirit such as was typical of those centuries rather than the Ṣafawid period. Yet not a trace of a mention of such a device or such a Mecca-centred map has been found in Islamic literature. However, there is indeed evidence that such maps were available in previous centuries. In *al-Zīdj al-djadīd* of Ibn al-Shāṭir (*fl.* Damascus *ca.* 750/1350 [*q.v.*]) there is a geographical table with longitudes, latitudes and *ḳibla*-values for about 240 localities (ms. Oxford Seld. A30). The *ḳibla*-values, which are given to the nearest 10′, do not correspond to recomputation by any of the known exact or approximate methods used by the Muslim astronomers. The fact that they were read from a Mecca-centred

rectazimuthal map of the same kind as the Iṣfahān piece is confirmed by the *ḳibla*s for localities in the far west and the far east. But it was not Ibn al-Shāṭir who determined the *ḳibla*-values. A similar table with entries for about 245 localities is found in the *Zīdj-i ashrafī* of Sandjar-i Kamālī, also known as Sayf-i Munadjdjim (*fl.* Yazd, *ca.* 710/1310) (ms. Paris B.N. supp. pers. 1488). Both tables stem from a common source, sc. *al-Zīdj al-Sandjarī* of Abu 'l-Fatḥ al-Khāzinī (*fl.* in Marw *ca.* 515/1120 [*q.v.*]). In one of the three available mss. of this work (B.L. Or. 6669) there is a substantial fragment of the same table (one complete folio is missing). It appears that al-Khāzinī had access to a Mecca-centred map on which the *ḳibla*-values, estimated from the map, were indicated alongside the place names. He himself estimated the longitudes and latitudes and copied the *ḳibla*-values. Now the coordinates are essentially those of al-Bīrūnī [*q.v.*]. The fact that al-Khāzinī obtained his data from a map is proven by the occasional differences in the longitudes and latitudes, particularly in the minutes. If they can be clearly associated with scribal errors resulting from the nature of the *abdjad* [*q.v.*] notation (thus, for example, when *y-h* (= *yāʾ-hāʾ*) for 10 + 5 = 15 is confused with *n-h* (= *nūn-hāʾ*) for 50 + 5 = 55), then we are dealing with transmission in manuscripts. But there are numerous modifications (for example, *l-h* (= *lām-hāʾ*) for 35 changing to *m* (= *mīm*) for 40) which result from misplacing localities on a map or misreading their positions. On the other hand, an Arabic recension of the *Zīdj-i Īlkhānī* of al-Ṭūsī by the Syrian astronomer Shihāb al-Dīn al-Ḥalabī (ms. Cairo Ṭalʿat *mīḳāt* 226, 1) contains a similar table which appears to have coordinates much closer to al-Bīrūnī's original values (the latter have not yet been critically edited).

It is abundantly clear that the basic idea behind a Mecca-centred map goes back at least as far as al-Bīrūnī. In his treatise on map-projections, *Tasṭīḥ al-ṣuwar wa-tabṭīḥ al-kuwar*, written *ca.* 395/1005, fairly early in his career, the great polymath describes eight different map-projections, one of which is "azimuth equidistant". The description is brief indeed, and it seems likely that al-Bīrūnī might have developed the theory and even presented a Mecca-centred map in another of the several treatises on mathematical geography that he wrote but that have not survived. There is, however, no mention of this projection in either his *zīdj* entitled *al-Ḳānūn al-Masʿūdī* or his monumental book on the subject entitled *Taḥdīd nihāyāt al-amākin*.

The rediscovery of these Mecca-centred maps raises our understanding of Islamic mathematical geography to a new level. A rectazimuthal map was first used in Europe by the French scholar Guillaume Postell in the 16th century, and the underlying mathematical theory of such azimuth-distance projections centred on Mecca was first investigated by Carl Schoy ca. (see Pl. LXIX).

Woodward (eds.), *The history of cartography*, ii/1, *Cartography in the traditional Islamic and South Asian societies*, Chicago and London 1992, 189-205, and eidem, *Die Astrolabiensammlung des Germanischen Nationalmuseums*, and *Weltkarten zur Ermittlung der Richtung nach Mekka*, in G. Bott (ed.), *Focus Behaim-Globus*, 2 vols., Nuremberg 1992, i, 167-71, ii, 686-91 (here the function of measuring distances is misinterpreted as being only approximate). On the astrolabe most probably by the same maker and engraver, see W.H. Morley, *Description of a planispheric astrolabe constructed for Sháh Sultán Husain Safawí...*, London 1856, repr. as the introd. to R.T. Gunther, *The astrolabes of the world*, 2 vols., Oxford 1932, repr. in 1 vol., London 1976. On the *Zīdj*s of Ibn al-Shāṭir and Sandjar-i Kamālī, see E.S. Kennedy, *A survey of Islamic astronomical tables*, in *Trans. of the American Philosophical Soc.*, N.S., xlvi/2 (1956), repr. n.d. [*ca.* 1989], 124 (no. 4), 125 (no. 11) and 162-4, respectively. On their geographical tables, see idem and Mary H. Kennedy, *Geographical coordinates of localities from Islamic sources*, Frankfurt am Main 1987, esp. pp. xvi (*sub* ASH), xxxi (*sub* SHA). On two of the many astrolabes from the four generations of al-Kirmānīs, see Gunther, *Astrolabes of the world*, i, 128-31 (nos. 15, 16, both misdated), and Sharon Gibbs and G. Saliba, *Planispheric astrolabes in the National Museum of American History*, Washington, D.C. 1984, 64-5 (no. 15). Bīrūnī's treatise on map projections is published as Aḥmad Saʿīdān, *Kitāb Tasṭīḥ al-ṣuwar wa-tabṭīḥ al-kuwar li-Abī l-Rayḥān al-Bīrūnī al-mutawaffā sanat 440 H*—Al-Bīrūnī on map projection (ms. Leiden 1068,9), in *Dirāsāt* (al-Djāmiʿa al-Urdunniyya), iv (1977), 7-22 (see esp. 21), with a new ed., tr. and comm. in J.L. Berggren, *Al-Bīrūnī on plane maps of the sphere*, in *Jnal. for the History of Arabic Science*, vi (1982), 47-169 (see esp. 67), and L. Richter-Bernburg, *Al-Bīrūnī's* Maqāla fi tasṭīḥ al-ṣuwar wa-tabṭīḥ al-kuwar. *A translation of the preface with notes and commentary*, in *ibid.*, 113-122. On rectazimuthal cartographic grids, see Schoy, *Azimutale und gegenazimutale Karten mit gleichabständigen parallelen Meridianen*, in *Annalen der Hydrographie und maritimen Meteorologie*, xli (1913), 33-43; idem, *Die gegenazimutale mittabstandstreue Karte in konstruktiver und theoretischer Behandlung*, in *ibid.*, 466-73; and idem, *Die Mekka- oder Qiblakarte (Gegenazimutale mittabstandstreue Projektion mit Mekka als Kartenmitte)*, in *Kartographische und schulgeographische Zeitschrift*, vi (1917), 184-5, and 1 map, repr. in idem, *Beiträge*, i, 157-9, and *Gnomonik der Araber*, 43, 45 (ii, 395, 397 of the repr.). Earlier Western writings on rec-

tazimuthal projections by cartographers, including Montucla, I. Craig and E. von Hammer, are mentioned by Schoy. (D.A. KING)

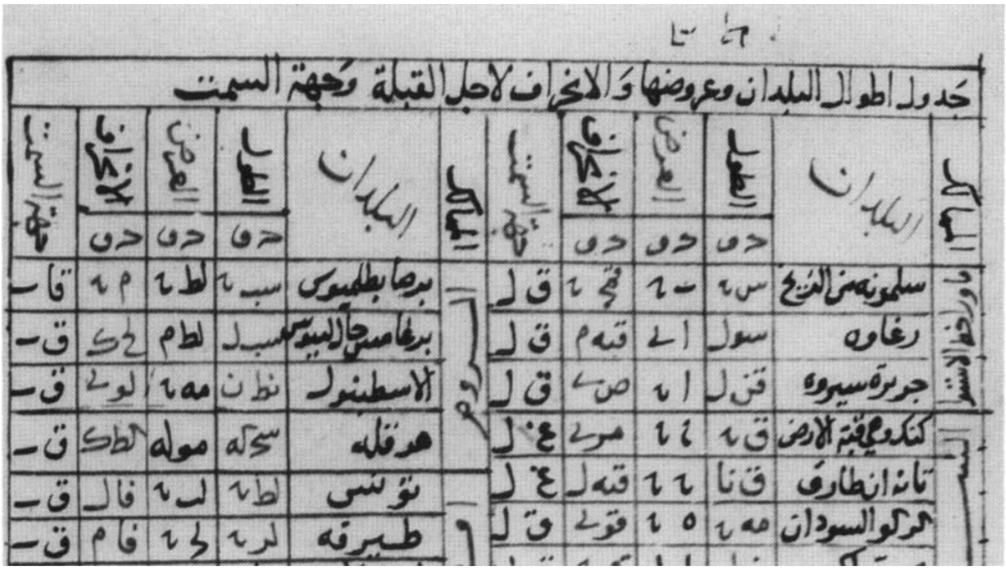
SAMUEL [see USHMŪ'ĪL].

SAMŪM (A.), yielding Fr. simoun and Eng. simoom, a hot wind of the desert accompanied by whirlwinds of dust and sand, and set in motion by moving depressions which form within the trade winds or calm zones of the high, subtropical depressions. This wind is especially characteristic of the Sahara, in Egypt, in Arabia and in Mesopotamia. The word occurs in three passages of the Ḳur'ān, where it is, however, not especially applied to the wind. In sūra XV, 27, it is said that the *Djānn* were created from the fire of Samūm. In LII, 27, the punishment of the Samūm is mentioned; and according to I, 41, the "people of the left" were dwelling in *Samūm wa-Ḥamīm*.

The *Ḥadīth* uses the word in the same sense; yet the meaning "hot wind" is here coming to the front. It is said that Hell takes breath two times a year: "its taking breath in summer is Samūm" (al-Tirmidhī, *Djahannam, bāb* 9; cf. Ibn Mādja, *Zuhd, bāb* 38). In al-Bukhārī we find reference to the opinion that the hot air during the day is called *ḥarūr*, whereas it is called *samūm* at night (*Bad' al-khalḳ, bāb* 4).

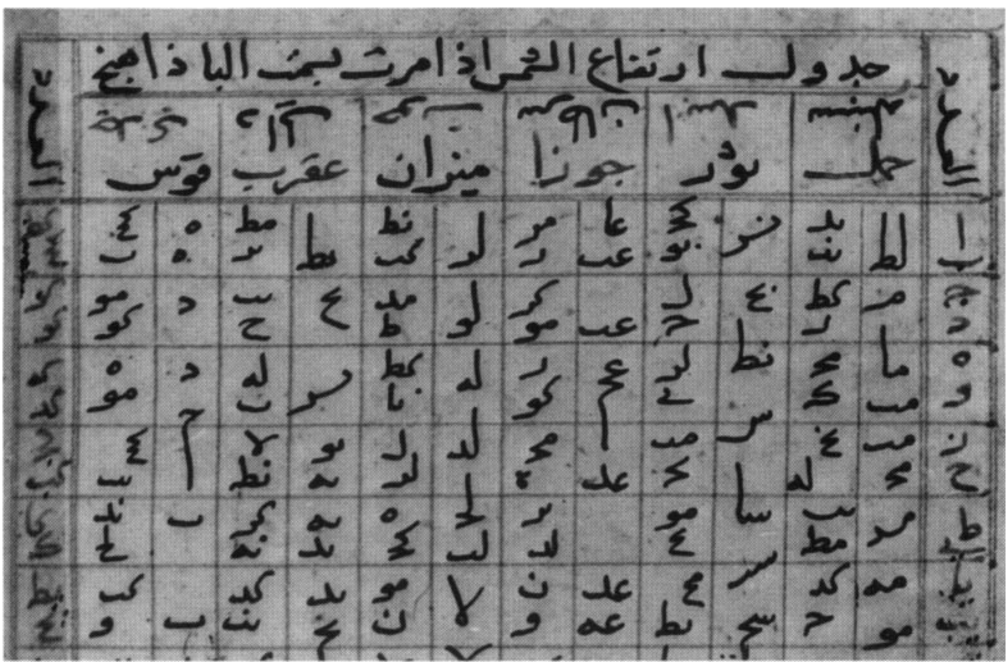
In nearly every traveller's account the *samūm* is mentioned in the sense of the suffocating wind, often called simoom. From the innumerable references, a few may be picked out. C.M. Doughty mentions it in the neighbourhood of Madā'in Ṣāliḥ as "a dry southern wind" against which the Bedouins "covered their faces up, to the eyes, with a lap of the kerchief". He again mentions it between Medina and Mecca and tells us that, according to the Bedouins, weak camels may be suffocated by it (*Travels in Arabia Deserta*, Cambridge 1888, i, 100, 188).

In Mecca, the north, north-east and east winds are called *samūm*. When it blows it makes the impression as if it came from a huge fire through the intermediacy of gigantic bellows (Snouck Hurgronje, *Mekkanische Sprichwörter und Redensarten*, no. 76). The season in which the sun enters the constellation of the Virgin (August) has an extremely bad reputation in Mecca, because in this time *ḥōm* and *wamd, samūm* and *azyab*, blow alternately (*loc. cit.*).



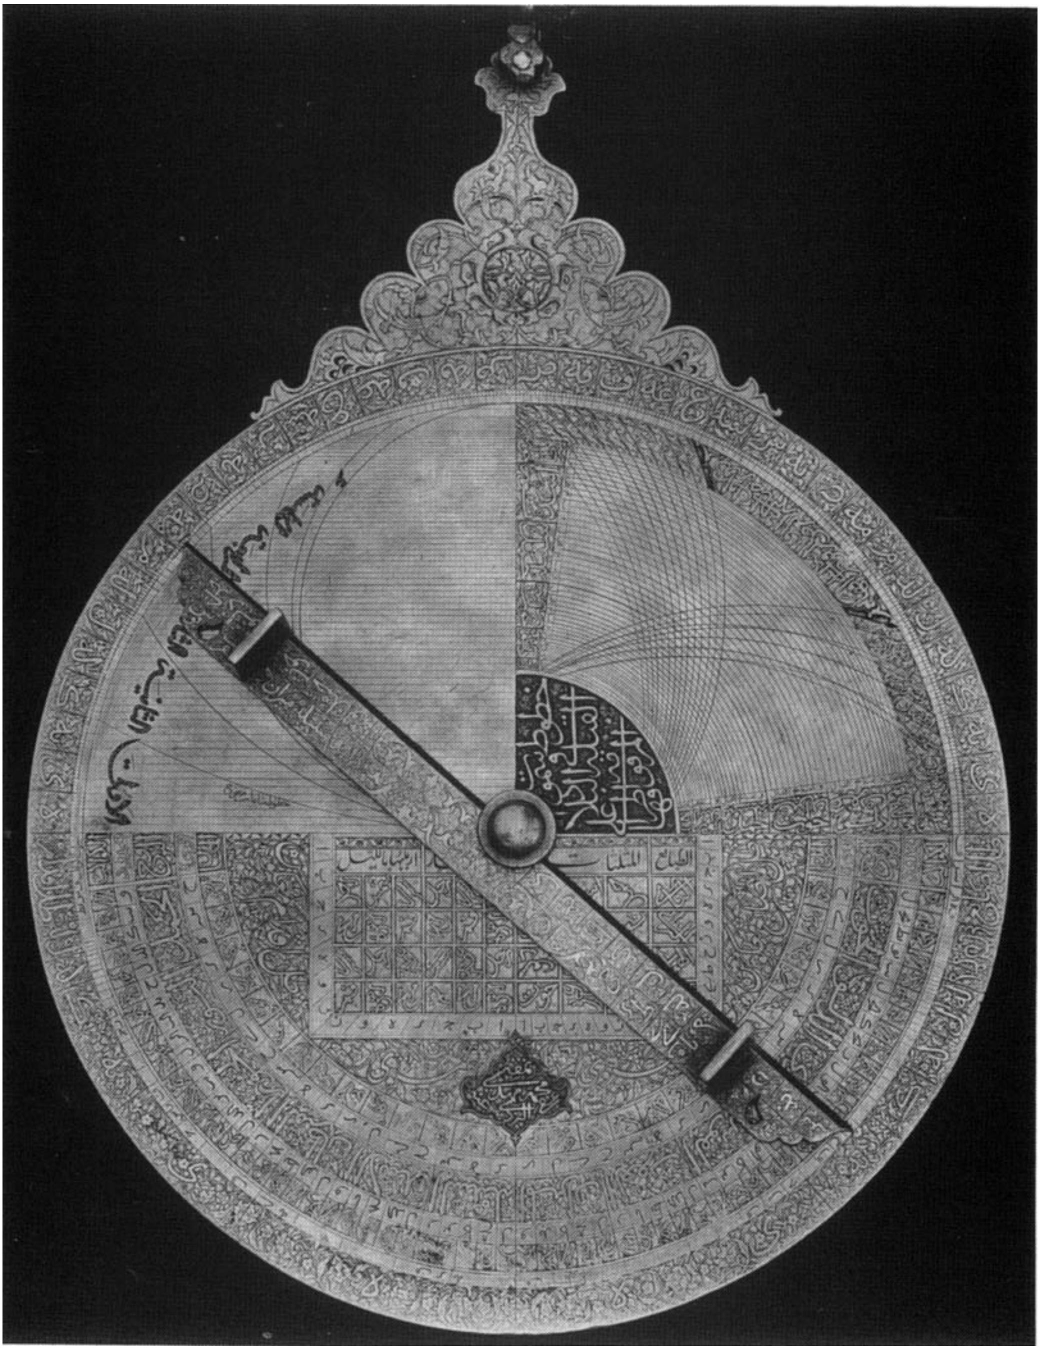
Concerning Egypt, Lane says (*Manners and customs*, Introduction): "Egypt is also subject particularly during spring and summer, to the hot wind called the "Samoom", which is still more oppressive than the khamáseen winds, but of much shorter duration, seldom lasting longer than a quarter of an hour or twenty minutes. It generally proceeds from the south-east, and carries with it clouds of dust and sands".

Concerning Ḳaṣr-i Shīrīn [*q.v.*], Ḥamd Allāh Mustawfī (*Nuzhat al-ḳulūb*, tr. Le Strange, 50) says: "Its climate is unwholesome, for in the hot season at most times the (hot) Simum blows".

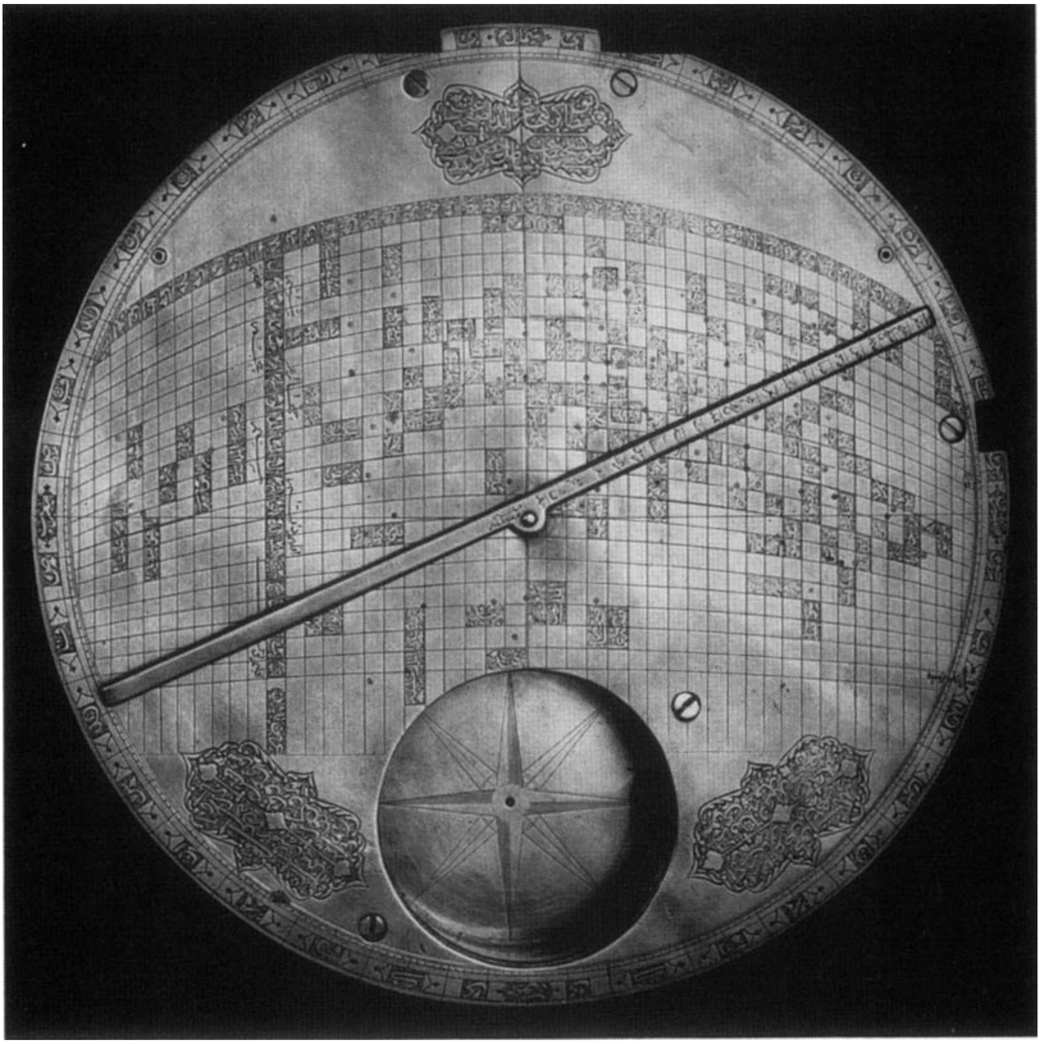


Al-Mas'ūdī, *Murūdj al-dhahab*, iii, 320-1 = § 1204 has a legendary report concerning the *djānn* which, according to the verse from the Ḳur'ān mentioned above, were created from the fire of the *samūm* (tr. R. Basset, *Mille et un contes, récits et légendes arabes*, Paris 1924, i, 57); see also A. Musil, *Reisen in Arabia Petraea*, Vienna 1907-8, iii, 3-4. In other parts of the Islamic world, other words are used for the *samūm*. In Europe, for instance, one finds the term sirocco.

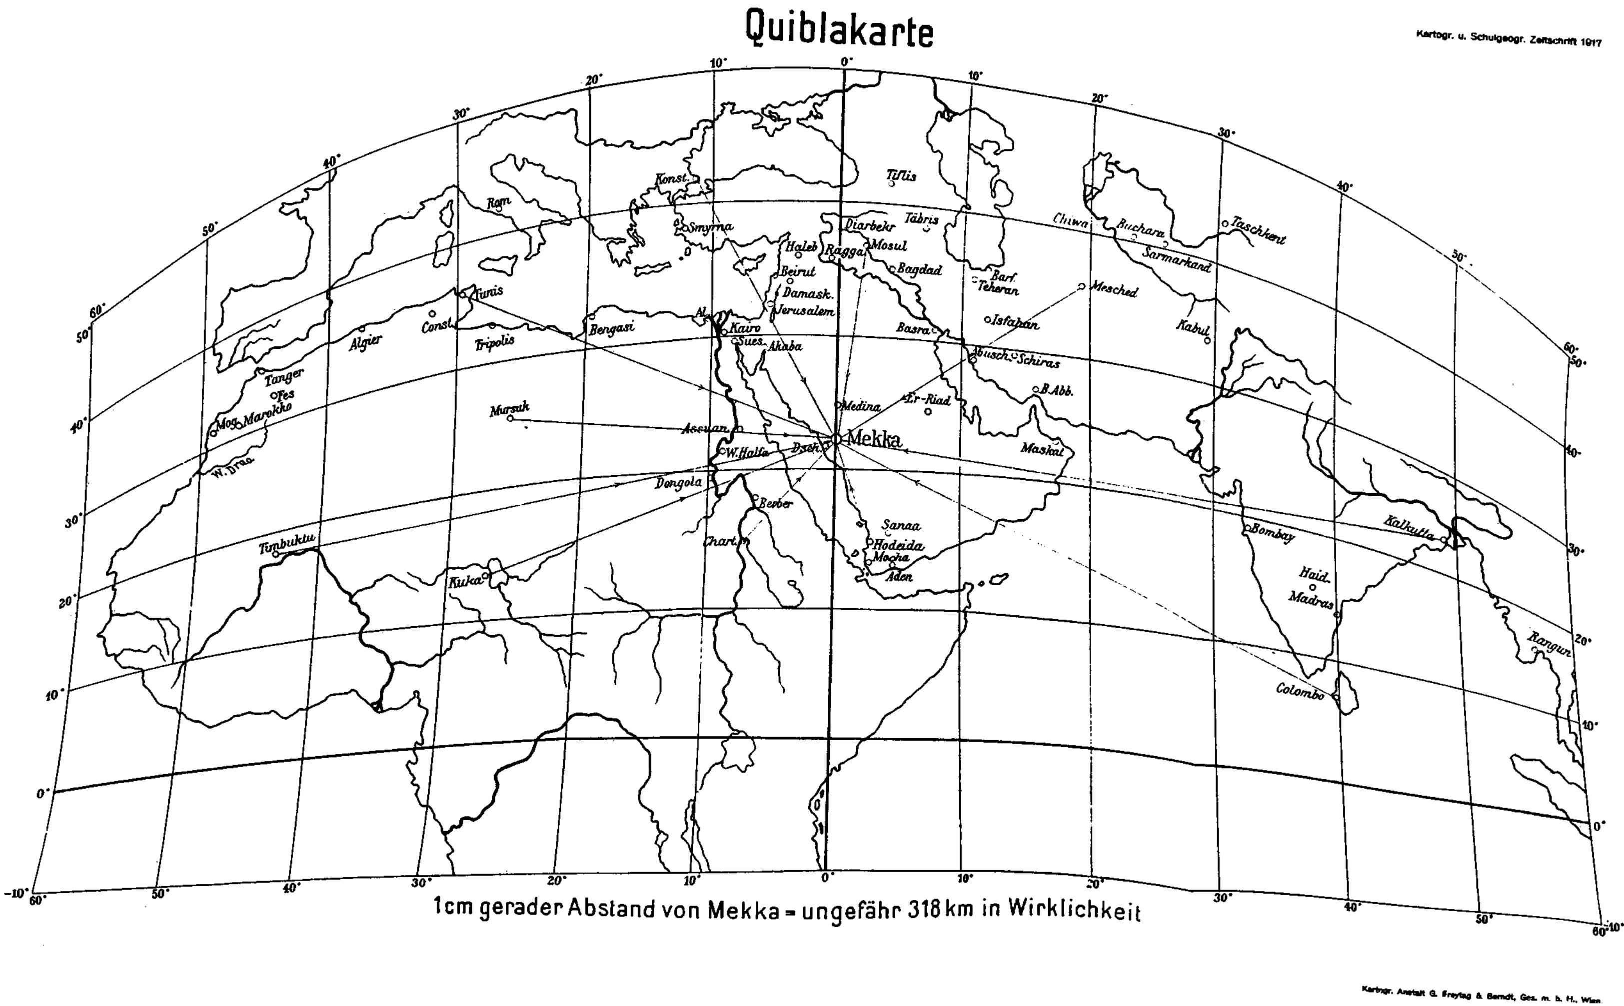
The word is hardly used in North Africa, where the hot wind is called, after its direction of origin, and according to the various regions, *ḳeblī* or *sharḳī*.



(A.J. WENSINCK*)



An extract from the geographical table in the Arabic recension of the *Zīdj-i Īlkhānī* by Shihāb al-Dīn al-Ḥalabī. The azimuths of the *ḳibla* are given to the nearest 10′ alongside the longitudes and latitudes of cities. Only in 1994 was it discovered that these *ḳibla*-values were read from a Mecca-centred world map. (From ms. Cairo Ṭalʿat *mīḳāt* 226,1, courtesy of the Egyptian National Library).



A table from mediaeval Cairo promising the altitude of the sun when it is in the direction of (the closed back of) the ventilator (*bādhahandj* [see BĀDGĪR]). Since the altitude at the winter solstice is zero, this means that the ventilators in Old Cairo were oriented with their openings facing perpendicular to the direction of winter sunrise (or about 27° E. of N.). This table led to the discovery that the entire medieval city is astronomically aligned (see further, *JAOS*, civ [1983], 97-133).

There are two sets of curves in the solar quadrant on the upper right of the back of this astrolabe by Muḥammad Muḳīm al-Yazdī (*ca.* 1060/1650). The set whose curves are not equally spaced enables the user to find, using the horizontal ecliptic scale, the altitude of the sun when it is in the *ḳibla* of various cities in ʿIrāḳ and Persia. For a given day of the year, one finds the solar longitude, moves along the corresponding circular are with the alidade up to the curve in question and reads off the solar altitude on the outer scale. One then observes the sun until it reaches that altitude, and then one is facing the *ḳibla*. The other set of curves, which are equally spaced, enables the user to determine, using the vertical ecliptic scale, the solar altitude at midday for a series of latitudes from 27° to 53° in 2°-steps.
